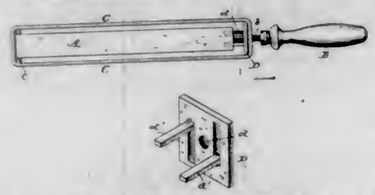
8. In a screw-jack, the combination, with the screw-shaft, of the divided gravitating nut and its guides, the elongated hub acting upon the shaft, and means for rotating said hub, substantially as described.

9. In a screw-jack, the combination, with the screw-shaft, of the divided gravitating nut and its guides, the elongated hub having the worm-gear, with the worm for engaging with the worm-gear, and the means for adjusting the said worm into or out of engagement, substantially as described.

10. In a screw-jack, the combination, with the screw-shaft, of the divided gravitating nut and its guides, the elongated hub having the upper ratchet and the lower worm-gear, the upper lever and its pawl, and the adjustable worm and means for operating it, substantially as described.

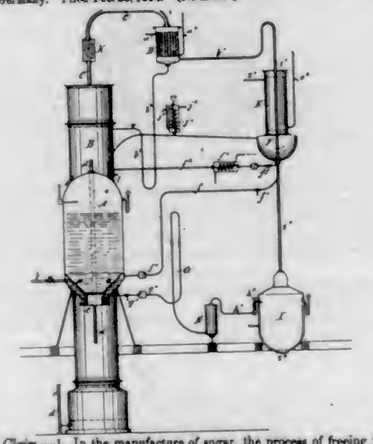


295,839. FLOOR-MAT. SIMON TOFFLER, New York, N. Y., assignor to ANNA TOFFLER and FRANK WARNECK, both of same place. Filed Dec. 13, 1883. (No model.)

Brief.—Parallel slats united by interlocking U-shaped staples which pass through the slats.

Claim.—The combination of a series of transverse slats having diametrical holes with U-shaped wire staples, the shanks of which are passed through said holes, and provided at one end with eyes and an intermediate abutment and at the other end with eyes at right angles to the plane of the shank, the eyes of the staples of one slat connecting with the eyes of the staples of the adjoining slats, substantially as and for the purpose set forth.

295,840. RAZOR-STROP. JOS. R. TORREY, Worcester, MASS. Filed Dec. 27, 1883. (No model.)



Claim.—1. A tightening-plate for razor-strops having projecting pins or lugs arranged diagonally opposite to each other on the body of the plate, substantially as described.

2. A tightening-plate for razor-strops having projecting pins or lugs struck out from the body of the plate and arranged diagonally opposite to each other, substantially as described.

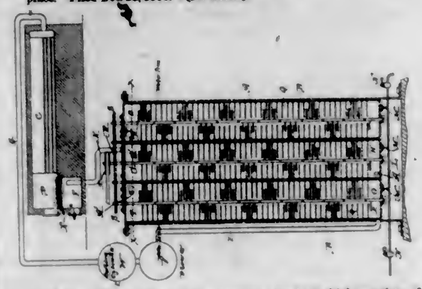
3. The combination of the body A, the handle B, having the screw-threaded shank *b*, the stropping-belt C, and the tightening-plate D, having the diagonally-arranged projecting pins or lugs *d'* struck out from the body of the plate, and the threaded hole *d*, substantially as described.

4. A tightening-plate for razor-strops having projecting pins or lugs struck out from the body of the plate and connected with said body near the corners thereof, substantially as set forth.

295,841. MANUFACTURE OF SUGAR. KONRAD TROBACH, Berlin, Germany. Filed Feb. 28, 1884. (No model.)

Claim.—1. In the manufacture of sugar, the process of freeing the sugary substances of their water by means of alcohol-steam, substantially as and for the purpose set forth.

2. In the manufacture of sugar, the process of first freeing the sugary substances of their water by means of alcohol-steam, and then extracting the sugar from the said substances by means of rectified alcohol, substantially as and for the purpose specified.



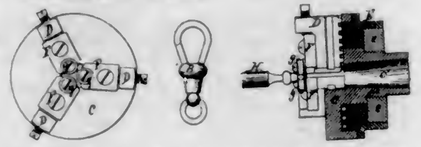
3. In the manufacture of sugar, the process of first freeing the sugary substances of their water by means of alcohol-steam, then extracting the sugar from the said substances by means of rectified alcohol, and finally passing the alcoholic solution of sugar thus obtained through a filter composed, as described, substantially as and for the purpose set forth.

4. In an apparatus for producing sugar from sugary substances, the combination, with the receptacle A, of the reservoir F, the pipe *f*, having the check-valve *f''*, the pipe *d*, the refining apparatus B, and the filter K, substantially as and for the purpose specified.

5. In an apparatus for producing sugar from sugary substances, the combination, with the receptacle A, of the reservoir F, the pipe *f''*, the air-pipe J, having the serpentine pipe *j''*, and the siphon-pipe G, substantially as and for the purpose set forth.

6. In an apparatus for producing sugar from sugary substances, the combination, with the receptacle A, of the siphon-pipe G, the filter H, and the vessel I, substantially as and for the purpose specified.

295,842. APPARATUS FOR AND PROCESS OF CONSUMING SMOKE. WILLIAM VOGEL, Chicago, Ill., assignor to G. A. Woolley, same place. Filed Dec. 28, 1883. (No model.)

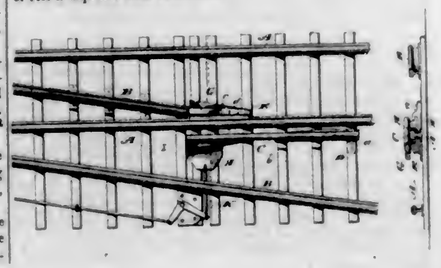


Claim.—1. The process of consuming smoke, which consists of forcing it through a series of vessels filled with water and subjecting it to the action of the beaters or agitators therein, substantially as set forth.

2. The combination of the cylinders B, water-supply pipe L, beaters P, and an inlet-pipe, substantially as described.

3. The combination of the cylinders B H, water-supply pipe L, inlet-pipe I, blower V, and an outlet-pipe, K, with beating devices that are adapted to operate within the cylinders, substantially as shown and described.

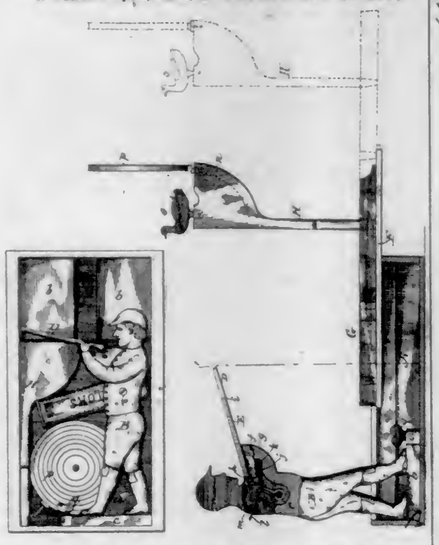
4. The combination of the cylinders B H, water-supply pipe L, inlet-pipe I, blower V, cooler W, and an outlet-pipe, K, with beating or agitating devices that are adapted to operate within the cylinders, substantially as specified.



295,843. DEVICE FOR FINISHING CHAIN-SWIVELS. JAMES E WALCOTT, Providence, R. I., assignor to Frederick I. Marcy, same place. Filed Nov. 13, 1882. (No model.)

Claim.—The combination of face-plate C, having extension, as described, the ring E, having helical raised ways, the dogs D, operated by said ring, the slides F, adapted to move in ways in the face-plate, and spinning-rolls *g g*, carried by said slides, all the enumerated elements arranged to co-operate in a spinning-chuck, substantially as set forth.

295,844. RAILWAY-CROSSING. MARION WALLACK and JACOB B. ROHRER, Cambridge City, Ind.; said Wallack assignor of one-half his right to Benjamin Enbelman, East Germantown, Ind. Filed Nov. 16, 1883. (No model.)



Brief.—A railway-frog the pivotal section of which has a plate bent to conform to the shape of the unbroken main rail, and which holds the pivotal section in position. A block or rest is provided with a spring-actuating cap which is moved by the pivoted section, and is returned to its normal position when the frog-rail is withdrawn, whereby the block or rest is kept free from obstructions.

Claim.—1. The combination, with the rails A A, of the rails B B, the pivoted section C, constructed as described, and the plate H, bent to conform to the shape of the rail A, and adapted to retain said pivoted section in position thereon, substantially as set forth.

2. The combination, with the rails B B, of a pivoted section connecting the ends of one of the rails B, and the block or rest E, provided with a spring-actuated cap, substantially as set forth.

295,845. TOY. JOHN ALONZO WARD, Sharpsville, assignor of one-half to William V. Byard, Sharon, Pa. Filed Jan. 24, 1884. (No model.)

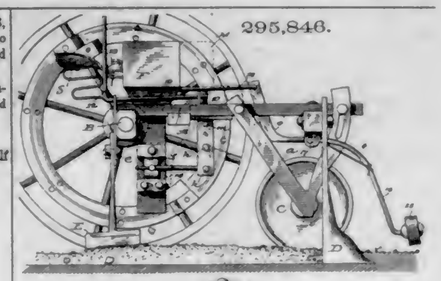
Claim.—1. The combination, in a toy, of a figure, B, detachably mounted in position and provided with devices for projecting objects, and a standard carrying a target and detachably mounted in position, substantially as set forth.

2. The combination, in a toy, of a box, a figure, B, detachably mounted in said box and provided with mechanism for projecting objects, and a standard carrying a target and detachably mounted in the cover of the box, substantially as set forth.

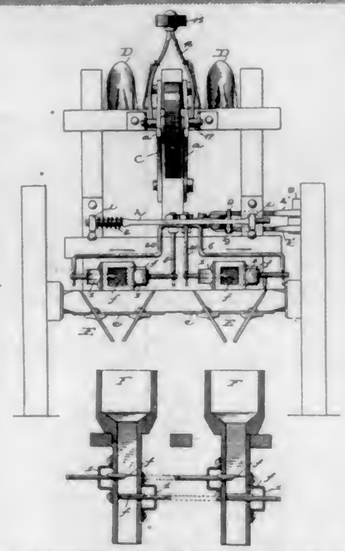
3. The combination, in a toy, of a box, a figure, B, provided with a dovetailed base adapted to engage a dovetailed recess in the box-bottom, a device for locking said base in position, mechanism combined with said figure for projecting objects, and a target detachably mounted in position, substantially as set forth.

4. The combination, in a toy, of a box, a figure, B, detachably mounted in position and provided with means for projecting objects, and a standard carrying a target and mounted in a rod provided with a series of recesses and pivotally secured to the cover of the box, substantially as described.

5. The combination, in a toy, of the figure B, detachably mounted in position and provided with means for projecting objects, a standard mounted in position and provided with a recess in its upper portion, and a pivoted figure, *c*, on said standard, substantially as set forth and described.



6. The combination, in a toy, of a figure, B, detachably mounted in position and provided with a tube or barrel, D, a pivoted bell-crank lever having the projecting member *l*, a headed rod playing in the tube or barrel and connected to the bell-crank lever, and a spring connected, as described, to said bell-crank lever, substantially as set forth.

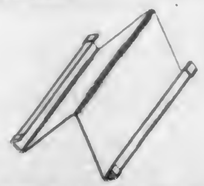


295,846. POTATO-PLANTER. JOHN P. WEIR, Parma, Ohio. Filed Nov. 21, 1883. (No model.)

Claim.—1. In a potato-planter, a seed box and tube, in combination with a stop-valve and a cutting-valve, and independent mechanism, substantially as described, for each of said valves, leading to cam-blocks on the wheel, whereby said valves are operated independently in a certain relation to each other, substantially as described.

2. In combination with the body and wheels, the seed box and tubes, the upper cutting and lower stop valve, the bars A and A', for giving independent movement to the said valves, with their springs and the bell-crank levers *k k'* and the cam-blocks, one set in advance of the other, the parts being constructed, arranged, and operating all substantially as described.

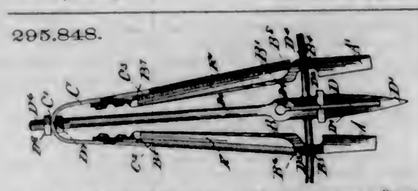
295,846.



3. In combination with the bell-crank levers *k k'*, the valves, the bars *h h'*, with their springs and rods, as described, between said valves and levers, the bar *m*, having pin 9 bearing upon the levers, and a lever, 10, acting upon the rod *m*, whereby the driver may throw the bell-crank levers out of the path of the cam-blocks, all substantially as described.

295,847. SADDLE-BOARD. JOSEPH A. WILSON, Chester, Vt. Filed July 23, 1883. (No model.)

Brief.—Constructs a saddle-board with grooves in its lower edges for a preservative compound.

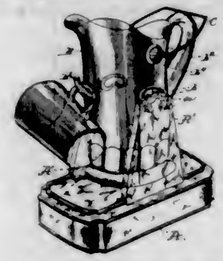


Claim.—The saddle-board, substantially as shown and described, having the grooves or channels formed upon its lower edges, as set forth.

295,848. TOOL FOR FORMING BOTTLE LIPS AND NECKS. JOS. B. WILSON, Clayton, N. J. Filed Sept. 14, 1883. (Model.)

Claim.—1. In a tool for forming the necks and lips of glassware, a shouldered plug formed of an integral piece of ductile metal, and having a slot formed therein for the purpose of facilitating the diametrical adjustment thereof, substantially as set forth.

2. In a tool for forming the necks and lips of glassware, a diametrically-adjustable slotted plug formed of an integral piece of ductile metal having lateral guides forming an integral part thereof, substantially as set forth.



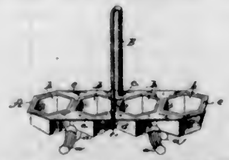
295,848.

3. In a tool for forming the necks and lips of glassware, a diametrically-adjustable slotted plug formed of an integral piece of ductile metal having a screwed shank forming an integral part thereof, and adapted to adjust the same lengthwise in relation to the jaws and spring of such tool, substantially as and for the purpose set forth.

4. An improved implement for forming the necks and lips of glassware, consisting of a diametrically-expansible slotted plug formed of an integral piece of ductile metal having lateral guides, and a screwed shaft forming an integral part thereof, in combination with jaws formed upon slotted shanks covered by slow-conducting handles, and united to said plug by cuts bearing upon a spring of metal less corrodible than the shanks and jaws, substantially as set forth and described.

295,849. TILTING VESSEL. WM. ZIMMER, Bellaire, Ohio. Filed Nov. 3, 1883. (No model.)

Claim.—1. A base for a tilting vessel composed of glass or earthenware, with vertical standards provided with double bearings for the tilting vessel, substantially as described.



2. A pitcher, jug, pot, or other vessel composed of glass or earthenware, provided with double connected journals, substantially as described.

3. The glass or earthenware tilting pitcher, jug, pot, or other vessel provided with double connected journals, combined with the base provided with standards having double bearings, substantially as described.

4. In combination with a glass or earthenware pitcher or other vessel, a hook, *b'*, substantially as described.

5. In combination with a glass or earthenware pitcher or other vessel, the double connected journals *b b*, substantially as described.

295,850. CASTER. WM. ZIMMER, Bellaire, Ohio. Filed Nov. 3, 1883. (No model.)

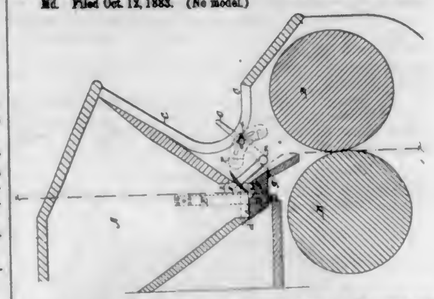
Claim.—1. A glass or earthenware caster having two or more cruet-receptacles sunk into its base in the same straight line, and with supporting-feet, and all pressed complete in the same mold, substantially as described.

2. The combination, in a glass or earthenware caster having two or more cruet-receptacles sunk into its base in the same straight line, and supporting-feet, all pressed in the same mold, of a detachable handle sprung into opposite recesses in the lower part of the base, and retained in a vertical position by notches at the top of the base, substantially as described.

295,851. METAL-BENDING MACHINE. HENRY A. ADEWORTH, Moline, Ill., assignor to Williams, White & Company, same place. Filed Nov. 12, 1883. (No model.)

Claim.—1. In a bending-machine, the combination of bed A, provided with a fixed die, shaft B, provided with gear-wheels C C, having crank-pins *c c*, cross-head E, and pitmen D D, connecting the cross-head with said crank-pins, substantially as and for the purposes set forth.

295,851.



2. The herein-described bending-machine, consisting of bed A, provided with a stationary die, shaft B, provided with gear-wheels C C, cross-head E, pitmen D D, connecting the cross-head and the gear-wheels, shaft G, provided with pinions H H and gear-wheel I, and shaft K, provided with pinion J and band-wheel L, all combined and operating substantially as shown and described.

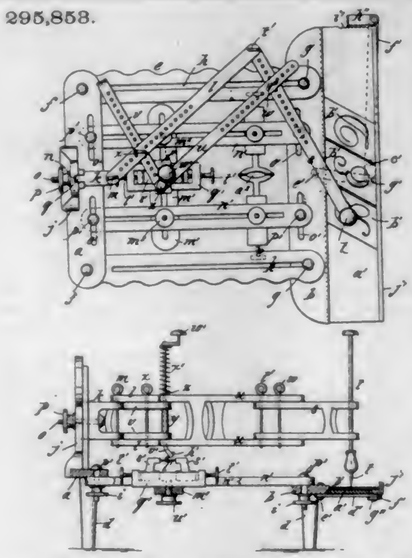
3. In a bending-machine, the combination of a bed-frame carrying a stationary die, a reciprocating cross-head arranged to move to and from said die, a shaft provided at opposite ends with gear-wheels, pitmen connecting said gear-wheels with opposite ends or sides of the cross-head, and a second shaft connected with or driven by a prime motor, and provided with pinions to mesh with and operate the gear-wheels of the first shaft, whereby the torsional strain of said shaft is avoided.

4. In an organized machine for bending metal, the combination of bed-frame A, provided with abutments *a*, upright frame F, shaft B, provided with gear-wheels C C at its ends, cross-head E, pitmen D D, connecting the cross-head and gear-wheels, shaft G, loose gear-wheel I, clutch N, pinion J, shaft K, and band-wheel L, all combined and arranged to operate substantially as set forth.

295,852. MILL-FEEDING DEVICE. JAMES B. ALLFREE, Cumberland, Md. Filed Oct. 12, 1883. (No model.)

Claim.—1. The combination, with a hopper, open at its bottom and along one side thereof and a gate therefor, of a shoe having a trough in it, as and for the purpose specified, whereby a passage will be left beneath the gate through said trough when the gate is as low or lower than the delivery-edge of said trough, as described.

2. The combination, with a hopper and a gate, of an oscillatory shoe having a gently inclined floor, a trough along the lower edge of the incline, and a steeper incline descending from said lower edge, as described.



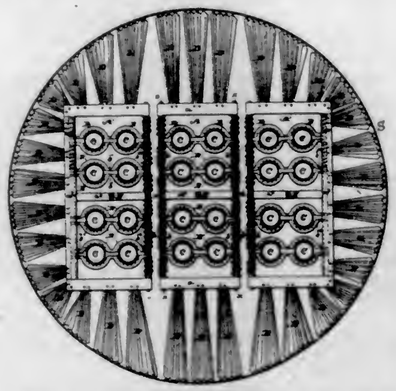
3. The combination, with a hopper having an opening at its bottom and a delivery along one edge thereof, of a shoe beneath said opening, having a trough whose bottom is lower than its delivery-edge, and means for shaking said shoe in a direction parallel with its delivery-edge, as shown and described.

295,853. ENGRAVING-MACHINE. IRA R. BEAN, Dryden, N. Y., assignor of one-third to Brown M. Barnes, same place. Filed Nov. 8, 1883. (No model.)

Claim.—1. The improved engraving-machine frame, consisting of plates *a b*, having leg or other supports, *d*, and connected by slotted cross-bars *c*, the plate *a*, having the slotted upright support *j* for the tool-frame head *k*, and the plate *b*, having the copy-table *a'*, connected to it, all substantially as described.

2. In an engraving-machine, the combination, with the head *k*, adjustably connected to its support, of the frames *l*, pivoted to the head *k*, the frame *s*, pivoted to frame *l*, and the frames *w v*, pivoted together and to the frames *s l*, respectively, the tool-staff *z* in the joints of the frames *w v*, and the style *t* in the end of the frame *s*, substantially as herein shown and described.

295,853.



3. The adjustable vise g' d' f' and slotted adjustable supporting-bars m' and n', in combination with the bed-frame plates a b, and the parallel tool-frame and engraving-tool, substantially as described.

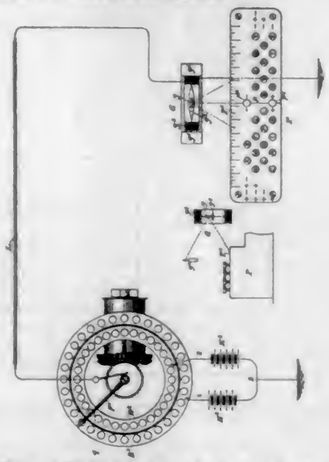
4. The table a', having flange j', and being pivoted on the lever f'', connected by link d'' with the bed-plate b, and having the catch-pawl h'', said table also being arranged to clamp the copy-plates b' against the edge of bed-plate b, and having notches i' for the holding-pawl, substantially as described.

5. In an engraving-machine, the combination, with the slotted plates a b, of the slotted bars n', adjustably attached to said plates a b, and the slotted plate m', for supporting adjustably a work-holding vise, substantially as described.

295,854. BOILER-SCRAPER. JOSEPH HENRY BEARE, Tombstone, Ariz. Filed July 28, 1883. (No model.)

Claim.—1. A boiler-scraper consisting of one or more frame-sections, annular internally serrated or toothed bands secured thereto and surrounding the tubes, toothed wings or shell-scrapers radiating from said frame-section to the inner circumference of the boiler, and a means for reciprocating said section or sections within the boiler, substantially as herein described.

2. In a boiler-scraper, the frame consisting of the end bars, a, side bars, a', and the springs b upon the side bars, a', in combination with the internally serrated or toothed independent semicircular bands or tube-scrapers B, having arms b^2, slotted or guided on the side bars, a', and resting on the springs b, and a means for reciprocating said frame within the boiler, substantially as and for the purpose herein described.



3. In a boiler-scraper and means for reciprocating it within the boiler, in combination with internally-serrated bands B, secured thereto and encircling the tubes, the toothed wings or shell-scrapers D, extending from the frame to the shell, said wings being made of spring material, substantially as and for the purposes herein described.

4. In a boiler-scraper, a frame having side and end bars and a cross-bar, a^2, the annular internally-serrated tube-scrapers B, secured within said frame, and the toothed wings or shell-scrapers D, extending therefrom, in combination with the piston or draw rod E, secured to the cross-bar a^2 and extending through the head of the boiler, whereby the frame may be reciprocated, substantially as herein described.

5. A boiler-scraper consisting of the independent frame-sections A A' A', the expanding annular internally-serrated tube-scrapers B, secured to said frames, the tapering toothed wings or shell-scrapers D, radiating from said frames, and the separate pistons or draw rods E, secured to each frame, said rods extending through the head of the boiler, whereby said frames may be reciprocated independently, substantially as herein described.

6. In a boiler-scraper, the side sections, A A', consisting of the spaced end bars, a, the inner side bars, a', and the outer spaced side bars, a^3, the springs b on said bars a', and the springs c within said spaced bars a^3, in combination with the internally serrated or toothed semicircular tube-scrapers B, having arms b^2, guided on the side bars and resting on the springs, and the radiating shell-scrapers D, bolted in the spaced bars, substantially as and for the purpose herein described.

295,855. TELEGRAPHIC SYSTEM. CHARLES G. BURKE, Richmond Hill, N. Y. Filed Dec. 17, 1883. (No model.)

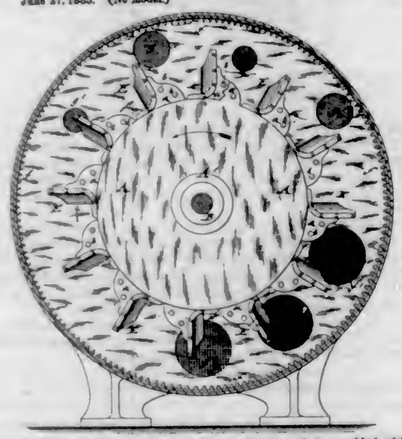
Claim.—1. The hereinbefore-described method of telegraphy, which consists in distinguishing different groups of characters by an electric current, impulse, or combination of electric currents or impulses, and the individual letters contained in such groups by distinctive intervals of time occurring after the group-signal has been given and before a succeeding signal is commenced.

2. The hereinbefore-described method of telegraphically indicating different characters of a series, which consists in dividing such series into arbitrary groups, designating each of the several groups by means of electric currents possessing particular characteristics, and indicating the individual letters in the several groups by different intervals of time succeeding the group-designating currents.

3. The hereinbefore-described method of telegraphy, which consists in indicating different groups of letters or characters by electric currents of distinguishing characteristics, and indicating the individual characters by different numbers of units of time elapsing after such groups are indicated, substantially as described.

4. The hereinbefore-described method of telegraphy, which consists in designating each particular group of letters by the transmission of electric currents or impulses, and each individual letter in such group by the interval elapsing before the transmission of a succeeding current or impulse.

5. The hereinbefore-described method of indicating the individual characters of a series, which consists in indicating the groups into which said series is divided by electric currents, and assigning to each character in each group a distinctive period of time by the occurrence of which, after the group has been indicated, that character is designated.



6. The hereinbefore-described method of indicating the different characters in a series, which consists in dividing such series into groups, designating each of the different groups by a characteristic signal, and indicating the individual characters in such groups by the measurements of a metronome.

7. The hereinbefore-described method of transmitting telegraphic messages, which consists in indicating different groups of character-recording keys, corresponding to the characters which constitute an embodiment of such message, by predetermined electric signals, and indicating the particular recording-key in a designated group by the interval occurring after such group has been designated before another signal is commenced.

8. The hereinbefore-described method of indicating the different keys of a character-recording key-board which correspond to the characters embodying a telegraphic message, which consists in indicating the side of such board upon which such keys are located by primal signals, the particular line of keys containing such keys by the same primal signal, or a combination therewith of other signal or signals, and the particular key in such line by the units of time measuring the intervals between the signals or combination of signals.

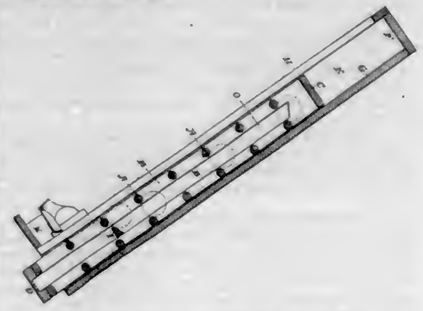
9. The hereinbefore-described method of indicating the different characters contained in a series, which consists in designating different groups of said series by the movements of a reflected ray of light, and indicating the different characters contained in such groups by the period during which the direction of such ray of light is unchanged.

295,856. PULVERIZING APPARATUS. LEWIS S. CHEESEMAN, Jersey City, N. J., assignor to C. M. Edward Schroeder, same place. Filed June 27, 1883. (No model.)

Claim.—1. The combination of an inclosing-casing, provided with projections on its inner circumference, a rotary disk within said casing, having tapered ejectors fixed thereto, and means for admitting and means for discharging the material, substantially as described.

2. The combination of an inclosing-casing provided with projections on its inner circumference, a rotary disk within said casing, provided with projections at its circumference, tapered ejectors provided with flanges bolted to said projections of the disk, the mouths of said ejectors being in radial lines with the center of the disk, and means for supplying and means for discharging the material, substantially as described.

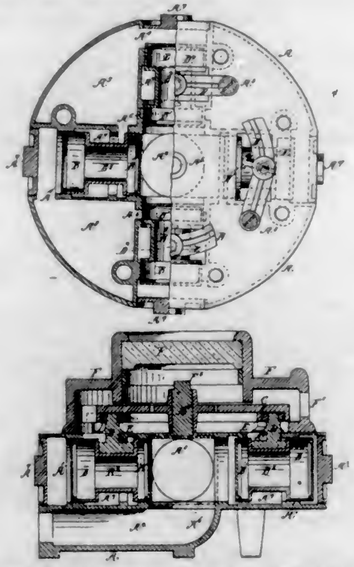
3. The combination of an inclosing-casing having interior projections on its inner circumference, and a rotary disk within said casing, provided with tapered ejectors at its circumference, said casing being also provided with a supply-hopper and an enlarged chamber at one side, and screened discharge-openings at its lower part.



4. A detachable ejector for pulverizing-machines, consisting of a tapered body having a mouth at one side and a discharge-opening at its contracted end, said ejector being provided with attaching-flanges, substantially as described.

5. The combination of an inclosing-casing having projections on its inner circumference, and openings in its side walls, lateral pressure-relief tubes connecting said openings, a rotary disk within said casing, provided with ejectors, and means for supplying and means for discharging the material, substantially as described.

6. The combination of an inclosing-casing having projections on its inner circumference, a chamber near its center, and openings in the side walls, radial connecting-tubes that extend from said openings to said chamber, a rotary disk within said casing, provided with ejectors, and means for supplying and means for discharging the material, substantially as described.



7. The combination of an inclosing-casing having projections on its inner circumference, a chamber near its center, and openings in its side walls, a rotary disk within said casing, provided with ejectors, means for supplying the material, means for discharging the same when pulverized, lateral pressure-relief tubes connecting the openings in the side walls of the casing, and radial conduit-tubes that extend from the openings in the side walls of the casing, near the circumference thereof, to the chamber near the center of the casing, substantially as described.

295,857. POOL-RACK. HUGH W. COLLENDER, New York, N. Y. Filed Feb. 13, 1884. (No model.)

Claim.—A contrivance for containing and effecting the ready discharge, into any suitable receptacle or tray, of the balls credited to the respective players in the game, composed of a sliding or descending and ascending pool-rack proper, arranged within any suitable guiding and supporting frame or case, and a stationary ball lifting and discharging bar or device, the whole arranged to operate in substantially the manner and for the purpose set forth.

295,858. MACHINE FOR MEASURING INCOMPRESSIBLE FLUIDS. JOS. E. CRISP, Somerville, assignor to John Stetson, Newton, Mass. Filed Oct. 12, 1883. (No model.)

Claim.—1. In a machine for measuring inelastic fluids under pressure, the combination of the pistons B B', the cam-disk C, the air-chamber F^2, the inlet A^2, and the outlet F^3, all substantially as described.

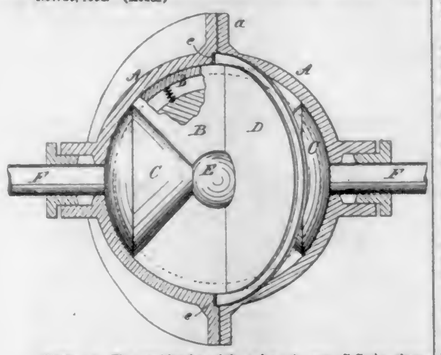
2. In a machine for measuring inelastic fluids under pressure, the combination of the inlet A^2, the cylinders A', the chambers A^3, connected

with the outer ends of the cylinders by the ports A^4, the chambers A^3, connected with the inlet A^2 by means of the ports A^6, the ports A^7, connecting with the chambers leading to the outlet-passage F^3, the piston-valve B B', the cam-disk C, and the pivoted connections D D', connecting the pistons with the cam-disk, all substantially as and for the purposes described.

3. In a machine using elastic or inelastic fluid, the combination of a cam, laid out and operating substantially as described, with the pistons moving in two cylinders at right angles to each other.

4. In a machine using elastic or inelastic fluid, a cam, as described, which allows the pistons periods of rest and maximum motion, substantially as and for the purpose set forth.

5. In combination with the pistons B B', cam C, and the swinging arms D, each of which is pivoted to the casing of the meter, and has the cam-pin D^2, which engages with the cam C, and an arm, D', which engages with the piston, all substantially as and for the purposes described.



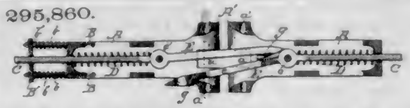
6. In a machine using elastic or inelastic fluid, the combination of a cam with single-acting pistons and piston-valves, whereby the pistons are caused to act in unison in opposite ends of the cylinders, and an automatic adjustment for wear thereof provided, all substantially as and for the purposes described.

7. The combination, in a meter or motor, of two or more cylinders, their ports A^4 A^6 A^7, chambers A^3, separate pistons B, piston-valve B', and the cam for returning the piston successively to a position to be again operated upon by the pressure, all substantially as and for the purposes described.

8. The combination, in a meter or motor, of a central chamber or pressure-supplied passage, two or more cylinders radiating therefrom, their pistons adapted by the pressure in the said central chamber or supply-passage to be moved successively outwardly in their respective cylinders, supply and exhaust ports and their valves, the outlet-passage F^3, and a cam for returning the pistons to a position to again take the pressure, all substantially as described.

9. In a motor or meter, the piston B, operated by the pressure of the fluid in one direction and by a cam in the reverse direction, and the intermediate pivoted connections, D D', connecting the piston with the cam, and shaped as described, whereby the piston is partially revolved during each complete reciprocation, all substantially as and for the purposes set forth.

295,859. ROTARY ENGINE. JOHN T. DAVIS, New York, N. Y. Filed Nov. 23, 1882. (Model.)



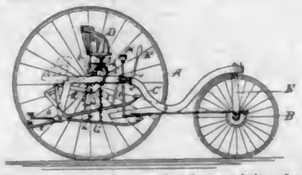
Claim.—1. The combination of the sphere A, cones C C, the piston B, and the shafts F F, all acting upon a common axis through the center of the sphere, and revolving upon a common center with the disk D, having a larger diameter than the internal diameter of the sphere, a slot of the exact diameter of the piston B, and a circular central aperture fitting the globe E of the piston B, and provided with packing *f*, which piston is set at an angle from a perpendicular, and the inlet and outlet passages *l m*, all of said parts being arranged substantially as shown, and for the purposes set forth.

2. The disk with a slot through its center and a circular aperture fitting the globe on the piston, through which the piston works in its revolutions around its axis, supported and kept in position by an outside ring or flange working in a groove turned in the case of the sphere at the point where the flanges come together.

295,860. CAR-COUPLING. JAMES F. DUFFY, South Chicago, Ill., and WILLIAM MCIVOR, Rochester, Ind., assignors of a part to Christopher C. Wolf, John B. Fraser, Daniel Jones, George W. Holman, and said McIvor, all of Rochester, Ind. Filed July 18, 1883. (No model.)

Claim.—1. A draw-head having the vertical side walls thereof cut away at or about their vertical centers, having suitable holes in the said

295,860.



side walls and in the transverse center of said draw-head for the reception of coupling-pins, and having a catch in the mouth of the same, the outer surface of which is beveled, as set forth.

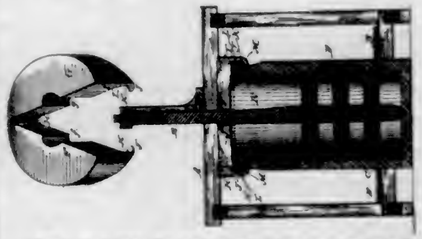
2. In a draw-bar, the combination, with a rod passing into the draw-bar from the rear, and having hinged to the end thereof, adjacent to the head of said draw-bar, a link, of a coil-spring surrounding said rod within the draw-bar, having one end preferably fastened to said bar, and the other end bearing against the closed end of said bar, substantially as set forth.

3. The combination, with a draw-bar, of a cushion consisting of four bolts secured in a suitable plate at one end and passing longitudinally into the rear of the said draw-bar, near the corners thereof, elastic rubber sleeves surrounding said bolt, and coiled springs surrounding said sleeves, substantially as and for the purpose set forth.

295,861. TRICYCLE. DAVID E. DUTROW, Washington, D. C., assignor of one-half to Charles W. Brady, Rockville, Md. Filed Dec. 26, 1883. (No model.)

Claim.—1. A motor for tricycles, &c., consisting of one or more bell-crank levers pivoted to the rear portion of the frame of the machine and back of the axle of the main driving-wheels, connected at one end to the axle or other driving mechanism, substantially such as described, by means of pitmen, and at the other end to treadles adapted to be moved in a vertical direction by the motion of the feet of the operator, as set forth.

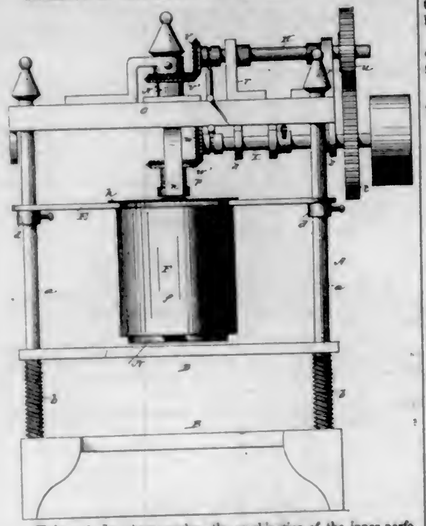
2. As a means for propelling tricycles, one or more bent or bell-crank levers pivoted to the rear portion of the frame of the machine and back of the axle of the main driving-wheels, connected at one end to the axle of the machine by means of pitmen, and the other or free ends of the bell-crank lever or levers extended forward within reach of the rider to form treadles by which the machine is operated.



3. A tricycle adapted to be moved or propelled by treadles or levers working in a vertical direction, in combination with a seat adapted to be adjusted toward or from said treadles, as set forth.

4. In a tricycle, the levers G, provided with the extensions e or foot-rests *m*, in combination with a supplemental seat, as and for the purpose set forth.

5. In a tricycle, the bell-crank levers provided with the treadle-extensions, connected at their upper ends to the axle or other driving mechanism by means of pitmen, in combination with springs I, as and for the purpose set forth.



6. The combination of the bell-crank levers provided with treadles and connected to the axle, as described, with the rods *u* and hand-levers P P.

295,862. CHURN. WILLIAM HENRY DYER, Midway, Va. Filed Nov. 16, 1883. (No model.)

Claim.—In a churn, the combination of the cream-receptacle D, having flange L and gasket M, and cover consisting of the hinged parts F and G, recessed at *f* and *g*, and having grooved flanges J and fastening H, as shown and specified.

295,863. BRAN AND FEED PACKER. SOLOMON B. ELLITHORP, Rochester, N.Y. Filed Jan. 24, 1884. (No model.)

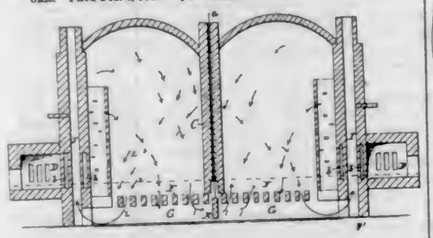
Claim.—1. In a bran-packer, the combination of the inner perforated cylinder, outer non-perforated cylinder, and horizontal perforated flange, substantially as described.

2. In a bran-packer, the combination of the two upright shafts, one running within the other, as described, and for the purpose set forth.

3. In a bran-packer, an auger constructed in two parts, as described, and for the purpose set forth.

4. The combination of the doubled-walled cylinder and the two uprights with packing devices, as described, and for the purpose set forth.

5. In a bran-packer, the combination of the adjustable auger and the two upright shafts, as described, and for the purpose set forth.



6. In a bran-packer, in combination with the vertical shafts and packing-means revolving the agitators therewith, as described and set forth.

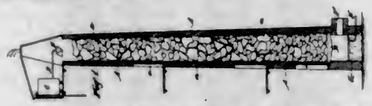
7. In a bran-packer, the combination of the inner vertical shaft with the lower compressing-auger and the suspended cylinder supporting the bag, substantially as described.

8. In a bran-packer, the combination of the upright shafts, augers, agitators, and cylinders, for the purpose set forth.

9. In a bran or feed packer, the combination of a suspended cylinder, inside and outside upright shafts, with augers and agitators, and an automatic falling table, all as described, and for the purpose set forth.

295,864. BRICK AND TILE KILN. WILLIAM A. EUDALY, Cincinnati, Ohio. Filed Feb. 4, 1884. (No model.)

Claim.—1. A kiln provided with a partition-wall in which are located chimneys communicating with and extending from the continuous flues at the bottom of the kiln only and leading to above and beyond the kiln-roof.



2. In a double kiln, continuous flues situated in the bottom of the kiln, and running under the partition-wall, and adapted to be divided at the partition-wall by dampers or cut-offs, as set forth.

3. In a kiln of the character described, the continuous flues, extending from side to side of the kiln, in combination with the partition-walls C and dampers K, as set forth.

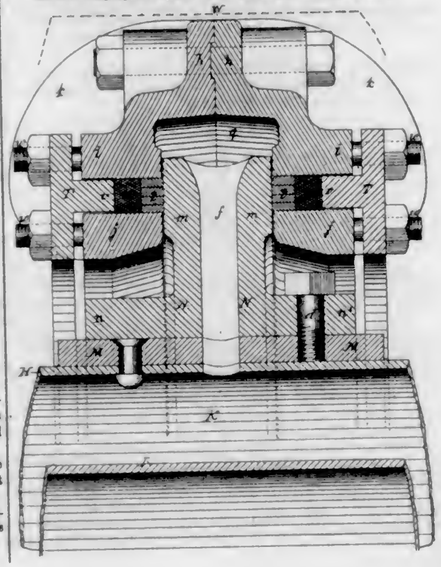
4. In a kiln-wall, air-chambers situated at the sides of the eye of the kiln, and within the walls of the kiln, arranged as described, so that the escaping heat from the kiln is made to pass through said air-chambers by means of chimneys situated within said air-chambers.

5. In a brick-kiln, the combination of the flues G, provided with dampers K, with the lateral or diagonal flues L and chimneys H, as set forth.

295,865. MANUFACTURE OF PAPER-PULP. DAVID OTTO FRANCKE, Korndal Molndal, Sweden. Filed Oct. 29, 1881. (No model.) Patented in England Oct. 11, 1881, No. 4,419, and Dec. 17, 1881, No. 5,532; in France Oct. 13, 1881, No. 145,317; in Canada Nov. 12, 1881, No. 13,695, and in Italy Dec. 31, 1881, XXVII, 2,020.

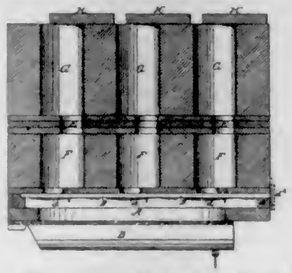
Claim.—1. As a preliminary step in the manufacture of paper, the method described of producing an acid-sulphite solution of proper strength and nearly the proper temperature for use in paper-pulp manufacture by presenting hot sulphurous-acid fumes to solid alkali in the presence of a small quantity of water allowed to trickle down over the solid surfaces, as herein specified.

2. The method described of manufacturing paper-pulp at a single operation by subjecting wood or analogous vegetable matter in a divided state to gentle mechanical agitation with acid sulphite at a temperature of about 300° Fahrenheit and a strength of 4° or 5° Baumé, all substantially as herein specified.



3. The process of manufacturing paper-pulp from wood and analogous vegetable fiber by subjecting the material in a divided state to the action of acid sulphite under heat and pressure at a single operation, substantially as herein specified.

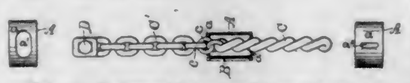
295,866. WHIFFLETREE. JOHN GRAVES, Green Point, N. Y. Filed Aug. 4, 1883. (No model.)



Claim.—A corrugated whiffletree made of one or more sheet-metal plates, with the sides turned up or down and the edges of the turned-up sides bent outward, as and for the purpose set forth.

295,867. WATER-JOINT FOR ROTARY PUDDLING-FURNACES. JOHN GRIFFEN and JESSE HALL, Jr., Phœnixville, Pa., assignors to the Phœnix Iron Company, same place. Filed June 22, 1883. (No model.)

Claim.—The combination of a rotary peddler and its ring *m* with the ring W, composed of two semi-annular parts, each composed of two segments, and each segment having a flange, *i*, and rib *j*, situated apart from each other, but connected together by webs *k*, all substantially as specified.



295,868. REED-ORGAN. JAMES BAILLIE HAMILTON, Hammersmith, County of Middlesex, assignor of one-third to Edward Archibald Ramsden, Isholme, England. Filed Feb. 4, 1884. (No model.)

Claim.—1. The combination of the pallets, sound-board, and reeds with cavity-boards, one above the other, the lower one containing the nostrils and the upper one the mouths, and an intermediate controlling-slide, substantially as set forth.

2. The combination of the pallets, sound-board, and reeds with cavity-boards, one above the other, the lower one containing the nostrils and the upper one the mouths, substantially as described.

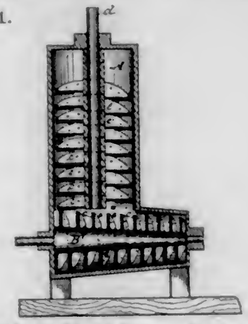
295,869. WATCH-CHAIN TIP. HENRY M. HERRING, North Attleborough, Mass., assignor of one-half to Oscar M. Draper, same place. Filed Dec. 17, 1883. (No model.)

Claim.—1. An improved watch-chain tip provided with apertures to receive the chain-link, and also to receive a ring secured to said link, the said tip being secured to the chain without solder.

2. The combination, with the tip having the flaring rim provided with the apertures a' a^2, of the chain C C', the part C being provided with a ring secured thereto by solder, substantially as and for the purposes described.

3. The combination, with a watch-chain, of a tip provided with two apertures adapted to be secured to the chain by passing a ring secured to one chain through the end link of the other chain, as described.

295,870. COMBINED BOUQUET AND TICKET HOLDER. WILLIAM H. HOGAN, Boston, Mass., assignor of one-half to Edward W. Pasture, same place. Filed May 14, 1883. (No model.)

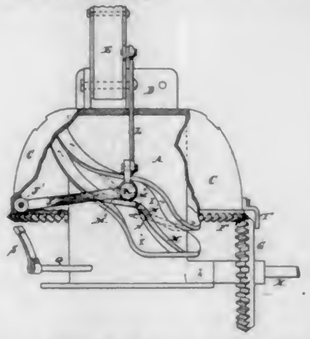


Claim.—1. A bouquet and ticket holder and cutter consisting of the shield *a*, the holder *g f f' e a*, the cutter *h*, and the hold *k i j l*, substantially as and for the purpose set forth.

2. The combination of the holder composed of the loop *g*, the bent portions *f f'*, and legs *e e* with the shield *a*, provided with the hook *d* and bent portions *b b*, the shield being of a single metal plate, all as shown and described.

295,871. BRICK AND TILE MACHINE. ABRAHAM HORROCKS, Bardolph, Ill. Filed Apr. 23, 1883. (No model.)

Claim.—1. In a brick or tile machine, a vertical chamber having therein a vertical pugging or mixing and forcing screw, said vertical chamber being joined and forming a part of a horizontal chamber, in which is placed a horizontal mixing and forcing screw, said screw being tapering and adapted to fill the space between the lower portion of the horizontal chamber and the lower end of the vertical screw, as set forth.



295,871.

2. The combination of the vertical screw with a tapering horizontal screw extending entirely across the horizontal chamber, as shown and described.

3. The combination, in a brick or tile machine, of the screw flanges or blades c with the steel plates *s s*, secured to their working-faces, substantially as shown and described, for the purpose set forth.

295,872. HARVESTER-RAKE. SAMUEL JOHNSTON, Brockport, N. Y. Filed Sept. 21, 1883. (No model.)

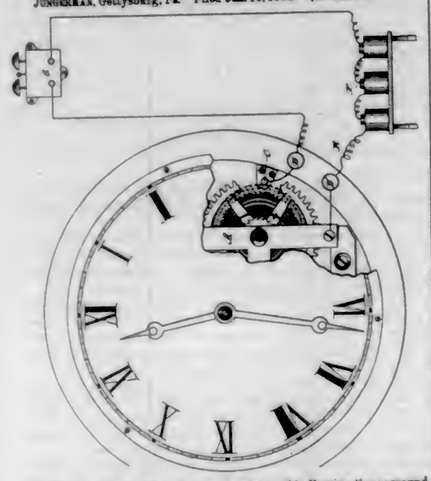
Claim.—1. A supporting-standard for the rake-head, made of large diameter, and provided on its circumferential surface with a rake-actuating camway, so shaped or formed that lines at right angles from the center of said standard through the actuating-surface of the camway shall lie in horizontal planes, substantially as and for the purpose specified.

2. A supporting-standard for the rake-head, made of large diameter, and provided on its circumferential surface with a rake-actuating camway, so formed that lines radiating at right angles from the center of said standard through the actuating-surface of said camway shall lie in horizontal planes, in combination with a rake-head, rakes, a hood carried by said rake-head, and covering said camway, rollers running in said camway and carried by said hood or rake-head, and connecting mechanism between said rollers and rakes, substantially as and for the purpose specified.

3. A supporting-standard for the rake-head, made cylindrical, provided with a journal or pin on its top and a main camway of great pitch upon its circumference, and an auxiliary camway, in combination with automatic switching devices, by which said auxiliary camway is opened or closed to the main camway, a rake-head, rakes, a hood inclosing said camways, rollers arranged to run in said camways and carried by said hood or rake-head, and links connecting said rollers with said rakes, substantially as and for the purpose specified.

4. The combination of standard A, having camway I and pin B, with hood C, rakes E, arms J, rollers K, and links L, substantially as and for the purpose specified.

5. The combination of standard A, having camway I and pin B, with hood C, having teeth F on its bottom, wheel G, rakes E, arms J, rollers K, and links L, substantially as and for the purpose specified.



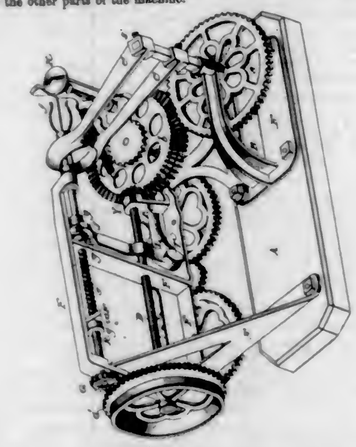
6. The combination of standard A, having camway I, camway I', switch M, having extension M', mechanism to actuate said switch, switch M^2, and pin B, with hood C, rakes E, arms J, rollers K, and links L, substantially as and for the purpose specified.

7. The combination of standard A, having camway I, camway I', switch M, having extension M', mechanism to actuate said switch, switch M^2, shaft N, having arm N', spring O, shaft Q, having arm P, spring R,

arm S, and tug T, pin B, with hood C, rakes E, arms J, rollers K, and links L, substantially as and for the purpose specified.

8. The combination of camway I, hood C, means to support said hood, rake-arms E, arms J, rollers K, and links L, substantially as and for the purpose specified.

295,873. ELECTRIC ALARM FOR SPRING-CLOCKS. EDWARD JUNGERMAN, Gettysburg, Pa. Filed Jan. 18, 1884. (No model.)



Claim.—1. The method herein described of indicating the unwound or spent condition of a spring-clock, which consists in closing an electrical circuit by the expansion of the mainspring and producing an audible or visible signal, substantially as described.

2. The combination, with a clock and its mainspring, of an electrical circuit, a battery, a signal set by the battery, and contact-points, of the circuit adapted to be closed by the expansion of the mainspring, substantially as shown and described.

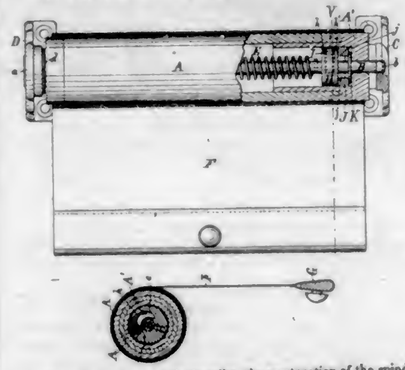
295,874. FRUIT-PARER. ALBERT N. KEOWN and WILLIAM G. TALLEY, Wilmington, Del. Filed Apr. 12, 1882. (Model.)

Brief.—The rotation of the fruit-holding fork is suspended at intervals for the placing of fruit thereon without interfering with the movement of the other parts of the machine.

Claim.—1. In a fruit-paring machine, the combination of a projection, *p*, upon a cogged turn-table, *b*, operating a lever, L, through the medium of a roller, *r*, on one arm of said lever, while the other arm is in gear with the sliding spring-operated fork-rod R through the medium of the jaw J and the grooved collar *o*, all substantially as set forth.

2. The combination of the fork-rod R, capable of a rotary and a lateral sliding movement by means of the pinion G and pivoted bell-crank lever L, having a fork or yoke thereon, with the spring S on said rod R, bearing at one end against the frame F, and at the other end against a loose washer, *w'*, said washer being prevented from turning on said rod by means of a projection of said washer engaging the edge of the frame, substantially as set forth.

3. In a fruit-paring machine, the combination of the fork-rod R, having bearings in the stationary frame F, with the pinion-wheel G and spur-wheel G', these wheels having cogs tapered in the direction of their axes, respectively, and said rod R having a lateral sliding movement greater than the width of the face of the pinion-wheel G, whereby, through the medium of the lever L, a cessation in the revolution of the fork *f* is caused, while the balance of the machinery continues to operate uninterruptedly.



4. In a fruit-paring machine, the combination of the spur-wheel *s* with the cogged turn-table *b*, provided with spur and crown teeth, with the bracket B, the shaft *s'*, and the doffer-arms and cups *c'' c''*, all substantially as set forth and herein specified.

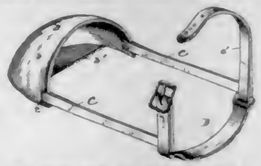
5. The frame F, provided with the horizontal parallel rods R D, the former carrying the pinion G, grooved collar *g*, and fruit-fork, and the latter carrying the pulley and driving gear-wheel P G', for rotating the rod R, and a pinion, Y, for rotating the turn-table *b*, in combination with the bell-crank lever L, pivoted to frame F in rear of the said rods, and engaging the grooved collar *g* with one end, and the other end bearing on the under side of the turn-table, which is provided with a cam projection, *p*, for operating said lever, whereby said lever will be rocked, causing said rod R to be thrown out of gear with the rod D, substantially as set forth.

6. The bell-crank lever L, pivoted to the frame F, one end of said lever engaging the fork-rod R, and the other end engaging the turn-table, the end engaging the turn-table being provided with slotted bearings *s* in the frame F, whereby bending of the lever is prevented, and means of support and guidance is afforded the lever, substantially as set forth.

7. An apple-parer consisting of the two parallel horizontal rods R D, mounted in frame F, and geared together by gear-wheels G G' at their outer ends, the fork *f*, collars *g g' w'*, and spring S on said rod R, the bell-crank lever L, engaging said collar *g* with one end, and the under side of the table-wheel with its other end, said table-wheel having crown-teeth on its face and spur-teeth on its periphery, the former meshing with cog-wheel *s*, whose shaft *s'* has bearings in the bracket B, and is provided with the cup-shaped doffer-arms *c'' c''*, substantially as set forth.

295,875. SPRING SHADE-ROLLER. DANIEL E. KEMPSTER, Boston, Mass. Filed Oct. 4, 1883. (No model.)

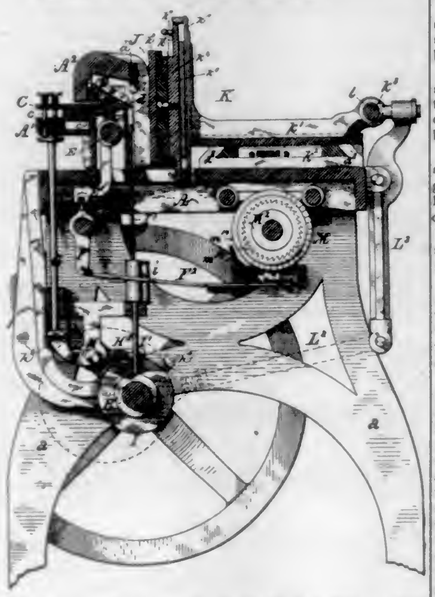
Claim.—1. In a spring shade-roller, the combination of the spindle B, provided with a lip, *b*, cam H, having legs *j j*, locking-piece I, friction-disk J, washer K, and cap A', all constructed and arranged substantially as set forth.



2. In a spring shade-roller having a fibrous friction-disk inside its end cap, the combination therewith of an oscillating locking-piece, operating, substantially as described, within the bore of the cap, to prevent the spring from unwinding when the roller is removed from its brackets.

3. A spring shade-roller having a spindle-cam recessed to receive entire an oscillating locking-piece whose center of motion or pivot-point is above and eccentric to the center of the spindle.

295,876. ANTISEPTIC SOLUTION. JOHN F. KENNEDY, Boston, Mass. Filed Oct. 15, 1883. (No specimens.)



Claim.—The herein-described compound, consisting of water, alum, granulated sugar, saltpeter, and gum-arabic, for the purpose specified.

295,877. TOE-CAP FOR BOOTS OR SHOES. FREDERICK H. KENNEDY, Auburn, N. Y. Filed Jan. 18, 1884. (No model.)

Claim.—The herein-described toe-cap, formed of a single piece of metal, and consisting of the upper or toe portion, *b*, and the lower portion or strip, *b'*, said cap having slots for the attachment of straps *c*, having at their ends a plate, D, formed at its ends with slots for the attachment of cross-straps, substantially as set forth.

295,878. MACHINE FOR MAKING MATRICES. ROBERT L. KENNERLY, Philadelphia, Pa., assignor to the American Matrix Machine Company, of New York. Filed Dec. 10, 1883. (No model.)

Claim.—1. The combination, substantially as set forth, of a movable series of type or character dies, a fixed abutment, and mechanism for locating any one of said dies in a determined position relatively to said abutment.

2. The combination, substantially as set forth, of a movable series of type or character dies, a fixed abutment, a lateral guide, mechanism, substantially as described, for locating any one of said dies in determined position relatively to said abutment and guide, and mechanism for clamping the located die against said abutment and guide.

3. The combination, substantially as set forth, of a movable series of type or character dies, a fixed abutment, mechanism, substantially as described, for moving any one of said dies into and fixing it in position against said abutment, a holder or carrier adapted to receive a matrix block or blank, and mechanism, substantially as described, for moving said carrier toward the face of the die when fixed.

4. The combination, substantially as set forth, of a movable series of type or character dies, a fixed abutment, a lateral guide, mechanism, substantially as described, for moving any one of said dies into and fixing it in position against said abutment and guide, a holder or carrier adapted to receive a matrix block or blank, and mechanism, substantially as described, for moving said carrier toward the face of the die when fixed.

5. The combination, substantially as set forth, of a movable series of type or character dies, a fixed abutment, mechanism, substantially as described, for moving any one of said dies into and fixing it in position against said abutment, a holder or carrier adapted to receive a matrix block or blank, mechanism, substantially as described, for moving said carrier toward the face of the die when fixed, and a stationary plate or shield interposed between the face of the die and its abutment, and acting to limit the traverse of the matrix-block toward the latter.

6. The combination of a rigidly-held die, a reciprocating matrix-block holder, and a fixed guard or shield, substantially as described and shown.

7. The combination, substantially as set forth, of a movable series of type or character dies, members of which are of different widths of face respectively, a fixed abutment, a holder or carrier adapted to receive a matrix block or blank, mechanism for moving any one of the dies into and fixing it in position relatively to the fixed abutment, mechanism, substantially as described, for moving the matrix-block carrier toward the face of the die when located and fixed, and feed mechanism, substantially as described, connected with and actuated through the mechanism which locates each die in such manner as to impart to the matrix-block carrier a lateral traverse equal to the width of face of the located die.

8. The combination, substantially as set forth, of a sliding key-board and a series of type or character dies, each pivoted freely and independently thereon.

9. The combination, substantially as set forth, of a movable key-board, a series of type or character dies pivoted therein, and a series of operating-keys.

10. The combination, substantially as set forth, of a key-board, a series of type or character dies pivoted thereon on stems or pivots having a limited degree of movement in the line of the die-stocks, and springs bearing against the blocks or supports of said pivots.

11. The combination, substantially as set forth, of a frame or table, a stationary abutment secured thereto, impressing mechanism, substantially as described, mounted thereon, and a key-board carrying a series of type or character dies, and adapted to move longitudinally on the table and to be removed therefrom at pleasure.

12. The combination, substantially as set forth, of a frame or table, a stationary abutment secured thereto, a key-board adapted to move longitudinally thereon, a series of type or character dies journaled in said key-board, a series of operating-keys fitted in said key-board, and an opening in the table adapted to engage any one of said keys, these members being combined for joint operation, so that the engagement of any selected key with said opening shall locate a corresponding die in determined position relatively to the fixed abutment.

13. The combination, substantially as set forth, of a frame or table, an abutment fixed thereto and adapted to serve as an end bearing for the stock of a type or character die, and a shield or guard-plate formed upon or secured to the frame, and having its face parallel with the abutment and closer thereto than the distance between the end of the die-stock and the face of the die.

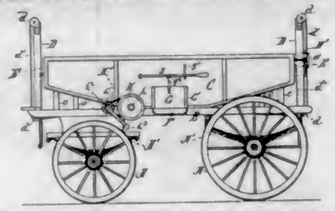
14. The combination, substantially as set forth, of a frame or table, a fixed abutment adapted to serve as an end bearing for the stock of a type or character die, and a lateral guide or socket adapted to serve as a side bearing for said die-stock.

15. The combination, substantially as set forth, of a frame or table, a fixed abutment and a lateral guide thereon, a key-board which is movable on said table transversely to said abutment and guide, a series of type or character dies pivoted freely and independently on said key-board, a series of operating-keys whereby any one of said dies may be located in determined position relatively to said abutment and guide, a clamping-bar actuated primarily by means of the key which locates a die, to clamp the located die in position for forming an impression, and a retracting device, substantially as described, connected to and operated by said clamping bar, to return the located die to proper position to admit of the movement of the key-board requisite for the location of another die.

16. The combination, substantially as set forth, of a frame or table, a fixed abutment thereon, mechanism for locating and holding the stock of any one of a movable series of type or character dies in position against said abutment, an intermittently-rotating driving-shaft actuated to make a single revolution in and by the location of each die-stock, a holder or carrier adapted to receive a matrix block or blank and to impart to the latter movement in three directions, a spring or weight connected to the matrix-block carrier and tending to move the same in a direction parallel with the face of the located die, mechanism, actuated by the location of each die, which permits such spring or weight to impart a determined traverse to the matrix-block carrier transversely to the face of the die, and mechanism, substantially as described, connected with and operated by the driving-shaft, for pressing the matrix-block against the face of the located die subsequent to said transverse movement of the carrier.

17. The combination, with a feed mechanism, substantially as described, of a rocking shaft adapted to be moved axially by a connection with a driving-shaft, a clutch-piece which is movable longitudinally on said rocking shaft, a sliding key-board which imparts longitudinal movement to said clutch-piece, and a series of double-armed rockers, each of which is coupled at one end to mechanism for partially rotating one of the disks of the feed mechanism, and is adapted to be engaged at the other by the clutch-piece, substantially as set forth.

18. The combination, with a feed mechanism, substantially as described, of a matrix-block carrier, a stationary abutment, a type or character die adapted to be located and fixed in position against said abutment, and mechanism, substantially as described, for pressing a matrix-block held by said carrier against the face of a die when so located, substantially as set forth.



19. The combination, with a feed mechanism, substantially as described, of a matrix-block carrier, mechanism, operated by an intermittently-rotating driving-shaft, for moving said carrier toward and from the face of a fixed type or character die, and mechanism, substantially as described, operated by said driving-shaft, for intermittently relieving the disks of said feed mechanism from the tension of the spring thereof, substantially as set forth.

20. The combination, with a feed mechanism, substantially as described, of a matrix-block carrier, mechanism, substantially as described, for moving said carrier in a direction opposite to its traverse when subject to the traction of the spring of the feed mechanism, and mechanism, substantially as described, for locking the carrier against movement during adjustment of the feed-disks, substantially as set forth.

21. A matrix-block holder having a face-plate adjustable upon a central pivot to any desired angle in the plane of its face, substantially as described and shown.

22. The combination of the centrally-pivoted face-plate, the toothed wheel fast to the face-plate, and the holding-pawl, whereby the matrix-block may be set and held at any angle in the plane of its face, substantially as described and shown.

295,879. DUMPING-WAGON. WILLIAM LEONHARDT and JOHN H. LEONHARDT, Baltimore County, Md. Filed Sept. 18, 1883. (No model.)

Claim.—1. The body of a dumping wagon or cart pivoted on its longitudinal axis and provided with a door, G, on the side thereof, in combination with means, substantially as described, for dumping the body sidewise, for the purpose set forth.

2. The combination of the body, pivoted at its ends, the swinging ratchet-bars *e*, the standards D, and the pin or loop *e'*, as set forth.

3. The combination of the body C, adjustable bar d^3, having ends d^3, the base B, having standards D, and the chains and pulleys, whereby said bar d^3 may be elevated, as set forth.

4. The combination of body C, standards D, bar d^3, pulley *d*, chains *d'*, shaft *h*, and its turning mechanism, as set forth.

5. A dumping cart or wagon the body whereof is pivoted at its ends and has its bottom inclined downward from each end toward the center, as and for the purpose set forth.

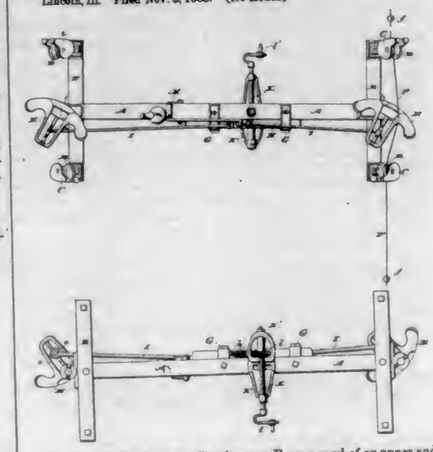
295,880. IMPLEMENT FOR ATTACHING HANGERS TO CEILINGS. PIERRE LORILLARD, Jr., New York, N. Y. Filed Feb. 6, 1884. (No model.)

Claim.—1. A combination implement consisting of a handle to which are attached plates 4 5, constructed to form a holder adapted to support the head of an eye or hook and a seat for the shank thereof, an anvil to support the head of a nail or tack, and spring-jaws to embrace the same, and a hook, as 3, substantially as described.

2. In a compound implement, the combination, with the handle, of plates 4 5, set apart and provided with projections 7 8, thereby constituting a holder adapted to support the head of a hook or eye and embrace its shank, substantially as described.

3. In a compound implement, the combination, with the handle, of the anvil 9 and jaws 11 12, substantially as described.

4. In a compound implement, the combination, with the handle and with plates 4 5 and projections 7 8, of the hook 13, substantially as described.



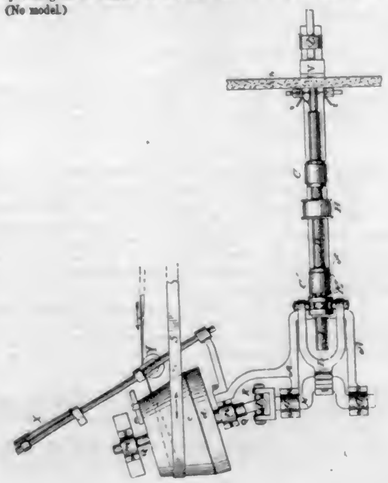
295,881. WATERPROOFING COMPOSITION. ALBERT MINK, Newark, N. J., assignor to Christian F. Mueller, same place. Filed July 23, 1883. (No specimens.)

Claim.—The waterproofing composition formed of tallow, rosin, creosote, rape-seed, and ammonia, combined substantially in the manner and proportions herein specified.

295,882. COMPOSITION FOR CLEANING TEXTILE FABRICS, WOODEN AND METALLIC SURFACES, &c. FRANCES S. MONROE, Oakland, assignor to Isabel M. Somers, San Francisco, Cal. Filed June 13, 1883. Renewed Jan. 25, 1884. (No specimens.)

Claim.—The herein-described composition of matter, to be used for cleansing textile fabrics, wooden and metallic surfaces, consisting of water, aqua-ammonia, white castile-soap, borax, and nitrate of potash, in the proportions specified.

295,883. CHECK-ROWER FOR CORN-PLANTERS. JOHN P. MOOS, Lincoln, Ill. Filed Nov. 5, 1883. (No model.)



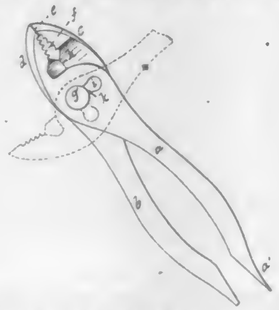
Claim.—1. The pivoted vibrating cam E, composed of an upper and a lower section, between which is a space for the check-row line, and provided at each side with guide-bars *e*, pocket e^2 at the rear of the cam, and post *e'*, connecting the rear ends of the bars, and situated outside of and opposite the pocket, in combination with the check-row line F, provided with balls *f*, substantially as shown and described.

2. In combination with the pivoted vibrating cams E, the rack-bar H A, connections I, shaft L, pinion *l*, crank *l'*, and reciprocating corn-dropping mechanism, substantially as and for the purpose set forth.

3. The rack-bar H, reciprocated through suitable connecting mechanism by the vibrating cam, in combination with the shaft L, carrying pinion *l* and crank *l'*, the lever M, provided with weighted portion *m*, and the rod *n*, connected with the rack-bar H, substantially as and for the purpose described.

295,884. CORK-CUTTING MACHINE. FREDERICK J. NUTTING, Brooklyn, assignor to Truslow & Co., New York, N. Y. Filed Mar. 29, 1883. (No model.)

Claim.—1. The combination, substantially as described, of a bench, a knife-cylinder arranged transversely to said bench and at an incline thereto, provided with a cylindrical knife, and means for imparting rotary and reciprocatory motion to said cylinder.



2. The combination, substantially as described, of a reciprocatory rotary knife-cylinder provided with a cylindrical knife, a cylindrical driving-pulley, a cone-pulley the shaft of which is at an angle to the shaft of the driving-pulley, whereby the outer or belt-bearing face of the cone-pulley is parallel with the face of the cylindrical pulley, a belt stretched between said pulleys, and mechanism between the shaft of said cone-pulley and said cylinder for converting the rotary motion of the former into the reciprocatory rotary motion of the latter.

3. The combination, substantially as described, of a reciprocatory knife-cylinder, a crank-shaft at a right angle thereto, means for connecting the crank of said shaft with said cylinder, a shaft arranged at an obtuse angle to said crank-shaft, a universal joint connecting said shafts, and a cone-pulley on said inclined shaft, the belt-bearing face of which is parallel, or nearly so, with the face of the driving-pulley.

4. The combination, substantially as set forth, of a reciprocatory knife-cylinder, a crank-shaft at an angle thereto, means for connecting the crank of said shaft with said cylinder, a shaft arranged at an obtuse angle to said crank-shaft, a universal joint connecting said shafts, a cone-pulley on said inclined shaft, the belt-bearing surface of which is parallel, or nearly so, with the face of the driving-pulley, an adjustable belt-shifting pulley between said driving and cone pulleys, a treadle, and means for connecting said belt-shifter therewith.

5. The combination, substantially as described, of a reciprocatory rotary knife-cylinder provided with a cylindrical knife, a crank-shaft, means for connecting the crank of said shaft with said cylinder, a shaft at an obtuse angle to said crank-shaft, a universal joint connecting said shafts, a cone-pulley on said inclined shaft, provided with a spring-stop, and a belt-shifting device provided with a stop, with which said spring-stop comes in contact.

295,885. PIPE-TONGS. HERBERT S. PULLMAN, Rockville, assignor to Charles E. Billings, Hartford, Conn. Filed Feb. 6, 1884. (No model.)

Claim.—1. As an improved article of manufacture, pivoted lever-handles with jaws substantially as described, one handle bearing a stud, with a shank of oblong section, and the other handle having a plural number of socket-bearings joined by a narrowed slot, all substantially as described.

2. The combination of lever-handles *a* and *b*, having jaws *c* and *d*, the handle *a* bearing the pivot-stud *g*, with oblong shank, and the handle *b* having a plural number of sockets, *i i'*, joined by the slot *k*, whereby the jaws may be adjusted, all substantially as described.

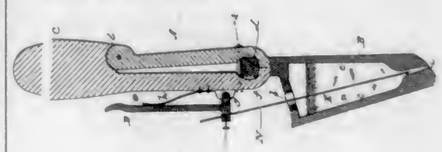
295,886. PROCESS OF PURIFYING HYPOSULPHITE SOLUTIONS USED IN LEACHING ORES. EDWARD HUBBARD RUSSELL, Park City, Utah. Filed Aug. 23, 1882. Renewed Feb. 27, 1884. (No specimens.)

Claim.—1. In the art of leaching ores with hyposulphite solutions wherein the solutions are reused after the precipitation of the precious metals therefrom, the process of neutralizing the alkaline impurities, which consists in adding an acid to the solution substantially in the proportion and manner described.

2. In the art of leaching ores with hyposulphite solutions, the process of restoring the solutions after they have been used, consisting in introducing into the solutions sulphuric acid to neutralize the impurities therein, substantially as described.

295,887. PROCESS OF SEPARATING METALS FROM ORES AND METALLURGICAL PRODUCTS. EDWARD HUBBARD RUSSELL, Park City, Utah. Filed Dec. 10, 1881. (No specimens.)

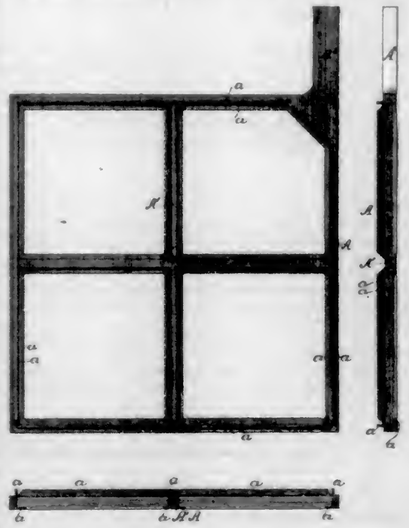
Claim.—1. The process of removing precious metals and lead from their ores or metallurgical products and separating them from each other, consisting in dissolving them both out of the ore or product with a hyposulphite solution, and then adding to the resulting solution a soluble carbonate to precipitate the lead, substantially as set forth.



2. The process of removing precious metals and lead from their ores and from metallurgical products and separating them from each other, consisting in leaching the ore or product with a hyposulphite solution, and then adding to the solution containing the precious metals and lead a soluble carbonate to precipitate the lead, substantially as described.

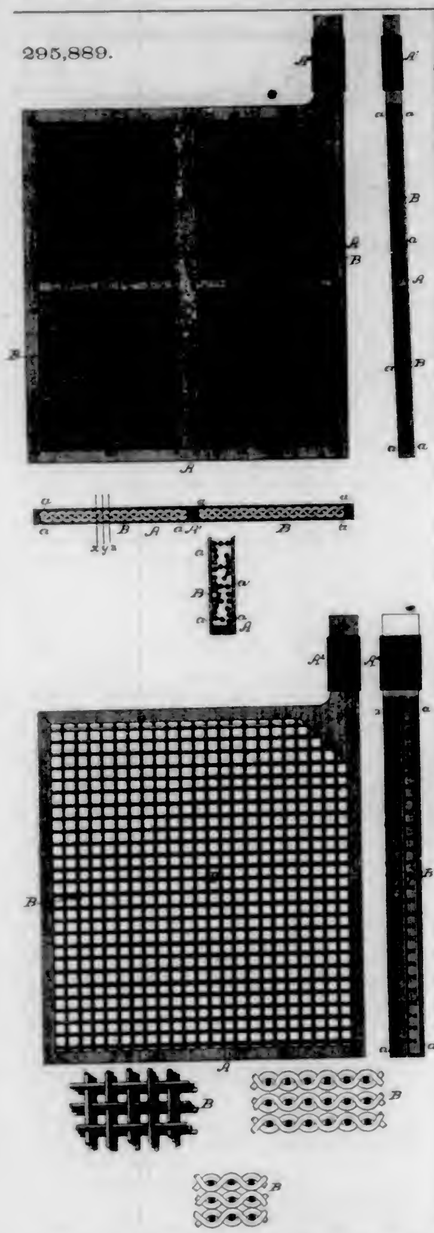
3. The process of separating precious metals and lead from ores and metallurgical products and from each other, consisting in leaching the ore or product with a hyposulphite solution, to dissolve out both the precious metals and lead, then adding to the resulting solution a soluble carbonate to precipitate the lead, and finally removing the remaining solution and precipitating therefrom the precious metals, substantially as described.

4. As an improvement in the art of extracting metals from their ores or from metallurgical products, the process consisting in leaching the ore or product with a hyposulphite solution, to dissolve out both the precious metals and the lead, and subsequently precipitating the lead and precious metals separately from the solution, substantially as described.



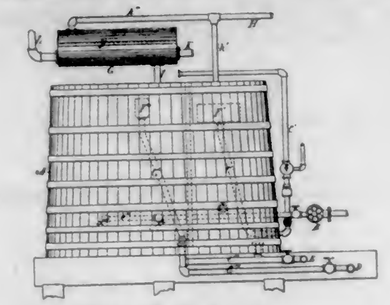
5. The process of separating metals from their ores and from each other, consisting in treating the ore with a hyposulphite solution, to dissolve the precious metals and the lead, then adding a soluble carbonate to precipitate the lead, and finally treating the solution separately to precipitate the precious metals.

295,888. SOLDERING-TOOL. WILLIAM M. RYAN, Shenandoah, Iowa. Filed July 30, 1883. (No model.)



Claim.—The soldering-tool described, consisting of the iron B, having the filling and discharge apertures, and provided with the receptacle E, having its inner walls converging to the discharge-aperture, and the upward loop-extension *d*, the handle C, having the hooked shank-extension *e* and shoulder *i*, the pivoted hooked arm A, spring *h*, fulcrum-bearing *g*, lever D, stopper-rod N, set-screw 3, and rod and nut for securing the handle to the iron, substantially as shown and described.

295,889. BATTERY ELECTRODE OR ELEMENT. ELI T. STARR, Philadelphia, Pa., assignor of one-half to H. M. Lewis and James W. White, both of same place, and William J. Peyton, Washington, D. C. Filed Oct. 30, 1883. (No model.)



295,889.

Claim.—1. An electrode having two or more sheets or strips of interlaced or woven wire placed with the broad sides of said sheets or strips facing each other, and surrounded at their edges and united thereat to an open-sided frame, substantially as described.

2. A secondary-battery electrode consisting of an open-sided frame having set therein layers or folds of woven or interlaced wire in the form of a flat plaited or braided strip or strips, said frame surrounding the edges of the plate formed by said folds or layers and being firmly united thereto, substantially as described.

295,890. PURIFYING WATER. WM. TWEEDDALE, Topeka, Kans. Filed July 31, 1883. (No model.)

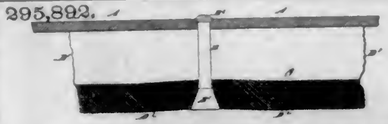
Claim.—1. The combination of the tank A and its compartments *a' a'' a'''* with the agitator B, the discharge-pipes C' and D, the waste-pipe E, the floating filters F' F'' F''', and heater G, all constructed, arranged, and operated substantially as and for the purpose hereinbefore described.

2. The process of eliminating carbonates and sulphates from water, consisting in introducing into and thoroughly mixing with a quantity of water sufficient milk of lime to make an oversaturated solution of lime-water, which, after precipitation, is inducted into the water to be treated, which, having already been highly heated, is thoroughly agitated and allowed more or less time to settle, when carbonate of soda is added, the water being kept highly heated and the mixture again agitated and allowed to settle, substantially as hereinbefore described.

295,891. FEED-WATER HEATER. BENJAMIN WEBSTER, Bridgeport, Conn., assignor of one-half to the Belknap Manufacturing Company, same place. Filed Nov. 15, 1883. (No model.)

Claim.—1. In a feed-water heater, the combination, with the exhaust-steam-inlet pipe, of the water-exit arranged at right angles to said pipe, substantially as set forth.

2. In a feed-water heater, the water-chamber constructed with a rectangular lower portion, in combination with the steam-inlet pipe extending downward at right angles to said portion and forming the upper wall thereof, substantially as described.



3. In a feed-water heater, the combination, with the neck or upper portion of the reservoir, of the steam-inlet pipe extending within said portion in such manner that a water-chamber is formed whose exit is at right angles to said pipe, whereby the water is discharged in a sheet directly across the current of the steam, substantially as shown and described.

295,892. RUNNER FOR SCRAPERS. LEVI D. YORK, Portsmouth, Ohio, assignor to the York Manufacturing Company, of Ohio. Filed Sept. 10, 1883. (No model.)

Brief.—Hollow scraper-runners are made with a thick bottom and sides flaring upward and outward therefrom.

295,892.

Claim.—1. The hollowed runners for scrapers herein described, having a thick bottom, D^2, with inclined sides D', adapted to serve as herein specified.

2. A scraper having hollow runners D' D^2, applied and secured substantially as herein specified.

PHOTO-LITH. NORRIS PETERS WASHINGTON, D.C.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE DEMMING.

Decided March 12, 1884.

No matter whether an inventor is a pioneer in his line or not, he cannot make a valid claim the scope of which is so extensive as to include means substantially different from those described, even though the same result may be produced by such different means.

An inventor may, however, employ language sufficiently comprehensive to include colorable variations of his invention, mechanical equivalents thereof, and (if the state of the art will justify it) modifications differing in form but embodying the same principles.

Claims which depend upon such words as "means" and "mechanism" to express their patentable difference over the prior state of the art are too broad.

And it is not sufficient that the claims contain words of reference to the specification where the invention is described, for under the statute it is the *office of the claims* to set forth specifically and definitely the actual invention covered by the patent.

APPEAL from the Primary Examiner.

LOCKS.

Application of Bernard Demming filed June 22, 1883.

Messrs. Baldwin, Hopkins & Peyton for the applicant.

BUTTERWORTH, *Commissioner:*

Three claims are presented in this case, which are as follows:

1. The combination, substantially as set forth, of a lock, bolt, tumbler or tumblers, a dog or dogs for locking one or more of the tumblers in an abnormal position when it has been moved past the proper point to permit the movement of the bolt, and means for acting directly on the dog or dogs with the key to restore the lock to its normal position.

2. The combination, substantially as set forth, of the bolt, the pivoted tumbler or tumblers notched on their rear ends, and detents or dogs which engage with one or more of the tumblers when they are moved past the proper point to permit the passage of the bolt, and the extended ends of the dogs by which the dogs may be thrown out of engagement with the tumblers, as described.

3. The combination, substantially as set forth, of a lock, bolt, tumbler or tumblers, a detent or detents for locking one or more of the tumblers in an abnormal position when it has been moved past the proper point to permit the movement of the bolt, and mechanism by which the detents may be acted directly upon and tripped by the proper key only.

Of these claims only the first and third are involved in this appeal. The first claim depends upon the words "and means for acting directly on the dog or dogs with the key to restore the lock to its normal position" to express its patentable difference over the prior state of the art. Were it not for such words said claim would be substantially answered by a British patent cited in reference. The words "*mechanism* by which the detents may be *acted directly upon* and tripped by the *proper key only*" are employed to distinguish between the combination covered by the third claim and said British patent.

An examination of the description and the drawings of the application shows a certain specific mechanism which acts directly in conjunction with the proper key (and can act with no other form of key) for tripping the dogs or detents and permitting the tumblers to return to their normal position. A portion of such mechanism is definitely expressed in the second claim by the words "*extended ends* of the dogs;" but the first and third claims, as we have seen, use such vague and indefinite terms as "means" and "mechanism," with no limitation except the function or result intended to be performed or accomplished.

If construed literally, the portions of the first and third claims upon which they depend for novelty embrace all construction or arrangements whereby a certain desired result can be attained, and if allowed and upheld would involve a departure from the settled practice, which very properly restricts a claim to the particular device mentioned and described or its palpable equivalent.

The limit to the scope of a patent which may be obtained by an inventor is clearly prescribed by the Supreme Court in *O'Reilly* v. *Morse*, (15 Howard, 62.) They say:

> Whoever discovers that a certain useful result will be produced in any art, machine, manufacture, or composition of matter by the use of *certain means* is entitled to a patent *for it*. * * * The patent confers on him the exclusive right to use the means *he specifies* to produce the result or effect he describes, and *nothing more*, and it makes no difference in this respect whether the effect is produced by chemical agency or combination, or by the application of discoveries or principles in natural philosophy known or unknown before his invention, or by machinery acting altogether upon mechanical principles. In either case he must describe the manner and process as above mentioned and the end it accomplishes; and any one may lawfully accomplish the same end without infringing the patent if he uses *means substantially different from those described*.

And in *Tilghman* v. *Proctor* (19 O. G., 859) the same court quote the language used in *O'Reilly* v. *Morse* above recited, and then say:

> It seems to us that this clear and exact summary of the law affords the key to almost every case that can arise.

This latter case was decided so recently as 1881, and therefore is the more valuable.

It follows from these decisions that, no matter whether an inventor is a pioneer in his line or not, he cannot make a valid claim the scope of which is so extensive as to include "means substantially different from those described," even though the same result may be produced by such "different" means. He is not entitled to cover every means for effecting the exact purpose his invention is designed to accomplish. (See *Burr* v. *Duryee*, 1 Wall., 531; *Case* v. *Brown*, 2 Wall., 230; *Marsh* v. *Dodge*, Fisher, 502, and others.) By the foregoing, however, it is not meant that an inventor may not employ language sufficiently comprehensive to include colorable variations of his invention, mechanical equivalents thereof, and (if the state of the art will justify

it) modifications differing in form, but embodying the same principles, for this he may properly do without coming in conflict with the rule announced by the courts.

In the first and third claims of the present application the terms employed to define the gist of the invention are too broad. They cover not only variations, equivalents, and modifications of the invention described, but also "means substantially different" therefrom, if such should in the future be invented. Indeed, the claims, having specified the desired result, indicate a purpose to monopolize everything that can accomplish such result. It may be urged because the specification clearly describes a particular mechanism for effecting the result, and the claims specify "means" and "mechanism," and contains words of reference to the specification, that the courts would construe them by the specification and sustain them. It is true the courts have been very liberal in this respect, and have in some instances upheld patents containing claims of a similar character, but even then they have commented unfavorably upon the form of the claims.

In the case of *Case* v. *Brown*, *supra*, the Supreme Court says:

> We have had occasion to remark in a late case (*Burr* v. *Duryee*, 1 Wall., 535; see also *McCormick* v. *Talcott*, 20 How., 405) on this new art of expanding machines into patents for a mode of operation, a function, a principle, an effect, or result, so that by an equivocal use of the term "equivalent" a patentee of an improved machine may suppress all further improvements. It is not necessary again to expose the fallacy of the arguments by which these attempts are sought to be supported, *though we cannot hinder their repetition.*

In *Merrill* v. *Yeomans* (11 O. G., 972) the same Court says:

> The developed and improved condition of the patent law and of the principles which govern the exclusive rights conferred by it leave no excuse for ambiguous language or vague descriptions. The public should not be deprived of rights supposed to belong to it without being clearly told what it is that limits these rights. The genius of the inventor constantly making improvements in existing patents, a process which gives to the patent system its greatest value, should not be restrained by *vague* and *indefinite* descriptions of claims in existing patents from the salutary and necessary rights of improving on that which has already been invented.

Without citing other cases in which the Court used similar language, I may add that it is clear the allowance of claims of the character under consideration finds no favor whatever with the Supreme Court, and is in terms condemned, which indicates the purpose of the Court to require that the claims shall be so framed as to point out distinctly and unequivocally the actual invention, and not resort to the specification to limit or extend the scope of the claims. I am confirmed in this view by observing the course of the decisions of the Supreme Court in the last few years in regard to reissues, and also by their ruling in the case of *Lehigh Valley Railroad Company* v. *Mellon*, (20 O. G., 1881.) At any rate, this should be the practice of the Patent Office. It is not sufficient under the statute to merely set forth an invention in the description, but it must be supplemented by a specific and well-defined claim to the part, improvement, or combination which the inventor regards as his property. The purpose of the description is to describe the manner of making, constructing, and using the invention, while the office of the claim is to define and accurately describe it.

The Examiner will be governed in this and similar cases by the suggestions contained herein.

62

EX PARTE DERBY.

Decided March 13, 1884.

Abandonment of an invention is not to be presumed from the fact that it is shown and described, though not technically claimed, in a patent, if there is coupled with such description and disclaimer a notice and reservation of the right and declaration of the purpose to claim such invention in a subsequent application, which is in fact filed with reasonable diligence. *Ex parte Rohn* (O. G., vol. 25, p. 113) overruled.

The notice and reservation mentioned above must be followed by diligence in filing an application for such invention. Each day's delay tends to prove abandonment, and is at the peril of the applicant. Both the law and public policy demand vigilance.

It is not intended to sanction *the practice* of incorporating in patents declarations of reservation of particular inventions not claimed therein. Such practice is of doubtful propriety, and ought only to be permitted in exceptional cases and on considerations not discussed in this decision.

Where an invention is described, but not claimed, in a patent, and no notice of an intention to claim it in a subsequent application is contained therein, if the inventor is justly entitled to claim such invention, and has inadvertently omitted to insert it in his patent, the appropriate remedy is a reissue, and not a subsequent application. Rule 91 authorizes this course, and it is sustained by the decisions of the Office and the courts in cases where application is made without unreasonable delay.

ROCK-DRILLS.

INTERLOCUTORY APPEAL.

Application of George McC. Derby filed June 20, 1883.

Messrs. Pope, Edgecomb & Butler and *Mr. F. Jannus* for the applicant.

BUTTERWORTH, *Commissioner:*

On May 29, 1883, there was granted to applicant Patent No. 278,517. The specification of said patent contains the following paragraph:

> I do not herein broadly claim a tubular rock-drill attached to a tubular shank, in combination with mechanism for communicating a positive to and fro motion thereto, and for forcing a stream of air or water therethrough, as I contemplate embodying the same in an application to be hereafter filed by me.

Twenty-two days after the grant of the patent above mentioned the present application was filed. It contains two claims covering the invention shown and described in said patent, but not claimed therein. The first of these claims is in substance identical with the disclaimer, which is coupled with notice and reservation contained in said patent; but the second is for a different invention, and more nearly resembles the second claim of said patent, but is much broader. The Examiner, following the case of *ex parte Rohn*, (O. G., vol. 25, p. 113,) rejected both the claims, because their subject-matter "was shown in a patent previously granted to applicant." Undoubtedly applicant had shown the subject-matter of both these claims in the patent granted to him as aforesaid without making technical claim thereto; but there is indicated a purpose to do so in a subsequent application, which has now been filed and is before me, and the question presented is whether applicant is debarred from having his claim allowed by reason of the facts hereinbefore recited. In other words, what effect does the description and showing of the device, the disclaimer, reservation, and notice contained in the patent granted have upon his right to prosecute an application containing claims to said device so as aforesaid in said patent mentioned, shown, described, and disclaimed in connection with reservation of right and notice of purpose to claim said invention in subsequent application?

Section 4886 Revised Statutes provides that—

> Any person who has invented or discovered any new and useful art, machine, manufacture, or composition of matter, or any new and useful improvement thereof, not known or used by others in this country, and not patented or described in any printed publication in this or any foreign country before his invention or discovery thereof, and not in public use or on sale for more than two years prior to his application, unless the same is found to have been abandoned, may, upon payment of the fees required by law and other due proceedings had, obtain a patent therefor.

The applicant has invented, so far as appears, a new and useful improvement in machines for drilling rocks. It is not shown that his invention was "known or used by others in this country," or "patented or described in any printed publication in this or any foreign country before his invention or discovery thereof;" nor is it shown that such invention was in "public use or on sale for more than two years prior to his application."

He has, therefore, satisfied the conditions prescribed by the statute, unless it is shown that said invention has been abandoned. Has that been shown, and if so, how?

It is a well-settled principle that abandonment is not to be presumed. It must be affirmatively established by satisfactory proof. An inventor, if he so elects, may, by express declaration, abandon or dedicate his invention to the public. But in the case at bar there is no evidence that the invention has been abandoned by the expressed intention of the inventor. On the contrary, the reverse appears in the very evidence relied upon to prove abandonment. Has the invention been abandoned by the acts of the inventor?

In the case of *Shaw* v. *Cooper* (7 Peters, 292) the Supreme Court say:

> No matter by what means an invention may be communicated to the public before a patent is obtained, any acquiescence in the public use by the inventor will be an abandonment of his right. If the right were asserted by him who fraudulently obtained it, perhaps no lapse of time could give it validity. But the public stand in an entirely different relation to the inventor. The invention passes into the possession of innocent persons who have no knowledge of the fraud, and at a considerable expense, perhaps, they appropriate it to their own use. The inventor or his agent has full knowledge of these facts, but *fails to assert* his right. Shall he afterward be permitted to assert it with effect? Is not this such evidence of acquiescence in the public use on his part as justly forfeits his right?
>
> If an individual witness a sale and transfer of real estate under certain circumstances, in which he has an equitable lien or interest, and does not make known this interest, he shall not afterward be permitted to assert it. On *this principle* it is that a discoverer abandons his right if before the attainment of his patent his discovery goes into public use. His right would be *secured by giving public notice* that he was the inventor of the thing used, and that he *should apply for a patent.*

And further on in the same decision the following language is employed:

> Whatever may be the intention of the inventor, if he suffers his invention to go into public use *through any means whatsoever*, without an immediate *assertion* of his right, he is not entitled to a patent, nor will a patent obtained under such circumstances protect his right.

In this decision, rendered more than fifty years ago, in the infancy of the patent system of this country, we find a clear and accurate exposition of the principle underlying the doctrine of constructive abandonment.

In whatever manner the public gains a knowledge of the invention, the right to the use of this knowledge becomes absolute, unless the inventor immediately assert his right. The manner pointed out in the decision for asserting his right is "by giving *public notice* that he was the inventor of the thing used, and that he *should apply for a patent.*"

The facts before the Court in *Shaw* v. *Cooper* were that the invention had been publicly used, and thereby the public had gained a knowledge of it; but the language of the Court and the principle upon which the decision rests cover a case where information of the invention was communicated to the public through the medium of a patent.

In *The Suffolk Co.* v. *Hayden* (3 Wall., 315) the point was raised that a description of an invention in a patent and *omission to claim it therein* operated as an abandonment or dedication of it to the public, and for that reason a subsequent patent claiming the said invention was void. The court said:

> But the answer to this ground of defense is that it appeared that Hayden, the patentee, had pending before the Commissioner of Patents an application for the same improvement at the time he described it in the specification of the 17th of March, which was doubtless the reason for not claiming it in this patent. The description in no sense affected this application thus pending before the Commissioner, and while it remained before him repelled any inference of abandonment or dedication from the omission to again claim it.

Here the principle announced in *Shaw* v. *Cooper*, *supra*, is again recognized, and applied to the extent called for by the facts; for abandonment or dedication to the public was held not to result from a description of an invention in a patent, even though it was not claimed therein, in case *another application claiming such invention was pending before the Commissioner at the time the patent was issued.* In other words, the pending application negatived the idea of abandonment of the inventor's right to the invention which was described though not claimed in the patent.

In the case of *O'Reilly* v. *Morse* (15 How., 62) the Court said:

> It is said, however, that this alleged improvement is not new, and is embraced in his former specification, and that if some portion of it is new it is not so described as to distinguish the new from the old. * * * All that we think is useful or necessary to say is that after a careful examination of the patents we think the objection on this ground is not tenable.

In this case, though the point now in controversy was raised, yet the decision seems to have turned on the correctness of the counsel's apprehension of the facts upon which the point was based, and as the Court found an error in the statement of the facts it was unnecessary to examine the legal proposition involved.

In the case of *Campbell* v. *James* (21 O. G., 337) the following language is used:

> The same combination of post-marker and blotter was also exhibited in Norton's patent of August 9, 1859. As he did not *then reserve* the process of stamping letters with such an instrument, nor the combination of a post-marker and a blotter, and did not make any simultaneous application therefor, he could not afterward obtain a patent for such process and combination, but would be restricted to such particular combination or process as might be exhibited in a new device or apparatus.

The rule suggested by this decision is, that to secure protection for an invention exhibited, but not claimed in a patent, the inventor must at the time of the issuance of the patent signify in his disclaimer an intention to reserve it for a future application, or he must evidence such intention by filing an application claiming such device prior to the issuance of the patent in which it is shown. The decision of *Campbell* v. *James* is therefore perfectly consistent with the decisions of the Supreme Court before mentioned. Indeed, it referred to the several proceedings recounted in *Shaw* v. *Cooper* and *Suffolk Company* v. *Hayden* as disproving constructive abandonment, and determined the case before the Court by reference thereto.

In *Singer* v. *Braunsdorf*, (7 Blatchf., 521,) *Graham* v. *McCormick*, (21 O. G., 1533,) *McMillen* v. *Rees*, (17 O. G., 1357,) *Hatch* v. *Moffitt*, (15 Fed. Rep., 252,) and other circuit court decisions, views are expressed which are even more liberal than those announced by the Supreme Court; but it is unnecessary to consider them in the present case.

63

It being determined that the inference of abandonment which might result from a description of an invention in a patent without a technical claim thereto would be repelled by an assertion of right by the inventor to said invention, the question remains as to the extent of the effect of such assertion of right. The answer is that abandonment then becomes a question of fact to be determined by the circumstances of each particular case. A compliance with the requirements suggested in *Shaw* v. *Cooper* and other cases cited, makes a *prima facie* case against the plea of abandonment, and this *prima facie* case can only be overcome by proof. Laches tend to establish abandonment, vigilance in the prosecution of the claim being required both by the letter and policy of the law.

It is clear that applicant cannot be permitted to rest in supine inaction upon the notice that he has an invention as yet formally unclaimed but which he intends in the future to claim. Every day's delay is at his peril. A similar doctrine is announced by the courts in regard to the prosecution of applications already filed, and, indeed, the statute limits a time within which they must be prosecuted. The first claim in the application under consideration is in terms identical with the subject-matter mentioned and described in the disclaimer, notice, and reservation which appear in the patent granted to applicant. In pursuance of said notice and reservation applicant did, in twenty-two days after the issuance of said patent, file his application, in which he makes claim to the device which is a part of the subject-matter of this controversy. While in my judgment the better practice would have been to file an application before the issuance of the patent, nevertheless, I cannot find that the right to file the application and prosecute the claim has been lost by laches, or that there is what I can regard as actual or constructive abandonment. There appears to be no statutory bar to the grant of a patent embracing the first claim. I am of the opinion that the grant can properly be predicated upon the application presented.

It is not intended by this decision to sanction the practice of incorporating in patents declarations of reservation of particular inventions not claimed therein. Such practice is of doubtful propriety, and ought only to be sustained in exceptional cases and on consideration not discussed herein.

I come now to consider whether the second claim in the present application can be sustained. It is substantially shown and described in the patent, but is not included in the reservation clause thereof. As presented, it operates to enlarge and broaden the second claim of said patent. The effect of permitting the issuance of a patent covering said claim as it appears in the application would be practically to extend the life of the original patent in derogation of the rights of the general public, and possibly embrace those who have acquired rights in the premises without notice.

As before stated, since no reservation clause or equivalent notice in regard to such broad claim is contained in the patent already granted, it may be doubted whether an independent valid patent can be granted for such claim; but it is not necessary to decide this point. If the applicant is justly entitled to such broad claim, and has inadvertently omitted to insert it in his patent, the appropriate remedy is a reissue. Rule 91 presents this course, and it is authorized and sustained, not only by the decisions of this Office, but by the courts, provided application is made without unreasonable delay.

The decision of the Examiner is affirmed as to the second claim and overruled as to the first.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court—Southern District of New York.

TRUSS *v.* SHUTER *et al.*

Decided March 12, 1884.

GEORGE—BOX-TOE FOR BOOTS AND SHOES.

Letters Patent No. 95,894, granted to H. W. George, October 19, 1869, for an improvement in box-toes for boots and shoes, anticipated by Letters Patent No. 69,082, granted to Alfred B. Ely, September 24, 1867.

Messrs. P. & D. Mitchell and *Messrs. Frost & Coe* for the complainant.

Messrs. Henry & P. McCloskey and *Mr. John Van Santvoord* for the defendants.

WALLACE, *J.*:

In view of the shoe-tip patented by Ely, September 24, 1867, there is no novelty in the box-toe patented by George, October 19, 1869. The two articles are exactly alike, and the uses to which they are applied are so analogous that there was no invention by George in placing Ely's tip inside the toe of the shoe, instead of outside, where it was placed by Ely.

The bill is dismissed.

DIGEST OF DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS

IN THE MATTER OF

PATENTS, TRADE-MARKS, &c.

OFFICIAL GAZETTE—January—March, 1884.

DIGEST OF DECISIONS.

[Decisions of U. S. court cases are designated by an asterisk, (*,) of the Secretary of the Interior by a dagger, (†,) and of State courts by a double dagger, (‡.)]

ABANDONMENT.

ABANDONMENT BY PUBLICATION INURES TO THE BENEFIT OF THE PUBLIC.

1. A novel thing, the invention of a patentee, fully shown and published in the drawing of his patent, even though not belonging exclusively to him as not being included in his claims, and even if estopped from being set up in a claim upon reissue, may not be donated to an individual. If the patentee has lost it—if it is abandoned—it has gone to the public, and is the property of the public.

[*Ex parte* Borden, 439.

2. What the causes were that led to a long silence on the part of the patentee are not so material as the fact itself that he made public the knowledge and use of his invention, and then for four years remained wholly silent and took no action for the procurement of a patent. *Held*, that under the circumstances the invention must be regarded as dedicated or abandoned to the public.

[*Andrews *et al.* v. Hovey, 1011.

3. Abandonment of an invention is not to be presumed from the fact that it is shown and described, though not technically claimed, in a patent, if there is coupled with such description and disclaimer a notice and reservation of the right and declaration of the purpose to claim such invention in a subsequent application, which is in fact filed with reasonable diligence. *Ex parte Rohn* (O. G., vol. 25, p. 113) overruled.

[*Ex parte* Derby, 1208.

4. The notice and reservation mentioned above must be followed by diligence in filing an application for such invention. Each day's delay tends to prove abandonment, and is at the peril of the applicant. Both the law and public policy demand vigilance.

[Id.

ABANDONED INVENTIONS.

(See Invention Shown but not Claimed, 1.)

ACQUIESCENCE.

(See Infringement, 3, 6.)

ADMINISTRATOR.

(See Parties to Suit.)

ADMISSIBILITY OF EVIDENCE.

(See Evidence, 1, 2.)

AGGREGATION.

AMENDMENT TO BILL.

(See Practice in the Courts, 3.)

AMENDMENTS.

(See Power of Attorney to Amend; Reissues, 4.)

ANALOGOUS DEVICES.

(See Particular Patents: 2, Bing; 5, Burdett; 8, Bussey; 11, Green; 21, Zwickl.)

ANNULMENT OF PATENT.

(See Invalid Patents, 1, 2.)

ANTICIPATION.

(See Particular Patents: 5, 6, Burdett; 9, George; 11, Green; 15, Jenkins; 19, Nation and Little.)

ANSWER TO BILL.

(See Practice in the Courts, 2.)

APPEALS.

APPEALS—PERTINENCY OF A REFERENCE APPEALABLE TO EXAMINERS-IN-CHIEF.

Whether or not a reference cited by the Examiner is entirely different from the invention claimed by an applicant is a question affecting the merits of the case, and as such is appealable in the first instance to the Examiners-in-Chief, and not to the Commissioner direct.

[*Ex parte* Borden, 439.

APPLICATIONS.

(See Divisional Application, 1, 2; Employé of the Patent Office, 1, 2, 3; Priority of Invention.)

ASSETS.

(See Trade-Mark, 2.)

ASSIGNMENTS.

(See Trade-Mark, 1, 2.)

ATTORNEYS.

(See Power of Attorney to Amend.)

BILL IN EQUITY.

(See Invalid Patents, 1, 2; Practice in the Courts, 3.)

BILL OF SALE.

(See Trade-Mark, 2.)

CANADIAN PATENTS.

1. MANUFACTURE AND CONSTRUCTION WITHIN TWO YEARS.

The Canadian patent law requiring "construction or manufacture of the invention or discovery patented within two years of the date of the patent" does not contemplate forcing, on penalty of forfeiture, the patentee to actually fabricate his invention with his own capital within specific establishments, with his own tools, and to keep stock for every moment of the existence of his privilege throughout the Dominion.

[‡Barter *v.* Smith, 197.

2. SAME.
The real meaning of the law is that the patentee must be ready either to furnish the article himself or to give license of using on reasonable terms to any person desiring to use it. The words "carry on in Canada the construction or manufacture," with their context, mean that any citizen of the Dominion has a right to exact from the patentee a license for using the invention patented, or obtain the article patented for its use at the expiration of the two years' delay, on condition of applying to the owner for it and on payment of a fair royalty.
[§197.

3. IMPORTATION.
The words "imports or causes to be imported into Canada," section 28 of the patent act of 1872, mean the importation of patented inventions to the injury of home labor, and do not cover the actual importation of a few machines as models or for the purpose of bringing the usefulness of the invention before the Canadian public.
[§197.

CHANGE OF MATERIAL.

(See Infringement, 1.)

CHANGE OF PROCESS.

(See Infringement, 1, 2.)

CHANGE OF STRUCTURE.

(See Infringement, 5: Particular Patents: 2, Bing; 3, Bull; 5, 6, Burdett.)

CLAIMS.

1. No matter whether an inventor is a pioneer in his line or not, he cannot make a valid claim the scope of which is so extensive as to include means substantially different from those described, even though the same result may be produced by such different means.
Ex parte Demming, 1207.

2. An inventor may, however, employ language sufficiently comprehensive to include colorable variations of his invention, mechanical equivalents thereof, and (if the state of the art will justify it) modifications differing in form but embodying the same principles.
[Id.

3. Claims which depend upon such words as "means" and "mechanism" to express their patentable difference over the prior state of the art are too broad.
[Id.

4. And it is not sufficient that the claims contain words of reference to the specification where the invention is described, for under the statute it is the *office of the claims* to set forth specifically and definitely the actual invention covered by the patent.
[Id.

COMBINATIONS.

(See Infringement, 5; Joinder of Inventions; Particular Patents: 1, 2, Bing; 3, Bull; 16, 17, 19, Nation and Little.)

COMMISSIONER OF PATENTS.

(See Appeals: Former Decisions Affirmed, 1.)

COMMON USE.

(See Abandonment, 1, 2.)

COMPOUNDS.

(See Joinder of Inventions.)

CONSENT OF INVENTOR TO USE OF INVENTION.

(See Abandonment, 1; Invention Shown but not Claimed, 1, 3.)

CONSTRUCTION OF RULES.

(See Disclaimer under Rule 42; Invention Shown but not Claimed, 3.)

CONSTRUCTION OF SPECIFICATIONS AND PATENTS.

(See Canadian Patents, 1, 2, 3; Particular Patents; Reissues.)

PROCESS—PROCESS OF OPERATING A MECHANISM NOT PATENTABLE.
A party having invented effective means for giving circular direction to a feed mechanism is entitled to a patent for said means, but not for merely giving such direction apart from the mechanism, nor to the process of operation of his mechanism for giving such direction.
[*Dryfoos v. Wiese, 639.

CONSTRUCTION OF STATUTES.

(See Employé of the Patent Office, 1, 2, 3; Oath of Inventor, 1, 2, 3.)

CONTEMPT.

(See Evidence, 2.)

INJUNCTIONS—MOTIONS FOR CONTEMPT.
Motions for contempt for violation of injunctions are not granted unless the violation of the injunction is plain and free from doubt. Doubted in this case whether there is a violation.
[*Smith v. Halkyard *et al.*, 1029.

CONTINUOUS APPLICATION.

(See Invention Shown but not Claimed, 1.)

CONVEYANCE.

(See Trade-Mark, 1, 2.)

COPYRIGHT.

1. PRINTED COPY OF TITLE OF BOOK, &c.
The "printed" copy of the title of a book or other article required by section 4956 of the Revised Statutes to be delivered or mailed to the Librarian of Congress, may be "printed" with a pen as well as type, with or without the aid of tracing paper.
[*Chapman v. Ferry *et al.*, 274.

2. DEPOSIT OF COPIES OF WORK WITH LIBRARIAN.
The copies of a copyright work required by section 4959 of the Revised Statutes to be deposited with the Librarian of Congress within ten days after publication, may be so deposited after the printing of the work and before its formal publication.
[*Id.

3. COPYRIGHT OF MAP—INFRINGEMENT OF.
It is difficult to say in some cases what constitutes an infringement of the copyright of a map; but where the subsequent map appears to have been substantially copied from the prior one, without alteration or revision except in scale and color, there is clearly an infringement, which authorizes a court of equity to enjoin the sale of such infringing map, and to require the publisher to account for the profits arising from the sale thereof.
[*Id.

COSTS.

COSTS.
Where the defendants infringe only one of two patents sued upon, neither party should recover costs as against the other.
[*Adams v. Howard *et al.*, 825.

COURTS OF EQUITY.

(See Bill in Equity: Infringement, 4.)

CROSS-EXAMINATIONS.

(See Evidence, 1, 2.)

DAMAGES AND PROFITS.

(See Infringement, 3, 4.)

1. PROFITS.
In view of the former decision of this Court in these cases, (reported under the name of the Cawood patent, 94 U. S., 695,) nothing was left open for further inquiry but the amounts of the former recoveries for the use of the non-infringing machines, and the true way of determining this clearly was to find out what part of the profits for which the original decrees were rendered had been made by the use of the non-infringing machines.
[*Illinois Central Railroad Company v. Turrell, 917.

2. PROFITS—WHEN INTEREST IS ALLOWABLE.
As a general rule, a patentee is not entitled to interest on profits made by an infringer, because profits are regarded in the light of unliquidated damages; but where a case was sent back to ascertain how much should be deducted from decrees for errors in the accounting as then stated, it seems not at all inequitable to allow interest on the corrected amounts from the date of the master's report. The cases are entirely different in this particular from what they would have been if the original decrees had been reversed for error in the principles of the accounting. The decrees in the present cases may be considered as affirmed in part and reversed in part, the new reference being had only to find out the exact extent of the reversals.
[*Id.

DATE OF FILING APPLICATION.

(See Divisional Application, 1, 2.)

DEATH OF PATENTEE.

(See Parties to Suit.)

DECREE.

(See Infringement, 4; Practice in the Courts, 2.)

DEDICATION TO THE PUBLIC.

(See Abandonment, 1, 2.)

DEFECTS.

(See Invention Shown but not Claimed, 3.)

DEFENSES.

(See Priority of Invention.)

DELAY.

(See Abandonment, 2; Infringement, 3. Invention Shown but not Claimed, 3; Reissues, 1, 2, 5, 6, 7, 8.)

DELAY IN APPLYING FOR REISSUE.

(See Reissues, 8.)

DEMURRER.

(See Practice in the Courts, 3.)

DESCRIPTION.

(See Claims, 1, 2, 3, 4.)

DEVIATION.

(See Invention.)

DIFFERENT INVENTIONS.

(See Invention 1.)

DILIGENCE.

(See Abandonment, 2, 3, 4; Invention Shown but not Claimed, 3; Reissues, 2.)

DISCLAIMERS.

(See Abandonment, 3, 4; Invention Shown but not Claimed, 1, 2; Reservation for Subsequent Patent.)

DISCLAIMER UNDER RULE 42.

DISCLAIMER UNDER RULE 42—SPECIFIC REFERENCES REQUIRED.
Rule 42 contemplates such specific reference as will clearly identify the particular application referred to, and this would seem to be best accomplished by stating the date of filing and the serial number of the application.
[*Ex parte* Finch, 273.

DISCLOSURE OF INVENTION.

(See Abandonment, 1; Prior Publication.)

DIVISIONAL APPLICATION.

(See Invention Shown but not Claimed, 1, 2, 3; Joinder of Inventions.)

1. PRACTICE IN PATENT OFFICE—DUTY OF EXAMINER IN DIVISIONAL APPLICATIONS.
When an application is filed as a division of a former application, the first duty of the Examiner is to determine whether the one is a continuation of the other application under the law.
[*Ex parte* Buell, 437.

2. PRACTICE—DIVISIONAL APPLICATION CANNOT BE BASED ON NEW MATTER.
An application based upon matter unwarrantably introduced into a former application cannot be considered as a division of the prior application.
[Id.

DRAWINGS.

(See Abandonment, 1; Prior Application.)

DUTY OF EXAMINERS.

(See Divisional Application, 1.)

EMPLOYÉ OF THE PATENT OFFICE.

1. SECTION 480 R. S. CONSTRUED.
Under Section 480 R. S. officers and employés of the Patent Office are prohibited from acquiring, directly or indirectly, any interest whatever in a patent, and are also prohibited from filing an *application* for a patent.
2. SAME—APPLICATION EVIDENCE OF A PARTY'S TITLE.
An application is the evidence of an applicant's title to the exclusive right or privilege sought, and since he can acquire no interest in the thing itself, to say that he might nevertheless take steps to establish his title thereto would be to pronounce an absurdity.
3. SAME—APPLICATION AND FEE TO BE RETURNED.
Applications filed in contravention of the statute as construed by this decision will be returned to the party filing the same, and the fee will also be returned.
[Opinion Touching the Right of Employés of the Patent Office to File an Application for a Patent, 637.

ENLARGEMENT OF ORIGINAL CLAIMS IN REISSUES.

(See Particular Patents: 3, Bull; 10, Green, Reissues, 1, 7.)

ENTRIES ON FILE-WRAPPERS.

(See Practice with Patent Office, 1, 2.)

ESTOPPEL.

(See Injunction.)

EQUIVALENTS.

(See Claims, 2; Infringement, 1.)

EVIDENCE.

1. Infringement — Compelling Defendant to Give Name of Customer.
In a suit for the infringement of a patent, where the validity of the patent and the infringement are denied, the complainant cannot, as part of his preliminary proof, compel the defendant to disclose the names of his confidential customers to whom he has furnished articles alleged to be covered by the patent, but he may be required to give the name of one person to whom he has furnished such articles.
[*Roberts v. Walley, 107.

2. Contempts—Power of Examiner to Rule on Evidence.
The examiner has no power to rule on the admissibility of evidence, and defendant, when a witness before him, has a right, upon a question not free from doubt, to take the opinion of the court; and when he refuses to answer under advice of counsel and apparently in good faith he should not be punished for contempt of court, even though he acted mistakenly.
[*Id.

EXAMINATION OF WITNESSES.

(See Evidence, 1, 2.)

EXAMINER NOT BOUND BY OPINION EXPRESSED BY HIS PREDECESSOR.

(See Practice with Patent Office, 1, 2.)

EXAMINERS.

(See Appeals; Divisional Application, 1, 2; Practice with Patent Office, 1, 2.)

EXAMINERS-IN-CHIEF.

(See Appeals.)

EXPIRATION OF PATENT DURING PENDING OF SUIT.

(See Infringement, 4; Practice in the Courts, 3.)

FEES.

(See Employé of the Patent Office, 3.)

FOREIGN PATENTS.

(See Canadian Patents, 1, 2, 3.)

FORMER DECISIONS AFFIRMED.

(See Damages and Profits, 1.)

1. Former Decision Affirmed.
Decision of the Commissioner of Patents in *ex parte* Hatchman (reported in 25 O. G., 979) affirmed.
[*In re* Hatchman, 738.

2. Former Decisions Affirmed.
Cause upheld for the same reasons and patent sustained to the same extent as in the case of *Oratrix* v. *Raynor et al.*
[*Reay v. Berlin & Jones Envelope Company, 1112.

FORMER DECISIONS REVERSED.

(See Abandonment, 3.)

FRAUD.

(See Invalid Patents, 1, 2.)

FRAUDULENT PATENTS.

(See Invalid Patents, 1, 2.)

FUNCTION.

(See Non-Patentability; Reissues, 7.)

GOVERNMENT RIGHT TO VACATE A PATENT.

(See Invalid Patents.)

HEIRS OF PATENTEE.

(See Parties to Suit.)

IMMATERIAL VARIATIONS.

(See Infringement, 1; Particular Patents: 2, Bing; 6, Burdett; 18, Nation and Little.

IMPORTATION OF PATENTED ARTICLES INTO CANADA.

(See Canadian Patents, 1, 2, 3.)

INADVERTENCE.

(See Invention Shown but not Claimed, 3; Reissues, 4.)

INFRINGEMENT.

(See Copyright, 3; Costs, 1; Damages and Profits, 1, 2; Evidence, 1, 2; Particular Patents: 2, Bing; 3, Bull; 6, Burdett; 8, Bussey; 21, Zwicki.)

1. Process—Infringement.
Defendants treated tobacco in a method similar to the process patented by plaintiffs, except that defendants made use of an equivalent for the gum-arabic used by the plaintiffs to produce the same effect as that rendered by plaintiffs' process. *Held*, that this was infringement.
[*Kimball v. Hess, 107.

2. Infringement.
The accomplishment of the same result, but by different means, does not constitute infringement.
[*Dryfoos v. Wiese, 639.

3. Defenses—Infringements of Patent Without Knowledge of Patentee Does Not Work an Abandonment.
Where infringements by various parties and for considerable periods have been shown to have taken place during the life of the patent, but the circumstances fail to establish acquiescence in the instances when the infringement was known to the owners of the patent, there exists no such laches as would defeat an accounting.
[*Adams v. Howard *et al.*, 825.

4. Practice in Courts—Court will Determine the Whole Controversy, even if Patent Expires Pending Suit.
There is no doubt of the propriety of decreeing an accounting, although the patent has expired since the commencement of the suit, and although for that reason there should not be an injunction. The jurisdiction of a court of equity having been legitimately invoked by the complainant, he will not be sent away without redress because all the redress to which he was originally entitled cannot now be awarded to him. The court will retain the cause in order to completely determine the controversy.
[*Id.

5. Infringement—Equivalent.
The use by defendants of the combination of the patentee, except that an equivalent element is substituted for one of the elements of the latter's combination, is an infringement.
[*Reay v. Raynor *et al.*, 1111.

6. Infringement—Silence not Estoppel under the Circumstances.
Where it does not appear that the patentee led the defendants into any expenditure or course of conduct by his silence when he ought to have spoken which they would not have made or followed if he had spoken, an infringement will not be avoided.
[*Id.

7. Infringement.
If an invention made and sold prior to the date of the patentee's invention is not an anticipation, it is not an infringement of it.
[*Id.

INJUNCTION.

(See Contempt; Practice in the Courts, 1.)

Preliminary Injunction—Granted where Defendants are Estopped.
A party having induced a complainant to acquire a patent and to engage in making and selling articles under it, is estopped from contesting the validity of it for the purposes of a motion for a preliminary injunction, and a second party who was cognizant of all the facts and seems to have been the principal promoter of the transaction occupies no better position.
[*The Time Telegraph Company v. Carey *et al.*, 826.

INTEREST.

(See Damages and Profits, 2.)

INTERFERENCE.

(See Appeals; Priority of Invention.)

INVALID APPLICATIONS.

(See Oath of Inventor, 1, 3.)

INVALIDITY OF PATENTS.

(See Non-Patentability; Reissues, 1, 9.)

INVALID PATENTS.

(See Particular Patents: 3, Bull; 5, 6, Burdett; 9, George; 10, Green; 16, 17, 18, 19, Nation and Little.)

1. Patents Obtained through Fraud—Right of Government to Vacate.
There is no distinction between letters patent for an invention and for land as regards the rights and remedies for vacating them when obtained by fraud. The right is the same as that which a State has to annul the charter of a corporation created by its legislature if obtained by fraud.
[*United States v. Gunning *et al.*, 356.

2. Same—Proper Remedy.
The appropriate remedy in behalf of the United States when a patent for an invention has been obtained by fraud is by a bill in equity.
[*Id.

INVENTION.

(See Particular Patents: 6, Burdett; 11, Green; 16, 17, 18, 19, Nation and Little; 22, Zwickl.)

Invention—Simple Change Remedying Defects Sufficient.
A simple change, which others failed to discover, and which remedied a grave defect, *Held* to constitute a patentable difference.
[*Adams v. Howard *et al.*, 825.

INVENTION SHOWN BUT NOT CLAIMED.

(See Abandonment, 1, 3, 4; Disclaimer under Rule 42; Reservation for Subsequent Patents.)

1. An application was filed December 11, 1882, certain claims of which were put into interference. Under Rule 125 matter not in interference was withdrawn from the *first* and made the basis of a second application, upon which second application a patent was granted February 20, 1883. Said patent contained a disclaimer covering all features shown but not claimed therein, and also a clause reserving the right to claim such features in an application filed previously. During the pendency of the first application, and after the patent had issued on the second, a third application was filed with claims covering the matter described in both the first application and the patent. *Held* that under the circumstances the third must be regarded as a division of the first application, and therefore the invention claimed in the latter cannot be deemed to have been abandoned by reason of its being described in the patent.
[*Ex parte* Clarke, 824.

2. Neither of the applications above referred to should be allowed until amended so as to disclaim the invention shown but not claimed therein, with proper cross-reference to the application in which such claim *is* made.
[Id.

3. Where an invention is described, but not claimed, in a patent, and no notice of an intention to claim it in a subsequent application is contained therein, if the inventor is justly entitled to claim such invention, and has inadvertently omitted to insert it in his patent, the appropriate remedy is a reissue, and not a subsequent application. Rule 91 authorizes this course, and it is sustained by the decisions of the Office and the courts in cases where application is made without unreasonable delay.
[*Ex parte* Derby, 1208.

JOINDER OF INVENTIONS.

Joinder of Invention—Several Claims to a "Composition" Permissible.
If several claims to a "composition of matter," though distinct, cover associations of elements which contribute to the production of a single beneficial result, and do not fall under different classes, they, properly speaking, cover but a single invention, and hence may be included in the same application.
[*Ex parte* Hentz, 437.

(See Particular Patents: 6, Burdett; 11, Green; 16, 17, 18, Nation and Little.)

PROCESS—FUNCTION OR MODE OF OPERATION OF A MACHINE NOT PATENTABLE.

A function or mode of operation of a machine is not patentable apart from the machinery.

[*Reay v. Raynor *et al.*, 1111.

NOTARY PUBLIC.

(See Oath of Inventor, 1.)

OATH OF INVENTOR.

1. OATH—SECTION 4892 REVISED STATUTES CONSTRUED.

Section 4892 Revised Statutes does not authorize an applicant who is a resident of a foreign country to make oath to his application before any officer other than those designated in said section. They are "any minister, *chargé d'affaires*, consul, or commercial agent holding commission under the Government of the United States, or any notary public of the foreign country in which the applicant may be."

[*Ex partes* Gruson and Schumann, 274.

2. SAME—AUTHORITY TO ADMINISTER OATHS DERIVED FROM UNITED STATES STATUTE ALONE.

Such designated officials in administering the oath act by virtue of the authority conferred by the statute of the United States, and not by virtue of any power or authority conferred by the foreign government.

[Id.

3. SAME—OFFICER NOT AUTHORIZED.

An oath taken before a judge of the royal Prussian court is not sufficient.

OPINION OF THE EXAMINER.

(See Practice with Patent Office, 1, 2.)

PARTICULAR PATENTS.

1. BING'S PATENT—SHOES FOR CAR-BRAKES—CONSTRUED AND LIMITED.

In this case it was held that on the record herein claim 2 of Letters Patent No. 40,156, granted to James Bing, October 6, 1863, for an improved shoe for car-brakes—namely, "The combination of shoe A, sole B, clevis D, and bolt G, the whole being constructed and arranged substantially as specified"—does not embody any lateral rocking motion in the shoe as an element of the combination.

[*Lake Shore and Michigan Southern Railway Company *v.* National Car Brake Shoe Company, 915.

2. SAME—INFRINGEMENT—COMBINATIONS—MECHANICAL CHANGES.

On such a construction, there was on the record herein patentable novelty in said claim, and a structure having the same four parts in combination, with merely formal, and not substantial, mechanical differences, infringes said claim.

[*Id.

3. BULL—APPARATUS FOR CLEANING PRIVIES—CLAIMS 1 AND 3 DECLARED INVALID FOR ENLARGEMENT.

Claims 1 and 3 of Reissue Letters Patent No. 6,902, granted to Lewis R. Keizer, February 29, 1876, for an improvement in apparatus for cleaning privies, the original Patent No. 115,565 having been granted June 6, 1871, to Henry C. Bull and Joseph M. Lowenstein, on the invention of said Bull, and the application for the reissue having been filed January 11, 1876—namely, "1. A privy-vault-cleaning apparatus consisting of an air-pump, a deodorizer, and suitable tubular connections, in combination with an independently-movable receiving-cask having an induction passage or opening, and also an air-opening for connection with the air-pump, and provided with screw-necks at each opening for receiving sealing caps or covers, substantially as described, whereby the movable cask may be located in any desired position with relation to the vault and privy, and the pump and deodorizer located in any desired position with relation to the vault, privy, and cask, and also whereby the casks, when filled, may be handled as is usual with filled casks, as set forth; 3. The combination, with a portable night-soil cask, of a float-valve located at the air-passage substantially as described, whereby the fluid matter is prevented from entering the air-passage and clogging the suction air-pipe and pump, as set forth"—are invalid, because they are for inventions not indicated in the original patent as inventions, being for sub-combinations in combinations claimed in the original, and were made for the purpose of covering features described in patents issued to others during the interval between the granting of the original and the application for the reissue. Those features are contained in the defendant's apparatus, and that apparatus does not infringe any claim in the original patent.

[*Clements *v.* Odorless Excavating Apparatus Company, 353.

4. BURDETT—REED-ORGANS—CLAIM 1 CONSTRUED AND DEFINED.

Claim 1 of Letters Patent No. 87,241, granted February 23, 1869, to Riley Burdett, as inventor, for seventeen years from August 24, 1868, for an improvement in reed-organs—namely, "The arrangement, in a reed musical instrument, of the reed-board A, having the diapason set *a* and its octave set *b* and the additional set L extending from about at tenor F upward through the scale, substantially as and to the effect set forth"—defined and construed.

[*Estey *et al. v.* Burdett, 637.

5. SAME—ANTICIPATION.

A reed-board with two sets of reeds and a third partial set was made and put into an organ by one Dayton prior to the invention of Burdett, and, such organ being put in evidence, it was held that the alleged infringing organs contained nothing which, so far as said claim 1 was concerned, was not found in such prior organ.

[*Id.

6. SAME—CLAIM 2 CONSTRUED—ANTICIPATION—NON-INVENTION.

As to claim 2—namely, "The reed-board A and foundation-board G, constructed with the contracted valve-openings D F F, and the reeds arranged in relation thereto, all in the manner described"—it was held that, in view of the state of the art, there was no invention in making the length and size of the valve-opening greater or less in a reed-board of a given width, or where the reed-board was made wider or narrower, or had more or less sets of reeds in it, either full or partial; and that the vibrating ends of the lowest and longest reeds in such prior organ were as near together as they were in the reed-boards of the alleged infringing organs. On these views a decree was entered in favor of the defendant.

[*Id.

7. BUSSEY'S COOKING-STOVE PATENTS—FIRST FOUR CLAIMS OF SECOND REISSUE CONSTRUED AND LIMITED.

The first four claims of Reissue Letters Patent No 3,815, granted to Esek Bussey and Charles A. McLeod, February 1, 1870, for a cooking-stove, the original patent, No. 56,686, having been granted to said Bussey, as inventor, July 24, 1866, and reissued to him, as No. 3,649, September 28, 1869—namely "1. A diving-flue cooking-stove with the exit-flue so constructed as to inclose on the sides and bottom the culinary boiler or hot-water reservoir B; 2. A diving-flue cooking-stove with the exit-flue constructed across the bottom and up the rear upright side of the culinary boiler or hot-water reservoir B; 3. A diving-flue cooking-stove constructed with an exit-passage, F, below the top of the oven, and an exit-flue, E E', in combination with an incased reservoir, B, attached to the rear of the stove, and placed just above such exit-passage, and so arranged that the gases of combustion, in passing through such exit-flue, will impinge upon or come in direct contact with said reservoir, substantially as and for the purposes hereinbefore specified; 4. An exit passage, F, constructed in the rear of a diving-flue cooking-stove and below the top of the oven, in combination with an incased reservoir, B, attached to the rear of the stove, the bottom of which reservoir is also below the top of the oven, and so arranged that the gases of combustion will come in contact with and heat such reservoir by a direct draft from the fire-box to the smoke-pipe"—are limited to a structure in which the front of the reservoir has no air-space in front of it, and in which the exit-flue does not expand into a chamber at the bottom of the reservoir, and in which the vertical part of the exit-flue does not pass up through the reservoir.

[*Bussey *et al. v.* Excelsior Manufacturing Company, 733.

8. SAME—NOT INFRINGED.

Hence, those claims are not infringed by a stove in which, although there are three flues, and an exit-passage below the top of the oven, and a reservoir the bottom of which is below the top of the oven, no part of the rear end vertical plate is removed, so as to allow the gases of combustion to come into direct contact with the front of the reservoir, nor is any such plate employed as the plate *w w* of the patent, but there is a dead-air space between the rear plate of the flue and the front of the reservoir, and the exit-flue is not a narrow one, carried across the middle of the bottom of the reservoir, as in the patent, but the products of combustion, on leaving the flue-space, pass into a chamber beneath the reservoir, the area of which is coextensive with the entire surface of the bottom of the reservoir, and the vertical passage out of such chamber is not one outside of the rear of the reservoir, but is one in and through the body of the reservoir, and removable with it.

[*Id.

9. GEORGE—BOX-TOE FOR BOOTS AND SHOES.

Letters Patent No. 95,894, granted to H. W. George, October 19, 1869, for an improvement in box-toes for boots and shoes, anticipated by Letters Patent No. 60,082, granted to Alfred B. Ely, September 24, 1867.

[*Truss *v.* Slinter *et al.*, 1210.

10. GREEN—DRIVEN WELL.

Patent No. 73,425, January 14, 1868, and Reissue No. 4,372, May 9, 1871, granted to Nelson W. Green, construed, compared, and the reissue held to cover an invention different from that embraced in the original patent, and to be therefore void.

[*Andrews *et al. v.* Hovey, 1011.

11. SAME—ANTICIPATION.

It being true that in 1849 and 1850 wells were driven at Milwaukee by a process not distinguishable from that devised by the patentee in 1861, and those wells were driven, not as mere experiments, nor for the purpose of exhibition, but for public and continuous use, it is held that the defense of want of novelty is sustained.

[*Id.

12. HICKS—HOES.

Letters Patent No. 189,220, granted April 3, 1877, to O. H. Hicks, for an improvement in hoes, considered.

[*Cook *v.* Sandusky Tool Company, 1114.

13. IRWIN—LANTERNS.

Patents Nos. 47,551 and 50,591, granted, respectively, May 2 and October 24, 1865, to John H. Irwin, for improvements in lanterns, construed.

[*Adams *v.* Howard *et al.*, 825.

14. JENKINS—SELF-CLOSING FAUCETS.

Letters patent granted to Nathaniel Jenkins, June 27, 1865, for an improvement in self-closing faucets, construed.

[*Zane *et al. v.* Soffe, 737.

15. SAME—CONSTRUED AND LIMITED.

In view of the fact that certain mechanical equivalents of a device claimed were previously used, the patent was construed to cover only the specific device mentioned in the claim.

[*Id.

16. NATION AND LITTLE—COOKING-STOVE—PATENT NO. 142,933 VOID FOR WANT OF NOVELTY.

The claim of Letters Patent No. 142,933, granted to David H. Nation and Ezekiel C. Little, as inventors, September 16, 1873, for an improvement in reservoir cooking-stoves—namely, "1. The combination, with the back-plate I of the cooking-stove A, of the reservoir C, arranged on a support about midway between the top and bottom plates of the stove, and the air-chamber *b*, between the stove-back and reservoir-front, open at the top, and communicating with the air in the room, substantially as and for the purposes set forth; 2. The combination, with the stove A and reservoir C, of the small opening *a*, the sheet-flue G under the entire bottom of the reservoir, and the small exit passage or pipe E, all substantially as and for the purposes herein set forth"—are void for want of novelty.

[*Bussey *et al. v.* Excelsior Manufacturing Company, 733.

17. NATION AND LITTLE—COOKING-STOVE—PATENT NO. 142,934 VOID FOR WANT OF NOVELTY.

The claims of Letters Patent No. 142,934, granted to David H. Nation and Ezekiel C. Little, September 16, 1873, for an improvement in reservoir cooking-stoves—namely "1. The detachable base-pan or flue-shell D, attached to the body at a point near the center of the back-plate of the stove, by means of hooks *a a*, cast on the base-pan, and pins *b b* on the stove-body, substantially for the purposes herein set forth; 2. The portable reservoir F, with the flue E in the rear side, in combination with the portable base-pan or flue-shell D, substantially as and for the purposes herein set forth; 3. The combination, with a three-flue stove having damper H, arranged as described, of the portable base-pan or flue-shell D, and warming-closet G, all substantially as and for the purposes herein set forth"—are void for want of novelty.

[*Id.

18. SAME—NON-INVENTION—OLD DEVICES.

There was no invention in claim 1 in using, to attach the base pan, an old mode used in attaching other projecting parts of the stove.

[*Id.

19. SAME—SAME—AGGREGATION.

Claims 2 and 3 are merely for aggregations of parts and not for patentable combinations.

[*Id.

20. REAY AND NEGBOUR—ENVELOPE-MACHINE.

Reissue Letters Patent No. 2,529, granted March 26, 1867, to George H. Reay and Lewis Negbour, for an improvement in envelope-machines, declared valid in part and invalid in part.

[Reay *v.* Raynor *et al.*, 1111.

21. ZWICKI—LOOMS.

The second and third claims of Patent No. 63,353, granted March 26, 1867, to James J. Walworth and Gustavus E. Buschick, assignees of Caspar Zwicki, for an improvement in looms, construed, and held not to have been infringed by the defendants.

[*Taft *v.* Steere *et al.*, 1030.

22. UTILITY OF INVENTION.

Doubted whether there is any utility in the cam mentioned in the third claim, supposing the nose-piece to be attached to the cam exactly as shown in the model, and it not appearing that any looms embodying the improvements claimed have ever been put in operation.

[*Id.

PARTIES TO SUIT.

(See Injunction; Practice in the Courts, 2.)

PRACTICE IN THE COURTS—DEATH OF PATENTEE AFTER APPEAL DOES NOT ABATE THE SUIT.

The death of the patentee since the appeals were taken does not prevent the suits from being further prosecuted in the name of the legal representatives.

[*Illinois Central Railroad Company *v.* Turrill, 917.

PATENTABILITY.

(See Construction of Specifications and Patents, 1; Invention; Non-Patentability; Particular Patents: 6, Burdett; 11, Green; 16, 17, 18, 19, Nation and Little; 22, Zwicki.

PATENT OFFICE.

(See Employé of the Patent Office, 1, 2, 3.)

PATENTS CAN INCLUDE BUT A SINGLE INVENTION.

(See Joinder of Inventions.)

PATENTS OBTAINED BY FRAUD.

(See Invalid Patents, 1, 2.)

PERMISSIBLE CHANGES IN REVISING PATENTS.

(See Invention Shown but not Claimed, 3.)

POWER OF ATTORNEY TO AMEND.

(See Reissues, 4.)

ATTORNEY—PARTY BOUND BY ACTS OF HIS ATTORNEY.

In legal effect the action of an applicant or his attorney is the same.

[*In re* Hatchman, 748.

PRACTICE IN THE COURTS.

(See Contempt; Costs, 1; Damages and Profits, 2; Evidence, 1, 2; Infringement, 3, 4, 6; Injunction.

1. UNITED STATES SUPREME COURT RULES.

Rule 30 of Supreme Court rules applies only to cases appealed before its adoption, and is practically obsolete.

[*White *et al. v.* Dunbar *et al.*, 352.

2. PARTIES TO SUIT—NO OBJECTION BEING TAKEN TO NON-JOINDER, DECREE GIVES.

A complainant being owner of an undivided third interest in a license, and no objection having been taken by demurrer or the answer to the non-joinder of the other two owners of the license, such non-joinder cannot be insisted on to defeat a decree.

[*Adams *v.* Howard *et al.*, 825.

3. PRACTICE IN COURTS—AMENDMENT TO BILL.

A bill was brought before the patent expired, but it was defective, and an amendment was filed after the patent had expired: *Held* that the amendment made the bill as it should have been at first, and in effect as if it had been so at first, and if a case for equitable relief is shown the bill should be retained for that and such cognate relief as is necessary to do complete justice.

[*Reay *v.* Raynor *et al.*, 1111.

PRACTICE IN THE PATENT OFFICE.

(See Abandonment, 3, 4; Appeals: Claims, 1, 2, 3, 4; Disclaimer under Rule 42; Divisional Application, 1, 2; Employé of the Patent Office, 3; Power of Attorney to Amend; Invention Shown but not Claimed, 1, 2, 3; Joinder of Invention; Prior Publications; Reissues, 4; Reservation for Subsequent Patent.)

1. PRACTICE—FAVORABLE JUDGMENT OF EXAMINER EXPRESSED BY FORWARDING CASE TO ISSUE DIVISION.
It is not until the Examiner signs the file-wrapper and forwards the application to the Issue Division that he can be considered as having rendered a favorable judgment upon it. He may have formed an opinion in its favor, or expressed an oral or even a written suggestion in the same direction; but these do not constitute his formal favorable judgment.
[*Ex parte* Buell, 437.

2. PRACTICE—EXAMINER NOT BOUND BY CONCLUSIONS OF HIS PREDECESSOR.
An Examiner is not obliged to adhere to a favorable conclusion which his predecessor formed or expressed in regard to the admission of certain matter into a particular application, unless such expression took the form of a favorable judgment.
[Id.

PRIORITY OF INVENTION.

(See Particular Patents: 5, 6, Bing; 9, George; Prior Publications.)

PRIOR USE—PRIOR APPLICATION ALONE NOT SUFFICIENT.
A prior application for a patent alone, without evidence to show that such a lantern as is described therein was ever constructed, is not sufficient to defeat a patent.
[*Adams *v.* Howard *et al.*, 825.

PRIOR PUBLICATIONS.

(See Abandonment, 1.)

PRIOR PUBLICATION—A DRAWING OF A PATENT A PUBLICATION.
Even without any description, if a published drawing fully and clearly exhibits and discloses an invention sought to be patented, it is an adequate and complete reference of itself alone. It is to be considered as a publication.
[*Ex parte* Borden, 439.

PROCESS.

(See Construction of Specifications and Patents; Non-Patentability.)

PROCESS AND PRODUCT.

(See Infringement, 2.)

PRODUCT.

(See Joinder of Inventions.)

PROPERTY RIGHTS.

PUBLICATION.

(See Abandonment, 1; Prior Publications.)

PUBLIC USE.

(See Abandonment, 2; Infringement, 7.)

REDUCTION TO PRACTICE.

(See Priority of Invention.)

REFERENCES.

(See Appeals; Disclaimer under Rule 42; Invention Shown but not Claimed, 2; Prior Publications.)

REFUNDMENT OF FEES.

(See Employé of the Patent Office, 3.)

REISSUES.

(See Invention Shown but not Claimed, 3.)

1. REISSUE—BROADENING OF THE INVENTION BEYOND THAT ORIGINALLY PRESENTED NOT PERMISSIBLE.
A claim in a reissue which covers an invention clearly beyond that shown in the original is invalid, whether the time elapsing between the reissue and original patent is great or not.
[*Dry Goss *v.* Weise, 639.

2. SAME—LAPSE OF A FEW MONTHS NOT TOO GREAT.
A reissue granted within a few months of the date of the original patent, and before others appear to have done anything in that region of invention, is looked upon favorably.
[*Id.

3. SAME—INVALIDITY OF ONE DOES NOT AVOID ANOTHER CLAIM.
A claim valid in a first reissue is valid in a second reissue, notwithstanding the latter contains an invalid claim.
[*Id.

4. REISSUE—INADVERTENCE, ACCIDENT, OR MISTAKE.
Where one of the claims in an original application was rejected upon reference to certain patents and the applicant, by his attorney, orders the same to be erased, and thus obtains and accepts a patent for the residue of his claims, there has been no inadvertence, accident, or mistake within the meaning of the patent law, and the patentee is not entitled to a reissue covering the claim before erased.
[*In re* Hatchman, 738.

5. REISSUE—RULE OF LACHES MORE RIGID WHEN INVENTION IS BROADENED THAN WHEN LIMITED.
Unreasonable delay a bar to reissue, although it is sought to narrow and restrict the claims; but the rule as to laches is more rigid in cases where applicant seeks to broaden claims.
*[*Ex parte* Matthews and Race, 823.

6. REISSUE—NO LACHES UNDER THE CIRCUMSTANCES.
After litigation lasting twelve years the Supreme Court of the United States held that the patent of Matthews and Race covered a broader invention than they had a right to claim as new. Matthews and Race thereupon apply for reissue with claims restricted: *Held* that they might do so, and that six months was not in the particular case unreasonable delay.
[Id.

7. REISSUE—CLAIM TOO BROAD.
The original patent showed certain devices to which no function was ascribed, and the position of which with reference to a particular part of the machine was not shown with accuracy. The reissue described such devices as occupying a definite position with reference to said particular part of the machine and as having a specified function: *Held* that a claim in the reissue covering the arrangement described therein embraced an invention different from that shown in the original, was too broad to be added at any time, and was therefore void.
[*Reay *v.* Raynor *et al.*, 1111.

8. REISSUE—LAPSE OF TIME.
The reissue was taken out more than three years after the original, and would seem to be for that reason unseasonable and invalid.
[*Id.

9. REISSUE—PARTIAL INVALIDITY.
Invalidity of one claim does not necessarily render the other claims of the reissue invalid.
[*Id.

REJECTED CLAIMS.

(See Reissues, 4.)

REMEDY.

(See Invalid Patents, 1, 2; Invention Shown but not Claimed, 3.)

RESERVATION FOR SUBSEQUENT PATENTS.

(See Abandonment, 3, 4; Disclaimer under Rule 42; Invention Shown but not Claimed, 1, 2, 3.)

It is not intended to sanction *the practice* of incorporating in patents declarations of reservation of particular inventions not claimed therein. Such practice is of doubtful propriety, and ought only to be permitted in exceptional cases and on considerations not discussed in this decision.
[*Ex parte* Derby, 1208.

RESTRICTIONS OF CLAIMS.

(See Reissues, 4, 5.)

REVIEW OF FORMER DECISIONS.

(See Practice in the Patent Office, 1, 2.)

STATE OF THE ART.

(See Claims, 2, 3.)

SUBSEQUENT PATENTS.

(See Abandonment, 3, 4; Invention Shown but not Claimed, 3; Reservation for Subsequent Patents.)

SUBSTITUTION OF MATERIAL.

(See Infringement, 1.)

SUBSTITUTION OF PARTS.

(See Infringement, 5.)

SUIT FOR ANNULMENT OF A PATENT.

(See Invalid Patents, 1, 2.)

SUITS IN EQUITY.

(See Parties to Suit.)

TITLE TO PATENT.

(See Employé of the Patent Office, 1, 2, 3.)

TRADE-MARK.

(See Copyright.)

1. TRADE-MARKS—A TRADE-MARK MAY BE CONVEYED WITH THE PROPERTY WITH WHICH IT IS ASSOCIATED.
As an abstract right, apart from the article manufactured, a trade-mark cannot be sold, the reason being that such transfer would be productive of fraud upon the public, but in connection with the article produced it may be bought and sold like other property.
[Morgan *et al.* *v.* Rogers, 1113.

2. TRADE-MARKS WILL PASS UNDER BILL OF SALE WITHOUT SPECIFIC MENTION.
For a trade-mark to pass under a bill of sale it is not necessary that it should be specifically mentioned. If a trade-mark is an asset, as it is, there is no reason why it should not pass under the term "assets" in an instrument which conveys the entire partnership property.

Bailey, Samuel R., Amesbury, Mass. Sleigh-dasher screen	292,275	Jan. 22	1500	444	26	306
Bain Electric Company. (See Bain, Forée, assignor.)						
Bain, Forée, assignor to Bain Electric Company, Chicago, Ill. Regulator for dynamo or magneto electric machines	291,566	Jan. 8	693	196	26	131
Baird, George D., Washington, Ill. Grain weigher and register	295,095	Mar. 11	950	259	26	998
Baker, Benjamin R., Northfield, Minn. Saw-buck	294,718	Mar. 4	457	128	26	908
Baker, Bernard N. (See Price, George W., assignor.)						
Baker, Charles A., Moline, Ill. Wheel-cultivator	293,616	Feb. 19	1066	295	26	643
Baker, Clarence E. (See Baker, Morris C. and C. E.)						
Baker, Delos R., Ludlow, Ky. Carburetor	291,128	Jan. 1	144	42	26	28
Baker, Edward F., assignor to M. M. Baker, Chicago, Ill. Manufacture of fly-paper	295,220	Mar. 18	1115	.....	26	1041
Baker, Elijah E., assignor of one-half to M. Sharp, Providence, R. I. Car-brake	295,096	Mar. 11	951	259	26	998
Baker, George C., Des Moines, Iowa. Wire-barbing machine	295,513	Mar. 25	1487	411	26	1117
Baker, George W., Wilmington, Del. Boring-tool	293,397	Feb. 12	822	221	26	592
Baker & Hamilton. (See Robinson, Alexander, assignor.)						
Baker, Jacob, Greenville, Ohio. Book and file case	293,701	Feb. 19	1176	328	26	664
Baker, James H., New York, N. Y. Pump-regulating device	291,271	Jan. 1	360	90	26	58
Baker, John, Muscatine, Iowa. Fruit and vegetable washer	295,715	Mar. 25	1740	486	26	1163
Baker, John, Muscatine, Iowa. Fruit, vegetable, and meat can	295,716	Mar. 25	1750	486	26	1164
Baker, John S., *et al.* (See Burns and Buckman, assignors.)						
Baker, Joseph H. (See Boynton, George W., assignor.)						
Baker, Leroy A., Elmira, N. Y. Fence	294,106	Feb. 26	1718	472	26	766
Baker, Margaret M. (See Baker, Edward F., assignor.)						
Baker, Morris C. and C. E., Mitchell, Dak. Ter. Machine for operating drills	292,888	Feb. 5	133	36	26	468
Baker, Nelson R., Greene, N. Y. Thill-coupling	294,107	Feb. 26	1718	472	26	766
Baker, Richard J., and J. P. Roberts, Providence, R. I. Marine-signal light	295,717	Mar. 25	1750	486, 487	26	1164
Baker, Thomas H., *et al.* (See Poole, Samuel, assignor.)						
Baker, William, *et al.* (See Dowling, Robert H., assignor.)						
Baker, William H. (See Knight, John K., assignor.)						
Baker, William H., Brooklyn, N. Y. Electrical indicator and alarm	291,483	Jan. 8	590	167	26	113
Baker, William H., Brooklyn, N. Y. Electrical indicator and alarm	291,484	Jan. 8	592	167	26	113
Baker, William S. G., Baltimore, Md. Car-axle box	292,390	Jan. 22	1743	486	26	336
Baker, Wilson M. (See Parker and Baker.)						
Baker, Wilson M., Urbana, Ohio. Knockdown crate	294,751	Mar. 11	500	139	26	921
Baldwin, A. C. (See Trier, Frank, assignor.)						
Baldwin, Benjamin L., *et al.* (See Crandall, Charles M., assignor.)						
Baldwin, George, assignor of one-half to T. Clark, Buckland, Conn. Tension-regulating device for loom-shuttles	291,831	Jan. 8	1021	285	26	188
Baldwin, James A., Jr., East Jaffrey, N. H. Pipe and other joints	294,562	Mar. 4	279	76	26	876
Baldwin, James S., assignor of twenty-one twenty-fifths to S. A. Farrand, Newark, N. J., and B. W. Bradford, New York, N. Y. Hot-air engine	292,400	Jan. 22	1744	486	26	336
Baldwin, William F., Grayville, Ill. Fire-engine	292,276	Jan. 22	1591	444	26	306
Ball, Addison W. (See Ball, William W., assignor.)						
Ball, Albert, Canton, Ohio. Plow	291,667	Jan. 8	836	234	26	156
Ball, Albert, assignor to Sullivan Machine Company, Claremont, N. H. Apparatus for shifting drilling-machines	295,325	Mar. 18	1246	345	26	1066
Ball, Benjamin E., Denver, Colo. Wire cutter and shaper	293,134	Feb. 5	460	122, 123	26	522
Ball, Charles E., Philadelphia, Pa. Dynamo-electric machine	291,973	Jan. 15	1205	336	26	232
Ball, Charles E., Philadelphia, Pa. Regulator for dynamo-electric machines	294,180	Feb. 26	1629	498	26	783
Ball, Charles E., Philadelphia, and C. S. Bradford, Jr., West Chester, Pa., assignors to said Ball. Electric gas-generator	291,463	Jan. 1	560	158	26	100
Ball, Clinton M., Troy, assignor of two-thirds to J. McKenzie, West Troy, and J. A. Powers, Lansingburg, N. Y. Dynamo-electric machine	294,719	Mar. 4	458	128, 129	26	908
Ball, James A. (See Moore, Jonathan J., assignor.)						
Ball, William, Lynchburg, Ohio. Filter	291,863	Jan. 15	1075	300	26	207
Ball, William W., assignor of one-half to A. W. Ball, Indianapolis, Ind. Buggy-seat	295,143	Mar. 18	1013	279	26	1023
Ballard, Andrew J., assignor to Cohoes Iron Foundry and Machine Company, Cohoes, N. Y. Self-closing hatch-cover	294,108	Feb. 26	1719	473	26	766
Ballard, Levi. (See Port, Go Hin, assignor.)						
Ballin, Moritz, New York, and F. Hoff, Brooklyn, N. Y. Coffee-pot attachment	294,347	Mar. 4	4	1	26	899
Ballin, Semmy, Hamburg, Germany. Station indicator	295,336	Mar. 18	1247	346	26	1066
Ballou, Walter, North Attleborough, Mass. Ornamental chain	292,815	Jan. 29	2040	567	26	393
Baltes, Peter J., assignor of one-half to J. B. Donnelly, Oswego, N. Y. Lubricator	295,474	Mar. 18	1429	395	26	1101
Bangs, David E., Medford, Mass. Vapor-burner	292,616	Jan. 29	2041	567	26	394
Bangs, Frederick E. (See Dibble, Chauncey G., assignor.)						
Banker, George W., Brooklyn, N. Y. Composite oil for lubricating, &c	294,752	Mar. 11	501	.....	26	921
Banning, Walter E., Syracuse, N. Y. Sign	293,702	Feb. 19	1177	328	26	664
Bannister, Lemuel, Philadelphia, Pa. Grate	291,864	Jan. 15	1076	300	26	208
Bannister, Thomas M., Lone Pine, Cal. Brick-cutting machine	295,097	Mar. 11	952	259, 260	26	999
Barber Asphalt Paving Company. (See Knight, William H. H., assignor.)						
Barber, Edwin L., Chicago, Ill. Filter	295,327	Mar. 18	1249	346	26	1066
Barber, J. B., *et al.* (See Charbonean, Pascal B., assignor.)						
Barbour, Charles S., New Haven, Conn. Extension fruit-dish holder	292,197	Jan. 22	1475	414, 415	26	288
Barclay, Charles. (See Miner, Henry M., assignor.)						
Barclay, William P., Chicago, Ill. Abrading-tool	293,398	Feb. 12	823	221, 222	26	593
Barcus, Willard E., Vineland, N. J. Measuring-tank	294,181	Feb. 26	1630	499	26	783
Bardo, Peter N., Newport, Ky., assignor to Bourbon Copper and Brass Works, Cincinnati, Ohio. Still	291,833	Jan. 8	1022	285	26	188
Barenfanger, Christian W., assignor of one-half to J. H. Mesker, Evansville, Ind. Vehicle-spring	291,832	Jan. 8	1021	285	26	188
Barger, Nathaniel S., Hampton, Iowa. Wheel landside-plow	292,401	Jan. 22	1747	486	26	337
Barker, James, Philadelphia, Pa. Mechanism for converting rotary into vibrating motion	292,461	Jan. 29	1829	509, 510	26	350
Barker, Samuel L. (See Barker, Silas and S. L.)						
Barker, Silas and S. L., Hartford, Conn. Self-closing faucet	291,668	Jan. 8	836	234	26	156
Barlet, Herrman, Nüremberg, Bavaria, Germany. Paste for cleaning metals	293,998	Feb. 26	1569	.....	26	741

Capewell, George J., Cheshire, Conn. Horseshoe-nail machine	292,201	Jan. 22	1480	416, 417	26	288
Carbaugh, William H., Columbus, Ohio. Dinner-pail	291,680	Jan. 8	848	237	26	158
Card, Lucinda S., *et al.* (See Dane, Joseph C., assignor.)						
Cardy, Joseph, Tampa, Fla. Operating butting-saws	291,148	Jan. 1	169	49	26	32
Carraga y Saenz, Luis G., Puebla, Mexico. Pump	295,734	Mar. 25	1769	492	26	1167
Carleton, Cyrus, assignor to Brown & Sharpe Manufacturing Company, Providence, R. I. Micrometer-calipers	292,409	Jan. 22	1758	490	26	339
Carleton, William E., Boston, Mass. Brick	293,716	Feb. 19	1200	332	26	668
Carley, Harvey, and T. McKenna, Long Branch, N. J.; said Carley assignor to said McKenna. Electric alarm for steam-gages	294,195	Feb. 26	1845	503	26	785
Carlough, Daniel, Paterson, N. J. Car-coupling	291,149	Jan. 1	169	49	26	32
Carlson, Andrew M. (See King and Carlson.)						
Carlson, Charles P., McKeesport, Pa., assignor to himself and National Tube Works Company, Boston, Mass. Coupling for shafts or rolls	292,095	Jan. 15	1346	378	26	259
Carly, John W., Mexia, Tex. Advertising device	293,850	Feb. 19	1383	362	26	699
Carnes, Serena M., New York, N. Y. Sad-iron holder	294,196	Feb. 26	1846	503	26	786
Carpenter, Alexis C. (See Holman, Charles T., assignor.)						
Carpenter, Alice P. (See Wilson, Eugene M., assignor.)						
Carpenter, George O., *et al.* (See Simonds, George W., assignor.)						
Carpenter, Israel C., Cherry Creek, N. Y. Paper-perforating machine	291,293	Jan. 1	349	98, 99	26	63
Carpenter, James W. (See Maxon, Thomas, assignor.)						
Carpenter, Oramille C., assignor to N. B. Abbott, Brooklyn, N. Y. Machine for wiring corks in bottles	295,735	Mar. 25	1770	492, 493, 304, 305	26	1167, 211
Carpenter, Robert K., Medford, Mass. Drilling-machine	291,876	Jan. 15	1092			
Carpenter, Ward B., West Topsham, Vt., assignor of one-half to J. R. Abbe, Manchester, N. H. Lifting-jack	293,946	Feb. 19	1507	415	26	722
Carpenter, William L. (See Penney, Mark A., assignor.)						
Carr, Henry W. (See Calmar and Carr.)						
Carr, Robert S., assignor to J. W. Sohn, Hamilton, Ohio. Cup for seeding-machines	292,893	Feb. 5	139	37	26	469
Carroll, James J., Baltimore, Md. Decorated plate-glass	293,947	Feb. 19	1508	415	26	722
Carson, Robert J., Dixon, assignor of one-half to E. Rutz, Belleville, Ill. Iron or steel fence-post	293,225	Feb. 12	589	155	26	550
Carter, George W. L., New York, N. Y. Magnetic ore-separating machine	292,096	Jan. 15	1343	378	26	259
Carter, Henry C., Fairfield, N. C. Excavating-machine	292,408	Jan. 29	1838	513	26	361
Carter, Henry C., Fairfield, N. C. Dredging-machine	292,732	Jan. 29	2166	610	26	419
Carter, James H. (See Turner and Carter.)						
Carter, Martha J., *et al.* (See Foster, Marion J., assignor.)						
Carter, Wallace H., Farmingdale, Me. Scuttle-hinge	293,416	Feb. 12	842	228	26	596
Carter, William H., *et al.* (See Foster, Marion J., assignor.)						
Carver Cotton Gin Company. (See Strong, Frederick S., assignor.)						
Carver, Reading L., Pre-emption, Ill. Sulky-cultivator	293,717	Feb. 19	1201	333	26	668
Case, Frederick, L. Chaplin, Conn. Finishing-machine for press-boards	295,521	Mar. 25	1497	413	26	1118
Case, George, assignor to A. Dillman and E. R. Knowlton, Joliet, Ill. Take-up for wire-barbing machines	292,733	Jan. 29	2188	610	26	420
Case, John M., assignor to Case Manufacturing Company, Columbus, Ohio. Roll for crushing grain	293,306	Feb. 12	698	186	26	569
Case Manufacturing Company. (See Case, John M., assignor.)						
Case, Willard E., Auburn, N. Y. Secondary-battery element	292,469	Jan. 29	1840	.....	26	361
Casebolt, Johnathan B., San Francisco, Cal. Cable railway	295,147	Mar. 18	1016	281	26	1024
Casebolt, Johnathan B., San Francisco, Cal. Cable railway	295,148	Mar. 18	1017	281	26	1024
Caspari, Max, Detroit, Mich. Horseshoe	295,616	Mar. 25	1624	440	26	1142
Castleman, David R., Louisville, Ky. Fertilizer	292,470	Jan. 29	1841	.....	26	361
Castner, Victor, *et al.* (See Hall, Charles, assignor.)						
Castor, Lewis F., Philadelphia, Pa. Two-wheeled vehicle	294,009	Feb. 26	1582	438	26	744

Comings, William R., Norwalk, Ohio. Apparatus for indicating temperatures of distant rooms	294,291	Feb. 26	1851	505	26	786
Commercial Telegram Company. (See Field, Stephen D., assignor.)						
Companion Sewing Machine Company. (See Healey, C. Wallace, assignor.)						
Company of Vulcan. (See Graham, Daniel M., assignor.)						
Compton, William A., Liberty Corner, N. J. Machine for planing and printing wood	291,155	Jan. 1	175	51	26	33
Comstock, Albert S., *et al.* (See Bradford, Addison, assignor.)						
Comstock, Charles J. (See Comstock, Eben C., assignor.)						
Comstock, Chester, New Canaan, Conn. Steam-radiator	294,854	Mar. 11	630	175	26	944
Comstock, Eben C., assignor to himself and C. J. Comstock, Springport, Mich. Spring-tooth harrow	291,840	Jan. 8	1033	288	26	190
Comstock, William T., New York, N. Y. Leveling-instrument	294,014	Feb. 26	1585	440	26	745
Conde, Alonzo B., Albany, N. Y. Hame-fastener	294,202	Feb. 26	1851	505	26	787
Condit, Ezekiel C., Kansas City, Mo. Furnace-joint	292,537	Jan. 29	1938	542	26	377
Condit, Israel D., Jr., Millburn, N. J. Retort deoxidizing-furnace	291,298	Jan. 1	357	101	26	64
Congdon, Isaac H., Omaha, Nebr. Water-closet funnel of railway-cars	292,472	Jan. 29	1842	513	26	361
Conklin, Linley H., Willow Creek, Minn. Grain-spout for thrashing-machines	291,966	Jan. 15	1225	341	26	236
Conly, Mahlon S., assignor of two-thirds to T. H. Butler and O. R. Weaver, Indianapolis, Ind. Condenser for ammonia ice-making apparatus	294,763	Mar. 11	512	{142 143}	26	923
Connell, John, Rochester, N. Y. Machine for lapping hoops	292,157	Jan. 22	1424	399	26	280
Conner & Co., Lewis D. (See Sanker, Curtis J., assignor.)						
Conner, James M., New York, N. Y. Type-casting mold	293,633	Feb. 19	1088	301	26	647
Connolly, Anthony A., Washington, D. C. Protector for telephonic and telegraphic instruments	291,299	Jan. 1	357	101	26	65
Connolly, Thomas A., Washington, D. C. Automatic electric switch	295,356	Mar. 18	1225	{356 357}	26	1073
Conover, Jacob A., New York, N. Y., assignor to A. F. Childs, Washington, D. C. Leaf-table	293,565	Feb. 12	1006	277	26	626
Conrad, Adam, Chicago, Ill., assignor of one-half to A. Dickinson. Elevator for bags, &c.	294,015	Feb. 26	1586	{440 441}	26	745
Conrad, Christopher F., Adrian, Mich. Pump for fire-extinguishers, &c	293,952	Feb. 19	1514	418	26	723
Conrath, George T., Warren, Pa. Device for lowering coffins into graves	294,366	Mar. 4	32	9	26	835
Consolidated Electric Light Company. (See Knowles and Idell, assignors.)						
Consolidated Safety Valve Company. (See Richardson, George W., assignor.)						
Contant, Paul, Reims, France. Sampling-tube	293,423	Feb. 12	848	230	26	597
Continental Cash Car Company of Baltimore. (See Clark, Milton, assignor.)						
Continental Glycerine Company. (See Michand, Edmond F. and E. N., assignors.)						
Converse, Lyman P., Chicago, Ill., assignor to Water-Proof Fabric Company, of New York. Substance for rendering fabrics water-proof	295,113	Mar. 11	909	.....	26	1002
Converse, Morton E., Winchendon, Mass. Machine for cutting heads of boxes	292,991	Feb. 5	263	72	26	490
Cook, Charles. (See Meinikheim, Bernard G., assignor.)						
Cook, Egbert C., Chicago, Ill. Portable hammock-support	292,204	Jan. 22	1489	418	26	290
Cook, Henry, Leadville, Colo. Inhaler for anæsthetics	294,585	Mar. 4	306	85	26	880
Cook, Sheldon P., Minneapolis, Minn. Grain-drier	294,367	Mar. 4	35	10	26	835
Cooke, David W., Franklin, Tenn. Steam traction tug-boat	295,231	Mar. 18	1129	{311 312}	26	1043
Cooley, Albert, Osceola, Iowa. Hay-stacker	294,768	Mar. 11	518	144	26	924
Coombs, John, assignor to Southwestern Implement Company, Springfield, Mo. Hay-stacker	291,694	Jan. 8	867	{242 243}	26	161
Coon, James H., Des Moines, Iowa. Applying barbs to fence-wire	292,205	Jan. 22	1490	419	26	290
Coon, James H., Des Moines, Iowa. Wire-barbing machine	292,206	Jan. 22	1491	{419 420}	26	290
Cooper, Albert. (See Jones and Cooper.)						
Cooper, James O. (See Cooper, John L., assignor.)						
Cooper, John L., San Francisco, Cal., assignor to J. O. Cooper, Portland, Oreg. Apparatus for cleaning ships' sides, &c	295,357	Mar. 18	1289	357	26	1074
Cooper, William, New York, N. Y. Game apparatus, calendar, and clock	294,586	Mar. 4	306	85	26	880
Cope, Henry P., assignor of one-half to J. H. Bissell, Detroit, Mich. Router-plane	294,724	Mar. 4	464	130	26	908
Copeland & Bacon. (See Bacon, Earle C., assignor.)						
Copeland, Brommie, and F. Wright, Salem, N. Y. Extensible latch	293,424	Feb. 12	849	230	26	597
Copeland, David W., assignor of seven-tenths to M. H. Bronson, Lowville, and W. H. Cole, Leyden, N. Y. Railway-gate	295,358	Mar. 18	1290	357	26	1074
Copithorn, John T., assignor of one-half to E. H. Studley, Boston, Mass. Mold	293,953	Feb. 19	1514	418	26	724
Coppel, Alexander. (See Kaldenbach, Friedrich W., assignor.)						
Coram, George B. (See Dennis and Coram.)						
Coram, Joseph A., *et al.* (See Dennis and Coram, assignors.)						
Corbett, Philip F., Boston, Mass. Clamp	292,207	Jan. 22	1404	420	26	290
Corbin Cabinet Lock Company. (See Mix, Frank W., assignor.)						
Corbin Cabinet Lock Company. (See Mix, Frank W., assignor.) (Reissue.)						
Corbin, P. & F. (See Arens, August, assignor.)						
Corcoran, Mathew, Sterling, Ill. Machine for trussing tubs	294,764	Mar. 11	513	143	26	923
Corey, George D., assignor of one-half to Woods, Sherwood & Co., Lowell, Mass. Bottle-stopper	294,443	Mar. 4	133	35	26	852
Cormack, George H., Rockford, Ill. Millstone-adjusting mechanism	292,026	Jan. 29	2059	571	26	396
Cormack, Hamilton M., Malden, Mass. Gang-plow	291,156	Jan. 1	177	51, 52	26	34
Cormack, Hamilton M., Malden, Mass. Traction-engine	291,300	Jan. 1	359	102	26	65
Cornelius, Oliver H. P., and G. H. Turner, Turner, Oreg. Alarm-signal for hot journals	292,902	Feb. 5	265	73	26	491
Cornely, Emil, Paris, France. Embroidering-machine	292,284	Jan. 22	1508	{446 447}	26	308
Cornely, Emil, Paris, France. Embroidering-machine	292,285	Jan. 22	1600	447	26	308
Coronet Corset Company. (See Weeks and Cady, assignors.)						
Cortis, Frank A., Meriden, Conn. Transom-lifter	291,095	Jan. 8	868	243	26	161
Costa Corrêa Leite, Henrique da, Lisbon, Portugal. Paper manufacture from the plant galega	293,566	Feb. 12	1008	.....	26	626
Coté, Louis, St. Hyacinthe, Quebec, Canada. Heel-stiffener-shaping machine	294,444	Mar. 4	134	35	26	852
Cottle, Julius O., and R. Ivie, St. Jo, Tex. Hopple for horses	293,312	Feb. 12	704	188	26	569
Cottle, Melvin, Scipio, Kans. Shutter	292,101	Jan. 15	1354	380	26	261
Cottrell, Calvert B., Westerly, R. I. Printing-press	293,313	Feb. 12	704	{188 189}	26	570
Cottrell, Herbert, Newark, N. J. Ice-creeper	291,880	Jan. 15	1097	306	26	212
Coty, Joseph, Joliet, Ill. Railway-crossing gate	294,765	Mar. 11	514	143	26	923

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Couch, Albert C., Boston, Mass. Flexible mirror for hat-tips and other purposes	291,033	Jan. 1	23	6	26	7

Copland, Charles, Seymour, Conn. Loom for weaving double pile fabrics	294,967	Mar. 11	761	212	26	968
Copland, Charles, Seymour, Conn. Loom for weaving double pile fabrics	294,968	Mar. 11	763	212	26	968
Copland, Charles, Seymour, Conn. Spindle and bearing for rotary cutters of machines for cutting double pile fabrics	294,969	Mar. 11	765	213	26	968
Copland, Charles, Seymour, Conn. Machine for cutting double pile fabrics	294,970	Mar. 11	767	{213 214 215}	26	969
Couvin, S. W., *et al.* (See Sanford, Addison V., assignor.)						
Covell, Edward T., New Bedford, Mass. Book-mark and pencil-holder	292,412	Jan. 22	1762	490	26	339
Cowdery, Warren H., assignor of one-half to S. R. Harris, Ashtabula, Ohio. Hay-fork	294,587	Mar. 4	308	86	26	881
Cowell, Newell P., Cleveland, Ohio. Car-coupling	295,618	Mar. 25	1627	450	26	1142
Cowen, William E., Defiance, Ohio. Car-ventilator	294,016	Feb. 26	1588	441	26	745
Cowie, Thomas J., U. S. Navy. Sailor's jackknife	293,634	Feb. 19	1089	301	26	648
Cowing & Gleason Manufacturing Company. (See Cowing, Philo, assignor.)						
Cowing, Philo, assignor to Cowing & Gleason Manufacturing Company, (limited,) Seneca Falls, N. Y. Core-box	292,102	Jan. 15	1355	381	26	261
Cowles, Alfred A., New York, N. Y., assignor to Ansonia Brass and Copper Company, Ansonia, Conn. Electric conductor	292,539	Jan. 29	1940	542	26	377
Cowles, Alfred A., New York, N. Y., assignor to Ansonia Brass and Copper Company, Ansonia, Conn. Tinning sheet-copper	292,540	Jan. 29	1942	.....	26	377
Cowles, Alfred A., New York, N. Y., assignor to Ansonia Brass and Copper Company, Ansonia, Conn. Manufacture of electric conductors	295,232	Mar. 18	1132	312	26	1044
Cowles, Alfred H. (See Cowles, Edwin and A. H.)						
Cowles, Edwin and A. H., Cleveland, Ohio. Stereotype-backing powder or filling	294,588	Mar. 4	308	.....	26	881
Cowles, Ezra R. and H. A., and M. Osborn, Westfield, Mass. Perfumery-charged cane and other handles	295,359	Mar. 18	1291	358	26	1074
Cowles, Henry A. (See Cowles and Osborn.)						
Cowles, Wilber F., St. Mary's, and J. Woolworth, Sandusky, Ohio. Wooden-stirrup machine	294,203	Feb. 26	1853	505	26	787
Cox, Arthur W., Auburn, Me., assignor of one-half to J. T. Bullivant, Newark, N. J. Last	292,792	Feb. 5	18	5	26	446
Cox, Daniel O., Mannsville, N. Y. Horse-checker	294,445	Mar. 4	136	36	26	852
Cox, H. M. (See Miles, Edward J., assignor.)						
Coy, Frederick W., Boston, Mass. Abrading-machine	294,766	Mar. 11	516	{143 144}	26	924
Coyle, Hugh B., Philadelphia, Pa. Awning	294,767	Mar. 11	517	144	26	924
Crabb, William, Newark, N. J. Comb	294,204	Feb. 26	1854	506	26	787
Crabtree, Thomas A., East Surry, assignor of one-half to E. Hale, Ellsworth, Me. Check-rein hook	294,310	Feb. 26	1983	542	26	811
Cragin, Ida L. (See Cragin, Samuel B., assignor.)						
Cragin, Samuel B., assignor of one-third to I. L. Cragin, Ada, Minn. Nut-lock	292,627	Jan. 29	2053	571	26	396
Craig, Warren H., Lawrence, Mass. Lubricator for steam-engines	291,696	Jan. 8	869	243	26	161
Craig, William, Brooklyn, N. Y. Steam-actuated valve	292,541	Jan. 29	1943	{542 543}	26	377
Craig, William, Brooklyn, N. Y. Producing circulation in steam-boilers	294,118	Feb. 26	1739	478	26	769
Craighead, Robert B., Milton, Ohio. Snap-hook	292,103	Jan. 15	1357	381	26	261
Cramer, Anthony, Detroit, Mich. Brick-machine	294,368	Mar. 4	35	10	26	836
Cramer, Charles H., Lake Mills, Wis. Wind-engine	294,369	Mar. 4	36	10	26	836
Cramp, Jacob P., Finedon, county of Northampton, England. Kiln	292,413	Jan. 22	1763	491	26	339
Crandal, George L., Binghamton, N. Y. Protecting button-holes	294,446	Mar. 4	137	36	26	853
Crandall, Charles M., assignor to F. W. Crandall and B. L. Baldwin, Montrose, Pa. Toy building-block	294,589	Mar. 4	309	86	26	881
Crandall, Charles M., assignor to F. W. Crandall and B. L. Baldwin, Montrose, Pa. Toy building-block	294,590	Mar. 4	310	86	26	881
Crandall, Fred W., *et al.* (See Crandall, Charles M., assignor.)						
Crandall, Orville A. (See Akins, John, assignor.)						
Crandell, James H., assignor of one-half to J. Flint, Upper Marlborough, Md. Sewing-machine motor	293,149	Feb. 5	475	127	26	525
Crane, Walter E., Waseca, Minn. Harvesting-machine	291,987	Jan. 15	1225	{341 342}	26	236
Crane, Winthrop M., Dalton, Mass. Machinery for manufacturing ornamental paper	293,229	Feb. 12	593	156	26	551
Crane, Winthrop M., Dalton, Mass., assignor to A. G. Goodall, New York, N. Y. Manufacture of ornamental paper	293,228	Feb. 12	592	156	26	551
Cratty, Joslah. (See Terman, James W., assignor.)						
Crawford, Alexander, Evansville, Ind. Double-acting force-pump	291,859	Jan. 8	1057	296	26	195
Crawford, Charles W., Brazil, Ind. Preventing condensation in steam-cylinders	292,104	Jan. 15	1357	381	26	261
Crawford, Charles W., Davenport Centre, N. Y. Siding and ceiling for buildings	294,855	Mar. 11	631	175	26	944
Crawford, George W., Davenport Centre, N. Y. Siding and ceiling for buildings	295,360	Mar. 18	1292	358	26	1074
Crawford, Henry, and J. M. Long, Virden, Ill. Hoisting food-cooler						
Cree, James. (See Marsh and Cree.)	291,158	Jan. 1	180	52	26	34
Cregier, Dewitt C., Chicago, Ill. Water-supply for cities	291,159	Jan. 1	182	53	26	34
Cregier, Dewitt C., Chicago, Ill. Water-supply for cities and towns	295,361	Mar. 18	1293	358	26	1075
Creighton, James S., and J. Tayler, Smith's Flat, Cal. Two-wheeled vehicle	291,881	Jan. 15	1098	306	26	212
Creighton, Millard, Marblehead, Mass. Work-bench						
Crim, Norval D. (See Troxel, Fredrick, assignor.)						
Crisp, Joseph E., Somerville, assignor to J. Stetson, Newton, Mass. Machine for measuring incompressible fluids	295,858	Mar. 25	1933	534	26	1197
Crockett, Charles E., Waupun, Wis. Refrigerating-counter for bar-rooms	293,425	Feb. 12	850	{230 231}	26	597
Croft, Wilbur & Co. (See Smith, John, assignor.)						
Crofut, Eber R., and C. L. Gribbin, Newark, N. J. Window	295,302	Mar. 18	1294	358	26	1075
Crompton, George, and H. Wyman, Worcester, Mass., assignors to G. Crompton. Mechanical movement. (Reissue)	10,433	Jan. 1	586	165	26	105
Crooke, Henry S. and L., New York, N. Y. Making rolled metallic foil	294,725	Mar. 4	465	.....	26	909
Crooke, Lewis. (See Crooke, Henry S. and L.)						
Crosby, Nathan, *et al.* (See Dennis and Coram, assignors.)						
Cross, Frank J. (See McDonald, William A., assignor.)						
Cross, William C., Boston, Mass. Necktie	291,301	Jan. 1	361	102	26	65
Cross, William C., Boston, Mass. Necktie	294,726	Mar. 4	466	130	26	909
Crossley, Louis J., W. Emmott, Halifax, and J. F. Harrison, Bradford, county of York, England. Electric signaling apparatus	292,542	Jan. 29	1945	543	26	378

Curtis, Uriah, Concord, Minn. Instrument for calculating interest, &c	295,152	Mar. 18	1021	282 / 283	26	1025
Curtis, William W., Stanberry, Mo. Well-boring machine	292,735	Jan. 29	2190	611	26	490
Cushing, Alvin M. (See Wells, Charles S., assignor.)						
Cushing, Frederick W., New York, N. Y. Measuring velocity by electricity	293,426	Feb. 19	852	231	26	598
Cushing, Harry C., New London, Conn. Sighting attachment for fire-arms	294,770	Mar. 11	520	145	26	924
Cushing, William L. B., and A. D. Vest, San José; said Vest assignor to T. A. Vest, North San Juan, Cal. Animal-trap	295,486	Mar. 18	1451	399	26	1105
Cnasons, John, Glen Allen, Va. Calendar	292,106	Jan. 15	1359	382	26	262
Custer, George, Whitney, Tex. File	295,487	Mar. 18	1452	400	26	1105
Custer, George M., Mattoon, Ill. Gate	294,971	Mar. 11	778	215	26	970
Cutting, Henry, assignor of one-half to T. J. De Laney, Buffalo, N. Y. Sash-holder	291,697	Jan. 8	870	244	26	162
D'Andrée, Louis, Riga, Prussia, assignor to himself and L. Loewe & Co., Berlin, Germany. Rotary steam-engine	292,898	Feb. 5	148	39	26	470
Dager, William B., Canton, Ohio. Door-check	294,018	Feb. 26	1501	442	26	746
Daheney, Thomas L., Boston, Mass. Table for leather-scouring machines	291,882	Jan. 15	1009	306	26	212
Dailey, Joseph W., Detroit, Mich. Fastening device for draft-pins	291,304	Jan. 1	365	103	26	66
Dake, William F., and J. H. Seek, Grand Haven, Mich. Shingle-sawing machine	292,107	Jan. 15	1359	382	26	262
Dakin, Montgomery, Leslie, Mich. Neck-yoke	294,447	Mar. 4	138	36	26	853
Dale, John H., assignor of two-thirds to A. S. Jenks, Philadelphia, Pa. Steam-generating apparatus	294,119	Feb. 26	1741	478 / 479	26	769
Dall, John, New York, N. Y. Coal-bank	295,233	Mar. 18	1133	312	26	1044
Dalley, Alfred E., Quincy, Mich. Boiler	294,448	Mar. 4	139	36	26	853
Dames, Peter J., St. Louis, Mo. Machine for cutting vegetables	291,305	Jan. 1	366	103	26	66
Dandurand, Cyprien, and L. M. Lafrance, Virginia City, Nev.; said Lafrance assignor of one-third to said Dandurand. Quartz-crushing machine	292,543	Jan. 29	1947	543	26	378
Dane, Joseph C., assignor of two-thirds to L. S. Card and F. J. Smith, La Crosse, Wis. Automatic car-brake	292,736	Jan. 29	2191	611	26	490
Dane, Joseph C., assignor of two-thirds to L. S. Card and F. J. Smith, La Crosse, Wis. Car-brake	292,793	Feb. 5	19	5	26	446
Danforth, George E., Chelsea, Mass. Clasp or fastening for gloves, &c	294,019	Feb. 26	1502	442	26	746
Daniell, James H., Prescott, Ark. Churn	291,306	Jan. 1	367	103	26	66
Daniell, William P., Girardville, Pa. Device for lubricating wheels and pulleys	291,307	Jan. 1	368	103	26	66
Daniels, Fred H., Worcester, Mass. Apparatus for making wire rods	292,794	Feb. 5	21	6	26	446
Daniels, Fred H., Worcester, Mass. Furnace for heating billets	294,370	Mar. 4	37	11	26	836
Daniels, Wolcott O., Westfield, Mass. Whip mount or button	293,954	Feb. 19	1516	418	26	724
Dankhoff, Louis, Passaic, N. J. Faucet attachment	291,161	Jan. 1	185	53	26	35
Danner, John, Canton, Ohio. Revolving book case and stand	293,151	Feb. 5	477	128	26	525
Dardenne, Auguste, Mariemburg, Belgium. Self-winding clock	292,108	Jan. 15	1361	382	26	262
Dare, Benjamin A. (See Horne, George W., assignor.)						
Darling, Fenner, Franklin, Mass. Pitman-box	292,994	Feb. 5	269	73	26	491
Darling, Orlando G., and H. A. Schuls, Brooklyn, N. Y. Truss	293,230	Feb. 12	595	156	26	551
Darling, Orlando G., and H. A. Schuls, Brooklyn, N. Y. Truss	293,231	Feb. 12	595	157	26	551
Darling, Samuel, Providence, R. I. Comparator	292,415	Jan. 22	1765	491 / 492	26	340
Darlington, Hillborn, Concord, Pa. Device for connecting and stretching fence-wire	295,114	Mar. 11	970	264	26	1002
Dathis, Léon, Paris, France. Portable oven	292,544	Jan. 29	1948	543 / 544	26	378
Daubmann, Jacob C. (See Gaunt, Poiesz, Calhoun, and Daubmann.)						
Daugherty, Creet H., Fremont, Ind. Cabinet for watch-crystals	291,308	Jan. 1	369	104	26	66
Daul, Anthony, assignor of one-half to C. Winckens, Jamaica, N. Y. Folding basket	295,363	Mar. 18	1295	359	26	1075
Davey, William H. (See Podger and Davey.)						
Davey, William H., and H. Fabian, London, England. Ironing-machine	291,035	Jan. 1	94	7	26	7
David, Jacob, Brooklyn, N. Y. Vessel having divided hull	295,153	Mar. 18	1024	283	26	1025
Davids, John B., New Rochelle, N. Y. Inkstand or receiver	295,739	Mar. 25	1779	494	26	1169
Davidson, George L. O., Manchester, county of Lancaster, England. Velocipede	295,364	Mar. 18	1296	359	26	1076
Davidson, L. E. (See Brekke, Lewis O., assignor.)						
Davidson, Marshall T. (See Hamilton, Robert W., assignor.)						
Davies, Henry J., Brooklyn, assignor to Ansonia Rubber Company, New York, N. Y. Clock-dial	291,989	Jan. 15	1228	342	26	236
Davies, John W. (See Davies, Jonathan M. and J. W.)						
Davies, Jonathan M. and J. W., Bryan, Ohio. Coal-drilling machine	291,578	Jan. 8	710	199 / 200	26	133
Davies, Thomas, Poughkeepsie, N. Y. Game apparatus	292,899	Feb. 5	148	40	26	470
Davis, Augustus G., Baltimore, Md. Telephone-box	295,365	Mar. 18	1298	359	26	1076

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr'g.	Vol.	Page.
Davis, Charles W., assignor to C. W. Williams Manufacturing Company, Montreal, Quebec, Canada, and Rouse's Point, N. Y. Sewing-machine	291,309	Jan. 1	370	104	26	67
Davis, George W., Freeport, Me. Watchman's electric time-recording system	294,371	Mar. 4	38	11	26	836
Davis, Henry M. (See Tower, Oscar, assignor.)						
Davis, Isaac B., and W. L. Shepard, Hartford, Conn. Cut-off valve	294,857	Mar. 11	633	176	26	944
Davis, John, Allegheny, Pa. Astronomical apparatus	291,698	Jan. 8	871	244 / 245	26	162
Davis, John, Allegheny, Pa. Globe and globe-support	292,158	Jan. 22	1425	400	26	280
Davis, John F., Altoona, Pa. Heating and ventilating drum for stoves	294,771	Mar. 11	521	145	26	925
Davis, John T., New York, N. Y. Rotary engine	295,859	Mar. 25	1936	534	26	1198
Davis, Kansas D., Cole City, Ga. Balloon-propeller	291,990	Jan. 15	1229	342 / 343	26	236
Davis, Lelan A., Newark, Md. Door-check	294,972	Mar. 11	779	216	26	971
Davis, Nathan R., Frectown, Mass. Breech-loading fire-arm	293,719	Feb. 19	1203	333	26	669
Davis, Nathan R., Frectown, Mass. Barrel-lock for breakdown guns	294,772	Mar. 11	521	145	26	925
Davis, Riley L., Mooresville, N. C. Elevator	292,995	Feb. 5	270	74	26	491
Davis, William H. (See Burdick and Davis.)						
Davis, William H., Syracuse, N. Y. Refrigerator	291,036	Jan. 1	25	7	26	7
Davis, William H., Glens Falls, N. Y. Bicycle	292,545	Jan. 29	1950	544	26	379
Dawson, George W., *et al.* (See Dixon, Joseph L., assignor.)						
Dawson, Joseph C. (See Bagley and Dawson.)						
Dawson, Joseph W., Auburn, Ala. Seed-planter	291,579	Jan. 8	712	200	26	134
Dawson, William A., Stony Point, Cal. Overalls	295,619	Mar. 25	1628	450	26	1142
Dawson, William A., assignor of one-fourth to E. K. Evans, Stony Point, Cal. Running-gear for vehicles	292,900	Feb. 5	149	40, 41	26	470
Dawson, William N., Adel, Iowa. Railway-signaling apparatus	294,206	Feb. 26	1857	506 / 507	26	787
Dawson, William S., Cisco, Ill. Device for holding bolts	291,037	Jan. 1	26	8	26	7
Day, George W., Haverhill, Mass. Last	291,991	Jan. 15	1230	343	26	237
Day, George W., Haverhill, Mass. Manufacture of boots or shoes	291,992	Jan. 15	1231	343	26	237
Day, John, Brooklyn, N. Y. Window-shade pull	294,449	Mar. 4	140	37	26	853
De Berry, Jesse D., Smithville, Mo. Folding egg-case	291,699	Jan. 8	874	245	26	162
De Castro, Jacob W., New York, N. Y. Electric safety device for elevators	293,851	Feb. 19	1383	382 / 383	26	699
De Dion, Albert, G. T. Bouton, and C. Trépardoux, Paris, France. Steam-boiler	291,580	Jan. 8	713	200	26	134
De Festetics, Gyula, Perth Amboy, N. J. Artistic tile	293,636	Feb. 19	1090	302	26	648
De Gaetano, Stephen. (See Collender and De Gaetano.)						
De Guinon, Richard V. F., Chicago, assignor of one-half to J. W. Parmelee, Englewood, Ill. Placer-mining machine	293,852	Feb. 19	1384	383	26	699
De Laney, Thomas J. (See Cutting, Henry, assignor.)						
De Laval, Gustaf, Stockholm, Sweden. Centrifugal creamer	293,314	Feb. 12	707	189	26	570
De Maine, Oscar, Alexandria, Va. Door-fastener	291,162	Jan. 1	186	54	26	35
De Nise, Benjamin, Camden, N. J. Compound for waterproofing and preserving buildings	295,525	Mar. 25	1502	.....	26	1119
De Smedt, Edward J., Washington, D. C. Apparatus for refining asphaltum for paving, &c	292,417	Jan. 22	1771	493	26	341
De Vigne, Georges, Lille, France. Manufacture of ferro-cyanides	291,163	Jan. 1	187	.....	26	35
De Vos, Cornelius, Battle Creek, Mich. Combined paper-holder, calendar, and blotter	291,499	Jan. 8	612	172	26	117
De Vry, J. Vital. (See McCall and De Vry.)						
Deal, Josiah J., assignor of two-thirds to W. M. Johnston, Wilmot, Ohio. Spittoon	292,286	Jan. 22	1601	447	26	309
Dean, Albert H., and C. A. Hotchkiss, assignors to Ives, Blakeslee & Co., Bridgeport, Conn. Toy pistol	294,450	Mar. 4	140	37	26	853
Dean, George A., Dorchester, Mass. Horseshoe	295,620	Mar. 25	1629	450	26	1142
Deane, Erasmus M., St. Paul, Minn. Grain-binder	291,497	Jan. 8	608	171 / 172	26	116
Dearmin, Frank, De Witt, Mo. Well-boring and drilling machine	295,621	Mar. 25	1630	451	26	1143
Decker, Alexander C. (See Ayres and Decker.)						
Decker, William, and J. A. Marshall, Darlington, Ind. Straw-stacker	292,698	Jan. 29	2054	571	26	396
Decombe, Joseph, San Francisco, Cal. Hinge	292,416	Jan. 22	1770	493	26	340
Deeds, John B., and J. H. Blake, Terre Haute, Ind.; said Deeds assignor to said Blake. Alarm-signal for railway-crossings	294,207	Feb. 26	1858	507	26	788
Delamater, Cornelius H., *et al.* (See Reynolds and Allen, assignors.)						
Delamater, William, *et al.* (See Reynolds and Allen, assignors.)						
Delker, George. (See Blackwell, Richard C., assignor.)						
Dellenbaugh, Frederick S., New York, N. Y. Combined reservoir and palette	294,591	Mar. 4	311	86	26	881
Demarest, John, assignor to J. L. Mott Iron Works, New York, N. Y. Water-closet valve	292,159	Jan. 22	1428	400	26	281
Demarest, John, assignor to J. L. Mott Iron Works, New York, N. Y. Cistern for water-closets	292,160	Jan. 22	1429	401	26	281
Demarest, John, assignor to J. L. Mott Iron Works, New York, N. Y. Cistern for water-closets	292,901	Feb. 5	150	41	26	471
Demers, J. Arthur, Great Falls, N. H. Burglar-alarm	295,366	Mar. 18	1299	360	26	1076
Demorest, W. Jennings. (See Rose, John H., assignor.)						
Dempsey, James, Lewiston, Me. Draft-regulator	292,287	Jan. 22	1601	447 / 448	26	309
Demuth, John A., Toledo, Ohio. Duplex-check scale-beam	293,637	Feb. 19	1091	302	26	648
Deniston, Ward W., Washington, D. C. Collar or tie adjuster	295,526	Mar. 25	1502	414	26	1119
Dennen, Charles O., W. C. Gray, and H. C. Nellis, Piqua, Ohio. Rake shoe or runner	293,210	Feb. 5	560	149	26	540
Dennett Harvesting Machine Company. (See Schulte and Martincourt, assignors.)						
Dennis, Edward P., assignor of one-half to J. S. Ludlam, Lowell, Mass. Mechanism for stripping the flats of carding-engines	291,471	Jan. 1	568	160	26	101
Dennis, James W., assignor of one-half to W. Hamilton, Cincinnati, Ohio. Retainer for gun-wads	295,234	Mar. 18	1133	312	26	1044
Dennis, James W., assignor of one-half to W. Hamilton, Cincinnati, Ohio. Gun-wad	295,235	Mar. 18	1135	313	26	1044
Dennis, John, and G. B. Coram, assignors to J. A. Coram and N. Crosby, Lowell, Mass. Press for pressing and stamping	294,311	Feb. 26	1984	542	26	811
Dennis, Thomas L., Jersey City, N. J. Electric lamp	295,367	Mar. 18	1300	360	26	1076
Dennis, Thomas L., New York, N. Y. Dynamo-electric machine	295,368	Mar. 18	1301	360 / 361	26	1077
Deplanty, Fabiens, Hastings, Mich. Fruit-canning device	291,581	Jan. 8	715	200	26	134
Depoully, Paul. (See Garnier and Depoully.)						
Deppen, Isaac, Hyde Park, Pa. Reclining-chair	294,973	Mar. 11	781	216	26	971
Desmoyers, Jerome B., and C. Sinning, St. Louis, Mo. Brake mechanism for sewing-machines	291,700	Jan. 8	875	245	26	163
Desmoyers, Jerome B., and C. Sinning, St. Louis, Mo. Button-hole sewing-machine	291,701	Jan. 8	876	246	26	163
Detamble, Henry, Aurora, Ill. Bob-sleigh	293,152	Feb. 5	478	128	26	525

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Detrick, Calvin, *et al.* (See Howson, Henry, assignor.)						
Detrick, Jacob S., and W. T. Smith, Baltimore, Md. Combined saw filing and setting machine	295,115	Mar. 11	971	265 266	26	1002
Detroit Casket Company. (See Froschl, Alfred, assignor.)						
Deupree, John E., Edinburg, Ind. Animal-poke	291,702	Jan. 8	877	246	26	163
Devine, Edward, Detroit, Mich. Pipe-bending machine	292,418	Jan. 22	1772	493 494	26	341
Devlin, Charles, Pembroke, Ontario, Canada. Car-coupling	291,498	Jan. 8	611	172	26	116
Dewey, Alvah. (See Clark and Dewey.)						
Dibble, Chauncey G., Farmington, Iowa, assignor of one-half to F. E. Bangs, New Haven, Conn. Bridge	293,427	Feb. 12	853	231	26	598
Dick, Dundas, New York, N. Y. Paper wrapper	294,859	Mar. 11	634	176	26	945
Dick, Joseph, Jr., Canton, Ohio. Horse-power	294,372	Mar. 4	42	11	26	837
Dickey, William H., Jackson, Mich. Drive-chain	294,373	Mar. 4	44	12	26	837
Dickie, George W., San Francisco, Cal. Valve-gear for hydraulic pumps	295,622	Mar. 25	1631	451 452	26	1143
Dickie, George W., assignor to Risdon Iron and Locomotive Works, San Francisco, Cal. Apparatus for draining mines	294,859	Mar. 11	635	176 177 178	26	945
Dickinson, Albert. (See Conrad, Adam, assignor.)						
Dickinson, Frederick. (See Getty and Dickinson.)						
Dickinson, Newton A., Chester, Conn. Trolling-hook	295,369	Mar. 18	1303	361	26	1077
Dickson, William F., Mosaville, Ill. Cultivator-shovel	292,795	Feb. 5	25	6	26	447
Dickman, August, and M. Heintz, Detroit, Mich. Veneer	291,164	Jan. 1	188	.....	26	35
Dickson, Lucias E., Brazil, Ind. Quilting-frame	293,638	Feb. 19	1093	303	26	648
Dickson, Silas, assignor of one-third to S. Myers, Marcy, Ohio. Saw-mill-feed mechanism	294,208	Feb. 26	1859	507	26	788
Dieckmann, George, New York, N. Y. Method of and apparatus for generating steam	292,546	Jan. 29	1951	545	26	379
Dieterla, Edward. (See Westphal and Dieterla.)						
Dieterich, Fred G., and E. C. Walford, Washington, D. C. Cigar-dealer's knife	292,473	Jan. 29	1843	514	26	302
Dietrich, Franz, Munich, Germany. Manufacture of cream of tartar	294,592	Mar. 4	312	.....	26	882
Dietz, Frederick, *et al.* (See Sanford, Addison V., assignor.)						
Dietz, Frederick, New York, N. Y. Lantern-globe holder	292,288	Jan. 22	1602	448	26	309
Dight, William M. (See Ferguson, Harvey W., assignor.)						
Dignam, John S., London, Ontario, Canada. Decorating glassware	293,639	Feb. 19	1094	303	26	649
Dignam, John S., London, Ontario, Canada. Jug	293,640	Feb. 19	1095	303	26	649
Dike, Albert E. (See Byron, Ulderic D., assignor.)						
Dilatush, Walter S., and J. R. Drake, Lebanon, Ohio. Three-wheeled vehicle	295,154	Mar. 18	1025	283	26	1026
Dillard, Gregory M., Macon, Miss. Vehicle-wheel	291,165	Jan. 1	189	54	26	35
Dillehay, John T., Beech Grove, Ky. Vehicle-brake	295,740	Mar. 25	1780	495	26	1169
Dillman, Andrew, *et al.* (See Case, George, assignor.)						
Dillon, Benjamin F., Savannah, Ga. Combined burglar-alarm and telephone system	291,310	Jan. 1	371	104	26	67
Dillon, Ira B., Visalia, Cal. Hen's nest	294,974	Mar. 11	781	216	26	971
Dimond, William, Huntington, Ind. Ice-tongs	294,975	Mar. 11	782	216	26	971
Dimpfl, Anton, Munich, Bavaria, Germany, assignor to M. Poletti, Hoboken, N. J. Manufacture of bricks, tiles, &c	291,582	Jan. 8	715	201 202	26	134
Dirhold, John W., St. Louis, Mo. Clamp for ruling-pens	295,370	Mar. 18	1304	361	26	1077
Diss, Louis P. (See Lee and Diss.)						
Disston, Hamilton, *et al.* (See Rose, Rufus E., assignor.)						
Divors, Joseph, Peru, Ill. Cultivator	292,996	Feb. 5	271	74	26	491
Dixon, Charles, Weedsport, N. Y. Pitman-box connection for mowers and reapers	292,289	Jan. 22	1603	448	26	309
Dixon, John W., Philadelphia, Pa. Apparatus for recovering soda used in manufacture of paper-pulp	291,993	Jan. 15	1232	343	26	237
Dixon, Joseph L., assignor of two-thirds to G. W. Dawson, Falmouth, and H. A. Hatcher, Guthrie, Ky. Twin-bed-spring connector	294,593	Mar. 4	313	87	26	882
Doane, Charles J., Old Gilroy, Cal. Farm-gate	291,994	Jan. 15	1234	344	26	237
Doane, William H., and G. W. Bugbee, Cincinnati, Ohio. Boring attachment for mortising-machines	295,236	Mar. 18	1136	313	26	1044
Dobbin, Robert O., Waterloo, Ontario, Canada. Barrel-finishing machine	292,737	Jan. 29	2192	611 612 613	26	421
Dobson, Henry C., New York, N. Y. Banjo	294,451	Mar. 4	141	37	26	853
Dockstader, James, Syracuse, N. Y. Billiard-table attachment	292,547	Jan. 29	1954	545	26	379
Dodd, Alexander, Baltimore, Md. Salesman's sample-trunk	294,594	Mar. 4	313	87	26	882
Dodge, Edward H., *et al.* (See Tyler and Smith, assignors.)						
Dodge, Frances A., Brady, Tex. Refrigerating apparatus	291,166	Jan. 1	190	54	26	35
Dodge, Henry B., East Somerville, Mass. Spring-hinge	292,210	Jan. 22	1503	422	26	292
Dodge, Richard S., *et al.* (See Harrison, Frank G., assignor.)						
Dodge, Theodore A., trustee. (See Heffernan, William J., assignor.)						
Dodge, Wallace H., Mishawaka, Ind. Band-saw machine	294,452	Mar. 4	142	37	26	854
Doersch, George M., Antigo, Wis. Bung-extractor	293,232	Feb. 12	596	157	26	551
Doherty, Fisher, and E. L. Sles, Crawfordsville, Ind. Two-wheeled vehicle	293,720	Feb. 19	1204	333	26	609
Doig, William S. (See Smith and Doig.)						
Dolbeer, John, San Francisco, Cal. Portable railway	293,853	Feb. 19	1387	383	26	699
Dolman, William H., New York, N. Y. Fire-proof timber	293,721	Feb. 19	1205	334	26	669
Dolton, George E., assignor to C. C. Nitzsche, St. Louis, Mo. Carriage-spring	292,419	Jan. 22	1774	494	26	341
Domestic Electric Manufacturing Company. (See Clarke and Leigh, assignors.)						
Domestic Electrical Manufacturing Company. (See Boyd, Dan, assignor.)						
Donaldson, William, Ambleside, county of Westmoreland, England. Hydraulic machinery	293,641	Feb. 19	1095	303 304	26	649
Donnelly, Charles J. and J. M., Philadelphia, Pa. Match-making machine	292,474	Jan. 29	1844	514	26	302
Donnelly, James B. (See Baltes, Peter J., assignor.)						
Donnelly, John M. (See Donnelly, Charles J. and J. M.)						
Doolittle, George. (See Ritchel and Doolittle.)						
Doolittle, George, assignor of one-half to H. D. Stanley, Bridgeport, Coun. Tip for electrical conductors	295,371	Mar. 18	1305	362	26	1077
Doolittle, Thomas B. (See Ritchel and Doolittle, assignors.)						
Doremus, Willard D., assignor to himself, T. F. Swayze, Washington, D. C., S. R. and J. T. Stratton, Strattonville, Pa. Apparatus for lighting and extinguishing lamps	291,995	Jan. 15	1235	344 345	26	238
Doren, Henry E., Grand Rapids, Mich. Fire-escape	292,548	Jan. 29	1956	545	26	379
Dorgan, Joseph H., Plattsburg, N. Y. Faucet	291,883	Jan. 15	1099	306 307	26	212
Dormitzer, Anna, New York, N. Y. Window-cleaning chair	293,428	Feb. 12	854	231	26	598
Dornfeld, John F., Watertown, Wis. Clay-tempering machine	292,997	Feb. 5	272	75	26	491
Dorr, Herbert C., San Francisco, Cal. Compound for preserving wood	293,955	Feb. 19	1517	.....	26	724

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Dorr, John P., Neenah, Wis. Ventilating-damper	294,773	Mar. 11	532	146	26	925
Dorsett, Daniel H., J. E. Morris, and B. Williams, Chicago, Ill. Apparatus for molding the sections of electrical conduits	291,996	Jan. 15	1237	345 346	26	238
Dorward, William B., Marion, Ohio. Construction of cisterns from concrete	292,420	Jan. 22	1775	495	26	342
Dotterweich, Andrew. (See Heintz and Dotterweich.)						
Doty, W. Mark, Biggs' Station, Cal. Combined can-holder and funnel	292,629	Jan. 29	2055	571	26	396
Doubler, John W. H., Rockford, assignor to A. H. Andrews & Co., Chicago, Ill. Map-holder	292,902	Feb. 5	151	41, 42	26	471
Dougherty, Tiberias, Philadelphia, Pa. Game board and counter	295,488	Mar. 18	1452	400	26	1105
Doughty, William H., New York, N. Y. Refrigerating apparatus for cars, &c	294,209	Feb. 26	1860	508	26	788
Dougine, James T., Chicago, Ill. Wagon-tongue support	295,237	Mar. 18	1137	313	26	1045
Douglas, Joseph W., assignor to himself and W. & B. Douglas, Middletown, Conn. Pump	294,210	Feb. 26	1861	508	26	788
Douglas, R. John, *et al.* (See Underwood, Henry M., assignor.)						
Douglas, W. & B. (See Douglas, Joseph W., assignor.)						
Douglass, William H., Philadelphia, Pa., assignor to North American Petroleum Gas Company, New York, N. Y. Apparatus for the manufacture of illuminating-gas	293,854	Feb. 19	1388	383	26	700
Dowling, Robert H., assignor of two-thirds to W. Baker and C. H. Follett, Newark, Ohio. Car-coupling	295,372	Mar. 18	1306	302	26	1077
Downer, James R., *et al.* (See Burns and Buckman, assignors.)						
Downie, Robert E., Clinton, assignor of one-half to G. A. Houston, Beloit, Wis. Fire-escape	295,527	Mar. 25	1503	415	26	1119
Downing, Arnold M., Oneida, N. Y. Fire-escape ladder	293,153	Feb. 5	479	128	26	526
Downing, Elizabeth M., Grant City, Pa. Dress-protector	293,722	Feb. 19	1206	334	26	669
Downing, James L., Richmond, Ill. Hand-truck	294,211	Feb. 26	1863	508 509	26	789
Doyle, John E., Richmond, Ind. Globe-valve grinder	293,723	Feb. 19	1207	334	26	669
Doyle, Joseph, Mount Liberty, Ind. Piano-forte	293,855	Feb. 19	1390	384 385	26	700
Doyle, William H., Bantam Falls, Conn. Vehicle-spring	294,374	Mar. 4	45	12	26	838
Drake, John R. (See Dilatush and Drake.)						
Draper, Oscar M. (See Herring, Henry M., assignor.)						
Draper & Sons, George. (See Sharples, William E., assignor.)						
Draper, Virgil, North Attleborough, Mass. Ornamental chain-link	294,595	Mar. 4	314	87	26	882
Drawbaugh, Daniel, Eberly's Mill, Pa. Telephone-transmitter	291,472	Jan. 1	570	160	26	102
Drawbaugh, Daniel, Eberly's Mill, Pa. Telephone	293,154	Feb. 5	479	128	26	526
Drawbaugh, Daniel, Eberly's Mill, Pa., assignor to People's Telephone Company, of New York. Telephone-transmitter	291,311	Jan. 1	373	105	26	67
Drawbaugh, Daniel, Eberly's Mill, Pa., assignor to People's Telephone Company, of New York. Telephone-transmitter	291,312	Jan. 1	374	105	26	67
Drawbaugh, Daniel, Eberly's Mill, Pa., assignor to People's Telephone Company, of New York. Telephone-transmitter	295,741	Mar. 25	1780	495	26	1169
Drawbaugh, Daniel, Eberly's Mill, Pa., assignor to People's Telephone Company, of New York. Telephone-transmitter	295,742	Mar. 25	1782	495	26	1170
Dresbach, Charles, *et al.* (See Brown and Miller, assignors.)						
Dresbach, Frank P., *et al.* (See Brown and Miller, assignors.)						
Dresbach, Wilson S., *et al.* (See Brown and Miller, assignors.)	293,155	Feb. 5	480	129	26	526
Driller, Bannad, St. Charles, Mo. Band-cutter and feeder for thrashing-machines	292,290	Jan. 22	1604	448	26	309
Dronsfield, Joseph S. Oldham, county of Lancaster, England. Grinding apparatus						
Drown, Ann M., *et al.* (See Drown, Otis E., assignor.)						
Drown, Otis E., assignor to A. M. Drown, Lincoln, W. F. and F. C. Sayles, Pawtucket, R. I. Tentering-machine	295,155	Mar. 18	1026	283 284	26	1026
Druecker, John, Chicago, Ill. Kiln and furnace	294,453	Mar. 4	143	38	26	854
Drummond, Alexander, Edinburgh, Scotland. Skylight	293,429	Feb. 12	856	232	26	598
Drummond, William W. (See Alkin and Drummond.)						
Dryer, Henry. (See Wagner and Dryer.)						
Dryfoos, Louis, New York, N. Y. Skirt	294,596	Mar. 4	315	88	26	882
Dryfoos, Nathan L., Fremont, Ohio. Necktie-fastener	294,597	Mar. 4	316	88	26	882
Du Bois, James J., Springtown, N. Y. Railway-tie	292,421	Jan. 22	1777	495	26	349
Dubois, Alexandre N., Philadelphia, Pa. Dyeing-machine	293,856	Feb. 19	1392	385	26	700
Dublin Agricultural Company. (See Tenant, Hanson P., assignor.)						
Dudley, Charles B., Altoona, Pa. Purifying water	291,167	Jan. 1	192	.....	26	36
Dudley, Charles B., Altoona, Pa. Purifying water for boiler use	291,168	Jan. 1	193	.....	26	36
Dudley, William, Newark, N. J. Ruffling and shirring attachment for sewing-machines	295,489	Mar. 18	1454	400	26	1105
Dueber, John C., Newport, Ky. Making watch-case centers	295,156	Mar. 18	1027	284	26	1026
Duff, James B. (See Duff, Samuel K. and J. B.)						
Duff Manufacturing Company. (See Duff, Samuel K. and J. B., assignors.)						
Duff, Samuel K., Allegheny, and J. B. Duff, assignors to Duff Manufacturing Company, (limited,) Pittsburg, Pa. Pipe-lifter for oil-wells	292,630	Jan. 29	2056	572	26	396
Duff, Thomas C., and R. I. Allan, San Francisco, Cal. Machine for hooping barrels	291,583	Jan. 8	717	202	26	134
Duffy, James F., South Chicago, Ill., and W. McIvor assignors of part to C. C. Wolf, J. B. Fraser, D. Jones, G. W. Holman, and said McIvor, Rochester, Ind. Car-coupling	295,860	Mar. 25	1938	535	26	1198
Dunbar & Son, R. (See Gardner, Frederick A., assignor.)						
Duncan, George, Dunedin, Otago, New Zealand. Brake for cable-railway cars	295,238	Mar. 18	1138	314	26	1045
Duncan, Walter, assignor of one-fourth to Union Brass Manufacturing Company, Chicago, Ill. Spring-hinge	291,169	Jan. 1	194	54	26	36
Dunham, Charles C. (See Stedman, Mortimer D., assignor.)						
Dunlap, John S., Peoria, Ill. Stool-seat	292,211	Jan. 22	1504	422	26	292
Dunn, Thomas C., *et al.* (See Tyler and Smith, assignors.)						
Durant, Edward G., and E. Shupe, Racine, Wis.; said Shupe assignor to T. Kane, Chicago, Ill. Opera-chair	293,724	Feb. 19	1207	334	26	670
Durant, Edward G., and E. Shupe, Racine, Wis.; said Shupe assignor to T. Kane, Chicago, Ill. Opera-chair	294,454	Mar. 4	146	39	26	854
Durant, George F., *et al.* (See Roper, Alfred W., assignor.)						
Durel, Justin, New Orleans, La. Filter	292,631	Jan. 29	2056	572	26	396
Durkee, Edward W., Mason, Ill. Wire-coiling machine	291,500	Jan. 8	613	173	26	117
Durkee, George B., Chicago, assignor to Joliet Wire Check Rower Company, Joliet, Ill. Machine for forming check-rower wires	291,584	Jan. 8	718	202 203 204	26	135
Durnin, John A. (See Germeyer and Durnin.)						
Duryea, Charles E., assignor of one-half to R. Garvey, St. Louis, Mo. Bicycle-saddle	293,725	Feb. 19	1209	335	26	670
Dusenbury, Philip S., assignor of one-half to W. Z. Baum and A. H. Randall, Sedalia, Mo. Railway frog and switch guard	294,598	Mar. 4	316	88	26	882
Dutrow, David E., Washington, D. C., assignor of one-half to C. W. Bready, Rockville, Md. Tricycle	295,861	Mar. 25	1939	535	26	1198

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Duvall, Henry R., *et al.* (See Wagner, John L., assignor.)						
Duvall, William C. (See Peterson, Samuel S., assignor.)						
Dwenger, George W., Brooklyn, N. Y. Mail-sack tag	292,632	Jan. 29	2057	572	26	396
Dwight, William M. (See Roberts, James A., assignor.)						
Dwinell, Byron L. (See Williams, Edwin O., assignor.)						
Dworsky, Abraham J., M. B. Kramer, and S. Phillips, New York, N. Y. Picture-exhibitor	294,976	Mar. 11	783	217	26	971
Dwyer, Christopher S., Spencer, Mass. Heel-trimmer	292,633	Jan. 29	2058	572	26	396
Dyckman, Frank H. (See Wetstein and Dyckman.)						
Dye, Elam, San Francisco, Cal. Fire-escape	294,860	Mar. 11	641	178	26	945
Dyer, Josiah W., Philadelphia, Pa. Protector for electric circuits	292,786	Feb. 5	26	7	26	447
Dyer, Lucius. (See Young and Dyer.)						
Dyer, William H., Midway, Va. Churn	295,862	Mar. 25	1941	536	26	1198
Dynamite Projectile Company. (See Snyder, Frederick H., assignor.)						
Earl, John H., assignor to National Roll Wrapping Paper Company, Chicago, Ill. Device for holding and cutting paper from rolls	294,312	Feb. 26	1986	543	26	812
Earle, Daniel D. (See Williams, Eben B., assignor.)						
Earle, Hardman A., London, England, and E. Goltstein, Hanover, Prussia, Germany. Electric-arc lamp	294,455	Mar. 4	147	39	26	851
Earle, John E. (See Shute, Edwin L., assignor.)						
Easley, Thomas L., Laddonia, Mo. Automatic grain-weigher	295,373	Mar. 18	1307	362	26	1078
Easthope, Henry, and G. C. Schneider, St. Louis, Mo. Billiard-cue tip	291,703	Jan. 8	877	246	26	163
Eastman, Benjamin N., and C. F. Finkbeiner, Geddes, N. Y. Gate	294,861	Mar. 11	643	179	26	946
Eastman, George C., assignor to I. C. Merrill, Lewiston, Me. Tug	293,642	Feb. 19	1097	304	26	649
Eastwick, Edward P., New York, N. Y. Apparatus for revivifying bone-black	293,430	Feb. 12	857	232	26	598
Eaton, Asahel K., Brooklyn, N. Y. Galvanometer	292,161	Jan. 22	1430	401	26	281
Eaton, Benjamin F. (See Newbury, Millard F., assignor.)						
Eaton, Benjamin F., Coxsackie, N. Y. Spring harrow-tooth	291,038	Jan. 1	27	8	26	7
Easton, John, Stockport, county of Chester, England. Apparatus for stretching hat-bodies	292,634	Jan. 29	2059	573	26	397
Eaton, Milton H., Wilton Junction, Iowa. Making mole-ditches	291,313	Jan. 1	375	105	26	68
Ebbert, John, Rockaway Beach, N. Y., assignor to P. A. Hall, Chicago, Ill. Spike-extractor	293,431	Feb. 12	858	232	26	599
Eberhardt, William, Allegheny, Pa. Cooler or refrigerator for ice-machines	294,977	Mar. 11	784	217	26	971
Eberle, August, Hamilton, Ohio. Caster	292,797	Feb. 5	28	7	26	447
Eberlein, Frederick, Chicago, Ill. Sash-fastener	294,774	Mar. 11	523	146	26	925
Eberly, Cyrus, Columbus, Ohio. Curtain-pole	293,643	Feb. 19	1098	305	26	649
Eckert, John, Madison, Ind. Stove	292,475	Jan. 29	1946	514	26	362
Eckert, William H., New York, N. Y. Telephonic transmission	292,212	Jan. 22	1505	423	26	292
Eckles, Samuel H. (See Mitchell, Pentecost J., assignor.)						
Eddy, Walton A., Randolph, N. Y. Carriage-seat	292,291	Jan. 29	1606	449	26	310
Edelheim, Carl. (See Von Dartein, Wilhelm, assignor.)						
Edgell, Aaron, Newport, Ohio. Nut-lock	291,039	Jan. 1	28	8	26	8
Edison Electric Light Company. (See Edison, Thomas A., assignor.)						
Edison Lamp Company. (See Holzer, William, assignor.)						
Edison, Thomas A., Menlo Park, N. J. Electrical generator or motor	293,432	Feb. 12	859	233	26	599
Edison, Thomas A., Menlo Park, N. J., assignor, by mesne assignments, to Electric Railway Company of the United States, of New York. Insulation of railway-tracks used for electric circuits	293,433	Feb. 12	861	233	26	599
Edison, Thomas A., Menlo Park, N. J., assignor to Edison Electric Light Company, New York, N. Y. Incandescent electric lamp	293,434	Feb. 12	862	233	26	599
Edison, Thomas A., Menlo Park, N. J., assignor to Edison Electric Light Company, New York, N. Y. Electrical meter	293,435	Feb. 12	862	234	26	599
Edlund, Claudius, Brooklyn, N. Y. Combined implement for tailors' use	293,857	Feb. 19	1393	385	26	700
Edmonds, Edmund C. (See Garton, David B., assignor.)						
Edmunds, Henry, Jr., New York, N. Y., assignor to T. J. Montgomery, Boston, Mass. Case for electric conductors	291,170	Jan. 1	195	55	26	36
Edmunds, Henry, Jr., New York, N. Y., assignor to T. J. Montgomery, Boston, Mass. Bracket for electric lamps	291,171	Jan. 1	196	55	26	36
Edson, Jacob, Boston, assignor of one-half to E. L. Caldwell, Hyde Park, Mass. Rowlock	293,858	Feb. 19	1394	386	26	701
Edson, Samuel B., Monterey, Ind. Harness-hook	295,374	Mar. 18	1308	363	26	1078
Edwards, Charles D., Albert Lea, Minn. Ditching-machine	291,040	Jan. 1	28	8, 9	26	8
Edwards, John A., Columbiana, Ala. Charcoal-oven	292,635	Jan. 29	2060	573	26	397
Edwards, Madison. (See Massey, John W., assignor.)						
Egan, James H., Jr., St. Johnsville, N. Y. Shoe-upper	295,239	Mar. 18	1139	314	26	1045
Egelhoff Manufacturing Company. (See Bolte, Frank H., assignor.)						
Eggleston, Charles H., Marshall, assignor of one-half to E. O. Ely, Grand Rapids, Mich. Button-fastener	293,233	Feb. 12	597	157	26	551
Eggleston, Charles H., Marshall, assignor of one-half to E. O. Ely, Grand Rapids, Mich. Button-setting instrument	293,234	Feb. 12	598	157	26	551
Ehrhardt, John, assignor of two-thirds to H., Sr., and C. Hopmann, St. Louis, Mo. Skylight	292,738	Jan. 29	2200	613	26	422
Ella, Bette E. J., Washington, D. C. Quadruplex telegraph	293,956	Feb. 19	1518	418, 419	26	724
Elseman, Solomon M., New York, N. Y. Treating volatile and inflammable fluids and oils	294,978	Mar. 11	786	.....	26	972
Elsendrath, Benjamin D. (See Elsendrath, William N., assignor.)						
Elsendrath, William N., assignor to himself and B. D. Elsendrath, Chicago, Ill. Lumberman's sock	294,020	Feb. 26	1592	442	26	746
Elam, William E., Americus, Ga. Temporary binder	294,775	Mar. 11	524	146	26	925
Elcock, Joseph, Mechanicsburg, Pa. Plow	292,636	Jan. 29	2061	573, 574	26	397
Elder, John V. (See Lindley and Elder.)						
Electric Railway Company of the United States. (See Edison, Thomas A., assignor.)						
Ellicott, H. William, Baltimore, Md. Superheater	292,292	Jan. 22	1607	449	26	310
Elliot, William H., New York, N. Y. Magazine fire-arm	293,315	Feb. 12	708	189	26	570
Elliott, James, Montreal, Quebec, Canada. Apparatus for consuming smoke in furnaces	293,436	Feb. 12	864	234	26	600
Ellis, Birch. (See Sinclair, James P., assignor.)						
Ellis, George A., Gardner, Mass., assignor to S., H., and G. Heywood, A. M. Greenwood, and A. Morrill, New York, N. Y. Canopy-standard for children's carriages	295,116	Mar. 11	973	266	26	1002
Ellis, Quincy A., Gatesville, Tex. Shot-case	293,437	Feb. 12	865	234	26	600
Ellithorp, Solomon B., Rochester, N. Y. Bran and feed packer	295,863	Mar. 25	1942	536	26	1199
Ellrich, Robert C., Plantsville, Conn. Pawl and ratchet	293,957	Feb. 19	1519	419	26	724
Ellwood, Hiram. (See Stover, Daniel C., assignor.)						
Ellwood, Isaac L., *et al.* (See Lord, Tyler C., assignor.)						
Ellwood, Isaac L., *et al.* (See Upham, Andrew J., assignor.)						
Ellyson, John T., Pleasant Plain, Iowa. Plow	292,998	Feb. 5	274	75	26	492

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Elms, F. L. (See Colby, Harlan P., assignor.)						
Elrod, Eugene L. (See Moore, Frank A., assignor.)						
Elson, William K., Martin's Ferry, Ohio. Caster	293,156	Feb. 5	481	129	26	526
Elterich, Charles, New York, N. Y. Die and die-stock	291,884	Jan. 15	1100	307	26	213
Ely, Edward O. (See Eggleston, Charles H., assignor.)						
Ely, William I., Detroit, Mich. Match-splint machine	291,314	Jan. 1	377	105	26	68
Emanuel, Henry, assignor to D. Heineman and S. Lorsch, New York, N. Y. Overcoat	294,599	Mar. 4	317	88	26	883
Emerson, Charles W., Charlestown, Mass. Hanging doors	295,743	Mar. 25	1784	495	26	1170
Emerson & Fisher Company. (See Breed, Judson W., assignor.)						
Emerson & Fisher Company. (See Ransom, Hiram W., assignor.)						
Emerson, James F., *et al.* (See Simonds, George W., assignor.)						
Emerson, Ralph, *et al.* (See Whitney, Charles, assignor.)						
Emery, George T. (See Barlow and Emery.)						
Emery, John B., Lynn, Mass. Cutter-head	292,422	Jan. 22	1777	495	26	342
Emery, John B., Lynn, Mass. Rotary cutter	295,490	Mar. 18	1455	401	26	1106
Emery, William G. (See Small, George D. B., assignor.)						
Emmert, Ezra, Dixon, Ill. Lifting-jack	292,739	Jan. 29	2201	613	26	422
Emmett, Walter. (See Crossley, Emmott and Harrison.)						
Emmett, Walter. (See Crossley, Emmott and Harrison.)	293,644	Feb. 19	1099	305	26	650
Emry, David L., Carthage, Mo. Device for securing the splice-joints of railway-rails	291,585	Jan. 8	726	204	26	136
Endicott, Charles, Kingsburg, Cal. Dirt-scraper	291,473	Jan. 1	571	161	26	102
Engels, Hugo F., Dorchester, assignor of one-half to G. Fera, Boston, Mass. Pantaloons	292,740	Jan. 29	2201	613, 614	26	422
Englehart, Phillip, Modesto, Cal. Spring-vehicle	293,438	Feb. 12	866	234	26	600
English, James W. (See Lockett, English, and Murphey.)						
English, William J., Cohoes, N. Y. Water-trap						
Ennis, John B., *et al.* (See Collins, Cornelious, assignor.)						
Ennis, William W., *et al.* (See Collins, Cornelious, assignor.)						
Eppler, Andrew, Jr., Boston, Mass. Rivet	294,979	Mar. 11	788	218	26	972
Equitable Water Meter Company. (See Park, William R., assignor.)						
Erdwins, John. (See Erdwins, William and J.)						
Erdwins, William and J., Compromise, assignors to C. B. Smith, Champaign City, Ill. Check-rower	292,100	Jan. 15	1363	382	26	262
Ernsting, Diedrich W., Bremen, Germany. Device for clamping cords, &c.	291,172	Jan. 1	197	55	26	36
Erric, Henry, Philadelphia, Pa. Mechanical movement	291,885	Jan. 15	1102	307	26	213
Eschenhorn, E. Gustav. (See Krossing, August, assignor.)						
Eshelman, Benjamin. (See Wallack and Rohrer, assignors.)						
Esser, Herman, *et al.* (See Schramm, Henry G., assignor.)						
Essex, David, Corona, N. J., assignor, by mesne assignments, to T. C. Bates, North Brookfield, Mass. Corset-busk fastening	293,567	Feb. 12	1009	278	26	626
Essig, Ozia A., Canton, Ohio. Plow	292,549	Jan. 29	1957	545	26	380
Esty, William, Laconia, N. H. Stocking and knitting the same	291,173	Jan. 1	198	56	26	37
Eton, George H. (See Lytle, Albert E., assignor.)						
Etzensperger, John, North Attleborough, Mass. Ornamental chain	295,117	Mar. 11	974	266	26	1003
Eudaly, William A., Cincinnati, Ohio. Brick and tile kiln	295,744	Mar. 25	1785	496	26	1170
Eudaly, William A., Cincinnati, Ohio. Brick and tile kiln	295,864	Mar. 25	1943	537	26	1199
Eureka Brick Machine Manufacturing Company. (See Ross, Robert N., assignor.)						
Evans, Austin C., Springfield, Ohio. Harrow	291,174	Jan. 1	199	56	26	37
Evans, Austin C., Springfield, Ohio. Combined drill and fertilizer-distributer for one-horse planters	294,313	Feb. 26	1987	543	26	812
Evans, Austin C., Springfield, Ohio. Fertilizer-distributer for seed-planters	295,528	Mar. 25	1505	415	26	1120
Evans, Austin C., Springfield, Ohio. Fertilizing attachment for seed-planters	295,529	Mar. 25	1507	415, 416	26	1120
Evans, E. K. (See Dawson, William A., assignor.)						
Evans Fiber Manufacturing Company. (See Evans, G. Frank, assignor.)						
Evans, G. Frank, Mechanic Falls, assignor to Evans Fiber Manufacturing Company, Saco, Me. Machine for reducing wood to pulp and fiber	293,235	Feb. 12	599	158	26	552
Evans, George R., assignor to J. P. Couch and W. T. Oncale, San Francisco, Cal. Concentrator and amalgamator	291,997	Jan. 15	1240	346	26	239
Evans, H. Clay, and G. Jones, Chattanooga, Tenn. Mail-bag	291,501	Jan. 8	614	173	26	117
Evans, John W., Cleveland, Ohio. Extracting naphtha from oil	291,175	Jan. 1	200	56	26	37
Evans, John W., and A. H. Vernay, Baltimore, Md. Thill-holder	291,315	Jan. 1	378	106	26	68
Evans, Theodore C., Ludington, Mich. Horseshoe	293,439	Feb. 12	867	235	26	600
Evans, William F., and J. B. Fielding, Prescott, Ark. Churn-motor	294,120	Feb. 26	1744	479, 480	26	770
Everitt, James. (See Vero and Everitt.)						
Evesson, Henry, Hempstead, N. Y. Folding coop or kennel	294,600	Mar. 4	318	89	26	883
Ewart Manufacturing Company. (See Ewart, William D., assignor.) (Reissue.)						
Ewart, William D., assignor to Ewart Manufacturing Company, Chicago, Ill. Drive-chain. (Reissue)	10,444	Feb. 5	561	149	26	540
Ewing, Thomas, assignor to C. F. Clarke and G. M. Spencer, Philadelphia, Pa. Composition for cleaning and renovating fabrics	294,727	Mar. 4	467	.....	26	909
Eybel, Bernhard, New York, N. Y. Pencil-holder	291,998	Jan. 15	1241	347	26	239
Eynon, William R., *et al.* (See Rhodes, Ezra, assignor.)						
Faas, Gustav A., assignor of one-fourth to A. P. Usher, Lawrence, Kans. Machine for making and sticking match-splints	292,423	Jan. 22	1779	495, 496, 497	26	343
Faber, Charles, Brooklyn, N. Y. Magnetic-iron-ore separator	294,021	Feb. 26	1593	442, 443	26	746
Fabian, Henry. (See Davey and Fabian.)						
Fahrney, Peter S. (See Rife, Henry A., assignor.)						
Fairbairn, William U., Hyde Park, Mass. Steam-boiler and furnace	291,041	Jan. 1	31	9	26	8
Fairbairn, William U., Hyde Park, Mass. Lubricator	291,042	Jan. 1	32	9	26	8
Fairbanks, Harlan, assignor to New England Patent Fire Escape Company, Boston, Mass. Protector and supporter for fire-escapes	291,586	Jan. 8	727	204	26	136
Fairbanks, Lorenzo S., Boston, Mass. Signaling apparatus for telephonic and telegraphic circuits	292,999	Feb. 5	275	75	26	492
Fairchild, Leroy W. (See Collard, Richard M., assignor.)						
Fairchild, Le Roy W., New York, N. Y. Pen and pencil case	291,886	Jan. 15	1103	307	26	213
Fairfield, Hadley P. (See McKay and Fairfield.)						
Fairfield, Hadley P., West Medford, Mass. Ore-separator	292,637	Jan. 29	2063	574	26	397
Fairfield, Hadley P., West Medford, Mass. Ore-separator	292,638	Jan. 29	2064	574	26	397
Fairfield, Hadley P., West Medford, Mass. Ore-separator	292,550	Jan. 29	1958	546	26	380
Fairly, John S., Charleston, S. C. Separator and conveyer	291,999	Jan. 15	1242	347	26	239
Fairman, J. Yale, Middletown, Conn. Ice-crushing machine						
Fairman, Simon, assignor of one-half to J. G. Mitchell and W. S. Taylor, Baltimore, Md. Car-brake	291,841	Jan. 8	1034	288, 289	26	191

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Drg.	Vol.	Page.
Faison, F. Leonidas, and G. M. Newell, Wake Forest College, N. C. Cotton-press	292,000	Jan. 15	1244	347, 348	26	239
Falkenau, Morris, assignor to Falkenau, Oppenheimer & Co., New York, N. Y. Ear-ring	293,958	Feb. 19	1520	419	26	724
Falkenau, Oppenheimer & Co. (See Falkenau, Morris, assignor.)						
Fallon, Louis F., St. Louis, Mo. Toy	292,798	Feb. 5	28	7	26	447
Fancher, Roman L., Baldwinsville, N. Y. Wooden plug	293,726	Feb. 19	1211	335	26	670
Fargo, Samuel M. (See Lapham, Paul J., assignor.)						
Farley, Henry W., Oswego, Ill. Turning-lathe	294,601	Mar. 4	310	89	26	883
Farley, Patrick W., and A. L. Trowbridge, Cazenovia, N. Y. Pool-rack	292,903	Feb. 5	153	42	26	471
Farlin, Dudley. (See Gorman, Thomas C., assignor.)						
Farmer, Charles H., Boston, Mass. Bias tape and making the same	293,440	Feb. 12	868	235	26	600

Hiltawski, Arthur R. B., Zaborze, Upper Silesia, Germany. Coking-furnace	293,023	Feb. 5	304	84	26	497
Hilts, George S., Batavia, N. Y. Divided screw-nut	294,781	Mar. 11	531	148	26	926
Himmer, Ida C., New York, N. Y. Electric battery	292,310	Jan. 22	1627	456	26	314
Himmer, Vitalis, New York, N. Y., assignor, by mesne assignments, to J. Koenigsberg, St. Louis, Mo. Secondary electric clock	294,131	Feb. 26	1756	483	26	771
Himmer, Vitalis, New York, N. Y., assignor, by mesne assignments, to J. Koenigsberg, St. Louis, Mo. Electric device for synchronizing clock-pendulums	294,132	Feb. 26	1759	483	26	772
Hinch, James H., Laconia, assignor of three-fourths to W. H. Philbrick, Belmont, N. H. Hydraulic motor	291,189	Jan. 1	221	61	26	40
Hinckley & Egery Iron Company. (See Shaw, Thaxter, assignor.)						
Hincks & Johnson. (See Greenfield, Harry, assignor.)						
Hinds, Charles H., New York, N. Y. Insulating-connection for electric-light fixtures	291,731	Jan. 8	904	255	26	168
Hine, Willis T., West Meredith, N. Y. Whiffletree-coupling	292,012	Jan. 15	1254	351	26	241
Hinkley, George M., Milwaukee, Wis. Saw-mill set-works	291,344	Jan. 1	403	114, 115	26	73
Hinkley, George M., assignor to E. P. Allis & Co., Milwaukee, Wis. Truck-box for saw-mill carriages	291,345	Jan. 1	405	115	26	74
Hinman, Edgar R., Ilion, N. Y. Table	295,007	Mar. 11	833	228	26	979
Hinton, Joseph R. H., assignor to Viaduct Manufacturing Company of Baltimore City, Baltimore, Md. Magneto-electrical alarm	292,311	Jan. 22	1629	456	26	314
Hitchcock, Arthur W., Parkersburg, Iowa. Land-marker	295,761	Mar. 25	1807	501	26	1174
Hitchcock, James W., New Richmond, Wis. Sand-band for vehicle-wheels	294,782	Mar. 11	532	148	26	927
Hitchcock, Robert, Springfield, Mass. Car-coupling	295,250	Mar. 18	1155	319	26	1048
Hitchon, Alfred, Barrowford, near Burnley, county of Lancaster, England. Apparatus for pressing or leveling yarn on weavers' beams in warp-sizing machines	294,235	Feb. 26	1889	517	26	794
Hitt, Marcellus M., Luray, Va. Bridle	291,596	Jan. 8	739	208	26	139
Hoag, Albert, Pearl, Vt. Hand seed-planter	295,762	Mar. 25	1807	502	26	1174
Hoag, Andrew J., assignor to Nichols, Shepard & Company, Battle Creek, Mich. Thrashing-machine	293,876	Feb. 19	1415	391	26	704
Hobbs, Brocknnier & Co. (See Russell, William F., assignor.)						
Hobbs, Horatio. (See Gordon and Hobbs.)						
Hobson, John L., *et al.* (See Hobson and Bagley, assignors.)						
Hobson, William P., and H. A. Bagley, assignors of one-half to J. L. Hobson and F. B. Kingsbury, Haverhill, Mass. Cutting boot and shoe uppers	293,964	Feb. 19	1530	421	26	726
Hochhausen, William, New York, N. Y. Regulator for dynamo-electric machines	294,038	Feb. 26	1615	449	26	749
Hochhausen, William, New York, N. Y. Regulator for dynamo-electric machines	294,039	Feb. 26	1617	449	26	750
Hochhausen, William, New York, N. Y. Regulator for dynamo-electric machines	294,040	Feb. 26	1620	450	26	750
Hochhausen, William, New York, N. Y. Automatic brake for electric motors	294,041	Feb. 26	1624	450	26	751
Hochhausen, William, New York, N. Y. Double electric-arc lamp	294,042	Feb. 26	1626	450, 451	26	751
Hochhausen, William, New York, N. Y. Dynamo-electric machine	294,043	Feb. 26	1629	451, 452	26	752
Hochhausen, William, New York, N. Y. Incandescent electric lamp	294,044	Feb. 26	1631	452	26	752
Hochhausen, William, New York, N. Y. Hanger-board for electric lamps	294,045	Feb. 26	1633	452	26	752
Hochhausen, William, New York, N. Y. Apparatus for regulating and distributing currents from dynamo-electric machines	295,552	Mar. 25	1538	426, 427	26	1126
Hocking, James, Denton, Nebr. Wagon-brake	295,008	Mar. 11	834	228	26	979
Hodgen, William, Vincennes, Ind. Flood-fence	291,346	Jan. 1	406	115	26	74
Hodges, Charles C., *et al.* (See Hodges, Clarence B. and C. H., assignors.)						
Hodges, Charles H. (See Hodges, Clarence B. and C. H.)						
Hodges, Clarence B. and C. H., assignors of one-half to H. C. and C. C. Hodges, Detroit, Mich. Lubricator for locomotives	291,847	Jan. 8	1042	291	26	192
Hodges, Henry C., *et al.* (See Hodges, Clarence B. and C. H., assignors.)						
Hodgson, John. (See Stone, Edward, assignor.)						
Hodgson, John G. (See Norton and Hodgson.)						
Hoe & Co., R. (See Crowell, Luther C., assignor.)						
Hoehn, George L., and F. P. Hilburn, Mount Vernon, Ind. Tile-ditching machine	291,511	Jan. 8	627	177	26	119
Hofele, Ferdinand W., New York, assignor to E. S. Allen, Larchmont, N. Y. Folding fire-escape ladder	294,319	Feb. 26	1995	545, 546	26	813
Hofer, William, assignor to B. Shoninger, New Haven, Conn. Bell attachment for pianos	292,815	Feb. 5	48	12	26	451
Hofer, William, assignor to B. Shoninger, New Haven, Conn. Reed-organ attachment	294,621	Mar. 4	342	95	26	887
Hofer, William L., Manhattan, Kans. Musical game	292,312	Jan. 22	1631	456	26	314

Hoff, Frans. (See Ballin and Hoff.)						
Hoffman, Arthur H., W. F. Lloyd, East New York, and J. H. Block, Brooklyn, N. Y. Toy target	292,652	Jan. 29	2081	580	26	401
Hoffman, Charles, Republic, Mo. Washing-machine	291,512	Jan. 8	628	177, 178	26	119
Hoffman, Edward J., Sioux City, Iowa. Life-protector for railways-rails	293,024	Feb. 5	305	84	26	497
Hoffman, Edward J., assignor of two-thirds to W. H. Freed, Sioux City, and W. H. Ransom, Missouri Valley, Iowa. Preventing incrustation in steam-boilers	293,172	Feb. 5	509	135	26	530
Hoffman, Horace J., Neillsville, Wis. Adjustable shelving	291,513	Jan. 8	629	178	26	120
Hoffman, Joseph, assignor to H. Berolzheimer, New York, N. Y. Pencil-sharpener	291,597	Jan. 8	739	208	26	139
Hoffman Manufacturing Company, J. G. (See Rowlands, John R., assignor.)						
Hoffnagle, Charles A. (See Coe and Hoffnagle.)						
Hogan, Philip J., Negaunee, Mich. Bottle-filling device	295,009	Mar. 11	835	229	26	979
Hogan, William H., assignor of one-half to E. W. Pasture, Boston, Mass. Combined bouquet and ticket holder	295,870	Mar. 25	1950	539	26	1200
Hogeboom, Franklin R., Brooklyn, N. Y. Tree-protector	293,463	Feb. 12	893	242	26	605
Hogg, James, Chicago, Ill. Can-machine	294,783	Mar. 11	533	148	26	927
Hohelsen, Carl, Pforzheim, Baden, Germany. Charm-telescope	294,467	Mar. 4	150	44	26	856
Holt, David, West Albany, assignor of one-half to C. R. Hicks, Troy, N. Y. Spring-buffer	292,166	Jan. 22	1436	402	26	292
Holbrook, Frederick H., Boston, Mass. Raised embroidery	293,677	Feb. 19	1416	391	26	704
Holbrook, Frederick H., Boston, Mass. Compound fabric	293,678	Feb. 19	1417	391	26	705
Holbrook, Henry R., Pueblo, Colo. Railway-tie	291,514	Jan. 8	632	179	26	120
Holden, Daniel L., Cincinnati, Ohio, assignor of two-thirds to P. T. Miller and T. E. Livezey. Ice and refrigerating machine	291,477	Jan. 1	576	162	26	103
Holl, Jacob. (See Myers, William H., assignor.)						
Holland, Anderson D., Newport, Ark. Combined lock and latch	293,248	Feb. 12	617	164	26	555
Holland, Edmund, *et al.* (See Stewart, George W., assignor.)						
Holland, John, Cincinnati, Ohio. Lead-holder for pencils	292,313	Jan. 22	1632	457	26	314
Holland, John J., New Orleans, La. Combined shovel and shield	291,732	Jan. 8	905	254	26	168
Holland, Wallace S., Burlington, Vt. Hanging for window-shades	295,396	Mar. 18	1335	372	26	1083
Hollen, William H. H., assignor, by mesne assignments, to R. S. Seeds, Tyrone, Pa. Knitting-machine	294,784	Mar. 11	534	148, 149	26	927
Hollingsworth, Joseph, Jonesborough, Ind. Washing-machine	292,314	Jan. 22	1632	457	26	314
Holloway, Robert A. (See Withers, James E., assignor.)						
Holman, Charles T., Lincoville, Pa., assignor of one-half to A. C. Carpenter, Rochester, N. Y. Horse hay-rake	292,013	Jan. 15	1256	351, 352	26	242
Holman, George W., *et al.* (See Duffy and McIvor, assignors.)						
Holman, William P., Howard, Ga. Blacksmith's punch	295,397	Mar. 18	1336	372	26	1083
Holmes, Britain. (See Holmes, Edward and B.)						
Holmes, Charles. (See Sager, Frank, assignor.)						
Holmes, Edward and B., Buffalo, N. Y. Machine for planing barrel-heads	292,816	Feb. 5	49	13	26	452
Holmes, Edward and B., Buffalo, N. Y. Windlass for compressing barrels	292,817	Feb. 5	50	13	26	452
Holmes, Francis M. (See Buck, Henry C., assignor.)						
Holmes, Philip H., Gardiner, Me. Machine for making wood fiber	291,848	Jan. 8	1043	291, 292	26	192
Holt, Alden, Boston, Mass. Heater for steam and water	291,347	Jan. 1	406	116	26	74
Holt, Mathew S., Weston, W. Va. Recording table or desk	292,749	Jan. 29	2222	618	26	426
Holt, Noah W., Buffalo, N. Y. Feed mechanism for roller-mills	293,464	Feb. 12	894	242	26	605
Holt, Noah W., Buffalo, N. Y. Roller-mill	294,236	Feb. 26	1890	517	26	795
Holtzbaugh, Adam. (See Mitchell, Barnard W., assignor.)						
Holwell, W. Antrobus, Quebec, Quebec, Canada. Door-closing device	293,336	Feb. 12	722	193	26	573
Holzer, William, Harrison, N. J. Manufacture of incandescing electric lamps	293,879	Feb. 19	1418	392	26	705
Holzer, William, assignor to Edison Lamp Company, Harrison, N. J. Manufacture of incandescing electric lamps	295,398	Mar. 18	1337	372	26	1084
Homrighous, Ervin, Shelbyville, Ill. Jeweling-machine	293,249	Feb. 12	618	164	26	555
Hönінger, Michael, assignor of one-half to J. C. Pickelmann, Buffalo, N. Y. School-bag	294,622	Mar. 4	344	96	26	887
Hood, Cyrus S., Corning, N. Y. Radiator for hot-air furnaces	293,025	Feb. 5	306	84, 85	26	498
Hoof, Julius H., Quincy, Dak. Ter. Rotary harrow	291,515	Jan. 8	633	179	26	120
Hooker, Henry C. (See Colton, George A., assignor.)						
Hooper, Lorenzo D., Coffeyville, Kans. Car-coupling	293,466	Feb. 12	896	242	26	606
Hooper, Nicholas B., Brooklyn, N. Y. Machine for froning hats	291,598	Jan. 8	740	208	26	140
Hooper, William, *et al.* (See Miller, William M., assignor.)						
Hopedale Machine Company. (See Northrop, James H., assignor.)						
Hopkins, Charles H., De Soto, assignor of one-half to H. S. Buller, Des Moines, Iowa. Attaching plant-shields to cultivators	293,465	Feb. 12	895	242	26	605
Hopkins, Egbert C., Rockford, Ill. Vapor-stove	292,315	Jan. 22	1633	457	26	314
Hopkins, George E., Cincinnati, Ohio. Ferrule	295,399	Mar. 18	1339	373	26	1084
Hopkins, George W. (See Roberts, Morris, assignor.)						
Hopkins, Lewis G., *et al.* (See Johnson, Perry, assignor.)						
Hopmann, Charles, *et al.* (See Ehrhardt, John, assignor.)						
Hopmann, Herman, Sr., *et al.* (See Ehrhardt, John, assignor.)						
Hoppen, Joseph E., Newark, N. J. Hanger for shafting	295,553	Mar. 25	1542	427	26	1127
Hopper, William, and I. J. Allen, Jefferson, Iowa. Corn-planter	294,623	Mar. 4	345	96	26	887
Horack, Carl L., Brooklyn, N. Y., assignor to Providence Steam and Gas-Pipe Company, Providence, R. I. Automatic fire-extinguisher	292,492	Jan. 22	1793	500	26	346
Horak, F. J., *et al.* (See Bilan, Louis, assignor.)						
Horn, William S., Mill Green, Md. Corn-silking machine	293,737	Feb. 19	1226	339	26	673
Horne, George W., assignor of one-fourth to B. A. Dare, New York, N. Y. Railway-switch mover	293,026	Feb. 5	308	85	26	498
Horne, George W., assignor to A. A. Knudson, New York, N. Y. Feed-bag for horses	293,250	Feb. 12	619	165	26	555
Horne, John H. (See Bradbury, Charles J., assignor.)						
Horne, John H., Lawrence, Mass. Securing the knives in paper-pulp-grinding engines	294,387	Mar. 4	61	15	26	840
Horner, Joseph W., New York, N. Y. Sectional compound telegraph-wire protector	291,478	Jan. 1	577	162	26	103
Horning, George H. (See Stedman, David R., assignor.)						
Horrall, William A., Washington, Ind. Spring bed-bottom	292,818	Feb. 5	52	13	26	452
Horrocks, Abraham, Bardolph, Ill. Brick and tile machine	295,871	Mar. 25	1951	540	26	1200
Horsman, Edward I. (See Stranders, Walter, assignor.)						
Horton, James A., Reading, Mass. Drop-press	294,237	Feb. 26	1892	518	26	795
Hortop, Henry, Rutherford, Cal. Road-cart	291,733	Jan. 8	906	254	26	168
Hoskins, Leander M., Evansville, Wis. Shifting apparatus for windmills	294,624	Mar. 4	346	96	26	888
Hosler, William W., Petoskey, Mich. Machine for boring tenons	293,880	Feb. 19	1419	392	26	705
Hotchkiss, Charles A. (See Dean and Hotchkiss.)						
Hougen, Hans P., *et al.* (See Whitton, Andrew D., assignor.)						
Hough, John T., Chicago, Ill., assignor of one-half to J. A. Harper, Pittsburg, Pa. Safe-lock	294,625	Mar. 4	348	97	26	888

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Hough, John T., Chicago, Ill., and J. A. Harper, Pittsburg, Pa. Bank-vault	294,626	Mar. 4	349	97	26	888
Houghton, Darius, Skowhegan, Me. Lathe-center-grinding machine	292,227	Jan. 22	1525	427	26	295
Houlehan, James, assignor of one-half to R. Fuller, Toledo, Ohio. Unloading platform-cars	293,467	Feb. 12	897	243	26	606
House, James A., Bridgeport, Conn. Apparatus for forming and shaping corsets	294,046	Feb. 26	1634	453	26	753
Houser, George H. (See Voorhis and Houser.)						
Houston, George A. (See Downie, Robert E., assignor.)						
Hovey, John H., assignor of one-half to E. L. Shaw & Co., Woburn, Mass. Leather-stoning machine	294,320	Feb. 26	1997	547	26	814
Howard, George F., London, England. Apparatus for checking and registering the number of games or deals played at cards, &c	291,056	Jan. 1	49	14, 15	26	12
Howard, Hiram. (See Nelson, Nels, assignor.)						
Howard, John P. (See Thorpe, David H., assignor.)						
Howard, Stanton M., Wheeling, W. Va. Water-closet	295,010	Mar. 11	836	229	26	979
Howard, Stephen C., New York, N. Y. Sleeve-button, &c	294,468	Mar. 4	160	44	26	857
Howard, Stephen C., New York, N. Y., and J. C. Schott, Providence, R. I. Sleeve-button	294,469	Mar. 4	161	44	26	857
Howarth, John H., Jr., New Haven, Conn. Leggin	292,819	Feb. 5	52	14	26	452
Howe, Asa A., Ulysses, Pa. Stump-machine	292,014	Jan. 15	1257	352	26	242
Howe, Elbridge, Peterborough, N. H. Truss	294,321	Feb. 26	1999	547	26	814
Howe, Warren B., Chicago, Ill. Wrapper-folding machine	294,470	Mar. 4	162	44, 45	26	857
Howe, Warren H., Marlborough, Mass. Watering apparatus for hot-houses	293,577	Feb. 12	1019	280	26	628
Howe, William G., *et al.* (See Stevens, Henry M., assignor.)						
Howell, George W., Covington, Ky. Wheel	293,251	Feb. 12	620	165	26	555
Howell, Lewis O., Jr., Philadelphia, Pa. Combined stop-box and fresh-air conduit	293,027	Feb. 5	309	85	26	498
Howell, Thomas J., London, county of Surrey, England. Galvanic battery	292,433	Jan. 22	1794	500	26	346
Howell, William. (See Thorpe, David H., assignor.)	291,734	Jan. 8	907	.....	26	168
Howell, William, Philadelphia, Pa. Artificial stone						
Howson, Henry, Philadelphia, Pa., assignor to C. Detrick, New York, N. Y., and E. W. Bond, Springfield, Mass. Mode of and mechanism for forming underground conduits	291,840	Jan. 8	1047	293	26	193
Hoxie, Elias, Red Creek, N. Y. Heel-plate	291,599	Jan. 8	742	209	26	140
Hoxie, Elias, Red Creek, N. Y. Thill-coupling	293,173	Feb. 5	510	135	26	530
Hoyt, Francis A., assignor of two-thirds to L. H. Ware and J. W. Moore, West Cleveland, Ohio. Car-coupling	292,557	Jan. 29	1966	548	26	381
Hoyt, Frank S., and P. L. Storch, Chicago, Ill. Broom-machine	291,735	Jan. 8	907	254	26	168
Hubbard, H. Wilber. (See Gunther and Hubbard.)						
Hubbard, Moses G., Norristown, Pa. Road-wagon	295,011	Mar. 11	837	229	26	979
Hubbard, Nathan B., assignor of one-half to J. Gray, Chicago, Ill. Mucilage-bottle and holder	292,116	Jan. 15	1374	385	26	264
Hubbard, William B., Greenville, Ill. Draft-equalizer	295,174	Mar. 18	1049	289	26	1030
Hubbard, Benjamin, Afton, Iowa. Staple-extractor	295,494	Mar. 18	1459	402	26	1106
Hubbell, Oliver C., Cleveland, Ohio. Skylight	291,057	Jan. 1	50	15	26	12
Huebel, Frederick A., Detroit, Mich. Machine for cutting off gelatine capsules. (Reissue)	10,437	Jan. 15	1412	396	26	271
Huebel, Frederick A., Detroit, Mich. Capsule-machine	292,434	Jan. 22	1795	500, 501	26	346
Huber, Edward, and H. M. Barnhart, Marion, Ohio. Car-coupling	295,763	Mar. 25	1808	502	26	1174
Huber, Edward, and F. Strobel, Marion, Ohio. Straw-carrier for thrashing-machines	293,881	Feb. 19	1420	392, 393	26	705
Huckins, Irving W. (See Proctor and Huckins.)						
Hudnut, Theodore, Terre Haute, Ind. Hominy-mill	295,554	Mar. 25	1543	427	26	1127
Hudson, John W., Wellington, Ill. Hame	295,012	Mar. 11	839	229	26	980
Huehn, Conrad, Rochester, N. Y. Plow	293,252	Feb. 12	621	165	26	555
Huff, Orison, Lyman, assignor to himself and A. F. Hill, Woodford's, Me. Pocket-knife	294,471	Mar. 4	165	45	26	857
Huff, Peter, New York, N. Y. Faucet	292,489	Jan. 29	1864	521	26	366
Huffman, Norman B., Grant, Ind. Gate	295,641	Mar. 25	1652	458	26	1147
Huggins, Manlius, Waynesborough, Miss. Ointment for tetter	294,876	Mar. 11	657	.....	26	949
Hughes, Henry R. (See Wiard, Norman, assignor.)						
Hughes, Robert, Waterford, assignor to T. A. Knickenbacker, Troy, N. Y. Straight-way valve	291,479	Jan. 1	579	163	26	103
Huguuin, Robert B., Hartford, Conn. Sash-fastener	292,117	Jan. 15	1375	385	26	264
Hulbert, Arthur G., St. Louis, Mo. Wire-netting	295,251	Mar. 18	1157	319	26	1048
Hulbert, Sylvester C., *et al.* (See Shanahan, Winfield S., assignor.)						
Hulburt, James H., assignor of one-half to G. Haggit, Millbrook, Mich. Spoke-setting machine	293,174	Feb. 5	511	136	26	531
Hull, Nicholas A., Peru, Ind. Desk	294,388	Mar. 4	63	16	26	840
Hull, Obidiah. (See Clark, Byron, assignor.)						
Hull, Wesley, Fort Wayne, Ind. Gate-latch	293,253	Feb. 12	622	165	26	556
Hull, Wesley, Fort Wayne, Ind. Automatic gate-hinge	293,397	Feb. 12	723	193	26	573
Hummel, James H., New York, N. Y. Weather-strip	293,738	Feb. 19	1227	339	26	673
Humphrey, Daniel W. G., Chelsea, Mass., assignor to Rapid Button-Hole Machine Company. Button-hole stitching-machine	291,736	Jan. 8	908	255, 256	26	169

Jones, N. A. T., Plymouth, Mass. Feed-water heating and purifying apparatus	294,786	Mar. 11	537	149	26	927
Jones, Owen H., Hartford, Conn., assignor of one-half to F. C. Smith, New York, N. Y. Car-ventilator	293,578	Feb. 12	1020	280	26	628
Jones, Owen H., Hartford, Conn., assignor of one-half to F. C. Smith, New York, N. Y. Car-ventilator	293,967	Feb. 19	1533	422	26	726
Jones, Richard W., Syracuse, N. Y. Safety hitching loop and strap	292,561	Jan. 29	1971	550	26	382
Jones, Samuel E. (See Jones, William R. and S. E.)						
Jones, Thomas B., assignor of one-half to N. S. and D. T. Grover, Hiawatha, Kans. Sash-holder	295,253	Mar. 18	1159	320	26	1049
Jones, Thomas C., Willows, Cal. Car-coupling	293,579	Feb. 12	1021	281	26	628
Jones, Thomas E., Cincinnati, Ohio. Boiler-furnace	292,751	Jan. 29	2226	619	26	427
Jones, Thomas E., Fairfield, Iowa. Rotary steam-engine	293,887	Feb. 19	1427	394	26	706
Jones, William H., Martinsburg, Iowa. Car-coupling	291,911	Jan. 15	1132	316	26	219
Jones, William R. and S. E., Toccoa, Ga. Carpenter's square	292,017	Jan. 15	1260	352	26	242
Jones, Woodruff & Co. (See Shaffer, Charles H., assignor.)						
Jonte, Pierre F., Cincinnati, Ohio. Operating mechanism for sewing-machines, lathes, &c.	292,436	Jan. 22	1798	502	26	346
Jopling, James, Oskaloosa, Iowa. Flying target	292,118	Jan. 15	1377	385	26	264
Jopling, Jesse, deceased, near Longwood, Mo.; M. Jopling, executor. Submarine boat	292,916	Feb. 5	170	46	26	474
Jopling, Monroe, executor. (See Jopling, Jesse.)						
Jopson, George W., Meriden, Conn. Key-ring	292,231	Jan. 22	1530	429	26	296
Jordan, Ambrose L., assignor of one-half to R. C. Jordan, Ottawa, Ill. Check-rower	293,888	Feb. 19	1428	395	26	707
Jordan, Elijah B. (See McDonald, John P., assignor.)						
Jordan, Jesse, and A. P. Powers, assignors of one-half to S. M. Hillard, Macon, Ga. Seal-lock	291,354	Jan. 1	415	118	26	76
Jordan, Richard C. (See Jordan, Ambrose L., assignor.)						
Joseph, Charles. (See Foster, William H., assignor.)						
Joseph, Frank, Portland, Me. Swivel-clevis for chain cables, &c	292,493	Jan. 29	1870	522	26	367
Joseph, Thomas B., Alpena, Mich., assignor of one-third to W. H. Patten, Philadelphia, Pa. Electric distress-signal	292,317	Jan. 22	1636	458	26	315
Journal Bearing Mica Company. (See Traylor, Robert W., assignor.)						
Jowitt, Josiah, Stanley, N. J. Apparatus for making roofing-felt and similar fabrics	291,600	Jan. 8	742	209	26	140
Joy, Thaddeus C., Titusville, Pa. Steam-generator	292,822	Feb. 5	55	14	26	453
Joyce, Samuel J., New York, N. Y. Fire-escape	293,177	Feb. 5	518	137	26	532
Judd, Hubert L., Brooklyn, N. Y. Window-shade bar	291,197	Jan. 1	233	64	26	41
Judd, Hubert L., Brooklyn, N. Y. Shade-bar	291,741	Jan. 8	919	257	26	170
Judd, John, Cherry Valley, N. Y. Trellis-hook	294,240	Feb. 26	1895	518	26	795
Judge, George, Chicago, Ill. Mechanism for carrying wire-cables around curves	294,322	Feb. 26	1999	547	26	814
Julian, William H., assignor to T. Wall, Springfield, Ohio. Feed for seed-drills	295,647	Mar. 25	1662	461	26	1149
Jungerman, Edward, Gettysburg, Pa. Electric alarm for spring-clocks	295,873	Mar. 25	1953	540	26	1201
Justice, Philip J. (See King and Cliff, assignors.)						
Kahler, Conrad, Chicago, Ill. Delivery apparatus for printing-machines	291,912	Jan. 15	1133	316	26	219
Kahler, Conrad, Chicago, Ill. Paper-folding machine	294,473	Mar. 4	168	46	26	858
Kaemp, Reinhold H. (See Nagel, Kaemp, and Linnenbrügge.)						
Kaffenberger, Gustav, Hamilton, Ohio. Drive for paper-making machines	293,471	Feb. 12	901	244	26	606
Kafka, Hugo, New York, N. Y. Fire-escape	291,198	Jan. 1	234	64, 65	26	42
Kahnweiler, David, New York, N. Y. Cotton-seed-hulling machine	294,241	Feb. 26	1896	519	26	796
Kaldenbach, Friedrich W., assignor to A. Coppel, Solingen, Prussia, Germany. Pocket-knife	292,917	Feb. 5	172	47	26	475
Kalish, Philip, Chicago, Ill. Button	293,472	Feb. 12	902	244	26	607
Kalish, Philip, Chicago, Ill. Button	295,769	Mar. 25	1816	505	26	1176
Kane, Louis E., assignor of one-half to G. J. Murray, Cincinnati, Ohio. Loose-pulley lubricator	293,036	Feb. 5	317	88	26	500
Kane, Thomas. (See Durant and Shupe, assignors.)						
Kanouse, John G., and R. Miller, Appleton, Wis. Hay-fork	294,050	Feb. 26	1639	454	26	753
Karns, William E., Parker's Landing, Pa. Reversing-link for engines	292,018	Jan. 15	1260	353	26	242
Kase, James D. (See Kase, Matthew W. and J. D.)						
Kase, Matthew W. and J. D., Danville, Pa. Tag	295,557	Mar. 25	1549	429	26	1128
Kasschau, Jürgen, New York, N. Y. Reflector for gas-burners	291,199	Jan. 1	235	65	26	42
Kantz, George J., Emporium, Pa. Circular sawing machine	293,037	Feb. 5	318	88	26	500
Kayser, Adolf, assignor of one-half to A. B. Young, Buffalo, N. Y. Evaporator	291,580	Jan. 8	630	181	26	121
Kayser, John, Kaiserslautern, Bavaria, Germany. Treadle-motion	291,200	Jan. 1	236	65	26	42
Kearney, William, Franklin, N. J. Egg-holder	295,648	Mar. 25	1662	461	26	1149
Keckeler, T. T., *et al.* (See Bowen, William J., assignor.)						
Keeler, Charles A., *et al.* (See Russell, Martin L., assignor.)						
Keeler, Charles C. (See Hathaway, George M., assignor.)						
Keen, Henry H. (See Shallus, William W., assignor.)						
Kehl, Henry, Mason City, Ill. Oat-drill	291,356	Jan. 1	417	119	26	76
Kehr, Cyrus, Chicago, Ill. Fire-escape	291,601	Jan. 8	745	210	26	140
Keibler, Samuel M., Saltsburg, Pa. Dumper	291,355	Jan. 1	416	118	26	76
Keigwin, Albert N., and W. G. Talley, Wilmington, Del. Fruit-parer	295,874	Mar. 25	1954	540, 541	26	1201
Keith, Jeremiah, assignor to Florence Machine Company, Florence, Mass. Sewing-machine	291,602	Jan. 8	740	211	26	141
Kellen, Robert W., Albion, Cal. Saw-tooth	295,649	Mar. 25	1663	461	26	1149
Keller, Isidor, Milwaukee, Wis. Scholar's shoulder-brace	294,323	Feb. 26	2000	548	26	814
Keller, John F., Martinsburg, W. Va. Feed-roller for grass-sowers	293,968	Feb. 19	1533	423	26	726
Keller, Louis, New York, N. Y. Cartridge-loader and cap-expeller	294,630	Mar. 4	355	99	26	890
Keller, Peter, Philadelphia, Pa. Gas regulator	292,459	Jan. 22	1922	508	26	351

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Kelley, William S., assignor to H. B. Smith Machine Company, Smithville, N. J. Wire spoke	292,562	Jan. 29	1971	550	26	382
Kells, Philip H., Adrian, Mich. Tile-machine	293,473	Feb. 12	903	244	26	607
Kells, Philip H., Adrian, Mich. Brick-machine	295,559	Mar. 25	1549	430	26	1128
Kelsey, James C., Middletown, Conn. Carpet-stretcher	295,018	Mar. 11	846	231	26	981
Kelly, George, assignor to Kelly Scroll Section Manufacturing Company, Chicago, Ill. Non-conducting covering	292,318	Jan. 22	1637	458	26	315
Kelly, John, Peoria, Ill. Coupling for propeller and other shafts	292,823	Feb. 5	56	15	26	453
Kelly, John, Chicago, Ill. Water-closet	292,918	Feb. 5	173	47	26	475
Kelly, John P., Saco, Me. Device for connecting loom-harnesses with their actuating mechanism	293,334	Feb. 12	731	195	26	575
Kelly Scroll Section Manufacturing Company. (See Kelly, George, assignor.)						
Kelsey, John R., Bristol, England. Hat-shaping machine	295,650	Mar. 25	1664	461, 462	26	1149
Kelsey, Roland S., Syracuse, N. Y. Safety attachment for vapor-burners	295,651	Mar. 25	1666	462	26	1149
Kemble, Clay, Philadelphia, Pa. Pulley	293,235	Feb. 12	625	166	26	556
Kempshall, Eleazer, New Britain, Conn. Window and door button	294,474	Mar. 4	169	47	26	858
Kempshall, Eleazer, New Britain, Conn. Sash-fastener	294,787	Mar. 11	539	150	26	928
Kempshall Manufacturing Company. (See Chambers, James, assignor.)						
Kempster, Daniel E., Boston, Mass. Spring shade-roller	295,875	Mar. 25	1955	541	26	1201
Kendall, J. Blake. (See Mead, James M., assignor.)						
Kenna, Joseph W., Chicago, Ill. Tilting chair	294,301	Mar. 4	67	17	26	841
Kennan, Sidney T., Menasha, Wis. Machine for planing felloes	292,752	Jan. 29	2227	619	26	427
Kennedy & Berkshire Feed Water Heater and Filter Manufacturing Company. (See Berkshire, John H., assignor.)						
Kennedy, Frederick H., Auburn, N. Y. Toe-cap for boots or shoes	295,877	Mar. 25	1957	542	26	1202
Kennedy, George W., Garnavillo, Iowa. Burglar-proof safe	294,631	Mar. 4	356	99	26	890
Kennedy, James L., Sioux City, Iowa. Hitching device	291,357	Jan. 1	419	119	26	77
Kennedy, John F., Boston, Mass. Antiseptic solution	295,876	Mar. 25	1957	.....	26	1201
Kennedy, John H., Cleveland, Ohio. Stop and waste cock	292,824	Feb. 5	57	15	26	453
Kennedy, Lewis B., Keokuk, Iowa. Brick-machine	295,019	Mar. 11	846	231	26	981
Kennedy, Simon, Auburn, N. Y., and S. G. Warner, Wilmington, Del., assignors to A. E. Smith and Warner Axle Company, of Delaware. Vehicle-axle	294,632	Mar. 4	357	99	26	890
Kerr, George W., Bridgeport, Conn. Two-wheeled vehicle	293,474	Feb. 12	904	245	26	607
Kerr, George W., Bridgeport, Conn. Brace-chuck	295,408	Mar. 18	1348	375	26	1086
Kerr, Hugh, New York, N. Y. Annealing wire	291,358	Jan. 1	420	.....	26	77
Kerr, Hugh, assignor of one-half to A. Graff, New York, N. Y. Leather belting	293,178	Feb. 5	519	138	26	532
Kessler, Johann K., assignor of two-thirds to M. Roth and G. Sylvester, Milwaukee, Wis. Making white lead	292,119	Jan. 15	1378	.....	26	264
Kessler, Johann K., assignor to himself, M. Roth, and G. Sylvester, Milwaukee, Wis. Making sponge-lead	292,753	Jan. 29	2229	.....	26	428
Kessler, Johann K., Milwaukee, Wis., assignor to Wisconsin Chemical Company, of Wisconsin, and G. Sylvester, Milwaukee, Wis. Making copper salts by the aid of electricity	294,051	Feb. 26	1640	454	26	754
Kester, John H. (See Pegram and Kester.)						
Ketchum, Landon. (See Goodyear, Watson A., assignor.)						
Keufel, William, *et al.* (See Schramm, Henry G., assignor.)						
Kidder, Frank L., Terre Haute, Ind. Separator for grain, &c	292,656	Jan. 29	2087	581	26	402
Kidder Press Manufacturing Company. (See Kidder, Wellington P., assignor.)						
Kidder, Wellington P., Malden, assignor to Kidder Press Manufacturing Company, Boston, Mass. Printing-machine	291,521	Jan. 8	641	181, 182	26	121
Kidder, William K., New York, N. Y. Microscope	295,770	Mar. 25	1817	505	26	1176
Kiekhefer, August, Milwaukee, Wis. Elevator	293,038	Feb. 5	319	88	26	500
Kieker, William C., Mequon, Wis. Farm-gate	291,059	Jan. 1	53	15, 16	26	13
Kieley, Timothy J., New York, N. Y. Regulator-valve	292,232	Jan. 22	1531	429	26	296
Kientoff, William F., and P. Bertemes, Englewood, Ill. Fire-escape	291,060	Jan. 1	54	16	26	13
Kihlgren, Carl A., Boston, Mass. Manikin, automaton, or jointed doll	292,919	Feb. 5	175	47	26	475
Kilborn, William R., Petoskey, Mich. Sled	295,409	Mar. 18	1349	375	26	1086
Killer, John. (See Long and Killer.)						
Killough, John N., Aurora, Tex. Machine for stretching and removing fence-wires	291,743	Jan. 8	920	258	26	170
Kilpatrick, Worth, Connellsville, and O. M. Johnston, Brownsville, Pa. Burial-casket	292,319	Jan. 22	1638	458	26	315
Kim, George M., Allegheny, Pa. Fire-escape	292,825	Feb. 5	57	15, 16	26	453
Kimball, Charles M. (See Kimball, Ephraim M. and C. M.)						
Kimball, Ephraim M. and C. M., Toledo, Ohio. Motor	291,522	Jan. 8	644	183	26	122
Kimball, Samuel P., Woodstock, Ohio. Nut-lock	291,913	Jan. 15	1135	316	26	220
Kimball, William H. (See Martine, Charles F., assignor.)						
Kimball, William W. (See Hessler, Jacob, assignor.)						
Kimberly, Robert L., Philadelphia, Pa., assignor to American Matrix Machine Company, of New York. Machine for making matrices	295,878	Mar. 25	1958	542, 543, 544, 545	26	1202
Kimplen, Cornelius, assignor to himself and North Western Fertilizing Company, Chicago, Ill. Press	292,920	Feb. 5	176	48	26	475
Kincaid, Frank G., Somerville, and C. A. Chandler, East Bridgewater, Mass. Faucet-socket	291,603	Jan. 8	751	212	26	141
Kinder, Arthur H., assignor to A. S. Barnes, Boston, Mass. Electric implement	295,652	Mar. 25	1667	462	26	1149
King, Charles W., Manchester, and A. Cliff, London, assignors to P. M. Justice, Chancery Lane, London, England. Gas-engine	293,179	Feb. 5	520	138	26	532
King, Frank. (See Beeman, Taylor, and King.)						
King, James M., Rochester, N. Y. Cockle-separator	293,039	Feb. 5	321	89	26	501
King, John A., St. Louis, Mo. Tool-handle	294,633	Mar. 4	358	99	26	890
King, Julia A., Chicago, Ill. Leggin	293,475	Feb. 12	905	245	26	607
King, Luranus F. (See Guyer and King.)						
King, Peter O., and A. M. Carlson, Valley City, Dak. Ter. Scrubber	294,634	Mar. 4	358	100	26	890
King, William H., Little Silver, N. J. Land-marker	295,254	Mar. 18	1160	320, 321	26	1049
Kingsbury, Fred B., *et al.* (See Hobson and Bagley, assignors.)						
Kingston, Paul, Hastings, Minn. Extensible fire-escape	294,635	Mar. 4	359	100	26	890
Kinney, Francis S., New Brighton, N. Y. Cigarette-case	291,201	Jan. 1	237	66	26	43
Kinsey, Oliver. (See Lee, Thomas, assignor.)						
Kirby, Josiah, Cincinnati, Ohio. Bung	292,826	Feb. 5	60	16	26	454
Kirk, Alva H., Minneapolis, Minn. Cigar-cutter	293,580	Feb. 12	1022	281	26	628
Kirk, Joseph H., Brady, assignor to himself and M. A. Kirk, Bellefonte, Pa. Bob-sled	294,883	Mar. 11	668	186	26	951
Kirk, Miles A. (See Kirk, Joseph H., assignor.)						
Kirkpatrick, Edward C. D., Camden, N. J. Folding table	292,657	Jan. 29	2088	581	26	402

Alphabetical list of patentees, January to March, inclusive—Continued.

Lindenberg, Herman, Jersey City, N. J. Liquid-cooler	294,889	Mar. 11	676	189	26	929
Lindley, Jacob Z., and J. V. Elder, Lamar, Mo. Stove-pipe	293,893	Feb. 19	1436	397	26	708
Lindner, Charles, Carlinville, Ill. Toilet-bracket	295,567	Mar. 25	1562	433	26	1130
Lindsay, James H., trustee. (See Browning, Clinton, assignor.)						
Lindsay, Richard A., Baltimore, Md. Live-box for fish	292,123	Jan. 15	1381	387	26	965
Lindsay, William L., Cleveland, Ohio. Car-wheel	294,890	Mar. 11	677	189	26	953
Linn, James R., Toledo, Ohio. Chair	291,366	Jan. 1	431	122	26	79
Linn, Samuel H., New York, N. Y. Method of and apparatus for preserving and transporting food	291,914	Jan. 15	1136	317	26	220
Linnenbrügge, Adolph. (See Nagel, Kaemp, and Linnenbrügge.)						
Linsley, Joel, Burlington, Vt. Refrigerator	292,926	Feb. 5	183	50	26	477
Lintner, Daniel H., Lancaster, Pa. Machine for mincing meat	293,754	Feb. 19	1251	346	26	676
Lipe, Charles E., Syracuse, N. Y. Index-head for milling-machines	292,927	Feb. 5	184	51	26	477
Lipe, Charles E., Syracuse, N. Y. Universal milling-machine	292,928	Feb. 5	186	51, 52	26	477
Lipe, Walter. (See Ludlow, Charles A., assignor.)						
Lippy, David, Mansfield, Ohio. Thrashing-machine	293,755	Feb. 19	1252	{346 347}	26	676
Lippy, David, Mansfield, Ohio. Railway-crossing	295,568	Mar. 25	1563	433	26	1131
Lipsey, Andrew B., West Hoboken, N. J., assignor to W. Bell, New York, N. Y. Gas-burner	291,480	Jan. 1	580	163	26	103
Lissagaray, Henri, and H. Leplay, Paris, France. Extracting and melting tallow at a low temperature	295,184	Mar. 18	1064	.....	26	1032
Lister, Samuel C., and J. Relxach, Manningham, near Bradford, county of York, England. Loom for weaving double pile fabrics	292,664	Jan. 29	2101	{583 584 585}	26	404
Little, Howard, Deckertown, N. J. Mixed paint	293,045	Feb. 5	326	.....	26	502
Little, Nelson B., Chicago, Ill. Key-fastener	293,756	Feb. 19	1253	347	26	677
Livet, Fountain, London, county of Middlesex, England. Steam-generator	295,775	Mar. 25	1821	{506 507}	26	1177
Liversey, T. E., *et al.* (See Holden, Daniel L., assignor.)						
Lloyd, John J., Streator, Ill. Car-coupling	293,757	Feb. 19	1254	347	26	677
Lloyd, Samuel, Birmingham, county of Warwick, England. Apparatus for generating and purifying gaseous fuel	294,646	Mar. 4	379	105	26	893
Lloyd, Walter J., Harborne, Birmingham, county of Stafford, England. Tricycle	295,257	Mar. 18	1164	{321 322}	26	1049
Lloyd, William F. (See Hoffman, Lloyd, and Block.)						
Lobdell, Henry, Troy, N. Y. Curtain-stick	292,332	Jan. 22	1655	462	26	318
Lobdell, Henry, Troy, N. Y. Curtain-stick	292,333	Jan. 22	1656	462	26	319
Lobdell, Henry, Troy, N. Y. Curtain-stick	292,334	Jan. 22	1658	462	26	319
Lochman, Julius, New York, N. Y. Necktie-fastener	292,929	Feb. 5	192	53	26	478
Locke, Charles S., Joliet, Ill. Reel for check-row wires	292,831	Feb. 5	67	18	26	455
Locke, Charles S., Joliet, Ill. Anchor for check-row wires	292,832	Feb. 5	68	19	26	455
Locke, Edward A., assignor to Waterbury Watch Company, Waterbury, Conn. Watch-movement box	293,046	Feb. 5	326	90	26	502
Locke, Joseph, Somerville, assignor to W. L. Libbey, Newton, (S. C. Libbey administratrix of said W. L. Libbey, deceased,) and E. D. Libbey, Boston, Mass. Glass globe. (Reissue)	10,446	Feb. 5	563	150	26	540
Locke, Milo W., assignor of one-half to R. S. Andrews, Baltimore, Md. Hoisting and conveying apparatus	295,770	Mar. 25	1822	{507 508}	26	1177
Locke, Richard B. (See Held and Locke.)						
Locke, Sylvanus D., Hoosic Falls, N. Y. Harvester-reel	292,238	Jan. 22	1539	{431 432}	26	297
Locke, Sylvanus D., Hoosic Falls, N. Y. Harvester	295,777	Mar. 25	1825	{508 509}	26	1178
Locker, Harmon. (See Lanscha, Theodore A., assignor.)						
Lockett, Benjamin G., J. W. English, and J. W. Murphey, Atlanta, Ga. Brick-drying kiln	295,026	Mar. 11	854	{233 234}	26	992
Lockhart, Alexander W., Sacramento, Cal. Feed-regulating device for thrashing-machines	295,185	Mar. 18	1066	{293 294}	26	1032
Lockling, Henry H., Magnolia, Iowa. Gate	295,569	Mar. 25	1565	433	26	1131
Lockwood, Charles S., Newburg, N. Y. Combined boiler, fire-regulator, and alarm	291,064	Jan. 1	58	17	26	14
Lockwood, George A., and D. Orrill, Chariton, Iowa. Sewing-machine treadle	295,027	Mar. 11	855	235	26	983
Lockwood, Thomas D., Malden, Mass. Telephone circuit and apparatus	291,915	Jan. 15	1139	318	26	220
Lockwood, Thomas D., Malden, and T. W. Lane, Boston, Mass. Magneto-electric telephone	292,335	Jan. 22	1650	463	26	319

Loud, Herbert. (See Ferrall, Thomas R., assignor.) (Reissue.)						
Loughrey, John. (See Robson, Robert S., assignor.)						
Loveland, Horace W., Topeka, Kans. Furnace fire-grate and frame	293,258	Feb. 12	628	167	26	557
Lovell, William A., Bingen, Ark. Lubricator	294,480	Mar. 4	177	49	26	859
Lovell, Henry H. and H. T., Ionia, Mich. Refrigerator	295,259	Mar. 18	1166	322	26	1050
Lovell, Homer T. (See Lovell, Henry H. and H. T.)						
Lovell Manufacturing Company. (See Miller, Charles H., assignor.)						
Low, Joshua, Steubenville, Ohio. Car-coupling	295,029	Mar. 11	858	235	26	983
Lowe, E. Louis, Jr., Brooklyn, N. Y. Machine for obtaining fibers from fiber-bearing substances	292,240	Jan. 22	1545	432, 433	26	299
Lowe, Frank W. (See Wilbur, Henry A., assignor.)						
Lowe, John R., Anderson, Cal. Gate	294,481	Mar. 4	177	49	26	859
Lowrie, Harvey C., Denver, Colo. Track and road-bed for railways	291,613	Jan. 8	767	215	26	144
Lozier, Abraham W., New York, N. Y. Fire-escape	295,570	Mar. 25	1566	434	26	1131
Lubke, Adolph E. G., New York, N. Y. Dynamo-electric machine	293,758	Feb. 19	1255	347, 348	26	677
Lubke, Adolph E. G., New York, N. Y., assignor of one-half to O. Heikel, Jersey City, N. J. Electric motor	292,930	Feb. 5	193	53	26	478
Lucas, Emil E. (See Greenberg and Lucas.)						
Lucas, George C., and J. A. Patterson, Cleveland, Ohio. Filling for railway-frogs	291,749	Jan. 8	925	250	26	171
Lucas, John, Hawk's Nest, W. Va. Coal-mining machine	291,916	Jan. 15	1142	318	26	221
Lucas, Thomas P., assignor of one-half to J. S. Brown, Galveston, Tex. Locking-pawl for anchor-chains	293,657	Feb. 19	1114	310	26	652
Luckenbach, Frederic A., New York, N. Y. Apparatus for pulverizing ores, &c	291,367	Jan. 1	431	122, 123	26	79
Luckenbach, Frederic A., assignor to Pneumatic Pulverizer Company, New York, N. Y. Pulverizing, desulphurizing, and otherwise treating metalliferous ores	295,125	Mar. 11	981	269	26	1004
Ludlam, J. S. (See Dennis, Edward P., assignor.)						
Ludlow, Charles A., Bridgeport, Conn., assignor of one-half to W. Lipe, New York, N. Y. Tumbler for locks	295,260	Mar. 18	1167	323	26	1050
Ludlow, William H. D., La Porte City, Iowa. Crutch	291,750	Jan. 8	926	250	26	171
Lueckenhoff, Herman. (See Schindler, Jacob, assignor.)						
Lufkin, Richard H., Chelsea, Mass. Leather-folding machine	294,394	Mar. 4	71	18	26	842
Luker, James, New York, N. Y. Case for hats	293,183	Feb. 5	526	139	26	533
Lum, Nettie A., Carneiro, Kans. Medical compound	291,751	Jan. 8	926	.....	26	171
Lundy, Charles L. (See Lundy, Hugh E. and C. L.)						
Lundy, Hugh E. and C. L., Cincinnati, Ohio. Mail-bag cord-fastener and label-holder combined	294,799	Mar. 11	561	155	26	931
Lungren, Charles M., New York, N. Y. Dynamo-electric machine	294,892	Mar. 11	679	189	26	953
Lusty, George, Brooklyn, N. Y. Folding box	292,833	Feb. 5	69	19	26	455
Lux, John H. and P., Earlville, Iowa. Hay elevator and carrier	291,368	Jan. 1	434	123	26	79
Lux, Philip. (See Lux, John H. and P.)						
Lydall & Foulds, H. (See Merrill, Oliver H., assignor.)						
Lyford, Francis, Boston, Mass. Laundry jack or bracket	293,971	Feb. 19	1536	423	26	727
Lyman, Chester C., Cleveland, Ohio. Steam-derrick	294,395	Mar. 4	73	18, 19	26	842
Lyman, Fordyce A., Cleveland, Ohio. Vapor-stove	293,259	Feb. 12	629	167	26	557
Lyman, George N. (See Robinson, William W., assignor.)						
Lyman, William H., Springfield, Mo. Claw-bar	295,571	Mar. 25	1569	434	26	1132
Lynch, Edward P., Davenport, Iowa. Carriage-wheel	294,056	Feb. 26	1650	456	26	754
Lynch, John, New Haven, Mich. Safety-guard for railway-frogs	292,834	Feb. 5	70	19	26	455
Lyon, William. (See Fitzgerald and Lyon.)						
Lyon, William, Sheffield, county of York, England. Fluid-pressure governor	292,241	Jan. 22	1547	433	26	299
Lytle, Albert E., Chicago, Ill. Combination-tool	292,168	Jan. 22	1438	403	26	283
Lytle, Albert E., Des Plaines, assignor of one-half to G. H. Eton, Chicago, Ill. Expanding mandrel	292,167	Jan. 22	1437	403	26	282
Lytle, Felton M., and J. A. McCoy, Baltimore, Md., assignors to H. B. Lytle, Boston, Mass., trustee. Telephone central-office apparatus	294,482	Mar. 4	178	49, 50	26	859

Marshall, Joseph A. and F. H., Darlington, Ind. Band-cutter and feeder for thrashing-machines	292,867	Jan. 29	2106	586	26	405
Marshall, Thomas, Ripon, Wis. Oar-lock	294,893	Mar. 11	680	190	26	953
Marshall, Thomas T., Jarvis, Ontario, Canada. Boot or shoe crimping machine	295,187	Mar. 18	1069	294	26	1033
Marshall, William P., Ingart Grove, Iowa. Corn-planter	291,757	Jan. 8	932	261 / 262	26	172
Marshall, William P., Cambridge, Mass. Shutter bower and fastener	294,894	Mar. 11	681	190	26	953
Marshman, Newman R., assignor to Mechanical Orguinette Company, New York, N. Y. Mechanical musical instrument	293,184	Feb. 5	527	140	26	533
Marstall, Hermann, Evansville, Ind. Saw-setting machine	291,917	Jan. 15	1143	319	26	221
Martel, Jean B., Newark, N. J. Mechanical movement	293,483	Feb. 12	914	248	26	609
Martens, August F., Hamburg, Germany. Padlock	294,058	Feb. 26	1652	456	26	755
Martin, Alexander H., Oskaloosa, Iowa. Milk-cooler	294,487	Mar. 4	190	53	26	861
Martin, Andrew J., assignor to Mechanicsburg Machine Company, Mechanicsburg, Ohio. Apparatus for distributing grain and fertilizers	295,655	Mar. 25	1669	463	26	1150
Martin, Bruno, East Saginaw, Mich. Attachment to hydrocarbon-vapor burners	291,918	Jan. 15	1145	319	26	221
Martin, Bruno, East Saginaw, Mich. Hydrocarbon-burner	293,972	Feb. 19	1536	423	26	727
Martin, Edward W., assignor to H. Martin, Lansingburg, N. Y. Roller-track mechanism for pendent sliding doors	293,339	Feb. 12	736	196 / 197	26	576
Martin, Enoch P. H., Wilmington, Del. Tuyere	292,668	Jan. 29	2107	586	26	405
Martin, Henry. (See Martin, Edward W., assignor.)						
Martin, Jacob M., Sterling, Ill. Automatic carrier system	293,898	Feb. 19	1441	399	26	709
Martin, James G., Bradford, Pa. Well-drilling rig	295,413	Mar. 18	1352	376	26	1087
Martin, John, Knight's Ferry, Cal. Car-coupling	293,899	Feb. 19	1442	399	26	709
Martin, Samuel W., Springfield, Ohio. Changeable-speed gearing	293,761	Feb. 19	1260	349	26	678
Martin, Van Buren, and C. W. Metcalfe; said Martin assignor to W. J. Graham, Hopkinsville, Ky. Saw-mill head-block	295,572	Mar. 25	1570	435	26	1132
Martin, William L. (See Chamberlain and Martin.)						
Martincourt, Charles. (See Schulte and Martincourt.)						
Martine, Charles F., assignor of one-half to W. H. Kimball, Boston, Mass. Lens attachment for lampe	293,586	Feb. 12	1028	283	26	609
Martinez, Rafael, assignor to E. Gutmann and H. Goodman, New York, N. Y. Mat	295,782	Mar. 25	1635	510	26	1160
Marvine, George E. (See Johnson, William H., assignor.)						
Mason, Charles T., Jr., Sumter, S. C., assignor to Southern Cotton Harvesting Company, of South Carolina. Cotton-picker stem	293,484	Feb. 12	915	248	26	609
Mason, Charles T., Jr., Sumter, S. C., assignor to Southern Cotton Harvesting Company, of South Carolina. Cotton-picker stem	293,485	Feb. 12	916	249	26	609
Mason, Edward R., Des Moines, Iowa. Grindstone	292,242	Jan. 22	1548	433	26	299
Mason, Isaac, *et al.* (See Thompson and Rice, assignors.)						
Mason, James E., Blanchard, Pa. Car-truck	294,140	Feb. 26	1772	486	26	774
Mason, John T., Streator, Ill. Lifting-jack	294,398	Mar. 4	77	19	26	843
Mason, Robert E., Vernon County, Mo. Gate	293,650	Feb. 19	1116	310	26	653
Mason, Volney W., Providence, R. I. Friction-pulley	295,656	Mar. 25	1672	464	26	1151
Mason, William, assignor to Winchester Repeating Arms Company, New Haven, Conn. Magazine fire-arm	295,031	Mar. 11	861	236	26	983
Massey, John, Salem, Mo. Circle-iron for wagons	293,340	Feb. 12	739	197	26	576
Massey, John W., Gholson, assignor of one-half to M. Edwards, Noxubee County, Miss. Power-jack	291,370	Jan. 1	436	123	26	79
Massey, William W. (See Bickford, Charles R., assignor.)						
Matcham, George D., Pittsfield, Ohio. Blank for road-scrapers	293,261	Feb. 12	634	169	26	558
Mast & Co., P. P. (See Kissell, Emanuel M., assignor.)						
Mathes, Philip, Idlewood, Pa. Device for saving the waste from emery-wheels	294,141	Feb. 26	1773	486	26	774
Mathews, Daniel A. (See Smith, Thomas L., assignor.)						
Mathews, Samuel R. C. (See Race and Mathews.) (Reissue.)						
Matlock, David B., Red Bluff, Cal. Gate	294,649	Mar. 4	382	106 / 107	26	894
Matter, Jean C., Mulhausen, Germany. Machine for sifting colors	295,783	Mar. 25	1637	511	26	1160
Matthews, Albert H., Oakham, and J. B. Small, Somerville, Mass. Combined seed-drill and cultivator	295,263	Mar. 18	1171	324 / 325	26	1051
Matthews, John W. (See Nye and Matthews.)						
Matthews, Luther, Paris, Tex. Corn-sheller	294,488	Mar. 4	191	53	26	861
Matthews, William F., Dallas, Tex. Combined ventilator and chimney	291,919	Jan. 15	1146	319	26	221
Matthews, William H., Livingston, Tex. Button	295,032	Mar. 11	863	237	26	984
Mattice, Christopher, Delhi, N. Y. Stove	293,973	Feb. 19	1538	423 / 424	26	728
Mattison, James D., New York, N. Y. Stopper-lock for bottles	291,990	Jan. 15	1147	320	26	222
Mauck, Alfred. (See Williams, Mauck, and Williams.)						
Mavor, Warwick C., Forlorn Hope, La. Truck	294,142	Feb. 26	1774	486	26	774
Maxim, Hiram S., Paris, France. Gas-motor	291,065	Jan. 1	59	17	26	14
Maxim, Hiram S., Paris, France. Hot-air or gas engine	293,185	Feb. 5	529	140	26	534
Maxim, Hiram S., Paris, France. Gas-motor	293,769	Feb. 19	1261	349 / 350	26	678
Maxim, Hiram S., Paris, France. Gas-engine	295,784	Mar. 25	1638	511	26	1160
Maxim, Hudson, Pittsfield, Mass. Steam-cooker	293,048	Feb. 5	331	91	26	503
Maxon, Thomas, assignor of one-half to J. W. Carpenter, Dayton, Ohio. Wagon-jack	292,441	Jan. 22	1404	403	26	348
Maxwell, James R., Cincinnati, Ohio. Valve and union	291,066	Jan. 1	62	18	26	14
Maxwell, James R., Cincinnati, assignor to Gordon & Maxwell Company, Hamilton, Ohio. Valve arrangement for duplex pumping-engines	295,500	Mar. 18	1464	403	26	1107
Mayall, Thomas J., Reading, Mass. Box for laying lines of telegraph-wire	291,371	Jan. 1	437	124	26	79
Mayer, Strouse & Co. (See Gilbert, Thomas S., assignor.)						
Mayes, Thomas, Albany, N. Y. Wave-power	291,758	Jan. 8	933	262	26	172
Maynadier, Gustavus B., assignor of one-half to W. H. Cilley, Boston, Mass. Attrition-mill	292,338	Jan. 22	1662	464	26	319
Maynadier, Gustavus B., and W. H. Cilley, Boston, Mass. Attrition-mill	292,170	Jan. 22	1441	404	26	283
Maynard, Fredrick T., Detroit, Mich. Pillow-sham holder	293,900	Feb. 19	1444	399	26	710
Maynard, George H., Brooklyn, N. Y. Folding bed-bottom	293,486	Feb. 12	917	249	26	610
Mayne, John, Atchison, Kans. Railway-signal	295,264	Mar. 18	1174	325	26	1052
Maynz, Theodor, *et al.* (See Teller, Carl F., assignor.)						
Mayor, Paul H., Owego, N. Y. Operating trains on cable railways	293,049	Feb. 5	332	91	26	503
Mayrand, Pierre, Montreal, Quebec, Canada. Car-coupling	291,210	Jan. 1	246	68, 69	26	44
McAdoo, Thomas, New York, N. Y. Elevator	293,050	Feb. 5	334	91	26	503
McAlvay, Charles B., assignor of three-eighths to C. H. Christopher, Jackson, Mich. Lubricator	294,399	Mar. 4	77	20	26	843
McArthur, Alexander W., Arroyo Grande, Cal. Frame for diplomas and credit-cards	291,921	Jan. 15	1149	320	26	222

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.

McBeth, Charles E. (See Long and McBeth.)						
McBrien, Francis J., Brooklyn, N. Y. Clothes-clamp	292,243	Jan. 22	1549	433	26	300
McCabe, James H., Jacksonville, Fla. Cartridge implement	295,265	Mar. 18	1175	325	26	1052
McCahon, James H., *et al.* (See Fulton, John M., assignor.)						
McCall, William, and J. V. De Vry, San Francisco, Cal. Device for transmitting power from a central station	292,025	Jan. 15	1267	354 / 355	26	244
McCalmont, James F., Wayne, Nebr. Water-elevator	291,759	Jan. 8	934	262	26	173
McCandless, Joseph P., New York, N. Y. Blank-book	295,266	Mar. 18	1175	325	26	1052
McCandless, Joseph P., New York, N. Y. Blank-book	292,340	Jan. 22	1664	464	26	320
McCannon, Elmer E., Barnhart's Mills, Pa. Globe-valve	294,650	Mar. 4	384	107	26	894
McCarter, Marshall J., Norristown, Pa. Cut-off-valve gear						
McCarthy, Daniel, assignor to P. J. O'Connor, Norwich, Conn. Railway switch and crossing	293,660	Feb. 19	1117	311	26	653
McCartney, Elizabeth F., Omaha, Nebr. Sewing-thimble	293,262	Feb. 12	634	169	26	558
McCarty, A. A. (See Legge, Josiah H., assignor.)						
McCarty, William F. M., Aix-la-Chapelle, Germany. Solidifying liquid or semi-liquid fatty acids	292,669	Jan. 29	2108	.....	26	405
McCarty, William F. M., Moscow, Russia, assignor to J. F. Pierce, trustee, New York, N. Y. Multiple circuit-controller	293,974	Feb. 19	1539	424	26	728
McCausland, John, Providence, R. I. Paper-piping	291,372	Jan. 1	438	124	26	80
McCay, Spencer, Topeka, Kans. Machine for sharpening mowing-machine knives	292,244	Jan. 22	1550	434	26	300
McCloskey, George M., Brooklyn, N. Y. Removable bottle-trap	294,489	Mar. 4	192	53	26	862
McCloskey, Riley, and A. E. Tozier, Walla Walla, Wash. Ter. Combined tire-tightener and jack	294,895	Mar. 11	682	190	26	953
McColib, Henry, *et al.* (See Wilson, Michael H., assignor.)						
McConnell, Alexander E., New Orleans, La. Car-truck	293,763	Feb. 19	1264	350	26	678
McConnell, John C. (See Clements, George P., assignor.)						
McCord, Luther A., Clinton, S. C. Paper-file	294,651	Mar. 4	386	107	26	894
McCormack, William J., Paignton, county of Devon, England. Screw stock and die	294,143	Feb. 26	1774	487	26	775
McCormick, Charles G., assignor of one-half to G. L. and J. N. McCormick, Cincinnati, Ohio. Car-coupling	292,564	Jan. 29	1973	550	26	382
McCormick, George L., *et al.* (See McCormick, Charles G., assignor.)						
McCormick Harvesting Machine Company. (See Pridmore, Henry E., assignor.)						
McCormick, John. (See Stone, Marvin C., assignor.)						
McCormick, John N., *et al.* (See McCormick, Charles G., assignor.)						
McCoy, John A. (See Little and McCoy.)	295,573	Mar. 25	1572	435	26	1133
McCracken, George B., Willimantic, Conn. Steam-trap						
McCreery, William. (See Brown, Charles R., assignor.)	294,896	Mar. 11	683	190	26	954
McCudden, Thomas, St. Louis, Mo. Brush for flour-bolts						
McCurdy, David. (See Conp, McCurdy, and Rice.)	295,267	Mar. 18	1176	326	26	1052
McDaniel, Charles W., Carthage, Mo. Lightning-arrester for electric lines	292,245	Jan. 22	1551	434	26	300
McDermott, Walter, Orange, N. J. Ore-concentrator						
McDole, George H., assignor of one-half to H. L. Merriman, Jackson, Mich. Trace-cock-eye attachment	292,171	Jan. 22	1442	405	26	283
McDonald, Alexander. (See Lawrence and McDonald.)						
McDonald, James H., Worden, Ill. Mining-machine	294,247	Feb. 26	1903	521	26	197
McDonald, John P., assignor to himself and E. B. Jordan, Litchfield, Ill. Burial-windlass	291,760	Jan. 8	935	262	26	173
McDonald, John P., assignor to himself and W. H. Galloway, Litchfield, Ill. Baling-press	294,897	Mar. 11	683	191	26	954
McDonald, John S., New Orleans, La. Hydraulic pressure-regulator	292,026	Jan. 15	1268	355	26	244
McDonald, William A., assignor of one-half to F. J. Cross, Minneapolis, Minn. Sash-holder	292,670	Jan. 29	2109	586	26	405
McDongall, Isaac, assignor of one-half to H. Hamilton, Petersburg, Ill. Flood-fence	292,757	Jan. 29	2235	620 / 621	26	429
McDongall, James T., No. 52 Granville Park, Blackheath, county of Kent, England. Purification of coal-gas	292,341	Jan. 22	1665	.....	26	320
McDougall, William L., New York, N. Y. Device for locking wheels	293,051	Feb. 5	335	92	26	503
McDowell, Frank D., Salem, Oreg. Finger-ring gage	291,373	Jan. 1	438	124	26	80
McElfresh, John T., Farmingdale, Ill. Moth-trap for bee-hives	295,786	Mar. 25	1642	512	26	1161
McElheny, William C. (See Satch and McElheny.)						
McElhiney, Haskell H., Nebraska City, Nebr. Photographer's retouching-point	294,050	Feb. 26	1653	456	26	755
McElroy, Charles A., Delaware, Ohio. Harrow attachment	294,652	Mar. 4	386	107	26	895
McEwen, James, and S. Spencer, Manchester, county of Lancaster, England. Apparatus for bottling and straping aerated beverages	292,565	Jan. 29	1975	551	26	383
McFadden, Patrick, Philadelphia, Pa. Shaft-tug for harness	293,052	Feb. 5	336	92	26	504
McGavin, John, and E. C. Sandford, New York, N. Y. Manufacture of oil-cloth	293,487	Feb. 12	918	249	26	610
McGee, James, *et al.* (See Melvin and Clute, assignors.)						
McGillis, John J., Marinette, Wis. Saw-mill dog	293,186	Feb. 5	531	141	26	534
McGinnis, William T., assignor to J. H. Shaw, New York, N. Y. Sealed galvanic-battery cell	295,574	Mar. 25	1574	435	26	1133
McGonigle, James A. (See McKnight, Thomas, assignor.)						
McGrath, Joseph, Newton, Kans. Sofa-bedstead	293,488	Feb. 12	919	249	26	610
McGraw, John H., Oswego, N. Y. Tube-expander	292,027	Jan. 15	1269	355	26	244
McGregor, William, administrator. (See Flenniken and Graham.)						
McGrory, Thomas, Philadelphia, Pa. Lock wire insulator	293,901	Feb. 19	1444	400	26	710
McGuire, Patrick W., Lacon, Ill. Tire and felly for wheels	292,028	Jan. 15	1271	355	26	244
McGuire, Thomas R. (See Purnell, Richard H., assignor.)

Paulus, Charles H., Irvington, N. J. Chamber-pail	293,776	Feb. 19	1981	354	26	681
Paxson, Charles H., Springfield, assignor of one-half to P. T. Cofield, New Carlisle, Ohio. Lawn-mower	293,507	Feb. 12	941	256	26	614
Payne, David W., and C. R. Williams, assignors to B. W. Payne & Sons, Corning, N. Y. Steam-governor or shifting eccentric	294,069	Feb. 26	1668	460	26	757
Payne, David W., and C. R. Williams, assignors to B. W. Payne & Sons, Corning, N. Y. Governor or shifting eccentric	294,070	Feb. 26	1669	460	26	758
Payne, David W., and C. R. Williams, Elmira, assignors to B. W. Payne & Sons, Corning, N. Y. Shifting eccentric	294,071	Feb. 26	1671	461	26	758
Payne & Sons, B. W. (See Payne and Williams, assignors.)						
Payne, Walter S., Titusville, Pa. Service-cock	292,349	Jan. 22	1679	467	26	323
Peachey, James. (See Montross and West, assignors.)						
Peacock, George, Selma, Ala. Lubricating device for wheels	293,070	Feb. 5	362	98	26	508
Peacock, George, Selma, Ala. Hub for car-wheels	293,071	Feb. 5	362	98	26	508
Peacock, Thomas B., Topeka, Kans. Fire-escape	293,072	Feb. 5	364	99	26	508
Pearce, Jacob A. (See Roth, Elias D., assignor.)						
Pearce, Truman J., Oakland, Cal. Fruit-drier	293,073	Feb. 5	364	99	26	509
Peare, George R., Lynn, Mass. Child's carriage	292,174	Jan. 22	1444	405	26	283
Peare, George R., Lynn, Mass. Wagon-lock	292,175	Jan. 22	1446	406	26	283
Pearson, Augustus W., Nyack, assignor to J. Cavanaugh, trustee, Brooklyn, N. Y. Last-ing-machine	292,575	Jan. 29	1985	553 554	26	385
Pearson, Fred S. (See Taylor and Pearson.)						
Pearsons, Harrison C., Ferrysburg, Mich. Screw-propeller	293,777	Feb. 19	1282	354 355	26	681
Peaslee, Charles R., Louisville, Ky. Oil-can	294,072	Feb. 26	1673	461	26	758
Peavey, Andrew J., Somerville, assignor to himself and E. B. Buckingham, Brookline, Mass. Screw-tap	295,421	Mar. 18	1363	378	26	1089
Peavey, Andrew J., Somerville, assignor to himself and E. B. Buckingham, Brookline, Mass. Screw-cutter	295,422	Mar. 18	1364	379	26	1089
Peck, Abel, *et al.* (See Stevenson, Robert, assignor.)						
Peck, Andrew, *et al.* (See Greenough and Boardman, assignors.)						
Peck, Obed, Rowe, Mass. Breast-drill	295,193	Mar. 18	1077	296 297	26	1034
Pecor, Alfred C., Baltimore, Md. Refrigerating dish-cover	293,074	Feb. 5	367	99 100	26	509
Peel, James N. (See Waterous and Peel.)						
Peggs, Henry, Windham, Ohio. Combined potato scoop and riddle	291,395	Jan. 1	471	132	26	84
Pegram, Thomas H. and J. H. Kester, Winston, N. C.; said Kester assignor to said Pegram. Car-coupling	294,501	Mar. 4	204	57	26	864
Pelham, Charles, *et al.* (See Cabell, Samuel G., assignor.)	295,277	Mar. 18	1187	329	26	1054
Pell, Henry W., Rome, N. Y. Side spring for vehicles	294,903	Mar. 11	680	192	26	955
Pelzer, Edward N., Ionia, Mich. Vehicle top-prop	294,502	Mar. 4	205	58	26	864
Pendexter, Edward F., Milford, Mass. Car-coupling						
Pendleton, Olin B., *et al.* (See Warriner, William A., assignor.)	292,251	Jan. 22	1558	436	26	301
Penfield, James W., Willoughby, Ohio. Tile-machine	292,576	Jan. 29	1988	554	26	385
Penfield, James W., Willoughby, Ohio. Clay-crushing roller	292,577	Jan. 29	1989	554	26	385
Penfield, James W., Willoughby, Ohio. Clay-crushing roller	293,270	Feb. 12	649	174	26	560
Penfield, James W., Willoughby, Ohio. Clay-crushing roller	294,904	Mar. 11	690	192	26	955
Pennell, William W., Nashville, Ohio. Railway-switch						
Penney, Mark A., assignor to W. L. Carpenter, Des Moines, Iowa. Wire-twisting machine	291,765	Jan. 8	940	264	26	174
Penney, Mark A., assignor to W. L. Carpenter, Des Moines, Iowa. Barb-wire-fence machine	293,778	Feb. 19	1282	355 356	26	681
Pennock, William H., Wilmington, Del. Corn-coverer	291,396	Jan. 1	471	133	26	85
Penrod, John F., Derry, Pa. Railway-frog	294,664	Mar. 4	396	110	26	896
Penrose, William, *et al.* (See Giffard, Falconor, assignor.)						
People's Telephone Company. (See Drawbaugh, Daniel, assignor.)	292,578	Jan. 29	1990	554	26	385
Perine, John J., Plainfield, N. J. Machine for felting and sizing hat-bodies	292,579	Jan. 29	1991	555	26	386
Perine, John J., Plainfield, N. J. Machine for sizing or felting hats	294,905	Mar. 11	692	193	26	955
Perkins, Gustavus S., Hartford, Conn. Pneumatic door-check	291,078	Jan. 1	76	21, 22	26	17
Perkins, Wheeler, Methuen, Mass. Stone-dressing machine	294,073	Feb. 26	1674	461	26	759
Perkins, Willis J., Grand Rapids, Mich. Refuse-conveyer for saw-mills						

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.

Puffer, William and W. D., Janesville, Wis. Steam-trap	295,280	Mar. 18	1191	330	26	1055
Pugh, Jesse B., Indianapolis, Ind. Automatic grain-shoveler	294,333	Feb. 26	2011	552	26	817
Pugh, Jesse B., assignor of one-half to E. A. Nichols and A. S. Vieiria, Indianapolis, Ind. Spring-motor	295,505	Mar. 18	1471	405	26	1109
Pugsley, Henry S., Brooklyn, N. Y. Vapor and atmospheric valve for steam-pumps	292,177	Jan. 22	1448	406	26	284
Pullman, Albert B., *et al.* (See Jackson, Andrew, assignor.) (Reissue.)						
Pullman, Albert B., Chicago, Ill. Urinal	293,275	Feb. 12	657	176	26	561
Pullman, Herbert S., Rockville, assignor to C. E. Billings, Hartford, Conn. Pipe-tongs	295,885	Mar. 25	1975	547	26	1204
Pumphrey, Jesse E., Columbus, Ohio. Snap-hook	291,226	Jan. 1	264	74	26	48
Purcell, Alonzo, Monticello, Ill. Ditching-machine	295,281	Mar. 18	1191	330	26	1056
Purdy, James H., and C. T. Welch, Bellona, N. Y. Seed-drill	293,671	Feb. 19	1130	315	26	656
Purdy, John H., Chicago, Ill. Brooch-pin	294,075	Feb. 26	1676	462	26	759
Purnell, Richard H., assignor of one-half to T. R. McGuire, Rosedale, Miss. Grain-sacker	293,594	Feb. 12	1037	286	26	631
Purnelle, Edward C., Seneca, Kans. Combined letter-scale and coin-tester	292,763	Jan. 29	2246	623	26	430
Purvis, William B., assignor of one-half to L. E. Pfeiffer, Philadelphia, Pa. Paper-bag machine	293,353	Feb. 12	756	201	26	579
Putnam, Henry W. (See Gomber, George W., assignor.)						
Putnam, Salmon W., Fitchburg, Mass. Lathe-bed	291,398	Jan. 1	475	134	26	85
Quigley, William W., Santa Ana, Cal. Folding table	295,673	Mar. 25	1696	469	26	1155
Quincy, Edmund W., Peoria, Ill. Check-row corn-planter	294,360	Feb. 26	1927	528	26	801
Raber, Charles G., Washington, Ind. Coin-counter for money-drawers	292,584	Jan. 29	1998	556	26	387
Race, Nancy, administratrix. (See Race and Mathews.) (Reissue.)						
Race, Washburn, deceased, (N. Race, Volney, N. Y., administratrix,) and S. R. C. Mathews, assignors, by mesne assignments, to S. R. C. Mathews, R., E. R., G., R., and W. Wood, Philadelphia, Pa. Hydrant. (Reissue)	10,452	Feb. 26	2034	557	26	821
Rae, Frank B., and C. L. Healy, San Francisco, Cal. Commutator for dynamo or magneto electric machines	294,270	Feb. 26	1929	529	26	801
Raimes, John W. (See Nobes, George, assignor.)						
Rall, Henry, St. Louis, Mo. Lard and oil tank	291,535	Jan. 8	659	187	26	125
Ramaden, Edward A. (See Hamilton, James B., assignor.)						
Rand Drill Company. (See Halsey, Frederic A., assignor.)						
Randall, A. H., *et al.* (See Dusenbury, Philip S., assignor.)						
Randall, Charles A., New York, N. Y. Telephonic receiver	295,804	Mar. 25	1862	518	26	1184
Randall, Charles A., New York, N. Y. Telephonic transmitter	295,805	Mar. 25	1864	518	26	1185
Randall, Charles A., New York, N. Y. Telephonic transmitter	295,806	Mar. 25	1866	518	26	1185
Randall, Charles A., New York, N. Y. Telephonic transmitter	295,807	Mar. 25	1868	519	26	1185
Randall, Henry E., Northampton, county of Northampton, England. Boot or shoe	293,354	Feb. 12	757	202	26	580
Randall, Le Roy D. (See Wilcox, Stephen C., assignor.)						
Randall, Nelson, Jersey City, N. J. Conduit for electric wires	291,399	Jan. 1	476	134	26	85
Randle, William, Sr., Fort Werth, Tex. Combined hay-press and horse-power	291,082	Jan. 1	80	23	26	18
Rankin, John D., and W. C. Knox, Groesbeck, Tex. Soil-pulverizer	293,080	Feb. 5	374	101	26	510
Ransom, Frank H. (See Sangster, Amos W., assignor.)						
Ransom, Frank H., Buffalo, N. Y. Trunk	295,808	Mar. 25	1869	519	26	1186
Ransom, Hiram W., assignor of one-half to Emerson & Fisher Company, Cincinnati, Ohio, Rack for wheels	293,783	Feb. 19	1290	357 358	26	683
Ransom, John, Williamsport, Pa. Bathing apparatus	294,150	Feb. 26	1781	488 489	26	775
Ransom Stove Company. (See Hamlin, Charles A., assignor.)						
Ransom, William H., *et al.* (See Hoffman, Edward J., assignor.)						
Raphael, Meyer, Wadsworth, Nev. Sand-band for vehicle-wheels	291,936	Jan. 15	1164	325	26	225
Rapid Button Hole Machine Company. (See Humphrey, Daniel W. G., assignor.)						
Rapp, Almire H., Paris, France, assignor to A. Gerry, trustee, New York, N. Y. Device for securing tools in stone-channeling machines	291,227	Jan. 1	265	74	26	48
Rappold, Albert, Titusville, Pa. Stop-valve	293,355	Feb. 12	759	202	26	580
Rarey, Daniel. (See Rarey, Joseph P. B., assignor.)						
Rarey, Joseph P. B., assignor of one-half to D. Rarey, Kokomo, Ind. Gate	295,428	Mar. 18	1370	380	26	1090
Rasgorshek, Gabriel, Plattsmouth, Nebr. Cover for openings in stove-pipes	291,771	Jan. 8	947	266	26	175
Rathbun, Edwin D., Williams, Cal. Gate	295,674	Mar. 25	1696	470	26	1155
Rausch, George H., Boston, Mass. Hand-truck	292,080	Jan. 29	2121	590	26	408
Ravenscroft, Walter S. (See Ravenscroft, William H. and W. S.)						
Ravenscroft, Walter S., Parkersburg, W. Va. Pulp caster-wheel	293,784	Feb. 19	1293	.....	26	683
Ravenscroft, William H. and W. S., Parkersburg, W. Va. Manufacture of articles from wood pulp	293,785	Feb. 19	1293	358	26	683

Townsend, Louis, Evansville, Ind. Telephone-call-bell switch	293,118	Feb. 5	430	113	26	518
Townsend, Thomas C., New York, N. Y. Antomatic device for stopping steam-pumps	294,929	Mar. 4	225	66	26	870
Toye, M. (See Morrison, Robert H. D., assignor.)						
Tozier, Albert E. (See McCloskey and Tozier.)						
Tracy, Frank B., *et al.* (See Hamilton, William M., assignor.)						
Tracy, Frederick K., assignor of one-half to C. E. Strong, Chicago, Ill. Stereotype-plate	295,506	Mar. 25	1597	443	26	1138
Tracy, George S., *et al.* (See Packer, Harvey, assignor.)						
Tranter, John R. (See Moxham and Tranter.)						
Trask, Charles H., Lynn, Mass. Underground electric-wire conduit	293,688	Feb. 19	1155	322	26	660
Trant, Justus A., New Britain, Conn. Bench-plane	291,815	Jan. 8	999	280	26	184
Trant, Justus A., New Britain, Conn. Gage for plane-bits	293,922	Feb. 19	1344	373	26	691
Trant, Justus A., New Britain, Conn. Bench-plane	294,925	Mar. 11	594	164	26	937
Traver, Augustus, New York, N. Y. Folding case	294,938	Mar. 11	725	203	26	961
Traver, Harriet A., Toledo, Ohio. Abdominal supporter	291,551	Jan. 8	677	192	26	128
Travis, Charles L., assignor to Wilton Manufacturing Company, Minneapolis, Minn. Carpet-sweeper	293,988	Feb. 19	1554	428	26	730
Travis, Charles L., assignor to Wilton Manufacturing Company, Minneapolis, Minn. Carpet-sweeper	293,989	Feb. 19	1556	429	26	730
Travis, Charles M., and C. H. Stibolt, assignors of one-third to J. R. Johnson, Crawfordsville, Ind. Fire-escape	292,148	Jan. 15	1409	395	26	270
Travis, James F., and W. H. Freaney, New York, N. Y. Friction-clutch for drop-lights	291,816	Jan. 8	999	280	26	184
Travis, Jerome, North Adams, Mich. Combined map case and holder	294,162	Feb. 26	1801	492, 493	26	778
Traylor, Robert W., Richmond, Va., assignor to Journal Bearing Mica Company, New York, N. Y. Journal box and bearing	291,243	Jan. 1	282	79	26	51
Tregoning, Charles, Lead City, Dak. Ter. Car-brake	293,823	Feb. 19	1345	374	26	692
Tregoning, Charles, Lead City, Dak. Ter. Combination-lock	294,290	Feb. 26	1955	535	26	806
Trenton Iron Company. (See Hewitt, William, assignor.)						
Trenton Iron Company. (See Withington, James, assignor.)						
Trépardoux, Charles. (See De Dion, Bouton, and Trépardoux.)						
Trier, Frank, Westminster, England, assignor to A. C. Baldwin, Boston, Mass. Machine for truing grindstones	293,203	Feb. 5	550	146, 147	26	538
Trier, Frank, Westminster, England, assignor to A. C. Baldwin, Boston, Mass. Machine for dressing grindstones	295,081	Mar. 11	931	254, 255	26	996
Trigg, Wilton, Cairo, Ill. Cutter-head	292,388	Jan. 22	1729	482	26	333
Tripp, Thomas, Stoughton, Mass. Anti-friction journal-box	295,308	Mar. 18	1227	341	26	1062
Trobach, Konrad, Berlin, Germany. Manufacture of sugar	295,841	Mar. 25	1906	527	26	1193
Trochsler, Albert, Boston, Mass. Brick	295,692	Mar. 25	1719	475	26	1159
Trotter, Charles W., Rochester, assignor to Tuttle & Bailey Manufacturing Company, New York, N. Y. Frame for hot-air registers	291,428	Jan. 1	513	145	26	92
Trontman, Frank S., Seneca Falls, N. Y. Rotary pump	295,597	Mar. 25	1598	443	26	1138
Trouttet, Amédée, assignor to M. A. Trouttet, New York, N. Y. Glove-fastener	292,450	Jan. 22	1812	505	26	349
Trouttet, Mary A. (See Trouttet, Amédée, assignor.)						
Trowbridge, A. Lucas. (See Farley and Trowbridge.)						
Trowbridge, Newton, Council Grove, Kans. Wheel-cultivator	295,062	Mar. 11	933	255	26	996
Troxell, Fredrick, Danville, Ill., assignor to N. D. Crim, Anderson, Ind. Incrustation-preventive	295,309	Mar. 18	1229	.....	26	1062
True, David, Salisbury, Mass. Carriage-wrench	291,961	Jan. 15	1192	331	26	230
True, David, Salisbury, Mass. Carriage-wrench	292,186	Jan. 22	1460	410	26	286
True, Moses E., Batavia, N. Y. Saw-handle	291,108	Jan. 1	118	33	26	24
True, Moses E., Batavia, N. Y. Saw-handle	294,164	Feb. 26	1805	493	26	779
Trum, Emanuel J., Brooklyn, N. Y. Envelope	295,598	Mar. 25	1599	443	26	1138
Trumbull, James A. (See Willis, Robert L., assignor.)						
Trunk, Anton, Bridgeport, Conn. Toy	295,063	Mar. 11	934	255	26	996
Truslow & Co. (See Nutting, Frederick J., assignor.)						
Trussell, Wilburt C., Boston, Mass. Car-starter	293,119	Feb. 5	431	114	26	518
Tschumy, Robert. (See Booker, Samuel, assignor.)						
Tucker, Sidney D., Troy, N. Y. Clasp	295,310	Mar. 18	1230	342	26	1062
Tucker, Stephen D., New York, N. Y. Sheet-delivery apparatus for printing-machines	293,120	Feb. 5	432	114, 115, 116	26	518
Tucker, Stephen D., New York, N. Y. Sheet-delivery apparatus for printing-machines	293,121	Feb. 5	438	117, 118	26	519
Tucker, Stephen D., New York, N. Y. Sheet folding and delivery apparatus	293,122	Feb. 5	443	118, 119	26	520
Tucker, Sylvester J., Richmond, Va. Percentage-calculator	291,817	Jan. 8	1000	281	26	184
Tucker, William, East Brookfield, Mass. Saw-filing machine	295,133	Mar. 11	992	273, 274	26	1007
Tucker, William W. (See Gray, William, assignor.)						
Tudor, Frederic, Boston, Mass. Steam-heating apparatus	291,818	Jan. 8	1001	281	26	185
Tuerk, Frederick W., Jr., Chicago, Ill. Hydraulic sausage-stuffing machine	294,926	Mar. 11	596	165	26	938
Tunelins, Charles E., Chicago, Ill. Rotary fan	293,286	Feb. 12	670	179	26	564
Turly, Marshall, and R. T. Bryant, Council Bluffs, Iowa. Car-brake	291,109	Jan. 1	118	33	26	24

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Turnbull, Walter, New Orleans, La. Car-coupling	292,268	Jan. 22	1582	442	26	305
Turner, Edward R. and F., Ipswich, county of Suffolk, and J. H. Carter, London, England. Roller-mill	293,990	Feb. 19	1558	429, 430	26	730
Turner, Edward M., Knoxville, Tenn. Oil-can	291,962	Jan. 15	1192	332	26	230
Turner, Frederick. (See Turner and Carter.)						
Turner, George H. (See Cornelius and Turner.)						
Turner, Orrin S., New Vineyard, Me. Belt-stud	295,599	Mar. 25	1600	443	26	1138
Turner, Robert R., West Middlesex, Pa. Machine for rolling coupling-pins	291,110	Jan. 1	119	33	26	24
Turner, Robert W., Thornton, Tex. Steam-heated evaporator	292,768	Jan. 29	2255	624	26	432
Turner, William B., assignor of one-half to C. Beard, New York, N. Y. Car-brake	294,939	Mar. 11	726	203	26	961
Turrell, George B., South Orange, N. J., assignor to Union Hardware Company, Torrington, Conn. Coupling for rods	291,819	Jan. 8	1004	281	26	185
Tuttle & Bailey Manufacturing Company. (See Trotter, Charles W., assignor.)						
Tuttle, George F., Newark, N. J. Graduated scale	291,429	Jan. 1	514	145	26	92
Tweeddale, William, Topeka, Kans. Purifying water	295,890	Mar. 25	1980	548	26	1205
Tweedy, Edmund, Danbury, Conn. Apparatus for trimming hat-bodies	293,380	Feb. 12	795	213, 214	26	587
Twombley, O., *et al.* (See Huse, Warren D., assignor.)						
Tyler, Charles C., New York, N. Y. Cotton-batting	292,187	Jan. 22	1460	410	26	286
Tyler, Merrill A., and D. S. Smith, Rockland, assignors of seven-twelfths to T. C. Dunn and E. H. Dodge, Boston, Mass. Machine for finishing heel-bottoms	293,604	Feb. 12	1048	289, 290	26	633
Tyrer, Sarah P. (See Tyrer, Theodore W., assignor.)						
Tyrer, Theodore W., Stillwater, Minn., assignor to S. P. Tyrer, Los Angeles, Cal. Constructing buildings of artificial stone	292,149	Jan. 15	1410	393	26	271
Tyrrell, Edward, Cincinnati, Ohio. Fountain-pen	294,340	Feb. 26	2024	554	26	819
Tyson, Charles. (See Morse and Tyson.)						
Uebinger, Charles, St. James, Ind. Car-coupling	292,074	Jan. 15	1321	369	26	254
Uhleman, William. (See Jenkins, Thomas M., assignor.)						
Ulm, Samuel B., assignor of one-half to C. Steward, Ashville, Ohio. Thill-coupling	291,552	Jan. 8	678	192	26	128
Underhill, Francis M., *et al.* (See Tatum, C. Albert, assignor.)						
Underhill, William W., Brooklyn, N. Y. Manufacturing starch	294,530	Mar. 4	236	.....	26	870
Underhill, William W., Brooklyn, N. Y. Manufacturing starch	294,531	Mar. 4	237	.....	26	870
Underwood, Flavius J., North Springfield, Mo. Fire-escape	292,769	Jan. 29	2255	624	26	432
Underwood, H. Channing, Kalamazoo, Mich. Folding box	295,311	Mar. 18	1231	342	26	1063
Underwood, Henry M., assignor of one-half to J. F. Powell and R. J. Douglas, Waukegan, Ill. Windmill	295,064	Mar. 11	935	255	26	996
Underwood, William T., *et al.* (See Vogel, William, assignor.)						
Union Brass Manufacturing Company. (See Duncan, Walter, assignor.)						
Union Foundry and Machine Company. (See Norton, Reuben C., assignor.)						
Union Hardware Company. (See Turrell, George B., assignor.)						
Union Hardware Manufacturing Company. (See Gibbons, John, assignor.)						
Union Switch and Signal Company. (See Gassett, Oscar, assignor.)						
Union Switch and Signal Company. (See Gnerber, Frederick S., assignor.)						
Union Switch and Signal Company. (See Pope, Frank L., assignor.)						
United States Automatic Buttonhole Sewing Machine Company. (See Mills, Daniel, assignor.)						
United States Cotton Seed Cleaning Company. (See Hungerford, Henry, assignor.)						
United States Electric Lighting Company. (See Weston, Edward, assignor.)						
United States Metallic Packing Company. (See Monroe, Edwin P., assignor.)						
United States Ore Separating Company. (See Sébillot, Amédée M. G., assignor.)						
Updegraff, Horace, Hampton, Kans. Breech-loading fire-arm	291,111	Jan. 1	120	34	26	24
Upham, Andrew J., Sycamore, Ill., assignor to Washburn & Moen Manufacturing Company, Worcester, Mass., and I. L. Ellwood, De Kalb, Ill. Barbed wire	294,827	Mar. 11	599	165	26	938
Upham, Andrew J., Sycamore, Ill., assignor to Washburn & Moen Manufacturing Company, Worcester, Mass., and I. L. Ellwood, De Kalb, Ill. Machine for making barbed fence-wire	295,134	Mar. 11	997	274, 275	26	1007
Upham, James C., North Sydney, and J. P. Rogers, Elmsdale, Nova Scotia, Canada. Electric railway-signal	293,381	Feb. 12	797	214	26	588
Upson, James E. (See Upson, James W., assignor.)						
Upson, James W., Cleveland, assignor to J. E. Upson, Shawnee, Ohio. Steam-generator	294,291	Feb. 26	1956	536	26	806
Upson, Lyman A., Thompsonville, Conn. Machine for scouring and cleansing woolen yarn. (Reissue)	10,439	Jan. 29	2266	627	26	434
Upton, George W. D. (See Hill, Milton B., assignor.)						
Upton, King. (See Swanton, Thomas, assignor.)						
Urbahn, Alwill, Paterson, N. J. Machine for making ornamental looped cord	293,605	Feb. 12	1049	290, 291	26	633
Urban, George, Jr. (See Ortman, Barnim F., assignor.)						
Usborne, John, Arnprior, Ontario, Canada. Fire-escape	293,680	Feb. 19	1156	323	26	661
Usher, Arthur P. (See Faas, Gustav A., assignor.)						
Vacheron & Constantin. (See Roux and Fatio, assignors.)						
Vaile, John H., Dayton, Ohio. Oil-press	291,112	Jan. 1	122	34, 35	26	25
Valentine, George, Monticello, Ill. Drag-saw	294,096	Feb. 26	1707	469	26	764
Van Alstine, Charles W., Chelsea, Mass. Water-meter	291,647	Jan. 8	808	226	26	151
Van Anden, William, New York, N. Y. Vehicle-spring	293,824	Feb. 19	1347	374	26	692
Van Auken, Sidney, Oswego, N. Y. Mortise-cleaner	294,097	Feb. 26	1708	470	26	764
Van Auken, Sidney, Oswego, N. Y. Wiring blind-stiles	294,098	Feb. 26	1709	470	26	764
Van Benthuysen, Henry B., Phœnixville, Pa. Puddling-machine	291,963	Jan. 15	1193	332, 333	26	230
Van Bibber, James D., Springfield, Mo. Fence-staple driver	293,287	Feb. 12	671	180	26	564
Van Camp, Will A., Milton, Ind. Mail-bag	293,123	Feb. 5	444	119	26	520
Van Denburgh, Jesse. (See Sperry, Elmer A., assignor.)						
Van Depoele, Charles J., Chicago, Ill. Electric-arc lamp	291,553	Jan. 8	678	192, 193	26	128
Van Depoele, Charles J., Chicago, Ill. Regulator for dynamo-electric machines	291,554	Jan. 8	681	193	26	129
Van Depoele, Charles J., Chicago, Ill. Electric-circuit closer	291,648	Jan. 8	809	226	26	151
Van Depoele, Charles J., Chicago, Ill. Electric safety cut-out	291,649	Jan. 8	810	226	26	152
Van Depoele, Charles J., Chicago, Ill. Current-regulator for electric motors	291,650	Jan. 8	812	227	26	152
Van Depoele, Charles J., Chicago, Ill. Electric lamp	291,651	Jan. 8	814	227	26	152
Van Depoele, Charles J., Chicago, Ill. Safety cut-out for series of electric lamps	291,652	Jan. 8	817	228	26	153
Van Depoele, Charles J., Chicago, Ill. Electric-arc lamp	291,653	Jan. 8	819	228	26	153
Van Depoele, Charles J., Chicago, Ill. Motor for electric regulators	294,165	Feb. 26	1805	494	26	779
Van Depoele, Charles J., Chicago, Ill. Electric-arc lamp	294,532	Mar. 4	238	67	26	870
Van Depoele, Charles J., Chicago, Ill. Electric lamp	294,533	Mar. 4	240	67, 68	26	870
Van Dusen, Charles, New Albany, Ind., assignor of one-half to W. L. Breyfogle, Louisville, Ky. Nut-lock	292,601	Jan. 29	2023	563	26	391

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Drg.	Vol.	Page.
Van Fleet, Alfred, assignor to A. H. Shreffler, Joliet, Ill. Check-row attachment for seed-planters	292,771	Jan. 29	2257	625	26	432
Van Hoevenbergh, Henry, Elizabeth, N. J. Printing-telegraph	292,966	Feb. 5	231	64	26	485
Van Hoevenbergh, Henry, Elizabeth, N. J. Printing-telegraph	293,922	Feb. 19	1470	406	26	714

Wells, Charles S., assignor to himself and A. M. Cushing, Boston, Mass. Buckle	292,777	Jan. 29	2263	627	26	433
Wells, Walter S., New York, N. Y. Apparatus for tanning	294,420	Mar. 4	107	28	26	847
Wells, Williams R. (See Prosser, Willard F., assignor.)						
Wellsville Plate and Sheet Iron Company. (See Beaman, Charles F., assignor.)						
Welsh, Alexander, St. Denis, Md., assignor to Viaduct Manufacturing Company of Baltimore City. Holder for the carbons of incandescing electric lamps	295,087	Mar. 11	940	256	26	997
Welsh, Alexander, St. Denis, Md., assignor to Viaduct Manufacturing Company of Baltimore City. Electric lamp	295,088	Mar. 11	941	257	26	997
Welteroth, Henry J. (See Brown and Welteroth.)						
Wemple, Andrew, Chicago, Ill., assignor to F. Schumacher, Akron, Ohio. Machine for cutting grain	295,689	Mar. 25	1729	481	26	1160
Wemple, George W., and B. W. Child, Boston, Mass. Foot-weight	293,692	Feb. 19	1162	324	26	602
Wenman, James F. (See Stewart, George W., assignor.)						
Wenström, Jonas, Orebro, Sweden. Dynamo-electric machine	292,079	Jan. 15	1329	371, 372	26	256
Wentworth, George W., Boonville, N. Y. Tag or label for mail-bags	294,707	Mar. 4	443	123	26	905
Werner, Emil, Philadelphia, Pa. Easel	294,941	Mar. 11	731	204	26	963
Werner, Hellmuth F., Milwaukee, Wis. Case for holding pencils, &c	292,270	Jan. 22	1583	442	26	305
Werts, Nelson, and W. Spicer, Mendon, Ohio. Fence	293,547	Feb. 12	983	269	26	622
Werts, William, Camden, N. J. Machine for threading sheet-metal screws	291,656	Jan. 8	892	229, 230	26	153
Werum, Phillip, Stryker, Ohio. Hay-elevator	291,822	Jan. 8	1008	282	26	186
Wessell, Otto, A. Nickel, and R. Gross, New York, N. Y. Piano-damper	295,317	Mar. 18	1238	343	26	1064
Wesselmann, Bruno, Hamburg, Germany. Door-lock	293,548	Feb. 12	984	270	26	622
West, Byron D., Chicago, Ill. Hasp-lock	293,693	Feb. 19	1163	324	26	602
West, Frank M., Mohawk, N. Y. Ice-creeper	294,829	Mar. 11	601	165	26	938
West, John C. (See Montross and West.)						
West, John C., assignor of one-half to J. D. Smith, Clarksville, Mo. Ironing-board	294,708	Mar. 4	444	123	26	905
West, Jonathan B., Rochester, N. Y. Apparatus for slitting embroidery	291,116	Jan. 1	128	37	26	26
West, Nathaniel W., Alna, Me. Roofing-clamp	291,248	Jan. 1	287	80	26	52
Westbrook, Frank A., Port Jervis, N. Y. Hand corn-planter	294,709	Mar. 4	445	124	26	905
Westcott, John D., Union City, Pa. Cutter-head for handle-turning lathes	293,829	Feb. 19	1354	375	26	693
Western Electric Company. (See Gilliland, Ezra T., assignor.)						
Western Electric Company. (See Haskins, Charles D., assignor.)						
Western Electric Company. (See Hibbard, Angus S., assignor.)						
Western Electric Company. (See Patterson, William R., assignor.)						
Western Electric Company. (See Scribner, Charles E., assignor.)						
Westlake, Andrew, Leadville, Colo. Car-truck	292,454	Jan. 22	1817	506, 507	26	350
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Method of and apparatus for regulating the electrical transmission of power	291,445	Jan. 1	529	150	26	95
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Fusible safety-strip for electric circuits	292,713	Jan. 29	2159	601	26	415
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Electrical indicator	292,714	Jan. 29	2160	602	26	415
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Regulator for dynamo-electric machines	292,715	Jan. 29	2162	602	26	415
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Device for connecting safety-strips in electric circuits	292,716	Jan. 29	2163	602	26	416
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Conductor for electric circuits	292,717	Jan. 29	2164	603	26	416
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Electric circuit	292,718	Jan. 29	2165	603, 604	26	416
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Electrical generator or motor	292,719	Jan. 29	2168	604	26	416
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Incandescent lamp	292,720	Jan. 29	2169	604	26	417
Weston, Edward, Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. System for the electrical transmission of power	292,721	Jan. 29	2170	604, 605	26	417
Weston, Thomas A., assignor to Yale & Towne Manufacturing Company, Stamford, Conn. Reversing mechanism for rolling-mills	292,968	Feb. 5	235	645	26	485
Westphal, Henry, and E. Dieterle, Chicago, Ill. Shackle for carriage-springs	295,318	Mar. 18	1239	344	26	1064
Wetmore, Jerome W., Erie, Pa. Vehicle-spring	291,968	Jan. 15	1190	335	26	231
Wetstein, Ferdinand, and F. H. Dyckman, Sleepy Eye, Minn. Trace-buckle	294,942	Mar. 11	732	204	26	963
Wetzler, Sigmund, Hoboken, N. J. Cloak	293,386	Feb. 12	806	217	26	589
Wey, Walter J. (See Pace and Wey.)						
Weymouth, Elisha T., Brooklyn, N. Y. Steam-radiator	295,700	Mar. 25	1730	481	26	1160
Whaples, Ella, assignor of one-half to L. Shannon, Jackson, Mich. Attachment for dresses	293,387	Feb. 12	807	217	26	589
Wharry, John R., Moundsville, W. Va. Hobby-horse	291,657	Jan. 8	824	231	26	154
Wharton, Joseph. (See Wilson, Joseph B., assignor.)						
Wheaton, Frank, Brooklyn, N. Y. Ventilator for feed-bags	294,421	Mar. 4	108	28	26	847
Wheeler, Charles, *et al.* (See Feldmann, Hermann B., assignor.)						
Wheeler, James. (See Wheeler, Ransom S. and J.)						
Wheeler, James, assignor of two-thirds to T. Hagler and J. T. Williams, Red Oak, Mo. Gate	292,455	Jan. 22	1818	507	26	350
Wheeler, John E., trustee. (See Higgins, Charles L., assignor.)						
Wheeler, John M., Toledo, Ohio. Match-safe	293,694	Feb. 19	1164	324	26	602
Wheeler, Nellie J., West Winfield, N. Y. Purse	291,447	Jan. 1	532	151	26	96
Wheeler, Nelson A. (See Cobb and Wheeler.)						
Wheeler, Ransom S. and J., Red Oak, Mo. Car-coupling	291,446	Jan. 1	531	150	26	96
Wheeler, Richard, San Francisco, Cal. Canning apparatus	292,080	Jan. 15	1331	372	26	256
Wheelock, Jerome, Worcester, Mass. Cut-off valve and gear	291,249	Jan. 1	288	81	26	53

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Whelan, Frances G., Philadelphia, Pa. Hook-and-eye fastening	294,554	Mar. 4	272	74	26	875
Wherry, John, Jr., Putnam, Ill. Automatic register for grains, seeds, and other substances.	293,129	Feb. 5	452	121	26	521
Whipple, John P., Milwaukee, Wis. Paint-distributer	292,189	Jan. 22	1465	412	26	226
Whitaker, Elijah J. B. (See Ladd and Whitaker.)						
Whitaker, James L., *et al.* (See Watt, John A., assignor.)						
Whitall, James, *et al.* (See Tatum, C. Albert, assignor.)						
White, Alfred R., Stevens Point, Wis. Sad-iron	292,722	Jan. 29	2172	605	26	417
White, Angeline, London, Ohio. Wash-board	294,102	Feb. 26	1712	471	26	765
White, Archibald W., San José, Cal. Pump	291,250	Jan. 1	290	82	26	53
White, Charles W., Santa Rosa, Cal. Windmill	294,943	Mar. 11	733	204	26	963
White, Clarence O., assignor of one-half to H. H. Johnson, Minneapolis, Minn. Ironing-machine	292,883	Feb. 5	127	35	26	467
White Dental Manufacturing Company, S. S. (See Browne, Arthur W., assignor.)						
White Dental Manufacturing Company, S. S. (See Johnston and Browne, assignors.)						
White Dental Manufacturing Company, S. S. (See Pettit, Elihu R., assignor.)						
White, Emory B., Clarion, Iowa. Check-row corn-planter	294,535	Mar. 4	272	74	26	875
White, James, Canton, Ohio. Safe-lock	293,388	Feb. 12	808	217, 218	26	589
White, James W., *et al.* (See Starr, Eli T., assignor.)						
White, John A. (See Thurston, James B., assignor.)						
White, John G., Pensacola, Fla. Show-box cover	291,450	Jan. 1	536	152	26	97
White, John H., North East, Md. Razor-strop	294,830	Mar. 11	602	166	26	938
White, Joseph J., New Lisbon, N. J. Hoisting-machine	291,251	Jan. 1	291	82	26	53
White, Josiah, Toledo, Ill. Car-coupling	294,831	Mar. 11	602	166	26	938
White, Samuel K., Chicago, Ill. Geometric lathe	291,451	Jan. 1	537	152, 153	26	97
White, Thomas, Cleveland, Ohio, assignor of one-half to E. H. Campbell, Chicago, Ill. Garment-supporter	291,252	Jan. 1	292	82	26	53
White, Welcome, Everett, Mass., assignor of one-half to W. L. Maltby, Montreal, Canada. Roofing composition	295,604	Mar. 25	1607	.....	26	1139
Whitehead, Benjamin S., Newark, N. J. Inking attachment for printing-presses	291,969	Jan. 15	1200	335	26	231
Whiting, Albert, Rochester, N. Y. Apparatus for scouring and fleshing hides	292,723	Jan. 29	2173	605	26	417
Whiting, George A. (See Malone and Whiting.)						
Whiting, Henry, Cedar Rapids, Iowa. Piston-valve	292,778	Jan. 29	2265	627	26	434
Whiting, Henry A., Brooklyn, and W. J. Winghart, New York, N. Y. Combined cane and umbrella	293,830	Feb. 10	1355	375	26	693
Whiting, William M., Elizabeth, N. J. Slate-eraser	294,295	Feb. 26	1963	538	26	808
Whitman, Charles E., St. Louis, Mo. Baling-press	295,089	Mar. 11	942	257	26	997
Whitman, George W., assignor to M. C. Bignall, St. Louis, Mo. Device for punching metal tubes	295,090	Mar. 11	944	257	26	997
Whitney, Charles, assignor of three-fourths to C. W. and W. W. Marsh, Sycamore, R. Emerson and W. A. Talcott, Rockford, Ill. Harvester-platform	291,448	Jan. 1	533	151	26	96
Whitney, Charles, Sycamore, assignor of three-fourths to R. Emerson and W. A. Talcott, Rockford, C. W. and W. W. Marsh, Sycamore, Ill. Grain-harvester frame	291,449	Jan. 1	535	151, 152	26	96
Whitney, Charles, and W. W. Marsh, Sycamore, Ill. Grain-binding harvester	291,452	Jan. 1	541	153, 154, 155	26	98
Whitney, Charles, and W. W. Marsh, Sycamore, Ill. Harvester and binder	295,510	Mar. 18	1478	407, 408	26	1109
Whitney, James H., Brooklyn, N. Y. Device for poising treadle and crank movements	292,909	Feb. 5	238	65	26	486
Whitney, Pardon A., Cleveland, Ohio. Ratchet-drill	292,522	Jan. 29	1912	535	26	373
Whitney, Rael W., assignor to Leader Sewing Machine Company, Cleveland, Ohio. Fly-wheel	295,215	Mar. 18	1105	306	26	1040
Whiton, David E. and L. E., West Stafford, Conn. Lathe-chuck	294,296	Feb. 26	1964	538	26	808
Whiton, Lucius E. (See Whiton, David E. and L. E.)						
Whittaker, Henry B., and G. F. Godley, Philadelphia, Pa. Spring-motor	292,970	Feb. 5	239	65, 66	26	486
Whittaker, William T. (See Ladd and Whitaker, assignors.)						
Whitton, Andrew D., assignor of two-thirds to G. Rice and H. P. Hougen, Philadelphia, Pa. Device for transmitting power	295,701	Mar. 25	1731	482	26	1161
Wiard, Harry, and W. R. Bullock, Syracuse, N. Y. Plow	295,702	Mar. 25	1731	482	26	1161
Wiard, Norman, assignor to H. R. Hughes, Washington, D. C. Carpet-stretcher	293,205	Feb. 5	553	147	26	538
Wichard, Frank F., St. Louis, Mo. Cithern	294,832	Mar. 11	604	166	26	938
Wick, John P., Parma, Ohio. Potato-planter	295,840	Mar. 25	1914	529	26	1194
Wickers, William H., Indianapolis, Ind. Ring for securing finger-cots in position	293,831	Feb. 19	1356	376	26	693
Wickes, Edward N. (See Wickes, Henry D. and E. N.)						
Wickes, Henry D. and E. N., East Saginaw, Mich. Press-roller mechanism for gang-saw mills	291,823	Jan. 8	1009	282	26	186
Wickham, James E., Hartford, Conn. Bracket, shelf, or picture support	292,523	Jan. 29	1914	535	26	373
Wicks, William A., Baltimore, Md. Method of and device for filling and draining food-cans	291,117	Jan. 1	129	37	26	26

Alarm-lock	S. Meers	293,054	Feb. 5	337	92	26	504
Album	J. A. Stelzner	294,285	Feb. 26	1945	334	26	805
Alcohol. Process of and apparatus for the production of highly-purified	J. E. Hand	293,013	Feb. 5	290	80	26	495
Alidade	J. B. Jones	293,886	Feb. 19	1426	.....	26	706
Alloy for coating metals	F. J. Seymour	291,631	Jan. 8	787	221	26	148
Aluminium. Obtaining	T. H. Becker	293,936	Feb. 19	1493	411 412	26	719
Amalgamator	A. B. Paige	294,263	Feb. 26	1922	527	26	800
Amalgamator	A. B. Paige	294,264	Feb. 26	1923	527	26	800
Amalgamator	J. and J. Addie	291,264	Jan. 1	312	88	26	57
Ammonia from furnace-gases. Obtaining	A. M. Long	294,479	Mar. 4	174	48	26	859
Anæsthetic gases. Apparatus for administering	H. C. Chester	291,963	Jan. 15	1219	340	26	294
Anchor	H. M. Schmeelk	294,813	Mar. 11	579	160	26	935
Anchor	T. P. Lucas	293,657	Feb. 19	1114	310	26	652
Anchor-chains. Locking-pawl for	L. C. Strong	291,640	Jan. 8	799	224	26	150
Animal-power	W. L. B. Cushing and A. D. Vest	295,486	Mar. 18	1451	399	26	1105
Animal-trap	C. Hall	295,634	Mar. 25	1643	456	26	1145
Animal-trap	H. B. Sargent	295,056	Mar. 11	894	245	26	989
Animal-trap	C. Remington	292,853	Feb. 5	89	24	26	459
Animal-trough	D. L. Johnson	293,470	Feb. 12	901	243	26	606
Animals. Exterminating ground-burrowing	H. Redding	293,911	Feb. 19	1456	403	26	712
Annular surfaces and cutting screw-threads thereon. Machine for forming	I. H. Farnham	294,212	Feb. 26	1864	509	26	789
Annunciator. Electric	A. E. Leitch	291,063	Jan. 1	57	17	26	13
Annunciator. Electrical	J. Walter	294,535	Mar. 4	244	68	26	871
Annunciator. Speaking-tube	C. E. Scribner	293,197	Feb. 5	542	144	26	536
Annunciator-switch and telephone-circuit	J. F. Kennedy	295,876	Mar. 25	1957	.....	26	1201
Antiseptic solution	W. E. Brock	293,940	Feb. 19	1499	413	26	720
Apple corer, parer, and slicer	F. C. Zanetti	295,218	Mar. 18	1108	306 307	26	1040
Aquarium	G. E. Swan	295,304	Mar. 18	1222	340	26	1061
Arrow	G. Winding	295,707	Mar. 25	1740	484	26	1162
Asphalt. Machine for mixing	W. H. H. Knight	293,180	Feb. 5	522	138 139	26	533
Asphalt-mixing machine	E. J. De Smedt	292,417	Jan. 22	1771	493	26	341
Asphaltum for paving, &c. Apparatus for refining	J. Davis	291,698	Jan. 8	871	244 245	26	102
Astronomical apparatus	G. B. Maynadier	292,338	Jan. 22	1662	464	26	319
Attrition-mill	G. B. Maynadier and W. H. Cilley	292,170	Jan. 22	1441	404	26	283
Attrition-mill	T. L. Sturtevant	291,954	Jan. 15	1184	329	26	228
Auger. Earth-	F. Brown	291,977	Jan. 15	1210	338	26	233
Auger. Earth-	S. S. and J. G. Sherman	295,444	Mar. 18	1385	384	26	1093

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Anger. Post	J. E. Miles	293,490	Feb. 12	921	250	26	610
Automatic lubricator	J. C. Thayer	294,163	Feb. 26	1803	493	26	779
Automatic register for grains, seeds, &c	J. Wherry, Jr	293,129	Feb. 5	452	121	26	521
Awning	H. B. Coyle	294,767	Mar. 11	517	144	26	924
Awnings. Device for raising and lowering	J. Greenberg and E. E. Lucas	292,216	Jan. 22	1510	424	26	293
Ax	R. R. Pace	294,144	Feb. 26	1775	487	26	774
Axle-attaching device	A. Fontayne	293,960	Feb. 19	1522	420	26	725
Axle bearings. Brass for car	J. Wallace	292,452	Jan. 22	1215	506	26	350
Axle box. Car	W. S. G. Baker	292,399	Jan. 22	1743	486	26	336
Axle box. Car	J. Stephenson	292,379	Jan. 22	1719	479	26	331
Axle. Car	G. W. Stewart	293,201	Feb. 5	548	145	26	538
Axle. Carriage	J. Gowland	294,222	Feb. 26	1876	513	26	791
Axle journals. Bearing for car	G. W. Stewart	291,547	Jan. 8	673	191	26	127
Axle-repairing tool	F. S. Packard	292,039	Jan. 15	1283	350	26	247
Axle. Vehicle	S. Kennedy and S. G. Warner	294,632	Mar. 4	357	99	26	890
Axle. Wagon	T. M. Jenkins	295,404	Mar. 18	1344	374	26	1085
Back-band hook	F. Haynes	294,229	Feb. 26	1883	515	26	793
Back-stay fastener	C. M. Schaefer	294,083	Feb. 26	1686	464	26	760
Bag: *See* Feed-bag. Paper bag. Mail-bag. School-bag.							
Bag-fastener	C. Collins	293,564	Feb. 12	1006	277	26	626
Bag-fastener	W. B. Hanlon	294,228	Feb. 26	1882	515	26	793
Bag-holder	M. Hayman	292,648	Jan. 29	2078	578, 579	26	400
Bag-holder	E. H. Morehouse	294,659	Mar. 4	393	109	26	896
Bag-holder	A. Robinson	294,505	Mar. 4	208	58	26	865
Bag-holder	C. J. Sanker	293,079	Feb. 12	602	177	26	562
Bag-lock	T. Wood	294,299	Feb. 26	1960	539	26	809
Bagasse-drier	R. H. Yale	294,836	Mar. 11	607	167, 168	26	939
Bait. Artificial fish	W. D. Chapman	295,350	Mar. 18	1279	354	26	1072
Bait. Spoon	C. B. Hibbard	295,758	Mar. 25	1799	500	26	1173
Balance	F. Meyer, Jr	292,935	Feb. 5	201	55	26	479
Balance. Spring	H. Haerter	294,227	Feb. 26	1881	514	26	792
Balance-wheels. Crank adjustment for	J. B. Thurston	291,645	Jan. 8	805	225	26	151
Bale-band tightener	C. C. Montague	292,249	Jan. 22	1556	435	26	301
Bale-band tightener	R. L. Willis	291,560	Jan. 8	688	194	26	130
Bale-tie	J. W. Garland and E. Becker	294,609	Mar. 4	330	91	26	885
Bale-tie	R. E. Rialo	291,228	Jan. 1	266	74	26	48
Bale-tie	L. Williams	295,319	Mar. 18	1240	344	26	1064
Bale-tie fastener	C. S. Garrigus	292,004	Jan. 15	1248	349	26	240
Bale-tie aplice	F. Bonmarius	295,340	Mar. 18	1268	351	26	1070
Bale-tie. Wire	W. Hewitt	294,386	Mar. 4	61	15	26	840
Bale-tie. Wire	G. Nicholson	295,419	Mar. 18	1361	378	26	1089
Baling bran. Process of and apparatus for	O. Anketell	293,699	Feb. 19	1174	327	26	664
Baling-machine	D. Tarr	292,872	Feb. 5	114	31	26	464
Baling-press	D. B. Hendricks	295,122	Mar. 11	978	268, 269	26	1004
Baling-press	J. P. McDonald	294,697	Mar. 11	683	191	26	954
Baling-press	J. D. Page	295,672	Mar. 25	1695	469	26	1154
Baling-press	E. U. G. Reagan	295,282	Mar. 18	1193	330, 331	26	1054
Baling-press	G. W. Robburts	292,952	Feb. 5	219	60	26	483
Baling-press	D. W. Seeley and A. Buckman	292,593	Jan. 29	2015	560	26	389
Baling-press	N. W. Speers, Sr	294,818	Mar. 11	586	162	26	936
Baling-press	C. C. Warren and W. H. Oliver	291,439	Jan. 1	523	148	26	94
Baling-press	J. Watson	294,551	Mar. 4	267	73	26	874
Baling-press	C. E. Whitman	295,089	Mar. 11	949	257	26	997
Baling-press. Duplex	J. La Dow	294,638	Mar. 4	302	101, 102	26	891
Baling-presses, &c. Screw-driving mechanism for	P. Slattery	291,791	Jan. 8	970	272	26	179
Ball-trap	J. C. Parmerlee	292,043	Jan. 15	1287	360	26	248
Ball-trap	C. F. Stock	293,814	Feb. 19	1334	370	26	690
Ball-trap	C. F. Stock	295,302	Mar. 18	1219	339	26	1061
Balloon-propeller	K. D. Davis	291,990	Jan. 15	1229	342, 343	26	236
Ballot-box	J. Klioger	295,560	Mar. 25	1551	430	26	1128
Band-fastening	W. W. Stewart	293,812	Feb. 19	1331	369	26	690
Bandage. Suspensory	L. P. Griffin	291,502	Jan. 8	734	206	26	138
Banjo	H. C. Dobson	294,451	Mar. 4	141	37	26	853
Bar: *See* Hitching-bar. Jail-bar.							
Barrel-cleaning machine	W. W. Beach	293,843	Feb. 19	1375	380	26	697
Barrel-cover. Detachable	H. Mann	294,057	Feb. 26	1651	456	26	755
Barrel-finishing machine	R. O. Dobbin	292,737	Jan. 29	2192	611, 612, 613	26	421
Barrel-heads. Machine for planing	E. and B. Holmes	292,816	Feb. 5	49	13	26	452
Barrel-hooping machine	T. C. Duff and R. I. Allan	291,583	Jan. 8	717	202	26	134
Barrel-making machine	S. Wright	292,728	Jan. 29	2178	607	26	418
Barrel or cask for liquid and similar articles	F. Schimper	293,677	Feb. 19	1141	318	26	658
Barrels. Rack for holding	W. Walter	295,085	Mar. 11	938	256	26	996
Barrels. Windlass for compressing	E. and B. Holmes	292,817	Feb. 5	50	13	26	452
Bars. Machine for drawing	J. S. Griffin	293,450	Feb. 12	878	238	26	602
Basket. Folding	A. Daul	295,363	Mar. 18	1295	359	26	1075
Basket-splint machine	S. Oakman	292,942	Feb. 5	208	57	26	480
Bat. Base-ball	W. Williams	292,190	Jan. 22	1468	412	26	287
Bathing apparatus	J. Ransom	294,150	Feb. 26	1781	488, 489	26	775
Battery: *See* Electric battery. Secondary battery. Galvanic battery. Storage-battery.							
Battery	A. Haid	294,463	Mar. 4	156	43	26	856

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Batting. Cotton	C. C. Tyler	292,187	Jan. 22	1460	410	26	286
Beam and girder support	P. H. Jackson	291,192	Jan. 1	226	63	26	41
Beans, nuts, fruits, &c. Table for assorting	J. Johnson	293,333	Feb. 12	730	195	26	575
Bearing. Anti-friction	T. R. Ferrall. (Reissue)	10,455	Mar. 4	490	137, 138	26	913
Bearing. Self-lubricating	T. R. Ferrall. (Reissue)	10,456	Mar. 4	491	138	26	914
Bed-bottom	E. S. Field	291,868	Jan. 15	1104	308	26	213
Bed-bottom. Folding	G. H. Maynard	293,496	Feb. 12	917	249	26	610
Bed-bottom. Spring	W. A. Horrall	292,818	Feb. 5	52	13	26	452
Bed-bottom. Spring	B. R. Platt	293,077	Feb. 5	371	101	26	510
Bed-lounge	A. Hansen	292,556	Jan. 29	1964	547, 548	26	381
Bed. Sofa	W. A. Clark	294,198	Feb. 26	1847	504	26	786
Bed-spring connector. Twin	J. S. Dixon	294,593	Mar. 4	313	87	26	882
Bedstead and crib. Folding	C. T. Shepard	293,796	Feb. 19	1310	363, 364	26	687
Bedstead. Sofa	J. Bagge	294,954	Mar. 11	745	208	26	965
Bedstead. Sofa	J. McGrath	293,488	Feb. 12	919	249	26	610
Bedstead. Wardrobe	W. D. Snyder	293,806	Feb. 19	1324	368	26	689
Bee-hive	T. Gorsuch	293,449	Feb. 12	876	237	26	602
Bee-hive	W. E. Hatton	293,873	Feb. 19	1411	390	26	704
Bee-hive	J. Vanzandt	295,693	Mar. 25	1719	475	26	1159
Bee-hives. Moth-trap for	J. T. McElfresh	295,786	Mar. 25	1842	512	26	1181
Bees. Device for hiving	F. C. Morrow	293,905	Feb. 19	1448	401	26	710
Beef-cutter	J. Glover	294,031	Feb. 26	1608	446	26	748
Beer and other fermented liquids for the market. Process of and apparatus for preparing	C. Pfaudler	293,909	Feb. 19	1454	403	26	711
Beer-cooler	C. A. Bartliff	294,183	Feb. 26	1832	499	26	783
Beer-cooler	C. L. Krum	294,884	Mar. 11	669	186	26	951
Beer-cooler	V. Wilhelmi	292,971	Feb. 5	243	66, 67	26	487
Beer-cooler	J. Schafhaus	292,590	Jan. 29	2008	558	26	389
Beer-finings spreader	H. Strater, Jr	292,266	Jan. 22	1579	441	26	304
Beer-kettles. Pipe-coupling for	W. E. Barton	294,184	Feb. 26	1833	500	26	783
Bell	A. W. Barton	292,889	Feb. 5	134	37	26	468
Bell. Call	D. Boyd	293,938	Feb. 19	1496	412	26	720
Bell. Electric call	A. S. Bunker	293,626	Feb. 19	1079	299	26	646
Bell-pull. Electric	O. Gassett	293,571	Feb. 12	1012	279	26	627
Bell-ringing apparatus. Electric	C. M. Theberath	291,957	Jan. 15	1187	330	26	229
Bell. Sleigh	T. Woodason	292,085	Jan. 15	1336	375	26	257
Bellows attachment for insect-powder, &c	G. B. Simkin	293,799	Feb. 19	1315	365	26	687
Belt and attachment. Protection	P. Koch	291,202	Jan. 1	238	66	26	43
Belt-fastener	J. B. Norton	292,173	Jan. 22	1444	405	26	283
Belt-hinge	E. Smith	294,923	Mar. 11	710	198	26	959
Belt-stud	O. S. Turner	295,509	Mar. 25	1606	443	26	1138
Belt-tightener	M. L. Russell	294,678	Mar. 4	411	114	26	899
Belt-tightener	F. Sager	292,308	Jan. 22	1708	476	26	329
Belt-tightener	H. Kerr	293,178	Feb. 5	519	138	26	532
Belting. Leather							
Bench: *See* Wash-bench. Work-bench.							
Bench dog and clamp. Combined	C. C. Johnson	295,178	Mar. 18	1055	291	26	1030
Berth for ships. Self-leveling	J. H. Milligan	291,070	Jan. 1	67	19	26	15
Bessemer converter	H. Schulze-Berge	294,684	Mar. 4	417	116	26	900
Bevel and T-square. Combined	S. H. Bellows	295,100	Mar. 11	955	260	26	999
Bicycle	W. H. Davis	292,545	Jan. 29	1950	544	26	379
Bicycle	G. D. Foote	291,323	Jan. 1	386	108	26	70
Bicycle	E. G. Latta	294,640	Mar. 4	368	102, 103	26	892
Bicycle	W. Rennyson	293,081	Feb. 5	375	102	26	510
Bicycle	H. Strait	292,961	Feb. 5	227	62	26	484
Bicycle	R. C. Thompson and W. Spence	293,377	Feb. 12	791	212	26	586
Bicycle-brace	W. X. Stevens	293,284	Feb. 12	667	179	26	563
Bicycle-saddle	C. E. Duryea	293,725	Feb. 19	1209	335	26	676
Bicycle-saddle	J. A. Lamplugh	293,656	Feb. 19	1112	309, 310	26	652
Bicycle-saddle	F. Lillibridge	294,645	Mar. 4	377	105	26	893
Bicycle-saddle spring	O. M. Mitchell	294,655	Mar. 4	389	108	26	895
Bicycle-support	J. W. Fry	292,163	Jan. 22	1433	402	26	282
Bier or coffin stool	J. N. Knox	291,605	Jan. 8	753	212	26	142
Bilge-water alarm	P. Hand	291,711	Jan. 8	886	249	26	165
Bill-holder	H. Easthope and G. C. Schneider	291,339	Jan. 1	399	142	26	73
Billiard-cue tip	J. Dockstader	291,703	Jan. 8	877	246	26	163
Billiard-table attachment	H. W. Collender	292,547	Jan. 29	1954	545	26	379
Billiard-table cushion	W. Sherwood	292,990	Feb. 5	261	72	26	490
Billiard-tables. Automatic chalk-holder for	W. E. Elam	294,516	Mar. 4	218	62	26	867
Binder. Temporary		294,775	Mar. 11	524	146	26	925
Bit: *See* Bridle-bit.							
Bit and drill brace	J. D. Richardson	292,587	Jan. 29	2004	557	26	388
Bit-brace. Ratchet	W. R. Clarkson	294,762	Mar. 11	510	142	26	923
Blacking-box	A. V. Sanford	295,677	Mar. 25	1700	471	26	1156
Blast-furnace for zinc ores	A. M. G. Sébillot	291,410	Jan. 1	493	138	26	88
Blast-furnaces. Hot-blast apparatus for	J. P. Bennett	294,003	Feb. 26	1574	434	26	742
Blast-furnaces. Preventing chilling of	J. M. Hartman	292,305	Jan. 22	1623	454	26	313
Blast-furnaces. Regenerative hot-blast stove for	B. Ford and J. Moncur	294,314	Feb. 26	1988	543, 544	26	815
Blasting-barrel	G. A. Ingram	295,556	Mar. 25	1547	429	26	1128
Blasting rock. Method of and tool for	J. L. L. Knox	291,606	Jan. 8	754	212	26	142
Bleaching. Process of and apparatus for	J. B. Thompson	293,376	Feb. 12	789	211	26	586
Blind	G. W. Morstatt	291,924	Jan. 15	1159	321	26	229
Blind and awning. Window	E. Lee	294,324	Feb. 26	2001	548	26	815
Blind-slats. Device for wiring	G. W. Soule	291,546	Jan. 8	670	190	26	127
Blind-stiles. Wiring	S. Van Auken	294,698	Feb. 26	1709	470	26	764
Blind. Window	A. H. Hill	294,233	Feb. 26	1887	516	26	794
Blind. Window	J. Williams	291,254	Jan. 1	295	83	26	53

Boat	N. C. Jessup	291,909	Jan. 15	1129	315	26	218
Boats. Construction of	F. Byrnes	293,714	Feb. 19	1198	332	26	668
Boats from celluloid, &c. Manufacture of	C. P. Pitman and H. Allaire	291,533	Jan. 8	656	166	26	124
Boats. Sliding seat for	J. C. Garrood	294,029	Feb. 26	1604	446	26	748
Bobbin-truck	W. E. Sharples	295,441	Mar. 18	1382	384	26	1093
Body-protector	W. Gray	295,543	Mar. 25	1526	421	26	1124
Boiler:							
See Locomotive-boiler. Tubular boiler. Steam-boiler.							
Boiler	A. E. Dalley	294,448	Mar. 4	139	36	26	853
Boiler, fire-regulator, and alarm. Combined	C. S. Lockwood	291,064	Jan. 1	58	17	26	14
Boiler-furnace	A. Backus, Jr	293,933	Feb. 19	1499	410	26	718
Boiler-furnace	J. J. Hall	294,998	Mar. 11	810	224	26	976
Boiler-furnace	T. E. Jones	292,751	Jan. 29	2226	619	26	427
Boiler furnace. Steam-	P. Johnson	293,654	Feb. 19	1110	308	26	652
Boiler furnace. Steam-	I. L. Merrell	294,654	Mar. 4	388	108	26	895
Boiler furnace. Steam-	J. B. Smith, C. A. Presler, and E. Fox.	294,924	Mar. 11	711	198; 199	26	959
Boiler-scraper	J. H. Beare	295,854	Mar. 25	1923	531; 532	26	1196
Boiler-support	J. C. Haag	294,871	Mar. 11	653	182	26	948
Boiler use. Purifying water for	C. B. Dudley	291,168	Jan. 1	193	.....	26	36
Boiler-water purifier	G. M. Brauninger	294,754	Mar. 11	502	140	26	922
Bolt:							
See Shutter-bolt. Trunk-tray bolt.							
Bolt-heading machine	J. Bruderer	292,534	Jan. 29	1029	540; 541	26	376
Bolt-holding device	W. S. Dawson	291,037	Jan. 1	26	8	26	7
Bolt or rivet machine	J. Morgan	293,348	Feb. 12	748	200	26	578
Bolts. Machine for making eye-	L. J. M. Mortenson	291,387	Jan. 1	463	130	26	83
Bolting-chest	L. B. Kohnle and W. B. Hamilton	295,561	Mar. 25	1553	431	26	1129
Bolting-reel. Centrifugal	A. H. Spaulding	295,453	Mar. 18	1395	387	26	1095
Bone-black. Apparatus for revivifying	E. P. Eastwick	293,430	Feb. 12	857	232	26	598
Book and file case	J. Baker	293,701	Feb. 19	1176	328	26	664
Book and pad. Memorandum-	S. J. Silberman	294,920	Mar. 11	707	197	26	958
Book. Blank-	J. P. McCandless	295,266	Mar. 18	1175	325	26	1052
Book-carrier	P. N. Breton	295,226	Mar. 18	1121	310	26	1042
Book-case	W. A. Smith	293,101	Feb. 5	399	109	26	514
Book case or stand. Revolving	J. Danner	293,151	Feb. 5	477	128	26	525
Book-case. Revolving	W. C. Seldomridge	294,337	Feb. 26	2016	553	26	818
Book holder and rest	E. V. Parker	294,496	Mar. 4	200	56	26	863
Book-leaf protector	J. Akins	295,141	Mar. 18	1011	279	26	1023
Book-mark and pencil-holder	E. T. Covell	292,412	Jan. 22	1762	490	26	339
Books. Device for holding open the leaves of	G. D. B. Small	294,067	Feb. 26	1605	466	26	762
Boot	W. Irvin	291,516	Jan. 8	634	179	26	120
Boot	M. J. Wood and W. H. Bond	291,658	Jan. 8	824	231	26	154
Boot and shoe counters. Machine for bending	R. Glover	292,646	Jan. 29	2076	577	26	400
Boot and shoe crimping apparatus	H. R. Adams	291,017	Jan. 1	2	1	26	3
Boot and shoe fastening	F. Chase	293,145	Feb. 5	470	126	26	524
Boot and shoe last	W. Pond	294,146	Feb. 26	1777	487	26	775
Boot and shoe lasting device	W. Rogers	294,276	Feb. 26	1937	531	26	803
Boot and shoe lasting-jack	F. Chase	293,146	Feb. 5	471	126	26	524
Boot and shoe sole. Rubber	H. A. Wattson	292,711	Jan. 29	2158	601	26	414
Boot and shoe soles. Compound for preserving	M. Schütz	292,956	Feb. 5	222	.....	26	483
Boot and shoe uppers. Apparatus for operating upon	H. R. Adams	291,016	Jan. 1	1	1	26	3
Boot and shoe uppers. Cutting	W. P. Hobson and H. A. Bagley	293,964	Feb. 19	1530	421	26	726
Boot and shoe uppers. Device for expanding	C. L. Higgins	291,188	Jan. 1	220	61	26	39
Boot and shoe uppers. Mold for molding	G. H. Clark	293,631	Feb. 19	1585	301	26	647
Boot-cleaner	J. Wolf	294,934	Mar. 11	605	167	26	939
Boot or shoe	G. C. Buch	291,490	Jan. 8	599	169	26	114
Boot or shoe	C. W. Monson	294,253	Feb. 26	1910	524	26	798
Boot or shoe	H. E. Randall	293,354	Feb. 12	757	202	26	580
Boot or shoe	G. Rollhaus	293,350	Feb. 12	764	203	26	581
Boot or shoe crimping machine	T. T. Marshall	295,187	Mar. 18	1069	294	26	1033
Boot or shoe. Rubber	I. F. Williams	294,173	Feb. 26	1818	496	26	781
Boot or shoe. Rubber	I. F. Williams	294,174	Feb. 26	1819	496	26	781
Boot or shoe soles. Beating-out machine for	J. W. Rogers	294,506	Mar. 4	209	59	26	865
Boot or shoe stiffeners. Molding	N. J. Simonds	292,514	Jan. 29	1902	530; 531; 532; 533	26	371
Boot or shoe stitching-jack	J. F. Ames	291,661	Jan. 8	827	232	26	155
Boot or shoe toe-cap	F. H. Kennedy	295,877	Mar. 25	1957	542	26	1202
Boot or shoe upper. Machine for pebbling or embossing	J. H. Parker	292,572	Jan. 29	1992	553	26	384
Boot-strap	C. B. Lamb	291,746	Jan. 8	922	258	26	170
Boot-tree	J. H. Barbank	293,945	Feb. 19	1506	415	26	722
Boots and shoes. Device for stretching	H. Glines	293,448	Feb. 12	876	237	26	602
Boots and shoes. Exhibiting	C. L. Higgins	291,729	Jan. 8	903	253	26	167
Boots and shoes. Instep-holder for lasting	J. H. Parker	291,077	Jan. 1	75	21	26	17

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Boots and shoes. Machine for uniting the soles and uppers of	F. Chase	293,147	Feb. 5	473	126	26	524
Boots and shoes. Manufacture of	L. F. Norman	292,503	Jan. 29	1880	525	26	369
Boots and shoes. Manufacture of	E. L. Sprague	291,796	Jan. 8	977	275	26	181
Boots or shoes. Machine for forming felt	D. F. Messer	293,766	Feb. 19	1268	351	26	679
Boots or shoes. Manufacture of	G. W. Day	291,992	Jan. 15	1231	343	26	237
Boots or shoes. Manufacture of rubber	E. Stout	295,062	Mar. 11	906	248	26	991
Borer. Hand-	W. E. Clough	295,523	Mar. 25	1499	414	26	1119
Boring-gage	T. J. Bush	293,144	Feb. 5	469	125	26	524
Boring-machine	W. E. Clough	295,524	Mar. 25	1500	414	26	1119
Boring-tool	G. W. Baker	293,397	Feb. 12	822	221	26	592
Bosom-boards. Neckband-shaping device for	D. G. Norris, 2d	295,130	Mar. 11	987	271	26	1006
Bottle	F. E. Heinig and F. Stitzel	293,460	Feb. 12	890	241	26	604
Bottle and jar stopper	N. Thompson	295,306	Mar. 18	1224	341	26	1062
Bottle and stopper	J. Story	291,638	Jan. 8	797	223	26	149
Bottle cap. Mustard-	F. Wolff	294,835	Mar. 11	606	167	26	939
Bottle-filling device	P. J. Hogan	295,009	Mar. 11	835	229	26	979
Bottle-holding clamp	J. B. Wilson	294,946	Mar. 11	736	205	26	963
Bottle lips and necks. Tool for forming	J. B. Wilson	295,848	Mar. 25	1916	530	26	1194
Bottle-register	E. H. Rogers, Jr	293,089	Feb. 5	382	104	26	511
Bottle. Siphon	H. L. Hanson and F. J. Johnston	293,014	Feb. 5	290	81	26	495
Bottle-stopper	G. D. Corey	294,443	Mar. 4	133	35	26	852
Bottle-stopper	S. P. M. Tasker	292,449	Jan. 22	1811	505	26	349
Bottle-stopper	A. H. Wirz	295,708	Mar. 25	1741	484	26	1162
Bottle-stopper	E. Sachs	292,367	Jan. 22	1708	476	26	329
Bottle-stopper cap	J. Story	291,637	Jan. 8	796	223	26	149
Bottle-stopper. Glass	H. Benson	295,102	Mar. 11	958	261	26	1000
Bottle-stopper. Internal	J. D. Mattison	291,920	Jan. 15	1147	320	26	222
Bottle-stopper lock	G. S. Norris	293,269	Feb. 12	648	174	26	560
Bottle-stopping device	G. M. McCloskey	294,499	Mar. 4	192	53	26	862
Bottle-trap. Removable	J. Bertius and A. Propst	295,721	Mar. 25	1755	488	26	1165
Bottles. Cutter for wires and cords of	R. J. Sankey	294,156	Feb. 26	1792	490	26	777
Bottles for containing aerated or gaseous liquids. Stoppering	S. P. M. Tasker	294,415	Mar. 4	98	25	26	846
Bottles, jars, &c. Automatic stopper for	O. C. Carpenter	295,735	Mar. 25	1770	492; 493	26	1167
Bottles. Machine for wiring corks in	J. McEwen and S. Spencer	292,565	Jan. 29	1975	551	26	383
Bottling and sirruping aerated beverages. Apparatus for	W. H. Hogan	295,870	Mar. 25	1950	539	26	1200
Bouquet and ticket holder. Combined							
Box:							
See Ballot-box. Knockdown box. Blacking-box. Letter-box. Dry-goods box. Mail-box. Fare-box. Match-box. File-box. Package-box. Fish-box. Packing-box. Folding box. Shoe-box.							
Box and similar receptacle	W. Von Darteln	293,288	Feb. 12	672	180	26	564
Box-fastener	S. D. Ford and F. M. Spencer	294,778	Mar. 11	928	147	26	926
Box-heads. Machine for cutting	M. E. Converse	292,991	Feb. 5	963	72	26	490
Box making and covering machine	C. H. Manneck and W. Witte	294,486	Mar. 4	186	50; 51; 52	26	861
Brace:							
See Bit-brace. Corner-brace. Bit and drill brace.							
Bracelet	C. R. Bugbee	295,108	Mar. 11	964	263	26	1001
Bracelet	J. C. Harrington	291,900	Jan. 15	1117	312	26	216
Bracelet	J. C. Harrington	293,016	Feb. 5	295	81	26	496
Bracelet	H. A. Church	293,418	Feb. 12	844	228	26	596
Bracelet. Chain-	S. Wallach	293,825	Feb. 19	1349	374	26	692
Bracelet-clasp	J. M. Chandler	291,150	Jan. 1	170	49	26	33
Bracelet-fastening	J. A. and C. F. Charnley	294,010	Feb. 26	1582	439	26	744
Bracelet. Plated-edge band-	E. Jones	291,519	Jan. 8	637	180; 181	26	121
Bracelet safety appliance	H. A. Church	293,419	Feb. 12	845	228	26	596
Bracelets. Clasp for roller-chain							
Bracket:							
See Electrical extension-bracket. Scaffolding-bracket. Shingling-bracket. Fire-escape bracket. Siding-bracket. Lamp-bracket. Toilet-bracket.							
Bracket	E. S. Hemmenway	294,385	Mar. 4	60	15	26	840
Bracket	J. Herrmann	292,011	Jan. 15	1254	351	26	241
Bracket, shelf, or picture support	J. E. Wickham	292,523	Jan. 29	1914	535	26	373
Braiding-machine	W. Hedtmann, E. Henkels, A. Schmiedel, and M. Fischer.	293,020	Feb. 5	299	82, 83	26	496
Brake:							
See Air or liquid brake. Sled-brake. Car-brake. Vehicle-brake. Carriage-brake. Wagon-brake.							
Brake and speed-regulating mechanism. Combined	T. R. Morgan, Sr	293,059	Feb. 5	343	94	26	505
Brake-shoe	J. J. Lappin	292,827	Feb. 5	61	16	26	454
Brake-shoe	G. B. Ross	292,861	Feb. 5	101	28	26	461
Brake-shoe	S. B. Ellithorp	295,863	Mar. 25	1942	536	26	1199
Bran and feed packer	J. D. Otis	295,420	Mar. 18	1302	378	26	1089
Bran-packer	J. F. Hardisty	295,386	Mar. 18	1324	368	26	1081
Breast-drill	O. Peck	295,193	Mar. 18	1077	296; 297	26	1034
Breastpin	D. F. Adams	291,564	Jan. 8	692	195	26	130
Bre'zel-machine	W. Lampert	293,336	Feb. 12	733	196	26	575
Brewing	M. Mueller. (Reissue)	10,447	Feb. 5	504	150	26	540
Brick	W. E. Carleton	293,716	Feb. 19	1200	332	26	608
Brick	G. W. Simonds	293,800	Feb. 19	1315	365	26	687
Brick	A. Trochsler	295,692	Mar. 25	1719	475	26	1159

Buckle	J. A. Park	293,973	Feb. 19	1544	425	26	728
Buckle	T. O. Potter	291,225	Jan. 1	263	74	26	48
Buckle	C. S. Wells	292,777	Jan. 29	2263	627	26	433
Buckle	M. E. Zeller	291,461	Jan. 1	558	157	26	100
Buckle and swivel. Combined	S. S. Sargeant	291,407	Jan. 1	491	137	26	87
Buckle. Automatic rope	S. and F. Seib	294,408	Mar. 4	90	23	26	845
Buckle for harness. Loop	J. A. Park	295,044	Mar. 11	876	240	26	986
Buckle guard. Harness	F. G. Harrison	291,846	Jan. 8	1041	291	26	192
Buckle. Harness	W. A. Allen	294,561	Mar. 4	278	75, 76	26	876
Buckle. Locking	W. A. Shaw	292,372	Jan. 22	1719	477	26	330
Buckle. Suspender	W. E. T. Merrill	295,035	Mar. 11	866	237	26	984
Buckle. Trace	D. Schoenthaler	291,540	Jan. 8	664	188	26	126
Buckle. Trace	F. Wetstein and F. H. Dyokman	294,942	Mar. 11	732	204	26	963
Buckle. Tug	S. Funk	294,028	Feb. 26	1604	445	26	748
Buffer. Spring	D. Hoit	292,166	Jan. 22	1496	402	26	292
Buffing and polishing devices. Manufacture of	L. Levett	291,610	Jan. 8	761	214	26	143
Buffing-wheel	H. E. Fowler	291,709	Jan. 8	885	248	26	164
Buggy-seat	W. W. Ball	295,143	Mar. 18	1013	279	26	1023
Buggy spring-gear	J. R. Hawkey	292,811	Feb. 5	42	11	26	450
Buggy-top	D. Nunnelley	292,941	Feb. 5	207	57	26	480
Building-block	J. J. Schillinger	293,524	Feb. 12	959	261	26	617
Building-block	J. Wadleigh	291,114	Jan. 1	196	56	26	25
Building-blocks. Machine for making	J. J. Schillinger	293,525	Feb. 12	959	261	26	617
Building. Fire-proof	J. J. Schillinger	293,523	Feb. 12	958	261	26	617
Building-wall compound	L. Haas	293,010	Feb. 5	386	80	26	494
Buildings from vermin, fire, &c. Protecting	F. W. Bartlett	293,617	Feb. 19	1068	296	26	643
Buildings of artificial stone. Constructing	T. W. Tyrer	292,149	Jan. 15	1410	395	26	271
Bullet-patch. Metallic	G. V. Fosbery and H. Pieper	291,891	Jan. 15	1107	309	26	214
Bung	J. Kirby	292,926	Feb. 5	90	16	26	454
Bung-bush wrench	S. H. Jenkins	291,193	Jan. 1	227	63	26	41
Bung-extractor	G. M. Doersch	293,232	Feb. 12	596	157	26	551
Bung-extractor	A. H. McKean	293,661	Feb. 19	1118	311	26	653
Burglar-alarm	J. A. Demers	295,366	Mar. 18	1299	360	26	1076
Burglar-alarm and telephone system. Combined	B. F. Dillon	291,310	Jan. 1	371	104	26	67
Burglar-alarm. Electric	J. P. Hanson and J. P. Christensen	292,806	Feb. 5	37	10	26	449
Burglar-alarm. Electric	J. P. Hanson and J. P. Christensen	292,807	Feb. 5	38	10	26	449
Burglar-alarms. Electric gas-lighting attachment for	A. L. Bogart	292,786	Feb. 5	10	3	26	444
Burial-casket	F. A. Field	294,456	Mar. 4	148	39	26	855
Burial-casket	W. Kilpatrick and O. M. Johnston	292,319	Jan. 22	1638	458	26	315
Burial-windlass	J. P. McDonald	291,760	Jan. 8	988	262	26	173
Burner: *See* Gas-burner. Vapor-burner. Hydrocarbon-burner.							
Burner	I. W. Shaler	294,409	Mar. 4	91	24	26	845
Burnishing-machine	W. J. Heffernan	294,129	Feb. 26	1754	482	26	771

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Burnishing machinery	W. O. Way	293,826	Feb. 19	1349	374	26	692
					375		
Bushing and plug. Tap-hole	H. A. Rueter	293,278	Feb. 12	660	177	26	502
Bushing for bung-holes and bung for use therewith	S. H. Jenkins	291,194	Jan. 1	228	63	26	41
Bustle	J. B. Phillips	295,584	Mar. 25	1583	438	26	1135
Bustle	L. L. Schwab	295,438	Mar. 18	1380	383	26	1092
Bustle	E. J. Weeks and G. M. Cady	292,453	Jan. 22	1816	506	26	350
Bustle	N. H. Sweet	292,706	Jan. 29	2152	599	26	413
Butter-cutter	D. S. Jones	293,035	Feb. 5	316	87	26	500
Butter-package	J. P. Sinclair	295,295	Mar. 18	1212	337	26	1060
Butter-package	A. C. Clark	293,148	Feb. 5	474	127	26	525
Butter-worker	W. W. Beach	292,790	Feb. 5	2	1	26	443
Button	R. B. Black	295,335	Mar. 18	1258	349	26	1068
Button	P. Kalish	293,472	Feb. 12	902	244	26	607
Button	P. Kalish	295,769	Mar. 25	1816	505	26	1176
Button	P. Kalish	295,032	Mar. 11	863	237	26	984
Button	W. H. Matthews	293,531	Feb. 12	964	263	26	619
Button	F. A. Smith, Jr	292,700	Jan. 29	2146	598	26	412
Button	H. Smith	293,539	Feb. 12	975	267	26	620
Button	J. F. Thayer	292,729	Jan. 29	2180	608	26	418
Button	E. Wnerfel	293,802	Feb. 19	1317	366	26	688
Button and fastener. Combined	F. A. Smith, Jr	293,517	Feb. 12	952	239	26	616
Button and fastening	G. W. Prentice	292,437	Jan. 22	1801	501	26	347
Button-attaching instrument	C. A. Koehler and C. Vogel	291,992	Jan. 15	1218	340	26	234
Button-card	H. A. Buttner	293,233	Feb. 12	597	157	26	551
Button-fastener	C. H. Eggleston	293,658	Feb. 19	1115	310	26	653
Button-fastener	C. B. Maedel	295,575	Mar. 25	1575	436	26	1133
Button-fastener	M. H. McNair	291,080	Jan. 1	78	22	26	18
Button-fastener	G. W. Prentice	291,081	Jan. 1	79	23	26	18
Button-fastener	G. W. Prentice	291,935	Jan. 15	1162	325	26	224
Button-fastener	G. W. Prentice	293,910	Feb. 19	1455	403	26	712
Button-fastener	G. W. Prentice	294,504	Mar. 4	208	58	26	865
Button-fastener	G. W. Prentice	294,089	Feb. 26	1697	467	26	702
Button-fastener	F. A. Smith, Jr	294,411	Mar. 4	93	24	26	845
Button-fastener	F. A. Smith, Jr	294,517	Mar. 4	219	62	26	867
Button-fastener	F. A. Smith, Jr	295,447	Mar. 18	1390	385	26	1094
Button-fastener	F. A. Smith, Jr	292,960	Feb. 5	226	62	26	484
Button-fastener	E. D. Steele	295,709	Mar. 25	1742	484	26	1162
Button-fastener	W. H. Wood	295,539	Mar. 25	1520	420	26	1123
Button-fastener staples. Implement for setting	J. H. Goodfellow	292,482	Jan. 29	1852	517	26	363
Button-fasteners. Implement for setting	J. H. Goodfellow	291,316	Jan. 1	379	106	26	68
Button-fly clamp	I. Felber	291,486	Jan. 8	594	168	26	114
Button-hole	F. Bakermeister, Jr	291,736	Jan. 8	908	255	26	168
					256		
Button-hole stitching-machine	D. W. G. Humphrey	294,446	Mar. 4	137	36	26	853
Button-holes. Protecting	G. L. Crandal	294,186	Feb. 26	1836	500	26	784
Button-hook	J. C. Beetle	295,828	Mar. 25	1887	523	26	1189
Button hook or fastening	F. A. Smith, Jr	295,765	Mar. 25	1735	483	26	1161
Button-machine	G. R. Williams	294,495	Mar. 4	198	55	26	863
Button or stud	N. Nelson	294,496	Mar. 4	199	56	26	863
Button or stud	N. Nelson	293,301	Feb. 12	693	185	26	568
Button or stud fastener	D. F. Baxter	291,534	Jan. 8	658	180	26	124
Button-setting apparatus	S. L. Pratt	293,234	Feb. 12	598	157	26	551
Button-setting instrument	C. H. Eggleston	294,744	Mar. 4	483	135	26	912
Button-setting instrument	G. W. Prentice	294,468	Mar. 4	160	44	26	857
Button, &c. Sleeve	S. C. Howard	294,469	Mar. 4	161	44	26	857
Button. Sleeve	S. C. Howard and J. C. Schott	293,102	Feb. 5	400	109	26	515
Buttons and studs. Manufacture of	T. W. F. Smitten	295,593	Mar. 25	1594	442	26	1137
Buttons, &c. Attaching	J. F. Thayer	291,562	Jan. 8	690	195	26	130
Buttons. Attaching	W. H. Wood	291,907	Jan. 15	1126	314	26	218
					315		
Buttons. Machine for making	F. J. Ilsley and A. S. Fernald	294,490	Mar 4	193	54	26	862
Buttons. Machinery for and process of finishing	H. W., M. G., and C. E. Merritt	292,518	Jan. 29	1908	534	26	379
Buttons to fabrics, &c. Instrument for attaching	P. H. Sweet, Jr.	294,284	Feb. 26	1845	534	26	805
Buttoner. Shoe	J. L. Sommer	10,460	Mar. 11	1007	278	26	1009
Cabinet-lock	F. W. Mix. (Reissue)	295,589	Mar. 25	1589	439	26	1136
Cabinet-maker's clamp	W. E. Sheldon, Jr	291,144	Jan. 1	165	48	26	31
Cable-motor	C. R. Brown	294,322	Feb. 26	1999	547	26	814
Cables around curves. Mechanism for carrying wire	G. Judge	294,540	Mar. 4	264	72	26	873
Cables. Repairing defects in the conductors of lead	K. S. Waring	294,078	Feb. 26	1679	463	26	759
Caissons. Construction and operation of	J. E. Robinson	291,381	Jan. 1	453	128	26	82
Cake and confectionery machine	J. H. Mitchell	292,906	Feb. 5	157	43	26	472
Cake and cracker machine	I. Goodman and L. F. Winter	292,260	Jan. 22	1572		26	303
Calcium chloride and sulphate. Utilizing waste	C. Semper	295,152	Mar. 18	1021	282	26	1025
					283		
Calculating interest, &c. Instrument for	U. Curtis	291,817	Jan. 8	1000	281	26	184
Calculator. Percentage	S. J. Tucker	292,658	Jan. 29	2089	581	26	402
Calculator. Tax, interest, and percentage	W. S. Kiser	292,106	Jan. 15	1359	382	26	262
Calendar	J. Cussons	292,409	Jan. 22	1758	490	26	339
Calipers. Micrometer	C. Carleton	295,493	Mar. 18	1459	401	26	1106
Calk. Driving	G. H. Hathorn						
Camera: *See* Photographic camera. Solar camera.							
Camp-chair and cane. Combined	T. Wright	295,216	Mar. 18	1106	306	26	1040
Can: *See* Fruit, vegetable, and meat can. Packing-can. Milk-can. Paint-can. Oil-can. Shipping-can.							
Can ending and seaming machine	E. Norton and J. G. Hodgson	294,065	Feb. 26	1660	458	26	756
					459		
Can-filling machine	J. Stevens	291,799	Jan. 8	984	276	26	182
Can for kerosene, &c.	P. Babcock, Jr	291,862	Jan. 15	1074	299	26	207
Can-holder and funnel. Combined	W. M. Doty	292,629	Jan. 29	2055	571	26	396

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr'g.	Vol.	Page.
Can-machine	J. Hogg	294,783	Mar. 11	533	148	26	927
Can-nozzle	R. C. Anderson	294,427	Mar. 4	113	30	26	848
Can-nozzle	I. T. Mee	291,575	Jan. 1	439	125	26	80
Can-opener	H. Bentham	291,567	Jan. 8	695	196	26	131
Can-opener	F. Sharp. (Reissue)	10,443	Jan. 29	2273	628	26	435
Cans. Method of and device for filling and draining food-	W. A. Wicks	291,117	Jan. 1	129	37	26	26
Cans. Noise-deadener for milk and other	J. H. Irwin and T. P. Apple	295,495	Mar. 18	1460	402	26	1106
Candy	S. H. Britton	294,575	Mar. 4	291	80	26	878
Candy-dropping machine	J. Smith	293,603	Feb. 19	1318	366	26	688
Candy. Table for the manufacture of	C. A. Alisky	293,931	Feb. 19	1486	409	26	717
Cane and burglar-alarm. Combined	J. B. Van Zandt	292,389	Jan. 22	1730	492	26	334
Cane and cigar-case. Combined	D. Lee, Jr	295,654	Mar. 25	1669	462	26	1150
Cane and umbrella. Combined	H. A. Whiting and W. J. Winghart	293,830	Feb. 19	1355	375	26	693
Cane-mill	D. A. Mullane	294,902	Mar. 11	698	192	26	955
Canister	A. Schilling	295,432	Mar. 18	1374	381	26	1091
Canister	A. Schilling	295,433	Mar. 18	1375	381	26	1091
Canister	A. Schilling	295,434	Mar. 18	1375	382	26	1091
Canning apparatus	R. Wheeler	292,080	Jan. 15	1331	372	26	256
Canning device. Fruit	F. Deplanty	291,581	Jan. 8	715	200	26	134
Cannon. Pneumatic	W. A. Bartlett	294,348	Mar. 4	5	2	26	829
Cannon. Pneumatic	W. A. Bartlett	294,349	Mar. 4	7	2	26	830
Cannon. Pneumatic	W. A. Bartlett	294,350	Mar. 4	9	3	26	831
Cannon. Pneumatic	W. A. Bartlett	294,351	Mar. 4	11	3	26	831
Cannon. Pneumatic	W. A. Bartlett	294,352	Mar. 4	13	3, 4	26	831
Cannon. Pneumatic	W. A. Bartlett	294,353	Mar. 4	15	4	26	832
Canoes. Construction of	J. S. Stephenson	292,183	Jan. 22	1457	409	26	285
Cap and other head-covering	P. Goldmann	293,662	Feb. 19	1399	387	26	701
Capstan-bars, &c. Rack for bolding	W. Foster and L. D. Hanford	295,746	Mar. 25	1788	496	26	1171
Capsule-machine	F. A. Hubel	292,434	Jan. 22	1795	500 501	26	346
Capsules. Machine for cutting off gelatine	F. A. Hnbel. (Reissne)	10,437	Jan. 15	1412	396	26	271
Car	R. H. Briggs and C. Prichard	294,574	Mar. 4	290	80	26	878
Car-brake	E. E. Baker	295,096	Mar. 11	951	259	26	998
Car-brake	A. Bolzano	294,570	Mar. 4	287	78	26	877
Car-brake	W. Brumble	294,306	Feb. 26	1977	540	26	810
Car-brake	G. W. Coffin	294,013	Feb. 26	1584	439	26	744
Car-brake	J. C. Dane	292,793	Feb. 5	19	5	26	446
Car-brake	S. Fairman	291,841	Jan. 8	1034	288 289	26	191
Car-brake	J. M. Grace	293,319	Feb. 12	714	191	26	579
Car-brake	W. Hackländer	294,994	Mar. 11	803	222	26	975
Car-brake	J. Harding	293,455	Feb. 19	984	240	26	663
Car-brake	G. M. Hathaway	292,429	Jan. 22	1790	499	26	345
Car-brake	C. Tregoning	293,823	Feb. 19	1345	374	26	692
Car-brake	M. Turly and R. T. Bryant	291,109	Jan. 1	118	33	26	24
Car-brake	W. B. Turner	294,939	Mar. 11	726	203	26	961
Car brake and coupler. Combined	E. B. Meatyard	293,263	Feb. 12	635	170	26	558
Car brake and coupler. Combined	E. B. Meatyard	293,264	Feb. 12	638	170 171	26	558
Car-brake. Automatic	J. C. Dane	292,736	Jan. 29	2191	611	26	420
Car-brake. Automatic	J. D. Miller	292,246	Jan. 22	1553	435	26	300
Car brake. Cable-railway	G. Duncan	295,238	Mar. 18	1138	314	26	1045
Car-brake. Electro-magnetic	J. E. Withers	293,993	Feb. 19	1561	430 431	26	731
Car-brake. Fluid-pressure	R. J. Wilson	291,826	Jan. 8	1019	283	26	187
Car. Coal-	J. D. Madeira	292,336	Jan. 22	1660	463	26	319
Car. Combined box and cylinder	T. T. Prosser	295,279	Mar. 18	1190	329 330	26	1055
Car coupler and buffer. Combined	C. Browning	295,482	Mar. 18	1442	398	26	1104
Car-coupling	F. K. Adams	295,609	Mar. 25	1618	447	26	1141
Car-coupling	J. E. Anger and D. Porter	293,132	Feb. 5	457	122	26	562
Car-coupling	S. D. Antle	295,092	Mar. 11	946	258	26	998
Car-coupling	A. H. Armstrong	294,345	Mar. 4	1	1	26	829
Car-coupling	W. A. Benjamin	294,565	Mar. 4	292	77	26	877
Car-coupling	J. L. Bias	293,618	Feb. 19	1069	296	25	644
Car-coupling	C. W. Bond	292,278	Jan. 22	1563	445	26	307
Car-coupling	C. Browning	295,483	Mar. 18	1445	399	26	1104
Car-coupling	G. Bryan	293,713	Feb. 19	1108	332	26	667
Car-coupling	J. C. Bryan	291,289	Jan. 1	326	95	26	62
Car-coupling	J. C. Bryan	291,572	Jan. 8	703	197	26	132
Car-coupling	G. W. Butler	291,290	Jan. 1	340	96	26	62
Car-coupling	D. Carlough	291,149	Jan. 1	169	49	26	32
Car-coupling	S. P. and J. M. Chandler	295,349	Mar. 18	1278	354	26	1072
Car-coupling	J. W. Childs	292,895	Feb. 5	144	38	26	469
Car-coupling	J. Coup, D. McCurdy, and W. B. Rice.	292,538	Jan. 29	1939	542	26	377
Car-coupling	N. P. Cowell	295,618	Mar. 25	1627	450	26	1142
Car-coupling	C. Devlin	291,498	Jan. 8	611	172	26	116
Car-coupling	R. H. Dowling	295,372	Mar. 18	1306	362	26	1077
Car-coupling	J. F. Duffy and W. McIvor	295,860	Mar. 25	1938	535	26	1198
Car-coupling	A. Fay	293,727	Feb. 19	1211	335	26	670
Car-coupling	C. Flynn	293,442	Feb. 12	870	235	26	601
Car-coupling	D. Fraser and Y. L. Rice	294,984	Mar. 11	794	220	26	973
Car-coupling	G. B. Gano	294,987	Mar. 11	797	220	26	974
Car-coupling	E. L. Granger	294,124	Feb. 26	1747	481	26	770
Car-coupling	D. A. Grounds and J. R. Gibson	294,127	Feb. 26	1751	482	26	771
Car-coupling	C. A. Hansgen and J. R. Coleman	293,325	Feb. 12	721	193	26	573
Car-coupling	J. M. Harper	292,940	Feb. 5	102	44	26	473
Car-coupling	M. Hayden	292,430	Jan. 22	1791	499	26	345
Car-coupling	R. Hitchcock	295,250	Mar. 18	1155	319	26	1048
Car-coupling	L. D. Hooper	293,466	Feb. 12	896	249	26	606
Car-coupling	F. A. Hoyt	292,537	Jan. 29	1966	548	26	321
Car-coupling	E. Huber and H. M. Barnhart	295,763	Mar. 25	1809	502	26	1174

Car-coupling	C. Uebinger	292,074	Jan. 15	1321	369	26	254
Car-coupling	W. H. Ward	295,697	Mar. 25	1724	479 480	26	1160
Car-coupling	R. S. and J. Wheeler	291,446	Jan. 1	531	150	26	96
Car-coupling	J. White	294,831	Mar. 11	602	166	26	938
Car-coupling	H. B. Williams	295,706	Mar. 25	1738	483	26	1162
Car-coupling	P. Wineman	292,724	Jan. 29	2174	606	26	417
Car-coupling	F. M. Wright	293,995	Feb. 19	1563	431	26	732
Car-coupling adjuster	J. P. Pics	292,506	Jan. 29	1883	526	26	370
Car coupling. Railway	A. K. Mansfield	295,186	Mar. 18	1069	294	26	1033
Car-curtain fixture. Street	J. A. Watt	293,291	Feb. 12	680	181	26	565
Car-door	F. B. Brownell	294,194	Feb. 26	1844	503	26	785
Car-door	T. Lee	293,181	Feb. 5	524	139	26	533
Car-door	W. W. Shallus	291,411	Jan. 1	495	138	26	88
Car-door	J. L. Wagner	293,124	Feb. 5	445	120	26	520
Car-door fastener	J. Rhule	293,083	Feb. 5	377	103	26	511
Car-door fastening	S. F. Rosse	291,404	Jan. 1	480	136	26	86
Car-door fastening	J. Sharkey	294,513	Mar. 4	216	61	26	866
Car-door lock	N. P. Liljeholm	293,479	Feb. 12	910	246	26	608
Car door. Railway-freight	T. S. Stewart	291,801	Jan. 8	986	277	26	182
Car-dumper	M. Van Wormer	291,113	Jan. 1	124	35, 36	26	25
Car. Dumping	J. Rosquist	292,366	Jan. 22	1707	476	26	329
Car for inclines in mines	P. Mayrand	294,618	Mar. 4	339	94	26	886
Car-grip. Electric	J. C. Henderson	293,963	Feb. 19	1526	420	26	725
Car heater. Street	J. F. Gyles	295,255	Mar. 18	1102	321	26	1049
Car-heating apparatus. Coupling for	J. J. Lacey	291,363	Jan. 1	427	121	26	78
Car platforms. Safety-door for railway	F. Lappin	293,265	Feb. 12	641	171 172 173	26	559
Car. Railway	E. B. Meatyard	293,608	Feb. 12	1053	291	26	634
Car. Railway	T. L. Wilson	292,192	Jan. 22	1469	413	26	287
Car. Railway	R. H. Wyman	291,764	Jan. 8	939	263	26	173
Car. Railway passenger	E. P. Osgood	291,622	Jan. 8	777	218	26	146
Car. Railway passenger	W. H. Paige	293,996	Feb. 26	1567	433	26	741
Car-replacer	R. E. Alexander	293,447	Feb. 12	875	237	26	602
Car-roofing	A. W. Gilmore	292,675	Jan. 29	2116	588	26	406
Car-roofing	W. H. Paige	295,637	Mar. 25	1646	456	26	1145
Car. Safety railway	E. Henn	294,846	Mar. 11	621	173	26	942
Car sand-box. Street	M. Bookman and C. F. Bingham	291,341	Jan. 1	401	113	26	73
Car sand-box. Street	G. H. Hathaway	291,263	Jan. 1	311	88	26	57
Car-seat	W. A. Ackley	295,144	Mar. 18	1013	280	26	1023
Car-signal	W. D. Beaty	294,331	Feb. 26	2008	551	26	816
Car. Sleeping	T. Clarke, W. H. Paulding, and G. Reinl.						
Car. Sleeping	J. Shorey	292,595	Jan. 29	2017	561	26	390
Car-spring	H. J. Mitchell	292,248	Jan. 22	1555	435	26	301
Car-spring	R. Vose	292,773	Jan. 29	2260	625	26	433
Car-spring	R. Vose	292,774	Jan. 29	2261	626	26	433
Car-spring	R. Vose	292,775	Jan. 29	2261	626	26	433
Car-starter	W. C. Trussell	293,119	Feb. 5	431	114	26	518
Car starter and brake	G. M. Hathaway	291,504	Jan. 8	736	207	26	139
Car-starter. Spring	W. A. Warriner	293,204	Feb. 5	552	147	26	538
Car. Stock	A. and A. F. Berdanier	291,136	Jan. 1	153	45	26	30
Car. Stock	L. R. Stiles	293,285	Feb. 12	669	179	26	563
Car. Stock	T. D. Williams	295,468	Mar. 18	1418	392	26	1099
Car-ventilator	W. E. Cowen	294,016	Feb. 26	1588	441	26	745
Car-ventilator	O. H. Jones	293,578	Feb. 12	1020	280	26	628
Car-ventilator	O. H. Jones	293,967	Feb. 19	1533	422	26	726
Car-warmer. Chemical	C. Mitchell	295,576	Mar. 25	1575	436	26	1134
Car-wheel	R. N. Allen	293,211	Feb. 12	569	151	26	547
Car-wheel	A. Atwood	294,750	Mar. 11	498	139	26	921
Car-wheel	J. A. Hagan	294,995	Mar. 11	804	223	26	975
Car-wheel	J. A. Hagan	294,996	Mar. 11	806	223	26	976
Car-wheel	J. A. Hagan	294,997	Mar. 11	808	223	26	976
Car-wheel	W. I. Lindsay	294,890	Mar. 11	677	189	26	953
Car-wheel	J. W. Melvin and W. H. Cluto	295,790	Mar. 25	1846	513	26	1192

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Car-wheel	G. W. Miltimore	291,618	Jan. 8	773	217	26	145
Car-wheel	F. H. Smith	294,090	Feb. 26	1698	467	26	762
Car-wheel	H. G. Taylor	291,807	Jan. 8	992	278	26	183
Car-wheel	T. Thomas	292,987	Jan. 22	1580	442	26	305
Car-wheel	N. Washburn	292,892	Feb. 5	126	35	26	466
Car-wheel and axle	J. Beampied	291,274	Jan. 1	324	91	26	59
Car-wheel hub	G. Peacock	293,071	Feb. 5	362	98	26	508
Car-window curtains. Device for holding	F. Furness	295,535	Mar. 25	1516	419	26	1122
Cars from one track to another. Mechanism for guiding	J. A. Heyl	295,640	Mar. 25	1650	457	26	1146
Cars of cable-roads. Pilot or guard for	W. U. Bohm	292,624	Jan. 29	2050	570	26	395
Cars. Panoramic sign for	W. Halkyard. (Reissue)	10,445	Feb. 5	562	150	26	540
Cars, &c. Propulsion of street	N. F. Graham and H. H. Young	292,483	Jan. 29	1854	517	26	364
Cars. Unloading platform	J. Houlehan	293,467	Feb. 12	897	243	26	606
Carbon-black. Apparatus for the manufacture of	G. G. Shoemaker	292,696	Jan. 29	2138	596	26	411
Carbureting apparatus. Air	W. F. Burrows	291,676	Jan. 8	844	236 / 237	26	157
Carbureting-machine	O. Tirrill and J. P. Wilson	294,527	Mar. 4	229	65	26	869
Carburetor	D. R. Baker	291,128	Jan. 1	144	42	26	98
Carburetor	A. Gairing and H. Lehmann	294,863	Mar. 11	645	179	26	946
Card for playing lote and other games	H. H. Harrison	295,388	Mar. 18	1325	369	26	1081
Card-sharpening apparatus	J. Brierley	294,902	Mar. 11	756	211	26	967
Carding and spinning machinery for the manufacture of asbestus yarn, &c.	W. Wood	293,391	Feb. 12	814	219	26	591
Carding-engines. Mechanism for stripping the flats of	E. P. Dennis	291,471	Jan. 1	568	160	26	101
Carding-machines. Self-feeder for	C. L. Goddard	295,243	Mar. 18	1143	315	26	1046
Carpet-fastener	J. A. Markoe	294,397	Mar. 4	76	19	26	842
Carpet-stretcher	G. W. Bowers and T. J. Thompson	293,410	Feb. 12	836	226	26	595
Carpet-stretcher	J. C. Kellsey	295,018	Mar. 11	846	231	26	981
Carpet-stretcher	E. P. Shaffer	292,693	Jan. 29	2136	595	26	411
Carpet-stretcher	W. A. Skinner	295,824	Mar. 25	1884	523	26	1189
Carpet-stretcher	N. A. Veline	291,555	Jan. 8	682	193	26	129
Carpet-stretcher	N. Wiard	293,205	Feb. 5	553	147	26	538
Carpet-sweeper	G. M. Rockwell	295,506	Mar. 18	1472	406	26	1109
Carpet-sweeper	C. L. Travis	293,988	Feb. 19	1554	428	26	730
Carpet-sweeper	C. L. Travis	293,989	Feb. 19	1556	429	26	730
Carpet-sweeper	G. W. Zeigler	295,470	Mar. 18	1423	393 / 394	26	1100
Carpet. Sweeping	E. Miller	293,902	Feb. 19	1445	.....	26	710
Carriage	R. C. Huse	292,558	Jan. 29	1966	548	26	381
Carriage and cradle. Combined folding	H. Ladewig	291,204	Jan. 1	240	66	26	43
Carriage brake. Child's	G. D. Paul	293,351	Feb. 12	753	200	26	579
Carriage. Child's	T. McKnight	292,933	Feb. 5	198	54, 55	26	479
Carriage. Child's	G. R. Peare	292,174	Jan. 22	1444	405	26	283
Carriage. Child's	J. Poolman and F. R. Marks	294,668	Mar. 4	401	111	26	897
Carriage. Child's	H. Spooner	291,940	Jan. 15	1177	328	26	227
Carriage. Convertible	A. K. Felton	292,001	Jan. 15	1245	348	26	240
Carriage-curtain fastening	J. Sage	293,522	Feb. 12	957	261	26	617
Carriage-curtains. Clamp-fastening for	A. S. Parker	292,571	Jan. 29	1981	552	26	384
Carriage-doors. Device for closing	H. W. Yonley	292,526	Jan. 29	1921	537	26	374
Carriage. Folding baby	H. A. Jackson	291,351	Jan. 1	411	117	26	75
Carriage-seat	W. A. Eddy	292,291	Jan. 22	1606	449	26	310
Carriage-seat	G. A. Sears	294,916	Mar. 11	703	196	26	957
Carriage-seat corner-iron	H. A. Moyer	293,663	Feb. 19	1130	312	26	654
Carriage-shade holder	N. M. Guillow	292,119	Jan. 15	1367	383	26	263
Carriage-spring	T. R. Bevans	292,200	Jan. 22	1479	415	26	288
Carriage-spring	G. E. Dolton	292,419	Jan. 22	1774	494	26	341
Carriage-spring	B. P. Morrison	291,761	Jan. 8	936	263	26	173
Carriage-spring shackle	H. Westphal and E. Dieterla	295,318	Mar. 18	1239	344	26	1064
Carriage-top	T. J. Reed	294,912	Mar. 11	699	195	26	957
Carriage-tops. Device for suspending	P. Marqua	293,897	Feb. 19	1440	398	26	709
Carriage-wheel	E. P. Lynch	294,056	Feb. 26	1650	456	26	754
Carriage-wrench	D. True	291,961	Jan. 15	1192	331	26	230
Carriage-wrench	D. True	292,186	Jan. 22	1460	410	26	286
Carriages. Canopy-holder for children's	A. S. Fitch	294,376	Mar. 4	48	12	26	838
Carriages. Canopy-standard for children's	G. A. Ellis	295,116	Mar. 11	973	269	26	1002
Carriages, &c. Weighing attachment for baby-	J. J. Vinton	292,878	Feb. 5	122	33	26	406
Carrier: *See* Book-carrier. Cash-carrier. Cash and parcel carrier. Egg-carrier. Hay-carrier. Trace-carrier. Wire-carrier.							
Carrier system. Automatic	J. M. Martin	293,898	Feb. 19	1441	399	26	709
Cart. Hive	C. R. Thompson	293,115	Feb. 5	422	113	26	517
Cart. Pleasure	H. A. Moyer	293,664	Feb. 19	1121	312	26	654
Cart. Road	C. S. Beebe	292,277	Jan. 22	1592	445	26	307
Cart. Road	J. W. Breed	291,488	Jan. 8	597	168 / 169	26	114
Cart. Road	H. Hertop	291,733	Jan. 8	906	254	26	168
Cartridge-case	W. Lorenz	293,257	Feb. 12	627	166	26	556
Cartridge-closing machine	C. S. Leet and W. H. Northall	291,207	Jan. 1	243	67	26	44
Cartridge decapper, recapper, and reloader	F. Gilfard	294,865	Mar. 11	647	180	26	947
Cartridge implement	M. S. Alexander	294,176	Feb. 26	1821	497	26	782
Cartridge implement	J. H. Barlow	293,297	Feb. 12	688	184	26	567
Cartridge implement	J. H. Barlow	294,955	Mar. 11	747	208	26	965
Cartridge implement	J. H. McCabe	295,265	Mar. 18	1175	325	26	1052
Cartridge-loader and cap-expeller	L. Keller	294,630	Mar. 4	355	99	26	890
Cartridge ring-extractor	J. Murphy	291,619	Jan. 8	774	217	26	145
Cartridge-shell	O. F. Selbold	294,280	Feb. 26	1941	532	26	804
Cartridge-shell creaser	F. E. and W. E. Nye and J. W. Mathews.	292,846	Feb. 5	83	23	26	458
Cartridge-shells. Machine for drawing metallic	P. Butler	294,115	Feb. 26	1736	477	26	768
Cartridge-shells. Machine for treating	W. Lorenz	294,055	Feb. 26	1647	455	26	754

Cartridge weighing and assorting machine	P. Butler	294,363	Mar. 4	27	7, 8	26	834
Case: *See* Book-case. Cartridge-case. Cigarette-case. Egg-case. Electric-conductor case. Filter-case. Folding case. Map-case. Needle-case. Organ-case. Pen and pencil case. Shipping-case. Shot-case. Show-case. Ticket-case. Toilet-case. Tombstone picture-case.							
Case for holding pencils, &c	H. F. Werner	292,270	Jan. 22	1583	442	26	305
Cash and parcel carrier	J. Berns	291,028	Jan. 1	17	5	26	6
Cash and parcel carrier	C. Grant, Jr	293,241	Feb. 12	608	161	26	553
Cash and parcel carrier	C. Grant, Jr., and D. Lawrence	291,895	Jan. 15	1111	310	26	215
Cash and parcel carrying system	W. S. Hill	295,172	Mar. 18	1047	289	26	1029
Cash-car system	B. A. and E. P. Osgood	293,192	Feb. 5	537	142	26	535
Cash-carrier elevator	H. H. Hayden	295,393	Mar. 18	1331	371	26	1083
Cash-carrier for stores	C. M. Johnson	295,645	Mar. 25	1659	460	26	1148
Cash-conveyer	O. B. Hall	293,012	Feb. 5	288	80	26	494
Casket for preserving the bodies of children. Cooling	C. M. Rutan	293,361	Feb. 12	766	204	26	592
Caster	A. Eberle	292,797	Feb. 5	28	7	26	447
Caster	W. K. Elson	293,156	Feb. 5	481	129	26	526
Caster	E. T. Thomas	295,689	Mar. 25	1714	474	26	1158
Caster	A. Thompson and G. H. Rice	291,426	Jan. 1	510	144	26	91
Caster	W. Zimmer	295,850	Mar. 25	1918	530	26	1195
Caster. Furniture	G. D. Clark	291,494	Jan. 8	604	170	26	115
Caster. Furniture	W. H. Spoerl	291,238	Jan. 1	277	76	26	50
Caster. Glass	D. C. Ripley	291,086	Jan. 1	85	24	26	19
Casting. Apparatus for manipulating molds in	C. F. Brush	293,711	Feb. 19	1192	331	26	667
Casting metals	C. F. Brush	293,709	Feb. 19	1185	330	26	666
Casting metals. Mold for	C. F. Brush	293,710	Feb. 19	1188	330	26	666
Casting mold. Type	J. M. Conner	293,633	Feb. 19	1088	301	26	647
Casting. Threaded	J. B. Larkin	294,639	Mar. 4	367	102	26	892
Castings from molds. Extracting	C. F. Brush	293,712	Feb. 19	1196	331	26	667
Castings. Machine for making molds for	E. Thomas	293,541	Feb. 12	977	267	26	620
Castings. Process of and apparatus for the production of dense metal	C. M. Pielsticker and F. C. G. Müller	291,223	Jan. 1	260	73	26	47
Cement. Manufacture of	L. Roth	294,080	Feb. 26	1684	.....	26	760
Cement. Manufacture of Portland	R. W. Lesley and J. M. Willcox	292,329	Jan. 22	1649	.....	26	317
Cement. Manufacture of tubs or vessels of hydraulic	G. L. Schmidt	291,091	Jan. 1	90	26	26	19
Center-board for vessels	J. S. Birch	292,890	Feb. 5	135	37	26	468
Center-board for vessels	R. Center	293,226	Feb. 12	590	155	26	550
Center-board for vessels. Adjustable	G. L. Mills and U. M. Gordon	292,031	Jan. 15	1274	356	26	245
Centrifugal machine	H. B. Stevens	292,705	Jan. 29	2150	599	26	413
Cereals. Machine for scouring and polishing	W. Ager	295,471	Mar. 18	1425	392	26	1101
Cesspool-well	W. and J. M. Rowbottom	292,953	Feb. 5	220	61	26	453
Chain	S. Ryder	294,812	Mar. 11	578	160	26	935
Chain attachment. Watch	H. M. Herring	294,733	Mar. 4	473	132	26	910
Chain. Drive	J. C. Bloom	293,407	Feb. 12	833	225	26	595
Chain. Drive	W. H. Dickey	294,373	Mar. 4	44	12	26	837
Chain. Drive	W. D. Ewart. (Reissue)	10,444	Feb. 5	561	149	26	540
Chain. Drive	E. M. Morgan	293,493	Feb. 12	924	251	26	611
Chain for draperies	C. A. Schmidt	294,682	Mar. 4	416	116	26	900
Chain-link. Ornamental	V. Draper	294,595	Mar. 4	314	87	26	892
Chain-link. Ornamental	H. M. Herring	294,734	Mar. 4	474	132	26	910
Chain-link. Ornamental	S. L. Lederer	295,772	Mar. 25	1819	505	26	1176
Chain-lock or baggage-guard	M. J. Clark	294,012	Feb. 26	1583	439	26	744
Chain. Ornamental	W. Ballon	292,615	Jan. 29	2040	567	26	393
Chain. Ornamental	H. A. Church	293,417	Feb. 12	843	228	26	596
Chain. Ornamental	H. A. Church	294,580	Mar. 4	298	82	26	879
Chain. Ornamental	J. Etzensperger	295,117	Mar. 11	974	266	26	1003
Chain tip. Watch	H. M. Herring	295,869	Mar. 25	1940	539	26	1200
Chair: *See* Camp-chair. Child's chair. Dental chair. Folding chair. Nursery-chair. Opera-chair. Reclining and folding chair. Tilting chair. Window-cleaning chair.							
Chair	W. H. Beardsley	294,433	Mar. 4	123	32	26	850
Chair	J. R. Linn	291,366	Jan. 1	431	122	26	79
Chair	G. B. St. John	293,813	Feb. 19	1333	370	26	690
Chair	G. C. Winchester	293,833	Feb. 19	1359	377	26	694
Chandelier. Extension	J. C. Knight	295,020	Mar. 11	848	232	26	981
Chandelier. Extension-slide	J. P. Bonner	295,519	Mar. 25	1495	413	26	1118
Charcoal-oven	J. A. Edwards	292,635	Jan. 29	2060	573	26	397
Charm-telescope	C. Hohelsen	294,467	Mar. 4	159	44	26	856
Chart-frame. Interchangeable	J. E. Hamilton	293,731	Feb. 19	1215	336	26	671
Check or water hook	T. Garrick	294,864	Mar. 11	647	179	26	946
Check-row wires. Anchor for	C. S. Locke	292,832	Feb. 5	68	19	26	455
Check-row wires. Reel for	C. S. Locke	292,831	Feb. 5	67	18	26	455
Check-row wires. Stop for	T. H. Hutchins	295,252	Mar. 18	1158	320	26	1049
Check-rower	W. and J. Erdwins	292,109	Jan. 15	1363	382	26	262
Check-rower	A. L. Jordan	293,888	Feb. 19	1428	395	26	707
Check-rower wires. Machine for forming	G. B. Durkee	291,584	Jan. 8	718	292 / 293 / 294	26	135
Check-rowers. Wire-stretcher for	W. W. Porter	292,679	Jan. 29	2121	589	26	407
Cheese. Machinery for manufacturing	A. H. Brintnell	293,140	Feb. 5	466	124	26	523
Cherry-pitter	J. Williams	292,393	Jan. 22	1735	483	26	335
Child's chair	A. B. Stevens	292,067	Jan. 15	1315	367	26	253
Child's chair	A. B. Stevens	292,068	Jan. 15	1315	367	26	253
Chimney-cap	M. Scholl	293,526	Feb. 12	960	262	26	617
Chimney-cowl	E. R. Stasch	295,687	Mar. 25	1712	474	26	1158

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Chimney-protector	I. A. Smith	292,701	Jan. 29	2147	598	26	412
Chimney-top	N. Petersen	292,505	Jan. 29	1882	525	26	369
Chopper:							
See Stalk-chopper.							
Christmas-tree candle-holder	F. Lechler	295,199	Mar. 18	1060	292	26	1032
Chuck. Brace-	G. W. Kerr	295,408	Mar. 18	1348	375	26	1086
Chuck. Drill-	C. Gage	294,121	Feb. 26	1745	480	26	770
Chuck for drilling-machines, &c	C. A. Brenzinger	294,755	Mar. 11	503	141	26	922
Chuck for holding fittings	S. P. M. Tasker	292,599	Jan. 29	2021	502 / 503	26	391
Chuck. Lathe-	G. A. Colton	295,229	Mar. 18	1125	310	26	1043
Chuck. Lathe-	G. A. Colton	295,230	Mar. 18	1126	311	26	1043
Chuck. Lathe-	J. S. Gilmore	295,628	Mar. 25	1638	454	26	1144
Chuck. Lathe-	D. E. and L. E. Whiton	294,296	Feb. 26	1904	538	26	808
Chuck. Lathe-	J. H. Daniell	291,306	Jan. 1	367	103	26	66
Churn	W. H. Dyer	295,862	Mar. 25	1941	536	26	1198
Churn	R. T. Henderson	291,901	Jan. 15	1117	312	26	216
Churn	O. Henry	292,915	Feb. 5	169	46	26	474
Churn	A. Jackson	295,766	Mar. 25	1811	503	26	1175
Churn	H. C. Neer	292,133	Jan. 15	1204	290	26	267
Churn	W. H. Royster	293,195	Feb. 5	540	143	26	636
Churn	O. F. Scribner	293,598	Feb. 12	961	262	26	618
Churn	R. R. Shive	292,695	Jan. 29	2137	595	26	411
Churn	W. H. Tawney	295,460	Mar. 18	1408	389	26	1097
Churn	E. H. Schmidt and H. F. C. Brammer	294,683	Mar. 4	416	116	26	900
Churn-cover fastening	J. E. Finley	294,024	Feb. 26	1599	444	26	747
Churn-dasher	R. Webb and M. G. Brooks	294,706	Mar. 4	442	123	26	904
Churn-dasher	W. F. Evans and J. B. Fielding	294,120	Feb. 26	1744	479 / 480	26	770
Churn-motor	W. A. Nevel and G. W. Fisher	294,064	Feb. 26	1659	458	26	756
Churn-motor	H. C. Sadler	295,587	Mar. 25	1587	439	26	1136
Cider-mill	M. P. Schenck	293,302	Feb. 12	767	204	26	582
Cider-press	H. Sells	293,795	Feb. 19	1309	363	26	687
Cider-press rack	W. H. Ferguson	294,023	Feb. 26	1596	443	26	746
Cigar and match holder for tables. Combined	J. E. Walch	294,293	Feb. 26	1959	537	26	807
Cigar-cutter	J. Grats and P. Hagedorn	291,509	Jan. 8	626	176 / 177	26	119
Cigar-cutter	A. H. Kirk	293,580	Feb. 12	1022	281	26	628
Cigar-cutter	F. C. Miller	291,379	Jan. 1	451	127	26	81
Cigar-cutter	W. H. Myers	293,665	Feb. 19	1122	313	26	654
Cigar-dealer's knife	F. G. Dieterich and E. C. Walford	292,473	Jan. 29	1843	514	26	362
Cigar-holder	A. L. Webb	291,115	Jan. 1	127	36	26	26
Cigar-maker's board	A. Thalheimer	291,644	Jan. 8	604	225	26	151
Cigar-mold	R. Appleby	292,398	Jan. 22	1743	485	26	336
Cigar-stand	C. N. Swift	293,374	Feb. 12	786	210	26	586
Cigar-wrappers. Machine for cutting	J. R. Williams	291,559	Jan. 8	687	194	26	130
Cigar-wrappers. Machine for cutting and piling	O. Hammerstein	293,733	Feb. 19	1218	337	26	672
Cigar-wrappers. Machine for manipulating	O. Hammerstein	293,732	Feb. 19	1217	336	26	671
Cigarette-case	F. S. Kinney	291,201	Jan. 1	237	66	26	43
Cigarette-machine	J. Burns and A. Buckman	294,113	Feb. 26	1725	474 / 475	26	767
Cigarette-machine	J. Burns and A. Buckman	294,114	Feb. 26	1729	475 / 476 / 477	26	767
Cigarette-machines. Apparatus for feeding paper in	E. F. Leblond	295,181	Mar. 18	1059	292	26	1032
Circuit-controller. Multiple	W. F. M. McCarty	293,974	Feb. 19	1539	424	26	728
Cistern	J. W. Barnum	295,330	Mar. 18	1252	347	26	1067
Cisterns. Automatic rain-water regulator for	F. E. Lord	295,258	Mar. 18	1165	322	26	1050
Cisterns from concrete. Construction of	W. B. Dorward	292,490	Jan. 22	1775	495	26	342
Cithern	F. F. Wichard	294,832	Mar. 11	604	166	26	938
Clamp:							
See Bottle-holding clamp. Roofing-clamp. Button-fly clamp. Rope-clamp. Cabinet-maker's clamp. Screw-clamp. Strap-clamp. Clothes-clamp.							
Clamp	P. F. Corbett	292,207	Jan. 22	1494	420	26	290
Clamp for cabinet-makers	J. W. Welser	292,391	Jan. 22	1731	483	26	334
Clamp for sheet-holders	A. P. Hayden and F. Pickup	292,307	Jan. 22	1624	455	26	313
Clamping cards, &c. Device for	D. W. Ernsting	291,172	Jan. 1	197	55	26	36
Clasp:							
See Bracelet-clasp. Fastening-clasp. Corset-clasp. Rope or line clasp.							
Clasp	S. D. Tucker	295,310	Mar. 18	1230	342	26	1062
Clasp for fastening gloves, &c	G. E. Danforth	294,019	Feb. 26	1592	442	26	746
Claw-bar	W. H. Lyman	295,571	Mar. 25	1569	434	26	1132
Clay-crusher and tile-machine. Combined	J. D. Fate and E. M. Freese	293,000	Feb. 5	276	75 / 76 / 77	26	492
Clay-crushing machine	F. E. Frey	295,533	Mar. 25	1513	417 / 418	26	1121
Clay-crushing roller	J. W. Penfield	292,576	Jan. 29	1988	554	26	385
Clay-crushing roller	J. W. Penfield	292,577	Jan. 29	1989	554	26	385
Clay-crushing roller	J. W. Penfield	293,270	Feb. 12	649	174	26	560
Clay-pulverizer	L. D. Ferguson	293,001	Feb. 5	278	77	26	492
Clay-tempering machine	J. F. Dornfeld	292,997	Feb. 5	272	75	26	491
Cleaner:							
See Boot-cleaner. Seed-cleaner. Coal-cleaner. Slate-cleaner. Cotton-cleaner. Steam-boiler cleaner. Grain-cleaner.							
Cleaning and renovating fabrics. Composition for	T. Ewing	294,727	Mar. 4	467	.....	26	909
Cleaning textile fabrics, wooden and metallic surfaces, &c. Composition for	F. S. Monroe	295,882	Mar. 25	1971	.....	26	1203
Clevis	R. Hamilton	291,053	Jan. 1	47	14	26	12

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Clevis	L. Jaquish	295,402	Mar. 18	1342	374	26	1085
Clevis for chain cables, &c. Swivel-	F. Joseph	292,493	Jan. 29	1870	522	26	367
Clevis for reversible plows	F. A. Barrows	294,431	Mar. 4	119	31	26	849
Clip:							
See Tug-clip.							
Clip for securing irregular surfaces together	A. H. Beach	291,134	Jan. 1	152	44	26	29
Cloak	S. Wetzler	293,386	Feb. 12	806	217	26	589
Clock. Alarm-	J. Ganss	295,627	Mar. 25	1636	454	26	1144
Clock. Alarm-	I. S. Goldman	294,220	Feb. 26	1872	512	26	790
Clock. Alarm-	C. S. Lewis	293,583	Feb. 12	1025	282	26	629
Clock-alarm apparatus	W. D. Smith	294,338	Feb. 26	2016	553 / 554	26	818
Clock-dial	H. J. Davies	291,989	Jan. 15	1228	342	26	236
Clock. Electric	G. M. Herotizky	293,613	Feb. 12	1060	293	26	635
Clock. Electric	G. B. Webb	294,552	Mar. 4	268	73	26	874
Clock-pendulum	L. Orser	293,063	Feb. 5	349	96	26	506
Clock-pendulums. Electric device for synchronizing	V. Himmer	294,132	Feb. 26	1759	483	26	772
Clock. Programme-	T. Wilmer	292,456	Jan. 22	1819	507	26	351
Clock. Secondary electric	V. Himmer	294,131	Feb. 26	1756	483	26	771
Clock. Self winding	A. Dardenne	292,108	Jan. 15	1361	382	26	262
Clock-striking mechanism	G. B. Owen	294,262	Feb. 26	1920	526 / 527	26	800
Clocks. Apparatus for adjusting the beat of pendulum-	G. H. Brown and H. J. Welteroth	292,282	Jan. 22	1596	446	26	308
Clocks. Device for removing mainsprings from	D. Switzer	291,803	Jan. 8	988	277	26	192
Clocks. Device for synchronizing	C. N. Talbot	292,902	Feb. 5	228	63	26	484
Clocks. Electric alarm for spring-	E. Jungerman	295,873	Mar. 25	1953	540	26	1201
Clocks. Music-box attachment for	J. Schmid	293,096	Feb. 5	393	107	26	513
Clocks. Strike system for secondary electric	W. H. Sawyer	295,287	Mar. 18	1201	333 / 334	26	1058
Clocks. Striking mechanism for eight-day	E. A. Müller	293,589	Feb. 12	1031	284	26	630
Clothes-clamp	F. J. McBrien	292,243	Jan. 22	1549	433	26	300
Clothes-drier	R. R. Richardson	292,052	Jan. 15	1299	363	26	250
Clothes-pounder	E. S. Burnham	291,029	Jan. 1	19	5	26	6
Clothes-reel	W. H. Richmond	292,359	Jan. 22	1695	472	26	326
Clover-huller cylinder	H. N. Land and H. Campbell	295,771	Mar. 25	1818	505	26	1176
Club. Indian	R. Reach	295,429	Mar. 18	1371	380	26	1019
Club. Police	J. J. Tower	291,949	Jan. 1	282	79	26	51
Clutch	T. R. Morgan, Sr	293,060	Feb. 5	345	94, 95	26	505
Clutch. Friction-	D. Mills	292,172	Jan. 22	1443	405	26	283
Clutch. Friction-	J. K. Proctor	294,671	Mar. 4	405	112	26	898
Clutch. Friction-	T. Scheffler	292,140	Jan. 15	1401	392 / 393	26	269
Clutch-guard	D. Tilton	295,595	Mar. 25	1596	442	26	1137
Coal-bunk	J. Dall	295,233	Mar. 18	1133	312	26	1044
Coal-cleaner	W. H. Shepherd	291,788	Jan. 8	667	271	26	179
Coal-cleaner. Pneumatic	A. Sottiaux	293,103	Feb. 5	401	109	26	515
Coal-drilling machine	J. M. and J. W. Davies	291,578	Jan. 8	710	199 / 200	26	133
Coal-dust feeder	H. A. Bradley	295,145	Mar. 18	1015	280	26	1024
Coal. Machine for separating slate from	C. W. Ziegler	291,123	Jan. 1	137	39	26	27
Coal-screen	J. Jones	292,560	Jan. 29	1970	549	26	382
Cock and tank for drawing fluids of varying temperatures.	J. Byrne	292,094	Jan. 15	1345	378	26	259
Cock. Automatic cylinder-	R. Reed and C. E. Loetzer	294,334	Feb. 26	2013	552	26	817
Cock. Ball-	T. McHugh	291,374	Jan. 1	439	124	26	80
Cock or faucet. Water and steam	J. Richter	294,674	Mar. 4	408	113	26	899
Cock. Service-	W. S. Payne	292,340	Jan. 22	1679	467	26	323
Cock. Stop-	J. Porsch, Jr	293,515	Feb. 12	950	259	26	616
Cock. Stop and waste	J. H. Kennedy	292,894	Feb. 5	57	15	26	453
Cock. Stop and waste	H. Taylor, R. B. Sharp, and T. J. Cain.	291,808	Jan. 8	993	278	26	183
Cocks for water and gas pipes. Case for operating stop-	E. L. Abbott	294,749	Mar. 11	497	139	26	921
Cockle-separator	J. M. King	293,039	Feb. 5	321	89	26	501
Coffee and other grain. Machine for cleaning	J. Reaney	292,681	Jan. 29	2122	590	26	408
Coffee and tea pot	F. Rosebrook	291,941	Jan. 15	1169	326	26	225
Coffee, &c. Machine for cleaning and grading	G. S. Hungerford	292,750	Jan. 29	2224	618	26	427
Coffee-pot	J. A. Ashley	292,089	Jan. 15	1340	376	26	258
Coffee-pot attachment	M. Ballin and F. Hoff	294,347	Mar. 4	4	1	26	829
Coffee-roasting machine	A. W. Roper	295,200	Mar. 18	1086	299	26	1036
Coffins into graves. Device for lowering	G. T. Conrath	294,366	Mar. 4	32	9	26	835
Coin-counter for money-drawers	C. G. Raber	292,584	Jan. 29	1998	556	26	387
Coin-holder	C. C. Johnston	293,033	Feb. 5	314	87	26	499
Coke-oven	H. Stier	291,422	Jan. 1	506	142 / 143	26	91
Coke-oven door	W. A. Blythe and J. Henderson	294,845	Mar. 11	619	171 / 172	26	941
Coking-furnace	A. R. B. Hiltawski	293,023	Feb. 5	304	84	26	497
Collar	F. R. Lewis	293,753	Feb. 19	1250	346	26	676
Collar	K. Perpento	293,508	Feb. 12	942	256	26	614
Collar. Horse-	M. S. Fort	294,218	Feb. 26	1871	511	26	790
Collar. Horse-	F. W. Nevins	292,843	Feb. 5	80	22	26	457
Collar or tie adjuster	W. W. Denlston	295,526	Mar. 25	1502	414	26	1119
Collar pad. Horse-	D. Curtis	294,769	Mar. 11	519	145	26	924
Colors and designs on surfaces. Producing and fixing	G. H. Smith	292,222	Jan. 22	1519	.....	26	294
Colors. Machine for sifting	J. C. Matter	295,783	Mar. 25	1837	511	26	1150
Colors or designs on surfaces. Apparatus for producing	G. H. Smith	292,220	Jan. 22	1514	425	26	294
Comb	W. Crabb	294,204	Feb. 26	1854	506	26	787
Combination-lock	J. N. Rice and J. Humphreys	292,253	Jan. 22	1563	437	26	302
Combination-lock	C. Tregoning	294,290	Feb. 26	1955	535	26	806
Combing fibrous material. Machine for	W. Hall and J. Midgley	295,165	Mar. 18	1037	287	26	1028

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Comparator	S. Darling	292,415	Jan. 22	1765	491, 492	26	340
Compass. Mariner's	E. S. Ritchie	291,463	Jan. 1	479	136	26	86
Compasses	F. S. Svenson	295,076	Mar. 11	924	253	26	994
Composing-stick	W. H. Golding	294,378	Mar. 4	52	13	26	838
Composing-stick	R. S. Robson	294,677	Mar. 4	410	113	26	899
Compressing plastic material. Machine for	C. J. Ridenour	294,274	Feb. 26	1933	530	26	802
Compressor for compressing bran, &c., into packages	G. A. Chapman	291,683	Jan. 8	854	239	26	159
Concentrator and amalgamator	G. R. Evans	291,997	Jan. 15	1240	346	26	239
Condensing or drying liquids. Apparatus for	N. B. Rice	292,940	Feb. 5	216	59	26	482
Condensing or drying liquids. Apparatus for	N. B. Rice	292,950	Feb. 5	217	60	26	482
Condenser. Jet-	L. Schutte	293,791	Feb. 19	1303	361	26	685
Conduit. Asphaltic-concrete	W. W. Averell	293,214	Feb. 12	574	151	26	547
Connecting-rod	G. B. Stevenson	292,380	Jan. 22	1720	479	26	332
Converter	T. Griffiths	295,544	Mar. 25	1527	422, 423	26	1124
Converter	T. Griffiths	295,545	Mar. 25	1529	423, 424	26	1125
Converter employed in the manufacture of iron and steel.	T. Griffiths	295,546	Mar. 25	1531	424	26	1125
Convertible chair	A. B. Stevens	291,952	Jan. 15	1182	329	26	228
Conveyer apparatus	G. C. Blickensderfer and H. Smith	295,338	Mar. 18	1261	349, 350	26	1069
Conveyer apparatus	G. C. Blickensderfer and H. Smith	295,339	Mar. 18	1264	350, 351	26	1069
Conveyer apparatus	G. C. Blickensderfer and H. Smith	295,478	Mar. 18	1436	396, 397	26	1103
Conveyer apparatus	H. Smith and G. C. Blickensderfer	295,448	Mar. 18	1392	385	26	1094
Conveyer. Screw	F. C. Caldwell	295,731	Mar. 25	1767	491	26	1167
Cooker. Steam	H. Maxim	293,048	Feb. 5	331	91	26	503
Cooking apparatus. Steam	G. W. Williams	294,945	Mar. 11	734	205	26	963
Cooler: *See* Beer-cooler. Milk-cooler. Food-cooler. Syrup-cooler. Ice-machine cooler. Water-cooler. Liquid-cooler.							
Cooler for uniting oils in the manufacture of lard, &c.	S. H. Cochran	291,692	Jan. 8	865	241	26	160
Coop. Knockdown	J. Burns	291,037	Jan. 1	17	4, 5	26	6
Coop or kennel. Folding	H. Evesson	294,600	Mar. 4	318	89	26	883
Coop. Poultry-	W. T. Bleike, Jr	293,138	Feb. 5	464	124	26	523
Copper and bronze. Alloy for and process of the manufacture of silicious	L. Weiller	293,827	Feb. 19	1351	.....	26	692
Copper salts by the aid of electricity. Making	J. K. Kessler	294,051	Feb. 26	1640	454	26	754
Copper. Tinning sheet-	A. A. Cowles	292,540	Jan. 29	1942	.....	26	377
Copy-holder	W. F. Miller	295,416	Mar. 18	1357	377	26	1088
Core-barrel	W. T. Mobberley and R. Taylor	295,039	Mar. 11	870	238	26	985
Core-box	P. Cowing	292,102	Jan. 15	1355	381	26	261
Cord. Machine for making ornamental looped	A. Urbahn	293,605	Feb. 12	1049	290, 291	26	633
Cork-cutting machine	F. J. Nutting	295,884	Mar. 25	1973	546	26	1203
Corking machine. Bottle-	E. E. Worden, G. Taylor, J. Power, and E. D. Colby.	291,458	Jan. 1	535	156, 157	26	99
Corn-coverer	W. H. Pennock	291,396	Jan. 1	471	133	26	85
Corn from the cob. Machine for cutting green	D. B. Speer	295,831	Mar. 25	1891	524	26	1190
Corn in the cob. Machine for cutting	S. F. Savits	295,819	Mar. 25	1879	521	26	1187
Corn-sheller	L. Matthews	294,488	Mar. 4	191	53	26	861
Corn-sheller	H. Packer	293,669	Feb. 19	1198	314, 315	26	655
Corn-silking machine	W. S. Horn	293,737	Feb. 19	1226	339	26	673
Cornstalk-rake	G. A. Runyan	295,054	Mar. 11	892	244	26	988
Cornstalks, &c. Machine for cutting and grinding	G. Sanford	291,231	Jan. 1	268	75	26	49
Corner-brace	W. C. Garretson	292,003	Jan. 15	1248	340	26	240
Corset	T. S. Gilbert	293,446	Feb. 12	573	236	26	601
Corset	C. A. Griswold	291,335	Jan. 1	396	111	26	72
Corset	C. A. Griswold	291,336	Jan. 1	397	112	26	72
Corset	C. A. Griswold	291,338	Jan. 1	398	112	26	73
Corset	C. W. Higby	294,620	Mar. 4	341	95	26	887
Corset	E. Leonard	293,969	Feb. 19	1534	422	26	727
Corset	I. Newman	295,041	Mar. 11	873	239	26	985
Corsets. Apparatus forming and shaping	J. A. House	294,046	Feb. 26	1634	453	26	753
Corset-busk	A. Taylor, Jr	294,933	Mar. 11	721	201	26	961
Corset-busk fastening	D. Essex	293,567	Feb. 12	1009	278	26	626
Corset-clasp	C. A. Griswold	291,337	Jan. 1	397	112	26	72
Corset-pad	Z. Ledochowski	293,829	Feb. 5	65	17	26	455
Corset-steel fastening	L. Hill	295,171	Mar. 18	1046	288	26	1029
Cot. Folding	W. H. Wooldridge	295,606	Mar. 25	1611	446	26	1140
Cotton-cleaner and gin-feeder. Self-feeding	J. W. and Z. W. Oglesby	293,771	Feb. 19	1274	352, 353	26	680
Cotton cleaner. Seed-	J. W. Webb	291,442	Jan. 1	526	149	26	95
Cotton elevator and cleaner. Seed-	W. T. Taylor	291,806	Jan. 8	990	272	26	183
Cotton-gin feeder	J. W. and Z. W. Oglesby	293,772	Feb. 19	1276	353	26	680
Cotton-gin feeders. Governor for	L. D. Forbes	295,377	Mar. 18	1311	364	26	1078
Cotton-gins, &c. Saw for	D. B. Haselton	293,576	Feb. 12	1018	280	26	628
Cotton-lap	R. Kitson	292,921	Feb. 5	178	49	26	476
Cotton-picker stem	C. T. Mason, Jr	293,484	Feb. 12	915	248	26	609
Cotton-picker stem	C. T. Mason, Jr	293,485	Feb. 12	916	249	26	609
Cotton-press	J. C. Allen	292,274	Jan. 22	1589	444	26	306
Cotton-press	F. L. Falson and G. M. Newell	292,000	Jan. 15	1244	347, 348	26	230
Cotton scraper and cultivator	S. H. Fountain	294,604	Mar. 4	325	90	26	884
Cotton-worm destroyer, sprinkler, &c.	J. D. Lambert, Sr., and J. G. Wiggins	294,135	Feb. 26	1764	484	26	772
Counter for stores. Glass-top	S. Schutz	294,512	Mar. 4	215	61	26	866
Counter. Portable	J. T. Perry	294,907	Mar. 11	695	194	26	956
Counting-register	J. W. Jones and A. Cooper	295,768	Mar. 25	1815	504	26	1176

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Coupling: *See* Car-coupling. Rod-coupling. Crupper-coupling. Shaft friction-coupling. Electric-wire coupling. Shaft or roll coupling. Shafting-coupling. Hose-coupling. Thill-coupling. Pipe-coupling. Whiffletree-coupling.							
Coupling for propeller and other shafts	J. Kelly	292,823	Feb. 5	56	15	26	453
Court-plaster. Preparing medicated	C. L. Morey	291,922	Jan. 15	1150	.....	26	222
Cover. Crock-	D. W. Frost	292,110	Jan. 15	1365	383	26	263
Cover for culinary and other receptacles	J. Beaupied	291,029	Jan. 1	10	3	26	5
Covering for steam boilers, pipes, and other heated surfaces	E. Krahenbehl and P. Rice	293,752	Feb. 19	1250	345	26	676
Covering. Non-conducting	G. Kelly	292,318	Jan. 22	1637	458	26	315
Cranes. Shaft-bearing for traveling	C. J. Appleby	291,861	Jan. 15	1073	299	26	207
Crank	J. E. Atwood	291,972	Jan. 15	1204	336	26	232
Crate. Folding	L. and C. Krieckhaus	294,789	Mar. 11	541	150	26	928
Crate. Knockdown	W. M. Baker	294,751	Mar. 11	500	139	26	921
Cream-gage for milk-cans	C. L. Colby	291,296	Jan. 1	354	100	26	64
Cream of tartar. Manufacture of	F. Dietrich	294,592	Mar. 4	312	.....	26	882
Cream-skimming apparatus	D. Stover	293,986	Feb. 19	1552	426	26	730
Creamer. Centrifugal	G. De Laval	293,314	Feb. 12	707	189	26	570
Creamer. Centrifugal	W. C. L. Lefeldt and C. G. O. Lentsch	292,661	Jan. 29	2092	582	26	403
Creamer. Centrifugal	W. C. L. Lefeldt and C. G. O. Lentsch	292,662	Jan. 29	2095	582, 583	26	403
Creaming milk. Centrifugal machine for	W. C. L. Lefeldt and C. G. O. Lentsch (Reissue.)	10,441	Jan. 29	2268	628	26	435
Crib and cradle. Combined	S. G. Sine	293,530	Feb. 12	964	263	26	618
Crupper-coupling	C. H. Orts	295,192	Mar. 18	1077	296	26	1034
Crusher: *See* Clay-crusher.							
Crushing-roll	W. H. H. Bowers	294,361	Mar. 4	25	7	26	834
Crutch	W. H. D. Ludlow	291,750	Jan. 8	926	259	26	171
Cryptographial table	J. L. Winnes	294,175	Feb. 26	1820	497	26	781
Cuff and wristlet. Driving	B. E. Northrup	293,500	Feb. 12	932	253	26	612
Cuff-holder	C. M. Alexander	295,091	Mar. 11	945	257	26	998
Cultivation and harvesting. System and apparatus for farm	R. Romaine	292,511	Jan. 29	1887	527, 528, 529	26	370
Cultivator	P. Beeler	292,091	Jan. 15	1342	377	26	259
Cultivator	B. C. Bradley	293,557	Feb. 12	996	273	26	624
Cultivator	B. C. Bradley	295,520	Mar. 25	1495	413	26	1118
Cultivator	L. A. Bringier	293,221	Feb. 12	584	153	26	549
Cultivator	D. Brix	292,979	Feb. 5	252	69	26	488
Cultivator	W. H. Clark	295,353	Mar. 18	1292	355	26	1073
Cultivator	N. Coleman	291,577	Jan. 8	709	199	26	133
Cultivator	J. Divora	292,996	Feb. 5	271	74	26	491
Cultivator	H. W. Ferguson	292,639	Jan. 29	2065	574	26	398
Cultivator	W. M. Harris	293,017	Feb. 5	295	81, 82	26	496
Cultivator	F. L. Hilsabeck	291,730	Jan. 8	904	253	26	167
Cultivator	J. M. Long and C. E. McBeth	295,779	Mar. 25	1832	509	26	1179
Cultivator	T. Meikle	293,266	Feb. 12	646	173	26	550
Cultivator	R. C. Norton	292,674	Jan. 29	2115	588	26	406
Cultivator	W. H. Parlin	291,930	Jan. 15	1158	323	26	223
Cultivator	C. W. Post	294,906	Mar. 11	571	158	26	934
Cultivator	A. Schoonover, Jr	295,292	Mar. 18	1209	336	26	1059
Cultivator	I. A. Smith	294,091	Feb. 26	1699	467	26	762
Cultivator	G. W. and S. Taylor	293,920	Feb. 19	1467	406	26	714
Cultivator	H. D. Terrell	292,070	Jan. 15	1318	368	26	254
Cultivator	A. C. and J. D. Tower	295,080	Mar. 11	928	254	26	995
Cultivator	F. T. Verharen	292,877	Feb. 5	120	33	26	465
Cultivator	J. Woolridge	295,607	Mar. 25	1612	446, 447	26	1140
Cultivator and drill. Spring-tooth	C. La Dow	294,791	Mar. 11	543	151	26	928
Cultivator and horse-hoe	C. W. Meador	295,189	Mar. 18	1074	295	26	1034
Cultivator. Grape and orchard	W. Fruhling, Sr	292,297	Jan. 22	1614	451	26	311
Cultivator-shovel	W. F. Dickison	292,705	Feb. 5	25	6	26	447
Cultivator. Sulky-	R. L. Carver	293,717	Feb. 19	1201	333	26	668
Cultivator. Tongueless	J. B. Christian and W. D. Hanson	292,283	Jan. 22	1597	446	26	308
Cultivator. Tongueless wheel-	T. B. Jewett	293,030	Feb. 5	311	86	26	499
Cultivator. Tongueless wheel-	T. B. Jewett	293,331	Feb. 12	728	194	26	574
Cultivator-tooth	J. P. Bradford	292,404	Jan. 22	1749	487	26	337
Cultivator. Wheel-	C. A. Baker	293,616	Feb. 19	1066	295	26	643
Cultivator. Wheel-	N. Trowbridge	295,082	Mar. 11	933	255	26	996
Cultivators. Attaching plant-shields to	C. H. Hopkins	293,465	Feb. 12	895	242	26	605
Cupola-furnace	W. J. Clapp and T. Griffiths. (Reissue.)	10,432	Jan. 1	583	164	26	104
Cupping-glass	C. L. Myers	291,388	Jan. 1	464	130	26	83
Curry-comb	H. C. Brill	294,305	Feb. 26	1977	540	26	810
Curry-comb	F. A. Canfield	293,415	Feb. 12	841	227	26	586
Curtain-fixture	M. B. Hill	293,963	Feb. 19	1528	421	26	725
Curtain-fixture	C. H. Miller, Jr	293,188	Feb. 5	533	141	26	535
Curtain-fixture	L. Page and L. Weber	291,928	Jan. 15	1155	322	26	223
Curtain-fixture	J. B. Finch	291,702	Jan. 8	615	173	26	117
Curtain-fixtures. Spring-roller for	C. Eberly	293,643	Feb. 19	1098	305	26	640
Curtain-pole	C. H. Miller	293,187	Feb. 5	532	141	26	535
Curtain-roller	H. Lobdell	292,332	Jan. 22	1655	462	26	318
Curtain-stick	H. Lobdell	292,333	Jan. 22	1656	462	26	319
Curtain-stick	H. Lobdell	292,334	Jan. 22	1658	462	26	319
Curtain-stick	H. Lobdell	292,992	Feb. 5	253	69	26	489
Curtains. Supporting-rod for window and door	J. A. Browne	294,758	Jan. 29	2236	621	26	429
Cut-off. Automatic spring-valve	J. L. Mitchell	295,131	Mar. 11	888	271	26	1006
Cut-off governor for engines	P. Pistor	294,857	Mar. 11	633	176	26	944
Cut-off valve	I. B. Davis and W. L. Shepard	291,240	Jan. 1	288	81	26	53
Cut-off valve and gear	J. Wheelock						

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Cut-off-valve gear	F. A. Gardner	291,181	Jan. 1	212	59	26	38
Cut-off-valve gear	G. T. Hatch and F. W. Riesenberg	294,036	Feb. 26	1612	448	26	749
Cut-off-valve gear	M. J. McCarter	294,650	Mar. 4	384	107	26	894
Cut-off-valve gear	E. Reynolds	293,356	Feb. 12	759	202, 203	26	580
Cutlery-handles. Manufacture of	S. E. Jeralds and E. R. Lawton	295,016	Mar. 11	843	230	26	980
Cutter: *See* Beef-cutter. Butter-cutter. Cigar-cutter. Feed-cutter. Fodder-cutter. Milling-cutter. Peg-cutter. Pipe-cutter. Rotary cutter. Straw-cutter. Thread-cutter. Tube-cutter. Vegetable-cutter. Wire-cutter.							
Cutter-head	H. S. Boynton	294,006	Feb. 26	1577	436	26	742
Cutter-head	J. B. Emery	292,422	Jan. 22	1777	495	26	342
Cutter-head	J. H. Morrison and E. Allen	293,494	Feb. 12	924	251	26	611
Cutter-head	G. J. Shimer	293,529	Feb. 12	962	262, 263	26	618
Cutter-head	W. Trigg	292,388	Jan. 22	1729	482	26	333
Cutter-head for wood-working machines	S. Osborn	294,067	Feb. 26	1664	459, 460	26	757
Cutting double pile fabrics. Machine for	C. Coupland	294,970	Mar. 11	767	213, 214, 215	26	969
Cutting double pile fabrics. Spindle and bearing for rotary cutters of machines for	C. Coupland	294,969	Mar. 11	765	213	26	968
Cutting out garments. Machine for	S. Rich	291,776	Jan. 8	956	268	26	177
Cutting-tool	J. B. Wallace	295,466	Mar. 18	1415	391	26	1099
Cyclometer	G. H. Gould	295,632	Mar. 25	1641	455	26	1145
Cylinder engine. Revolving	J. J. Blair	294,304	Feb. 26	1975	540	26	810
Dadoing-machine	J. K. Benway	291,865	Jan. 15	1077	300, 301	26	208
Damper	R. L. Walker	293,543	Feb. 12	979	268	26	621
Damper-regulator	G. W. Smith	293,367	Feb. 12	778	208	26	584
Damper. Ventilating	J. P. Dorr	294,773	Mar. 11	522	146	26	925
Dash-board	W. E. Minshall	292,032	Jan. 15	1275	357	26	245
Decorating walls, &c	M. Monoyment	291,215	Jan. 1	250	71	26	45
Dental chair	E. P. Stiles	294,226	Feb. 26	1948	534	26	805
Dental engine	E. R. Pettit	294,667	Mar. 4	399	111	26	897
Dental-engine attachment	J. W. Norwood	293,502	Feb. 12	934	253, 254	26	613
Dental-engine hand-piece	A. W. Browne	291,571	Jan. 8	700	197	26	131
Dental plates. Refining rubber	F. T. Hyatt	293,739	Feb. 19	1227	339	26	673
Dental plugger	J. W. Norwood	293,501	Feb. 12	933	253	26	612
Dental vulcanizer	F. W. Seabury	295,821	Mar. 25	1881	522	26	1188
Deodorizing and disinfecting apparatus	G. Nobes	294,327	Feb. 26	2004	549	26	815
Deoxidizing-furnace. Retort	I. D. Condit, Jr	291,298	Jan. 1	357	101	26	64
Deoxidizing iron ores. Apparatus for	J. Bridgford	292,788	Feb. 5	13	4	26	445
Derrick. Steam	C. C. Lyman	294,395	Mar. 4	73	18, 19	26	842
Desk	N. A. Hull	294,388	Mar. 4	63	16	26	840
Desks. Device for fastening school	J. W. Myers	291,219	Jan. 1	256	72	26	46
Desiccating eggs, &c. Method of and apparatus for	L. J. Cadwell	294,849	Mar. 11	624	173	26	942
Desulphurizing-furnace	H. E. Parson and G. V. Northey	292,944	Feb. 5	210	57	26	481
Detachable handle for glass and earthenware dishes	J. B. Timberlake	294,229	Feb. 26	1953	535	26	806
Diamonds in tools. Setting	A. Hessels	295,394	Mar. 18	1333	371	26	1088
Die: *See* Hammer-die.							
Die and die-stock	C. Elterich	291,884	Jan. 15	1100	307	26	213
Die-press	G. E. Merriman. (Reissue.)	10,461	Mar. 11	1009	278	26	1009
Die-shaping	H. A. Chamberlain and W. L. Martin	291,682	Jan. 8	851	239	26	150
Die-shaping apparatus	H. A. Chamberlain and W. L. Martin	291,681	Jan. 8	849	237, 238	26	158
Die-stock	F. Armstrong	291,268	Jan. 1	317	89	26	58
Digger: *See* Potato-digger. Well-digger.							
Dish. Butter	A. J. Chase	295,111	Mar. 11	906	264	26	1001
Dish holder. Extension fruit	C. S. Barbour	292,197	Jan. 22	1475	414, 415	26	988
Disinfectant	C. A. Catlin	294,758	Mar. 11	507	141	26	922
Disinfectant	C. A. Catlin	294,759	Mar. 11	508		26	922
Disinfecting-tank for the disposal of sewage	J. J. Powers	292,046	Jan. 15	1293	361	26	249
Distress-signal. Electric	T. B. Joseph	292,317	Jan. 22	1636	458	26	315
Ditcher. Tile	K. James	294,049	Feb. 26	1637	453	26	753
Ditches. Making mole	M. H. Eaton	291,313	Jan. 1	375	105	26	68
Ditching and grading machine	I. B. Hammond	295,247	Mar. 18	1148	317	26	1047
Ditching-machine	W. T. Bennett	294,567	Mar. 4	284	77	26	877
Ditching-machine	C. D. Edwards	291,040	Jan. 1	28	8, 9	26	8
Ditching-machine	J. T. Fitzpatrick	291,043	Jan. 1	34	10	26	9
Ditching-machine	F. Plumb	293,780	Feb. 19	1285	356	26	692
Ditching-machine	A. Purcell	295,281	Mar. 18	1191	330	26	1056
Ditching-machine	G. W. Raymond	292,355	Jan. 22	1685	469	26	324
Ditching-machine. Tile	J. Arthur	295,323	Mar. 18	1244	345	26	1065
Ditching machine. Tile	G. L. Hoehn and F. P. Hilburn	291,511	Jan. 8	627	177	26	119
Doll	S. M. F. Schilling	295,435	Mar. 18	1376	382	26	1092
Domino	J. L. Law	295,023	Mar. 11	851	232	26	982
Door-check	C. R. Bickford	291,466	Jan. 1	502	159	26	101
Door-check	J. Cleland	293,951	Feb. 19	1513	417	26	723
Door-check	W. B. Dager	294,018	Feb. 26	1591	442	26	746
Door-check	L. A. Davis	294,972	Mar. 11	779	216	26	971
Door-check	J. H. Runyan	295,507	Mar. 18	1476	406	26	1109
Door-check. Pneumatic	G. S. Perkins	294,905	Mar. 11	692	193	26	955
Door-closing device	W. A. Holwell	293,326	Feb. 12	722	193	26	573
Door-fastener	O. De Maine	291,162	Jan. 1	186	54	26	35

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Door-fastening device	J. E. Bozell	294,573	Mar. 4	289	80	26	878
Door-hanger	E. Y. Moore	295,501	Mar. 18	1464	404	26	1107
Door-hanger	J. E. Schmid	293,598	Feb. 12	1042	287, 288	26	632
Door-lock	B. Wesselmann	293,548	Feb. 12	984	270	26	622
Door-lock. Sliding	S. S. Peterson	293,593	Feb. 12	1036	285	26	631
Door-plate and mail-receiver. Combined	R. G. Pace and W. J. Wey	295,581	Mar. 25	1581	437	26	1135
Door-pull. Electric	C. Belle	294,642	Mar. 11	615	170	26	940
Door. Sliding	W. S. Voorhis and G. H. Houser	293,991	Feb. 19	1560	430	26	731
Door-spring	W. W. Jackson	294,785	Mar. 11	536	149	26	927
Doors and gates. Automatically operating	L. C. Norton and J. A. Sherman	292,845	Feb. 5	81	22	26	457
Doors. Hanging	C. W. Emerson	295,743	Mar. 25	1784	495	26	1170
Doors. Hanging	A. H. P. Leuf	294,476	Mar. 4	172	78	26	858
Doors of buildings. Mechanism for operating	H. J. Shaw	294,917	Mar. 11	704	196	26	957
Doors. Roller-track mechanism for pendent sliding	E. W. Martin	293,339	Feb. 12	736	196, 197	26	576
Doors. Stay-roller for sliding	W. M. Brinkerhoff	295,345	Mar. 18	1274	353	26	1071
Dovetailing-machine	J. Schmidt	293,097	Feb. 5	395	108	26	513
Dowel-pins or hinge-pins. Sustaining	A. F. Gerald	293,646	Feb. 19	1101	305	26	650
Draft-equalizer	J. Bowers	291,976	Jan. 15	1209	337	26	223
Draft-equalizer	W. P. Grannis	293,008	Feb. 5	284	79	26	494
Draft-equalizer	G. W. Harrington	291,899	Jan. 15	1116	311	26	216
Draft-equalizer	W. B. Hubbard	295,174	Mar. 18	1049	289	26	1030
Draft-equalizer	D. F. Robbins	293,086	Feb. 5	379	103	26	511
Draft-equalizer	J. W. Steel	293,283	Feb. 12	666	178	26	563
Draft-equalizer	J. W. Dalley	291,304	Jan. 1	365	103	26	66
Draft-pins. Fastening device for	J. Dempsey	292,287	Jan. 22	1601	447, 448	26	309
Draft-regulator	W. F. Grassler	291,713	Jan. 8	888	249	26	165
Draft-regulator	L. Y. Lenhart	293,043	Feb. 5	324	90	26	502
Draft-regulator for pipes, flues, and ventilators	J. H. Mitchell	291,380	Jan. 1	452	127	26	62
Drafting implement	R. R. Osgood	295,580	Mar. 25	1579	437	26	1134
Dredge	R. E. Rose	295,202	Mar. 18	1068	299, 300, 301	26	1036
Dredge. Hydraulic	J. H. Anderson	294,303	Feb. 26	1974	540	26	810
Dredge. Rock	I. D. Seabrook	292,371	Jan. 22	1711	477	26	330
Dredger	H. B. Angell	293,932	Feb. 19	1487	409, 410	26	717
Dredging-bucket	J. Menge	294,250	Feb. 26	1907	523	26	797
Dredging-machine	H. C. Carter	292,732	Jan. 29	2180	610	26	419
Dredging-machine	S. Mead	294,400	Mar. 4	78	20	26	843
Dress attachment	E. Whaples	293,387	Feb. 12	807	217	26	589
Dress-protector	E. M. Downing	293,722	Feb. 19	1206	334	26	669
Drier: *See* Bagasse-drier. Clothes-drier. Fruit-drier. Grain-drier. Lumber-drier. Malt-drier. Ore-drier.							
Drill: *See* Breast-drill. Expansible drill. Grain-drill. Oat-drill. Ratchet-drill. Rock-drill. Seed-drill. Well-drill.							
Drill-making machine	E. O. Williams	293,292	Feb. 12	681	181, 182, 427, 428	26	566
Drill-sharpening machine	M. C. Johnson	292,229	Jan. 22	1527		26	296
Drills. Machine for operating	M. C. and C. E. Baker	292,888	Feb. 5	133	36	26	468
Drilling-engine. Rotary	E. L. Sharpneck	294,514	Mar. 4	216	61	26	866
Drilling-machine	J. Barnet	295,329	Mar. 18	1251	347	26	1067
Drilling-machine	R. K. Carpenter	291,876	Jan. 15	1092	304, 305	26	211
Drilling-machine	L. Herrick	293,246	Feb. 12	615	163	26	554
Drilling-machines. Apparatus for shifting	A. Ball	295,395	Mar. 18	1246	345	26	1066
Drilling square holes. Device for	E. H. Bieber	291,137	Jan. 1	155	45	26	30
Drinking-glass	E. L. Moore	293,190	Feb. 5	536	142	26	535
Drop-lights. Friction-clutch for	J. F. Travis and W. H. Freaney	291,816	Jan. 8	999	280	26	184
Drop-press	J. A. Horton	294,237	Feb. 26	1892	518	26	795
Dry-goods box. Shipper's	L. Smith	292,066	Jan. 15	1313	367	26	253
Dummy for displaying clothing	J. R. Palmenberg	291,076	Jan. 1	74	21	26	17
Dumper	S. M. Keibler	291,355	Jan. 1	416	118	26	76
Dust-excluder and window-fastener. Combined	F. H. Moore	292,839	Feb. 5	75	21	26	456
Dust from air. Method of and apparatus for separating	J. M. McIntyre	294,248	Feb. 26	1905	522	26	797
Dust-pan	S. T. Fisher	292,213	Jan. 22	1507	423	26	292
Dust-pan	J. I. Flanagen	292,477	Jan. 29	1847	515	26	363
Dyeing-machine	A. N. Dubois	293,856	Feb. 19	1392	385	26	700
Dynamometer	F. A. Gleason	294,377	Mar. 4	49	13	26	838
Ear-ring	M. Falkenau	293,958	Feb. 19	1520	419	26	724
Ear-ring	B. Hartmann	292,810	Feb. 5	41	11	26	450
Ear-ring	F. W. Moore	293,366	Feb. 12	647	174	26	560
Earth, gravel, &c. Apparatus for transporting and dumping	Q. A. Fisk	291,587	Jan. 8	728	205	26	137
Easel	E. Werner	294,941	Mar. 11	731	204	26	963
Easel	D. K. Woodward	292,086	Jan. 15	1337	375	26	258
Eccentric. Shifting	D. W. Payne and C. R. Williams	294,071	Feb. 26	1671	461	26	758
Egg-beater	W. G. Flanders	291,890	Jan. 15	1106	308	26	214
Egg-beater	H. Z. Gibson	293,648	Feb. 19	1103	306	26	650
Egg-beater	W. Johnson	292,821	Feb. 5	54	14	26	453
Egg-beater	G. A. Chapman	292,986	Feb. 5	257	71	26	499
Egg-carrier	R. H. Harris	292,303	Jan. 22	1490	453	26	312
Egg-carrier	L. J. Wallich and W. B. Rigler	293,606	Feb. 12	1051	291	26	633
Egg-carrier	J. D. De Berry	291,699	Jan. 8	874	245	26	169
Egg-case. Folding							

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Egg-case. Folding	S. M. Toay and E. Harris	295,211	Mar. 18	1101	305	26	1039
Egg-holder	W. Kearney	295,648	Mar. 25	1602	461	26	1149
Ejector. Oil-	G. F. Lawrence and A. McDonald	295,502	Mar. 25	1554	431	26	1129
Ejector. Steam-jet	L. Schutte	295,293	Mar. 18	1211	337	26	1059
Elastic fabric	G. C. Moore	291,527	Jan. 8	649	184	26	123
Electric accumulator	G. Philippart	292,762	Jan. 29	2244	623	26	430
Electric battery	C. L. Clarke and J. Leigh	293,563	Feb. 12	1004	277	26	625
Electric battery	I. C. Himmer	292,310	Jan. 22	1627	456	26	314
Electric battery	J. L. Tobin	291,241	Jan. 1	280	79	26	51
Electric cable	R. S. Waring	294,541	Mar. 4	253	70	26	872
Electric cable	R. S. Waring	294,543	Mar. 4	255	70	26	872
Electric cable	R. S. Waring	294,545	Mar. 4	258	71	26	873
Electric cable. Compound	H. Van Hoevenbergh	292,772	Jan. 29	2259	625	26	433
Electric cable. Compound	R. S. Waring	294,536	Mar. 4	245	68	26	871
Electric cable. Compound	R. S. Waring	294,538	Mar. 4	248	69	26	871
Electric cable. Compound	R. S. Waring	295,086	Mar. 11	939	256	26	997
Electric cables. Branching	R. S. Waring. (Reissue.)	10,459	Mar. 11	1006	278	26	1009
Electric cables. Making joint-connections in	R. S. Waring	294,546	Mar. 4	260	71	26	873
Electric cables. Uniting	R. S. Waring. (Reissue.)	10,458	Mar. 11	1005	277	26	1009
Electric circuit	E. Weston	292,718	Jan. 29	2165	603	26	416
					604		
Electric-circuit closer	C. J. Van Depoele	291,648	Jan. 8	809	226	26	151
Electric-circuit conductor	E. Weston	292,717	Jan. 29	2164	603	26	416
Electric-circuit meter	P. G. Russell	291,405	Jan. 1	481	136	26	86
					137		
Electric-circuit protector	J. W. Dyer	292,706	Feb. 5	26	7	26	447
Electric circuits. Device for connecting safety-strips in	E. Weston	292,716	Jan. 29	2163	602	26	416
Electric circuits. Fusible safety-strip for	E. Weston	292,713	Jan. 29	2159	601	26	415
Electric conducting-wires. Machine for laying	H. B. Cobb	293,632	Feb. 19	1086	301	26	647
Electric conductor	A. A. Cowles	292,539	Jan. 29	1940	542	26	377
Electric-conductor case	H. Edmunds, Jr	291,170	Jan. 1	195	55	26	36
Electric-conductor conduit. Undeground	E. T. Starr	291,708	Jan. 8	979	275	26	181
					276		
Electric-conductor system. Underground	T. J. Perrin	294,906	Mar. 11	892	193	26	955
Electric-conductor tip	W. A. Childs and F. Shaw	294,851	Mar. 11	696	174	26	943
Electric conductors. Apparatus for covering	H. D. Staaley	291,239	Jan. 1	278	78	26	51
Electric conductors. Manufacture of	A. A. Cowles	295,232	Mar. 18	1132	312	26	1044
Electric conductors. Underground conduit for	E. Verstraete	294,703	Mar. 4	430	122	26	904
Electric cut-out	W. M. Thomas	291,958	Jan. 15	1168	330	26	229
Electric gas-burners. Tip for	A. T. Smith	292,374	Jan. 22	1714	478	26	331
Electric-generator commutator	H. M. Stevens	295,206	Mar. 18	1094	303	26	1038
Electric implement	A. H. Kinder	295,652	Mar. 25	1667	462	26	1140
Electric-light regulator and cut-out	R. J. Sheehy	295,058	Mar. 11	897	246	26	989
Electric machine. Dynamo-	C. E. Ball	291,973	Jan. 15	1205	336	26	232
Electric machine. Dynamo-	C. M. Ball	294,719	Mar. 4	458	128	26	908
					129		
Electric machine. Dynamo-	W. F. Buckley	292,625	Jan. 29	2051	570	26	395
Electric machine. Dynamo-	T. L. Dennis	295,368	Mar. 18	1301	360	26	1077
					361		
Electric machine. Dynamo-	F. K. Fitch	293,441	Feb. 12	869	235	26	601
Electric machine. Dynamo-	G. W. Fuller	294,458	Mar. 4	149	40, 41	26	855
Electric machine. Dynamo-	W. Hochhausen	294,643	Feb. 26	1629	451	26	752
					452		
Electric machine. Dynamo-	E. R. Knowles and F. E. Idell	292,121	Jan. 15	1379	386	26	265
Electric machine. Dynamo-	A. E. G. Lubke	293,758	Feb. 19	1255	347	26	677
					348		
Electric machine. Dynamo-	C. M. Lungren	294,892	Mar. 11	879	189	26	953
Electric machine. Dynamo-	C. Richter	294,913	Mar. 11	700	195	26	957
Electric machine. Dynamo-	D. A. Schuyler and A. G. Waterhouse.	291,944	Jan. 15	1171	327	26	226
Electric machine. Dynamo-	J. S. Sellon	292,601	Jan. 29	2133	593	26	410
					594		
Electric machine. Dynamo-	R. J. Sheehy	294,688	Mar. 4	420	117	26	901
Electric machine. Dynamo-	E. Thomson	294,094	Feb. 26	1702	468	26	763
Electric machine. Dynamo-	J. Wenström	292,079	Jan. 15	1329	371	26	256
					372		
Electric-machine regulator. Dynamo-	E. H. Amet	292,397	Jan. 22	1741	485	26	335
Electric-machine regulator. Dynamo-	C. E. Ball	294,180	Feb. 26	1829	498	26	783
Electric-machine regulator. Dynamo-	C. L. Buckingham	294,307	Feb. 26	1978	541	26	810
Electric-machine regulator. Dynamo-	W. Hochhausen	294,038	Feb. 26	1615	449	26	749
Electric-machine regulator. Dynamo-	W. Hochhausen	294,039	Feb. 26	1617	449	26	750
Electric-machine regulator. Dynamo-	W. Hochhausen	294,040	Feb. 26	1620	450	26	750
Electric-machine regulator. Dynamo-	C. J. Van Depoele	291,554	Jan. 8	681	193	26	129
Electric-machine regulator. Dynamo-	A. G. Waterhouse	294,169	Feb. 26	1810	495	26	780
Electric-machine regulator. Dynamo-	R. Weston	292,715	Jan. 29	2162	602	26	415
Electric-machine regulator. Dynamo or magneto	F. Bain	291,566	Jan. 8	693	196	26	131
Electric machines. Apparatus for regulating and distributing currents from dynamo-	W. Hochhausen	296,559	Mar. 25	1538	426	26	1126
					427		
Electric machines. Armature-coil for dynamo-	J. J. McTighe	295,789	Mar. 25	1845	513	26	1181
Electric machines. Automatic regulator for dynamo-	A. G. Waterhouse	294,170	Feb. 26	1813	495	26	780
Electric machines. Commutator for dynamo or magneto	F. B. Rae and C. L. Healy	294,270	Feb. 26	1929	529	26	801
Electric machines. Driving-gear for dynamo-	J. W. Boothby	295,614	Mar. 25	1622	448	26	1141
					449		
Electric machines. Exciting-circuit for dynamo-	C. Lever	291,309	Jan. 1	245	68	26	46
Electric machines. Mechanism for driving dynamo-	J. R. Markle and J. B. Wayne	293,482	Feb. 12	913	247	26	609
					248		
Electric messenger. Marine	J. C. Henderson	293,735	Feb. 19	1222	338	26	672
Electric motor	M. Bacon	294,717	Mar. 4	456	127	26	907
Electric motor	W. Bradbury	293,356	Feb. 12	995	273	26	624
Electric motor	A. E. G. Lubke	292,930	Feb. 5	193	53	26	478
Electric motor	L. W. Stockwell	291,636	Jan. 8	793	223	26	149
Electric motor	W. T. Waters	293,929	Feb. 19	1484	408	26	717

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Electric-motor regulator	L. W. Stockwell	292,382	Jan. 22	1722	480	26	332
Electric motors. Automatic brake for	W. Hochhausen	294,041	Feb. 26	1624	450	26	751
Electric motors. Current-regulator for	C. J. Van Depoele	291,650	Jan. 8	812	227	26	152
Electric-power-distribution system	E. Thomson	294,095	Feb. 26	1705	469	26	763
Electric-regulator motor	C. J. Van Depoele	294,165	Feb. 26	1805	494	26	779
Electric safety cut-out	C. J. Van Depoele	291,649	Jan. 8	810	226	26	152
Electric signals. Apparatus for transmitting	B. Abdank-Abakanowicz	292,193	Jan. 22	1471	413	26	287
Electric signaling apparatus	L. J. Crossley, W. Emmott, and J. F. Harrison.	292,542	Jan. 29	1945	543	26	378
Electric switch. Automatic	T. A. Connolly	295,356	Mar. 18	1285	356	26	1073
					357		
Electric-wire conduit	N. Randall	291,399	Jan. 1	476	134	26	85
Electric-wire conduit. Underground	C. H. Trask	293,688	Feb. 19	1155	322	26	660
Electric-wire connector	T. S. Stevenson	294,928	Mar. 11	715	200	26	960
Electric wire coupling	G. L. Kitson	295,559	Mar. 25	1550	430	26	1128
Electric wires. Artificial pavement and conduit for	W. Berry and P. Stuart	295,374	Mar. 18	1257	348	26	1068
Electric wires. Conduit for underground	H. B. Cobb	294,365	Mar. 4	30	8, 9	26	835
Electric wires. Sidewalk-curb and surface-case for	R. Wylie	295,710	Mar. 25	1743	484	26	1162
					485		
Electrical circuit-breaker for annunciators and gas-lighting apparatus	T. H. Rhodes	292,586	Jan. 29	2003	557	26	388
Electrical conductor	F. L. Pope	294,148	Feb. 26	1778	488	26	775
Electrical conductor	R. C. Stone	295,207	Mar. 18	1095	303	26	1038
Electrical conductor	G. Doolittle	295,371	Mar. 18	1305	362	26	1077
Electrical-conductor tip	J. Greives and J. H Bloco	291,715	Jan. 8	889	250	26	165
Electrical conductor. Underground	W. J. Philips and G. L. Kitson	293,271	Feb. 12	650	174	26	560
					175		
Electrical conductors. Method of and apparatus for laying branch underground							
Electrical conduits. Apparatus for molding the sections of	D. H. Dorsett, J. E. Morris, and B. Williams.	291,996	Jan. 15	1237	345	26	938
					346		
Electrical connector	S. Ryder	292,180	Jan. 22	1453	408	26	286
Electrical cut-out. Automatic	C. S. Pinkham	294,404	Mar. 4	84	22	26	844
Electrical devices. Apparatus for operating	A. L. Bogart	292,785	Feb. 5	8	3	26	444
Electrical distribution. System of	C. S. Bradley	291,141	Jan. 1	161	47	26	31
Electrical extension-bracket	J. E. Giles	293,318	Feb. 19	713	191	26	571
Electrical generator or motor	T. A. Edison	293,432	Feb. 12	859	233	26	599
Electrical generator or motor	E. Weston	292,719	Jan. 29	2168	604	26	416
Electrical haulage. System of	W. E. Ayrton and J. Perry	295,094	Mar. 11	947	258	26	998
Electrical indicator	E. Weston	292,714	Jan. 29	2160	602	26	415
Electrical indicator and alarm	W. H. Baker	291,483	Jan. 8	590	167	26	113
Electrical indicator and alarm	W. H. Baker	291,484	Jan. 8	592	167	26	113
Electrical meter	T. A. Edison	293,435	Feb. 12	862	234	26	599
Electrical switch	C. S. Shivler	295,445	Mar. 18	1386	385	26	1094
Electrical transmission of power. Method of and apparatus for regulating the	E. Weston	291,445	Jan. 1	529	150	26	92
Electrical transmission of power. System for the	E. Weston	292,721	Jan. 29	2170	604	26	417
					605		
Electrical wire. Manufacture of compound	L. L. Smith	293,532	Feb. 12	965	264	26	619
Electro-dynamic motor	F. J. Sprague	295,454	Mar. 18	1396	387	26	1095
Electro-magnetic helices. Automatic cut-out for	F. L. Pope	294,669	Mar. 4	402	111	26	897
Electro-magnetic machine	J. W. Nystrom	294,066	Feb. 26	1663	459	26	757
Electro-mechanical escapement	H. Van Hoevenbergh	293,925	Feb. 19	1475	407	26	715
Electro-mechanical movement	H. Van Hoevenbergh	293,923	Feb. 19	1471	406	26	714
Electro-mechanical movement	H. Van Hoevenbergh	293,924	Feb. 19	1472	407	26	715
Electrode or element. Battery	E. T. Starr	295,889	Mar. 25	1978	547	26	1204
					548		
Elevator:							
See Cash-carrier elevator. Cotton-elevator. Floating elevator. Hay-elevator. Saw-elevator. Water-elevator.							
Elevator	L. Beroud and E. Walsh	291,835	Jan. 8	1025	286	26	189
Elevator	R. L. Davis	292,995	Feb. 5	270	74	26	491
Elevator	A. Kieckhefer	293,038	Feb. 5	310	88	26	501
Elevator	T. McAdoo	293,050	Feb. 5	334	91	26	503
Elevator	G. A. Saxer	292,684	Jan. 29	2125	591	26	408
Elevator	F. J. Schupp	294,815	Mar. 11	581	161	26	935
Elevator	T. Williams, A. Mauck, and H. A. Williams.	295,135	Mar. 11	999	275	26	1008
					276		
Elevator for bags, &c	A. Conrad	294,015	Feb. 26	1586	440	26	745
					441		
Elevator safety-gate	F. K. Bartlett	292,402	Jan. 29	1830	510	26	350
Elevator safety-stop	E. Saunders	295,678	Mar. 25	1701	471	26	1156
Elevator stop mechanism	F. Scooneas	292,686	Jan. 29	2127	592	26	409
Elevators. Combined automatic floor and safety-clutch for	T. H. Wood	293,390	Feb. 12	812	218	26	591
Elevators. Electric safety device for	J. W. De Castro	293,851	Feb. 19	1383	382	26	699
					383		
Elevators. Safety automatic stop attachment for	O. Brugger	291,838	Jan. 8	1030	287	26	190
					288		
Embossed fabrics. Manufacture of	C. Garnier and P. Depoully	294,731	Mar. 4	471	.....	26	910
Embossing and backing wall-decorating materials. Machine for	W. S. Morton	294,257	Feb. 26	1914	525	26	799
Embroidery-frame	G. A. Brackett	291,870	Jan. 15	1084	302	26	210
Embroidery-machine	J. L. Parks	294,499	Mar. 4	201	56	26	863
Embroidery. Raised	F. H. Holbrook	293,877	Feb. 19	1416	391	26	704
Embroidery-slitting apparatus	J. B. West	291,116	Jan. 1	128	37	26	96
Embroidering. Apparatus for and method of	E. H. Alexander	293,840	Feb. 19	1371	379	26	696
Embroidering-machine	E. Cornely	292,284	Jan. 22	1598	446	26	808
					447		
Embroidering-machine	E. Cornely	292,285	Jan. 22	1600	447	26	809
Emery-wheels. Device for saving the waste from	P. Mathes	294,141	Feb. 26	1773	486	26	774
End-gate	J. Scherer	295,431	Mar. 18	1373	381	26	1091
End-gate. Automatic	T. S. Stewart	295,072	Mar. 11	919	252	26	993
End-gate. Wagon	G. Becker	293,009	Mar. 11	954	260	26	999

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
End-gate. Wagon	H. W. Gier and F. T. Fincke	295,750	Mar. 25	1792	497	26	1171
End-gate. Wagon	J. D. Mack	292,931	Feb. 5	195	53	26	478
End-gate. Wagon	H. P. Swensen	292,385	Jan. 22	1726	481	26	333
Engine: *See* Cylinder-engine. Dental engine. Fire-engine. Gas-engine. Gas-motor engine. Hot-air engine. Hot-air or gas engine. Locomotive steam-engine. Oscillating engine. Pumping-engine. Rotary engine. Rotary steam-engine. Steam-engine. Traction-engine. Wind-engine.							
Engine	S. N. Silver	291,543	Jan. 8	667	189	26	126
Engine reversing-link	W. E. Karns	292,018	Jan. 15	1260	353	26	242
Engraving-machine	I. R. Beam	295,853	Mar. 25	1922	531	26	1195
Envelope	G. B. Post	291,079	Jan. 1	77	22	26	17
Envelope	E. J. Trum	295,598	Mar. 25	1599	443	26	1138
Envelope-machine	H. A. Mann, Jr.	291,614	Jan. 8	768	215, 216	26	144
Envelope or folding card	C. Sneider	295,450	Mar. 18	1393	386	26	1095
Eraser. Slate-	W. M. Whiting	294,295	Feb. 26	1963	538	26	808
Escapement-wheel	C. Votti	291,432	Jan. 1	517	146	26	93
Evaporating apparatus	M. P. Hayes	295,169	Mar. 18	1044	288	26	1029
Evaporating sirups, &c., and for clarifying the same. Apparatus for	D. D. Powers	293,782	Feb. 19	1288	357	26	682
Evaporator	A. Kayser	291,520	Jan. 8	639	181	26	121
Evaporator. Steam-heated	R. W. Turner	292,768	Jan. 29	2255	624	26	432
Excavating-machine	H. C. Carter	292,468	Jan. 29	1838	513	26	361
Excavating-machine	T. Clark	295,592	Mar. 25	1498	414	26	1119
Excavating-machine. Hydraulic	S. M. Mansfield	292,024	Jan. 15	1266	354	26	243
Excavator	A. J. Snider and A. L. Kulp	295,451	Mar. 18	1394	386	26	1095
Excavator and embankment-builder. Earth-	M. J. Mulvihill and J. D. Tinney	295,128	Mar. 11	985	270, 271	26	1005
Excavator and land-leveler	B. M. Hague	292,535	Jan. 29	1963	547	26	381
Excavator, separator, and assorter. Sand and gravel	N. W. Godfrey	294,867	Mar. 11	649	180, 181	26	947
Expansible drill	O. Allen	294,302	Feb. 26	1973	539	26	809
Extractor: *See* Cartridge ring-extractor. Spike-extractor. Staple-extractor. Tenon-extractor.							
Eye-guard. Flexible air-tight	D. Genese	295,242	Mar. 18	1142	315	26	1045
Eyeglasses	I. Fox	292,479	Jan. 29	1849	515	26	363
Eyeglasses	J. S. Spencer	292,959	Feb. 5	225	62	26	494
Eyeglasses	D. L. Tice	292,073	Jan. 15	1320	369	26	254
Eyelet	C. K. Pickles	294,265	Feb. 26	1924	527	26	800
Eyelet-stitching machine	C. J. A. Sjoberg	291,855	Jan. 8	1053	294, 295	26	194
Fabric. Compound	F. H. Holbrook	293,878	Feb. 19	1417	391	26	705
Fan. Blast or exhaust	G. M. Capell and G. S. Macbean	291,493	Jan. 8	603	170	26	115
Fan. Rotary	C. E. Tunelius	293,286	Feb. 12	670	179	26	564
Fare-box	J. F. Goodridge	294,462	Mar. 4	155	42	26	856
Fare-box	T. B. Stewart	293,811	Feb. 19	1330	369	26	689
Fare-register	H. Marshall	295,781	Mar. 25	1833	510	26	1180
Fare-register	J. H. Rose	295,201	Mar. 18	1087	299	26	1036
Fare register or recorder	R. M. Rose	295,051	Mar. 11	888	243	26	988
Farm-gate	C. J. Doane	291,994	Jan. 15	1234	344	26	237
Farm-gate	W. C. Kleker	291,059	Jan. 1	53	15, 16	26	13
Fastening-clasp	L. Hill	293,247	Feb. 12	616	164	26	555
Fastening for wearing-apparel	P. Ladin	293,041	Feb. 5	323	89	26	501
Fatty acids. Solidifying liquid or semi-liquid	W. F. M. McCarty	292,609	Jan. 29	2108	.....	26	405
Faucet	A. A. Bennett	291,135	Jan. 1	152	44, 45	26	30
Faucet	J. H. Dorgan	291,883	Jan. 15	1099	306, 307	26	212
Faucet	P. Huff	292,489	Jan. 29	1864	521	26	366
Faucet	J. N. Knapp	292,273	Jan. 22	1532	429	26	296
Faucet and tap valve. Combined	K. C. Gillette	294,610	Mar. 4	331	92	26	885
Faucet attachment	L. Dankhoff	291,161	Jan. 1	185	53	26	35
Faucet-screw	M. O'Connor	295,794	Mar. 25	1850	514	26	1183
Faucet. Self-closing	S. and S. L. Barker	291,668	Jan. 8	836	234	26	156
Faucet-socket	F. G. Kincaid and C. A. Chandler	291,603	Jan. 8	751	212	26	141
Feed-bag	J. W. Gedney	293,004	Feb. 5	281	78	26	493
Feed-bag for horses	G. W. Horne	293,250	Feb. 12	619	165	26	555
Feed-bag ventilator	F. Wheaton	294,421	Mar. 4	108	28	26	847
Feed-cutter	C. C. Smalley	292,192	Jan. 22	1455	408, 409	26	285
Feed mechanism	N. P. and J. W. Lehr	294,739	Mar. 4	479	134	26	911
Feed-water heater	F. J. Korte	293,889	Feb. 19	1429	395	26	707
Feed-water heater	W. Rollar	291,538	Jan. 8	663	188	26	125
Feed-water heater	B. Webster	295,891	Mar. 25	1982	548	26	1205
Feed-water heater and purifier	J. H. Berkshire	293,692	Feb. 19	1073	297	26	645
Feed-water heating and purifying apparatus	N. A. T. Jones	294,786	Mar. 11	537	149	26	927
Feed-water purifier	W. K. Stevens	293,537	Feb. 12	971	265	26	619
Feed-water regulator	D. C. Walter	294,705	Mar. 4	441	123	26	904
Feed-water regulator and alarm	P. Brown and C. W. Johnston	292,435	Jan. 22	1796	501	26	346
Felly-boring and spoke-tenoning machine	E. M. Jenkins	294,628	Mar. 4	353	98	26	889
Felly-planing machine	S. T. Kennan	292,752	Jan. 29	2227	619	26	427
Felt bodies. Manufacture of smooth-faced napless	C. Vero and J. Everitt	291,431	Jan. 1	516	.....	26	93
Fence	L. A. Baker	294,106	Feb. 26	1718	472	26	766
Fence	I. M. Brown	294,721	Mar. 4	402	129	26	908
Fence	J. A. Grove	293,575	Feb. 12	1017	280	26	627
Fence	J. L. Manlove	292,823	Jan. 15	1205	354	26	243
Fence	J. W. Messenger	293,342	Feb. 12	740	198	26	577
Fence	F. Schmitz	295,679	Mar. 25	1702	471	26	1156

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Fence	N. Werts and W. Spicer	293,547	Feb. 12	983	269	26	622
Fence	W. F. and G. M. Zahniser	294,494	Mar. 4	111	29	26	848
Fence. Barbed	W. E. Brock	294,963	Mar. 11	757	211	26	967
Fence. Barbed	W. K. Gore	294,612	Mar. 4	333	92	26	885
Fence fastener. Wire-	C. E. Griffith	294,615	Mar. 4	336	93	26	886
Fence. Flood-	E. S. Garrett	293,003	Feb. 5	280	78	26	493
Fence. Flood-	W. Hodgen	291,346	Jan. 1	406	115	26	74
Fence. Flood-	I. McDougall	292,757	Jan. 29	2235	620, 621	26	429
Fence. Iron	T. Rogers	292,859	Feb. 5	98	27	26	461
Fence. Iron	T. Rogers	292,860	Feb. 5	99	28	26	461
Fence. Iron	T. Rogers	293,673	Feb. 19	1133	316, 317	26	656
Fence. Iron	T. Rogers	293,674	Feb. 19	1137	317	26	657
Fence machine. Barb-	C. C. Hill	291,902	Jan. 15	1118	312, 313, 355, 356	26	216
Fence machine. Barb-wire	M. A. Penney	293,778	Feb. 19	1282	391, 392	26	681
Fence. Portable	F. C. Renner	292,138	Jan. 15	1399	391, 392	26	268
Fence-post	E. D. Miner	294,493	Mar. 4	196	55	26	862
Fence-post	J. B. Ross	294,508	Mar. 4	211	59	26	865
Fence-post	F. S. Smith	292,141	Jan. 15	1402	393	26	269
Fence-post	R. J. Carson	293,225	Feb. 12	549	155	26	550
Fence-post. Iron or steel	J. D. Van Bibber	293,267	Feb. 12	671	180	26	564
Fence-staple driver	J. E. Pierce	295,501	Mar. 25	1860	517	26	1184
Fence stretcher and splicer. Wire-	J. H. Coon	292,205	Jan. 22	1490	419	26	290
Fence-wire. Applying barbs to	T. C. Lord	293,584	Feb. 12	1026	289	26	629
Fence-wire barb	A. W. Stevens	291,420	Jan. 1	503	141	26	90
Fence-wire. Barbed	H. Darlington	295,114	Mar. 11	970	264	26	1002
Fence-wire. Device for connecting and stretching	E. S. Lenox	295,565	Mar. 25	1561	432	26	1130
Fence-wire fastening	E. S. Lenox	295,566	Mar. 25	1561	432	26	1130
Fence-wire. Machine for making barbed	A. J. Upham	295,134	Mar. 11	997	274, 275	26	1007
Fence-wire. Manufacturing barbed	C. C. Hill	291,903	Jan. 15	1123	313	26	217
Fence wires and boards. Fastener for	C. E. Griffith	293,009	Feb. 5	285	79	26	494
Fence-wires. Machine for stretching and removing	J. N. Killough	291,743	Jan. 8	920	258	26	170
Fences. Machine for making wire and slat	W. Van Horn	293,382	Feb. 12	800	215	26	588
Fences. Strand-wire for barbed	H. B. Scott	292,688	Jan. 29	2130	592	26	400
Fencing. Barbed metal-strip	W. E. Brock	293,411	Feb. 12	837	226	26	595
Fencing. Barbed-wire	W. E. Brock	293,412	Feb. 12	838	226	26	595
Fencing. Guard for wire	R. Boone, Jr.	294,572	Mar. 4	929	80	26	878
Fencing. Machine for barbing metallic	H. L. Arnold	294,105	Feb. 26	1715	472	26	765
Fencing. Machine for making barb-link	F. P. Cady	292,406	Jan. 22	1754	480	26	338
Fermenting-room in distilleries	F. W. Wolf	293,294	Feb. 12	684	182	26	566
Ferro-cyanides. Manufacture of	G. De Vigne	291,163	Jan. 1	187	.....	26	35
Ferrule	G. E. Hopkins	295,399	Mar. 18	1339	373	26	1084
Ferrules. Machine for making coiled-wire	J. Crowfoot	291,496	Jan. 8	607	171	26	116
Fertilizer	D. R. Castleman	292,470	Jan. 29	1841	.....	26	361
Fertilizer-distributer	A. Mekenney	292,672	Jan. 29	2119	587	26	406
Fertilizer-distributer	A. Reger	292,852	Feb. 5	88	24	26	459
Fertilizers. Apparatus for making	A. Von Podewils	295,695	Mar. 25	1721	476, 477, 478, 479	26	1159
Fertilizing-machine	G. W. Harkey	295,387	Mar. 18	1324	369	26	1081
Fiber-drying machine	F. G. and A. C. Sargent	294,510	Mar. 4	213	60	26	866
Fibers from fiber-bearing substances. Machine for obtaining	E. L. Lowe, Jr	292,240	Jan. 22	1545	432, 433	26	299
Fibers of plants. Machine for extracting and cleaning	P. Cohn	293,422	Feb. 12	847	229	26	597
Fifth-wheel	M. J. Rogers	294,915	Mar. 11	702	196	26	957
Fifth-wheel	W. H. Stickle	295,458	Mar. 18	1406	388, 389	26	1097
File	G. Custer	295,487	Mar. 18	1452	400	26	1105
File. Bill and letter	S. H. Fish	294,214	Feb. 26	1867	510	26	789
File-box	E. W. Byrn	291,574	Jan. 8	705	198	26	132
File-box	F. M. Senter	292,692	Jan. 29	2135	595	26	410
File box. Paper-	F. W. Pratt	294,268	Feb. 26	1926	528	26	801
File. Extension-	J. Gross	292,484	Jan. 29	1856	518	26	364
File-holder	W. H. Foster	293,645	Feb. 19	1100	305	26	650
File holder. Paper-	A. C. Schooley	294,279	Feb. 26	1940	532	26	804
File. Letter or bill	O. C. Mackenzie	291,752	Jan. 8	927	260	26	171
File. Letter or paper	W. R. Havens	295,391	Mar. 18	1327	370	26	1092
File. Paper-	L. A. McCord	294,651	Mar. 4	386	107	26	894
File. Paper-	C. W. Sherwood	295,591	Mar. 25	1591	440	26	1136
File. Paper-	M. Smith	291,237	Jan. 1	277	78	26	50
File. Paper-	W. Ball	291,863	Jan. 15	1075	300	26	207
Filter	E. L. Barber	295,327	Mar. 18	1249	346	26	1066
Filter	J. Durel	292,631	Jan. 29	2056	572	26	396
Filter	J. W. Hyatt	293,742	Feb. 19	1230	340, 341	26	673
Filter	J. W. Hyatt	293,743	Feb. 19	1231	341	26	673
Filter	J. W. Hyatt	293,744	Feb. 19	1233	342	26	674
Filter	J. W. Hyatt	293,745	Feb. 19	1234	342	26	674
Filter	J. T. A. Lewis and C. A. Wolff	294,244	Feb. 26	1899	520	26	796
Filter	J. Toland	291,550	Jan. 8	676	192	26	128
Filter and cooler. Combined water	F. E. Cady	293,562	Feb. 12	1003	276, 277	26	625
Filter-case	E. S. Rich	293,519	Feb. 12	954	260	26	616
Filter. Floating	J. H. Breese	294,285	Jan. 1	335	94	26	61
Filter for water-coolers	A. Fiske	291,889	Jan. 15	1105	308	26	213
Filter. Water-	J. E. Heath	292,912	Feb. 5	164	45	26	473
Filter. Water-	J. Johnson	294,133	Feb. 26	1761	483, 484	26	772

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Filter. Water	J. Reid	291,083	Jan. 1	81	23	26	18
Filtering apparatus	J. W. Hyatt	293,750	Feb. 19	1246	{344 345}	26	676
Filtering material	I. S. Hyatt	293,741	Feb. 19	1229	340	26	673
Filtering or straining apparatus. Centrifugal	S. M. Lillie. (Reissue)	10,457	Mar. 4	493	138	26	914
Filtering water	J. W. Hyatt	293,892	Feb. 19	1420	393	26	705
Filtering water	J. W. Hyatt	293,893	Feb. 19	1421	393	26	706
Filtration	J. W. Hyatt	293,746	Feb. 19	1235	342	26	674
Filtration	J. W. Hyatt	293,747	Feb. 19	1238	342	26	675
Filtration	J. W. Hyatt	293,748	Feb. 19	1240	{343 344}	26	675
Filtration	J. W. Hyatt	293,749	Feb. 19	1245	344	26	675
Finger-ring	H. Henrich	293,874	Feb. 19	1413	390	26	704
Finger-ring	H. Henrich	293,875	Feb. 19	1414	391	26	704
Finger-ring	C. Staiger	293,985	Feb. 19	1552	427	26	729
Finger-ring	O. Thie	292,963	Feb. 5	229	63	26	484
Finger-ring. Adjustable	B. Lewkowitz	293,044	Feb. 5	325	90	26	502
Finger-ring gage	F. D. McDowell	291,373	Jan. 1	438	124	26	80
Finger-rings, bracelets, &c. Lock for adjusting	F. J. Schindler	294,277	Feb. 26	1938	532	26	803
Fire-alarm and fire-extinguisher system. Electric	C. E. Buell	294,008	Feb. 26	1578	{437 438}	26	743
Fire-alarm. Automatic	J. Hill	295,760	Mar. 25	1804	501	26	1174
Fire-alarm. Electric	J. Hill	295,759	Mar. 25	1800	{500 501}	26	1173
Fire and police alarm. Combined	J. C. Henry	295,249	Mar. 18	1153	{318 319}	26	1048
Fire-arm	D. S. Cole	291,153	Jan. 1	173	51	26	33
Fire-arm. Breech-loading	W. E. Budd	291,980	Jan. 15	1213	339	26	234
Fire-arm. Breech-loading	N. R. Davis	293,719	Feb. 19	1203	333	26	669
Fire-arm. Breech-loading	F. Schrand	295,437	Mar. 18	1378	{382 383}	26	1092
Fire-arm. Breech-loading	H. Updegraff	291,111	Jan. 1	120	34	26	24
Fire-arm. Electric	A. T. Brown	291,288	Jan. 1	338	95	26	61
Fire-arm magazine	J. P. Lee and L. P. Dias	295,563	Mar. 25	1556	431	26	1129
Fire-arm. Magazine	J. M. Clough	294,581	Mar. 4	299	82	26	879
Fire-arm. Magazine	W. H. Elliot	293,315	Feb. 12	708	189	26	570
Fire-arm. Magazine	J. Leemann	295,564	Mar. 25	1557	432	26	1129
Fire-arm. Magazine	W. Mason	295,031	Mar. 11	861	236	26	983
Fire-arm shield	J. Hunter	295,013	Mar. 11	840	230	26	980
Fire-arm sight	W. Plettner	295,425	Mar. 18	1367	379	26	1050
Fire-arm sighting attachment	H. C. Cushing	294,770	Mar. 11	520	145	26	924
Fire-arms. Recoil mechanism for	J. P. Onderdonk	294,402	Mar. 4	82	21	26	843
Fire. Device for cutting off the flow of gas, &c., in case of	J. A. Laemle	291,061	Jan. 1	55	16	26	13
Fire-engine	W. F. Baldwin	292,276	Jan. 22	1591	444	26	306
Fire-escape	N. R. Baar, C. J. and I. R. Coe	293,215	Feb. 12	577	152	26	548
Fire-escape	B. F. Bennett	295,221	Mar. 18	1116	308	26	1041
Fire-escape	D. Bennett	293,137	Feb. 5	463	123	26	523
Fire-escape	V. Bessier	295,477	Mar. 18	1433	396	26	1102
Fire-escape	G. M. Bird	293,845	Feb. 19	1378	380	26	698
Fire-escape	Y. W. Blanchard	295,723	Mar. 25	1757	488	26	1165
Fire-escape	F. A. Bone	294,109	Feb. 26	1720	473	26	766
Fire-escape	N. H. Borgfeldt	294,360	Mar. 4	25	7	26	833
Fire-escape	R. W. Bradley	293,707	Feb. 19	1183	329	26	665
Fire-escape	T. Brooke	292,981	Feb. 5	252	69	26	488
Fire-escape	R. A. Bush	294,848	Mar. 11	623	173	26	942
Fire-escape	S. D. Butler	293,627	Feb. 19	1060	299	26	646
Fire-escape	J. M. Chesnut	295,112	Mar. 11	967	264	26	1001
Fire-escape	A. L. Clark	292,411	Jan. 22	1761	490	26	339
Fire-escape	R. P. Clark	292,969	Feb. 5	259	71, 72	26	490
Fire-escape	A. S. Carrier	292,414	Jan. 22	1764	491	26	340
Fire-escape	H. E. Doren	292,548	Jan. 29	1956	545	26	379
Fire-escape	R. E. Downie	295,527	Mar. 25	1503	415	26	1119
Fire-escape	E. Dyre	294,860	Mar. 11	641	178	26	945
Fire-escape	A. Fischer	291,319	Jan. 1	382	107	26	69
Fire-escape	W. H. Glenn	291,333	Jan. 1	395	111	26	72
Fire-escape	L. J. Gott	295,631	Mar. 25	1640	455	26	1144
Fire-escape	W. N. Griswold	293,322	Feb. 12	717	192	26	572
Fire-escape	J. T. Guthrie	292,903	Feb. 5	33	9	26	449
Fire-escape	G. R. Jenkins	294,629	Mar. 4	354	98	26	899
Fire-escape	W. Jensen	294,239	Feb. 26	1894	518	26	795
Fire-escape	E. R. Johnson	294,879	Mar. 11	650	184	26	949
Fire-escape	J. A. Johnson	291,910	Jan. 15	1131	315	26	219
Fire-escape	S. J. Joyce	293,177	Feb. 5	518	137	26	532
Fire-escape	H. Kafka	291,198	Jan. 1	234	64, 65	26	42
Fire-escape	C. Kehr	291,601	Jan. 8	745	210	26	140
Fire-escape	W. F. Kientoff and P. Bertemes	291,060	Jan. 1	54	16	26	13
Fire-escape	G. M. Kiu	292,925	Feb. 5	57	15, 16	26	459
Fire-escape	C. A. Knauer	292,322	Jan. 22	1642	459	26	316
Fire-escape	N. Lennards	292,328	Jan. 22	1648	461	26	317
Fire-escape	T. P. Letton	294,887	Mar. 11	674	188	26	952
Fire-escape	A. W. Lozier	295,570	Mar. 25	1566	434	26	1131
Fire-escape	A. S. Miller	291,378	Jan. 1	447	{126 127}	26	81
Fire-escape	W. M. Miller	295,127	Mar. 11	984	270	26	1005
Fire-escape	O. G. Moore and M. H. Marcus	291,756	Jan. 8	932	261	26	172
Fire-escape	S. Norris	292,134	Jan. 15	1395	390	26	268
Fire-escape	R. B. Parrott	295,047	Mar. 11	879	241	26	986
Fire-escape	T. B. Peacock	293,072	Feb. 5	364	99	26	508
Fire-escape	E. A. C. Petersen	294,908	Mar. 11	696	194	26	956
Fire-escape	D. C. Pierce	291,532	Jan. 8	654	{185 186}	26	124
Fire-escape	D. C. Pierce	293,352	Feb. 12	754	201	26	579
Fire-escape	H. Poole	295,278	Mar. 18	1188	329	26	1055

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Fire-escape	H. Resley	295,430	Mar. 18	1372	{380 381}	26	1091
Fire-escape	J. C. Richberg and D. Brobston	292,855	Feb. 5	94	26	26	460
Fire-escape	C. A. Roberts	294,275	Feb. 26	1935	531	26	803
Fire-escape	M. Scholl	295,203	Mar. 18	1091	301	26	1037
Fire-escape	J. Steinwender	293,680	Feb. 19	1145	319	26	659
Fire-escape	R. Stevenson	292,767	Jan. 29	2254	624	26	431
Fire-escape	J. Stever	294,522	Mar. 4	225	63, 64	26	868
Fire-escape	J. Stever	294,523	Mar. 4	226	64	26	868
Fire-escape	H. C. Stockham and J. Adams	291,240	Jan. 1	280	78	26	51
Fire-escape	J. C. Stoddard	292,265	Jan. 22	1578	441	26	304
Fire-escape	S. J. Stofer	291,423	Jan. 1	508	143	26	91
Fire-escape	C. M. Travis and C. H. Stibolt	292,148	Jan. 15	1409	395	26	270
Fire-escape	F. J. Underwood	292,769	Jan. 29	2255	624	26	432
Fire-escape	J. Usborne	293,689	Feb. 19	1156	323	26	661
Fire-escape	C. A. Van Wagener	295,212	Mar. 18	1102	305	26	1039
Fire-escape	F. W. Voigt	291,245	Jan. 1	284	80	26	52
Fire-escape	C. Von der Linden	295,405	Mar. 18	1414	391	26	1098
Fire-escape	A. Walker	295,313	Mar. 18	1233	342	26	1063
Fire-escape	G. W. Watts	291,441	Jan. 1	536	149	26	95
Fire-escape	W. Wise	295,320	Mar. 18	1241	344	26	1064
Fire-escape	W. S. French	291,326	Jan. 1	389	109	26	70
Fire-escape and alarm	I. G. Morgan	291,481	Jan. 1	581	{163 164}	26	104
Fire-escape and hook-and-ladder carriage	J. B. Robertson	291,940	Jan. 15	1167	326	26	225
Fire-escape and self-preserver	M. E. Jones	294,892	Mar. 11	667	186	26	950
Fire-escape. Bed-spring	C. Murdock	293,191	Feb. 5	536	142	26	535
Fire-escape bracket	P. Kingston	294,625	Mar. 4	359	100	26	890
Fire-escape. Extensible	A. J. Bartlett	292,531	Jan. 29	1926	539	26	375
Fire-escape ladder	A. M. Downing	293,153	Feb. 5	479	128	26	526
Fire-escape ladder. Folding	F. W. Hofele	294,319	Feb. 26	1995	{545 546}	26	813
Fire-escape. Permanent	T. Clarke	291,688	Jan. 8	860	240	26	160
Fire-escape. Portable	T. Clarke	291,689	Jan. 8	862	241	26	160
Fire-escape protector and supporter	H. Fairbanks	291,586	Jan. 8	727	204	26	136
Fire extinguisher and alarm	C. E. Buell	294,308	Feb. 26	1980	541	26	811
Fire-extinguisher. Automatic	C. L. Horack	292,432	Jan. 22	1793	500	26	346
Fire-extinguishing apparatus	J. K. J. Foster	291,324	Jan. 1	387	108	26	70
Fire-kindler mold	C. E. Paddock	293,773	Feb. 19	1277	353	26	681
Fire-pot and lining	S. T. Bryce	292,983	Feb. 5	254	69	26	489
Fire-proof compound	L. Felldin	291,176	Jan. 1	201	.....	26	37
Fire-proof sheet	J. Nagel	292,037	Jan. 15	1280	358	26	246
Fish-box	C. A. Bergtold	295,517	Mar. 25	1493	412	26	1118
Fish. Live-box for	R. A. Lindsay	292,123	Jan. 15	1381	387	26	265
Fish-net lines. Machine for casting leads on	E. Mannis	295,262	Mar. 18	1170	324	26	1051
Fish-package	R. S. Jennings	291,195	Jan. 1	229	63, 64	26	41
Fishing-fly book	C. G. Levison	294,888	Mar. 11	675	188	26	952
Fishing-rod reel-fastening	G. L. Bailey	294,429	Mar. 4	116	30	26	849
Flanging-machine	R. C. Nugent	291,620	Jan. 8	775	{217 218}	26	145
Flask: *See* Molder's flask.							
Floating elevator	W. S. Brice	293,625	Feb. 19	1077	{298 299}	26	645
Flood-gate	J. A. Galloway	291,327	Jan. 1	390	109	26	71
Floor	C. R. Brothwell	295,461	Mar. 18	1441	398	26	1104
Floor-jack	T. L. Wilber	291,824	Jan. 8	1010	283	26	186
Floor-mat	S. Toffier	295,839	Mar. 25	1904	527	26	1192
Flour-bolt brush	T. McCudden	294,896	Mar. 11	683	190	26	954
Flour, bran, &c. Packer for	J. and B. C. Frysinger	293,859	Feb. 19	1395	386	26	701
Flour-dressing machine	J. M. Schutz	292,259	Jan. 22	1571	439	26	303
Flour-packing machine	A. C. Hartzoke	291,593	Jan. 8	735	207	26	138
Flue and pipe welder and fitter	J. C. Fleck and W. Herring	291,707	Jan. 8	882	248	26	164
Fluid-meter	H. Frost	293,317	Feb. 12	711	{190 191}	26	571
Fluids and oils. Treating volatile and inflammable	S. M. Eiseman	294,978	Mar. 11	786	.....	26	972
Fly-paper. Manufacture of	E. F. Baker	295,220	Mar. 18	1115	.....	26	1041
Fly-screen	J. I. Spencer	293,915	Feb. 19	1462	404	26	713
Fly-wheel	R. W. Whitney	295,215	Mar. 18	1105	306	26	1040
Fodder-cutter, corn-sheller, and feed-mill. Combined	I. P. Woodard	294,423	Mar. 4	110	29	26	848
Fog-alarm	A. H. Sherman	294,918	Mar. 11	705	197	26	958
Foil. Making rolled metallic	H. S. and L. Crooke	294,725	Mar. 4	465	.....	26	909
Folding box	G. Lusby	292,833	Feb. 5	69	19	26	455
Folding box	H. C. Underwood	295,311	Mar. 18	1231	342	26	1063
Folding case	A. Traver	294,938	Mar. 11	725	203	26	961
Folding chair	J. Hill	294,234	Feb. 26	1868	516	26	794
Folding chair	J. S. Mackaye	295,261	Mar. 18	1168	323	26	1050
Folding seat	J. E. Wakefield	293,384	Feb. 12	804	216	26	589
Folding table	E. C. D. Kirkpatrick	292,657	Jan. 29	2068	581	26	402
Folding table	N. H. Long	291,525	Jan. 8	647	184	26	123
Folding table	W. W. Quigley	295,673	Mar. 25	1696	469	26	1155
Folding table	H. Crawford and J. M. Long	295,360	Mar. 18	1292	358	26	1074
Food-cooler. Hoisting	G. W. Wemple and B. W. Child	293,692	Feb. 19	1162	324	26	662
Foot-weight	H. Hammond	295,547	Mar. 25	1532	425	26	1125
Forging hammers. Die for							
Fork: *See* Hay-fork. Hay-tedder fork.							
Form. Adjustable clothing	W. Leigh	295,025	Mar. 11	853	233	26	982
Frame: *See* Chart-frame. Hot-air-register frame. Embroidery-frame. Quilting-frame. Harvester frame. Saw-mill frame.							
Frame for diplomas and credit-cards	A. W. McArthur	291,921	Jan. 15	1149	320	26	922
Fruit and vegetable washer	J. Baker	295,715	Mar. 25	1749	486	26	1163
Fruit-basket fastener	C. H. Johnson	295,017	Mar. 11	845	231	26	981

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Fruit cutting and pitting machine	C. Allison	293,841	Feb. 19	1372	379	26	696
Fruit-drier	H. Fitts	291,320	Jan. 1	383	107	26	69
Fruit-drier	C. J. Geiger	295,382	Mar. 18	1319	367	26	1080
Fruit-drier	T. J. Pearce	293,073	Feb. 5	364	99	26	509
Fruit-drying rack	E. M. Bellinger	292,199	Jan. 22	1473	415	26	288
Fruit-jar	G. W. Gomber	295,244	Mar. 18	1145	315	26	1046
Fruit-package cover	J. Harris	293,456	Feb. 12	885	240	26	604
Fruit-picker	F. A. Moore	292,936	Feb. 5	202	55	26	479
Fruit-picker	G. A. Smith	291,792	Jan. 8	971	272	26	180
Fruit-press	B. J. Curry	293,635	Feb. 19	1089	302	26	648
Fruit, vegetable, and meat can	J. Baker	295,716	Mar. 25	1750	486	26	1164
Fuel. Apparatus for feeding and consuming fine	J. Leede	292,237	Jan. 22	1537	430, 431	26	297
Furnace: *See* Blast-furnace. Boiler-furnace. Coking-furnace. Cupola-furnace. Desulphurizing-furnace. Gas-furnace. Gas-producing furnace. Gas-retort furnace. Glass-furnace. Hydrocarbon-furnace. Metallurgical furnace. Ore-furnace. Ore-roasting furnace. Puddling-furnace. Regenerator-furnace. Retort deoxidizing-furnace. Roverberatory ore-furnace. Roasting-furnace. Smoke and gas consuming furnace. Vapor and gas generating furnace.							
Furnace	V. Colllau	295,355	Mar. 18	1284	356	26	1073
Furnace	K. M. Jarvis	293,906	Feb. 19	1532	421	26	726
Furnace	C. McMillan	295,188	Mar. 18	1071	295	26	1033
Furnace	H. C. Williamson	294,556	Mar. 4	273	74	26	875
Furnace fire-grate and frame	H. W. Loveland	293,258	Feb. 12	608	167	26	557
Furnace for burning garbage, roasting ores, &c	G. B. N. Tower	293,821	Feb. 19	1342	373	26	691
Furnace for heating billets	F. H. Daniels	294,370	Mar. 4	37	11	26	836
Furnace for heating blanks	G. H. Webb	291,967	Jan. 15	1198	335	26	231
Furnace for treating ores continuously	A. M. G. Sébillot	292,690	Jan. 29	2132	593	26	410
Furnace-grate	M. C. Jones	292,492	Jan. 29	1869	522	26	367
Furnace-grate	J. A. Price	293,273	Feb. 12	655	175	26	561
Furnace-grate	J. A. Price and D. Wright	293,274	Feb. 12	656	176	26	561
Furnace-grate. Self-clearing	J. C. Jones	292,230	Jan. 22	1529	426	26	296
Furnace-joint	E. C. Condit	292,537	Jan. 29	1938	542	26	377
Furnace-month	T. O'Brien	291,763	Jan. 8	938	263	26	173
Furnaces. Apparatus for consuming smoke in	J. Elliott	293,496	Feb. 12	864	234	26	600
Furnaces. Device for indicating the temperature in annealing	M. A. Lhuissier	292,497	Jan. 29	1874	523	26	368
Furnaces. Fume-condensing attachment for ore-	E. M. Alderman	291,462	Jan. 1	559	158	26	100
Furnaces. Manufacture of non-calcareous linings for metallurgical	J. Reese	292,508	Jan. 29	1885	.....	26	370
Furnaces. Mechanism for introducing tubes into	E. W. Wolfe	291,454	Jan. 1	549	155	26	98
Furnaces. Pig-carrier for blast-	F. W. Gordon	291,507	Jan. 8	624	176	26	119
Furnaces. Revolving cylinder for	S. G. Sackett	293,676	Feb. 19	1140	318	26	658
Furniture. Folding-joint for camp-	P. Latour	291,069	Jan. 1	56	16	26	13
Gaff-support for vessels	G. I. Field	294,980	Mar. 11	789	218	26	972
Gage: *See* Boring-gage. Finger-ring gage. Liquid or water gage. Pipe-threading-machine gage. Plane-bit gage. Plow-gage. Pressure-gage. Saw-mill gage. Sawyer's gage. Splitting-gage. Steam-gage. Thickness-gage.							
Gage	J. H. Fenety	292,551	Jan. 29	1958	546	26	380
Gage attachment for boring-bits, &c	J. Fuller, Sr	294,985	Mar. 11	795	220	26	974
Galvanic battery	H. J. Brewer	291,871	Jan. 15	1085	302	26	310
Galvanic battery	T. J. Howell	292,433	Jan. 22	1794	500	26	346
Galvanic battery	C. Pabst	295,671	Mar. 25	1693	469	26	1154
Galvanic battery	O. C. D. Ross	294,335	Feb. 26	2014	552, 553	26	817
Galvanic-battery cell. Sealed	W. T. McGinnis	295,574	Mar. 25	1574	435	26	1133
Galvanometer	A. K. Eaton	292,161	Jan. 22	1430	401	26	281
Game apparatus	T. Davies	292,899	Feb. 5	148	40	26	470
Game apparatus	G. A. Lilliendahl	292,563	Jan. 29	1973	550	26	382
Game apparatus, calendar, and clock	W. Cooper	294,586	Mar. 4	306	85	26	880
Game apparatus. Pistol-	J. R. Mestier	294,491	Mar. 4	195	54	26	862
Game board and counter	T. Dougherty	295,488	Mar. 18	1432	400	26	1105
Game. Checker and base-ball combination	H. S. Towner	292,709	Jan. 29	2156	600	26	414
Game. Musical	W. L. Hofer	292,312	Jan. 22	1631	456	26	314
Game-register and trump-indicator	G. W. Hyatt	291,349	Jan. 1	410	116	26	75
Games or deals played at cards, &c. Apparatus for checking and registering the number of	G. F. Howard	291,656	Jan. 1	49	14, 15	26	12
Garment attachment	C. D. Spence	294,686	Mar. 4	419	117	26	901
Garment-supporter	T. White	291,252	Jan. 1	292	82	26	53
Garter	R. Mitchell	294,656	Mar. 4	390	109	26	895
Gas and electric-light fixture. Combined	L. Stieringer	294,697	Mar. 4	431	120	26	903
Gas and water regulator	A. E. Cohn	292,536	Jan. 29	1937	541	26	377
Gas apparatus	A. O. Granger	295,118	Mar. 11	974	267	26	1003
Gas. Apparatus for making	A. Wilson	292,081	Jan. 15	1332	372, 373	26	256
Gas. Apparatus for making	A. Wilson	292,082	Jan. 15	1333	373, 374	26	257
Gas. Apparatus for manufacturing	J. L. Stewart. (Reissue)	10,436	Jan. 8	1064	297	26	196
Gas. Apparatus for manufacturing	B. Van Steenbergh	294,534	Mar. 4	242	68	26	871

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Gas. Apparatus for manufacturing illuminating	J. J. Shedlock	295,922	Mar. 25	1883	522	26	1188
Gas. Apparatus for producing and burning	L. D. York	294,301	Feb. 26	1971	539	26	809
Gas. Apparatus for the manufacture and delivery of heating and illuminating	W. H. Adams	291,860	Jan. 15	1069	299	26	207
Gas. Apparatus for the manufacture of illuminating	W. H. Douglass	293,854	Feb. 19	1388	383	26	700
Gas. Apparatus for producing	G. W. Billings	292,622	Jan. 29	2047	569	26	395
Gas-burner	A. B. Lipsey	291,480	Jan. 1	580	163	26	103
Gas-burner	J. G. Sanderson	292,766	Jan. 29	2252	624	26	431
Gas-burner for heating purposes	T. Fletcher	291,475	Jan. 1	573	161	26	102
Gas. Condenser-scrubber for	C. W. Isbell	293,884	Feb. 19	1422	393, 394	26	706
Gas. Device for checking the flow of	E. E. Marass	291,369	Jan. 1	435	123	26	79
Gas-engine	J. Charter	292,894	Feb. 5	140	38	26	469
Gas-engine	C. W. King and A. Cliff	293,179	Feb. 5	520	138	26	532
Gas-engine	H. S. Maxim	295,784	Mar. 25	1838	511	26	1180
Gas-engine	J. A. Menck and A. Hambrock	295,415	Mar. 18	1355	377	26	1087
Gas-engine	A. K. Rider	292,178	Jan. 22	1450	407	26	284
Gas engine. Explosive	J. T. Morgan and H. F. Hayden	295,502	Mar. 18	1465	404	26	1107
Gas-furnace	J. T. Morgan and H. F. Hayden	291,386	Jan. 1	460	129, 130	26	83
Gas-furnace for metallurgic and other purposes, and operating the same	D. M. Small	291,948	Jan. 15	1175	328	26	226
Gas-generator	C. E. Ball and C. S. Bradford, Jr	291,463	Jan. 1	560	158	26	100
Gas generator. Electric	J. Flannery	294,602	Mar. 4	321	89	26	883
Gas generator. Hydrocarbon	J. Flannery	294,802	Mar. 11	644	179	26	940
Gas-lighter. Electric	E. L. Shute	295,059	Mar. 11	901	246, 247	26	990
Gas-lighter. Electro-magnetic	E. H. Jenkins	293,330	Feb. 12	726	194	26	574
Gas-motor	H. S. Maxim	291,065	Jan. 1	59	17	26	14
Gas-motor	H. S. Maxim	293,762	Feb. 19	1961	349, 350	26	678
Gas-motor	J. Spiel	291,102	Jan. 1	109	30, 31	26	22
Gas-motor engine	J. Schweizer	292,864	Feb. 5	103	29	26	462
Gas-pressure regulator	L. G. Francis and J. A. Tibbs	295,532	Mar. 25	1511	417	26	1121
Gas. Process of and apparatus for making coal	A. Stamm	291,417	Jan. 1	501	140	26	89
Gas. Process of and apparatus for manufacturing	J. L. Stewart	291,421	Jan. 1	504	141, 142	26	90
Gas. Process of and apparatus for manufacturing	J. L. Stewart	295,832	Mar. 25	1893	525	26	1190
Gas-producer	J. Zellweger	292,394	Jan. 22	1736	484	26	335
Gas-producer	J. Zellweger	292,395	Jan. 22	1738	484	26	335
Gas-producing furnace	N. M. Langdon	294,796	Mar. 11	553	153, 154	26	930
Gas. Purification of coal	J. T. McDougall	292,541	Jan. 22	1665	.....	26	320
Gas-purifier screen or grid	J. Cabot	292,984	Feb. 5	255	70	26	489
Gas-purifying box	C. W. Isbell	291,190	Jan. 1	222	62	26	40
Gas-regulator	P. Keller	292,459	Jan. 22	1822	508	26	351
Gas-retort furnace	I. N. Stanley and W. A. Stedman	293,107	Feb. 5	406	110	26	516
Gas-scrubber	C. W. Isbell	292,491	Jan. 29	1867	522	26	361
Gases and steam. Apparatus for separating liquids from	W. H. Wood and G. Richmond	294,300	Feb. 26	1970	539	26	809
Gases for motors. Heating and controlling	G. E. Haight, W. H. Wood, and W. E. Winsor	292,428	Jan. 22	1789	499	26	345
Gaseous fuel. Apparatus for generating and purifying	S. Lloyd	294,646	Mar. 4	379	105	26	893
Gasoline-vapor burner	T. Johnson	293,032	Feb. 5	314	86	26	499
Gate: *See* End-gate. Farm-gate. Flood-gate. Railway-gate. Railway-crossing gate. Railway-crossing safety-gate. Water-gate.							
Gate	W. Bruce	292,405	Jan. 22	1750	487	26	337
Gate	D. Collins	294,853	Mar. 11	629	174	26	943
Gate	G. M. Custer	294,971	Mar. 11	778	215	26	970
Gate	B. N. Eastman and C. F. Finkbeiner	294,861	Mar. 11	643	179	26	946
Gate	W. J. Hamilton	291,724	Jan. 8	899	252	26	167
Gate	N. B. Huffman	295,641	Mar. 25	1652	458	26	1147
Gate	I. L. Landis	291,205	Jan. 1	241	67	26	43
Gate	I. L. Landis	291,206	Jan. 1	242	67	26	44
Gate	H. H. Lockling	295,569	Mar. 25	1505	433	26	1131
Gate	J. R. Lowe	294,481	Mar. 4	177	49	26	859
Gate	R. E. Mason	293,659	Feb. 19	1116	310	26	653
Gate	D. B. Matlock	294,649	Mar. 4	382	106, 107	26	894
Gate	J. P. B. Rarey	295,428	Mar. 18	1370	380	26	1090
Gate	E. D. Rathbun	295,674	Mar. 25	1696	470	26	1155
Gate	D. E. Robinson	294,077	Feb. 26	1678	462	26	759
Gate	F. X. Schullian	294,814	Mar. 11	580	161	26	935
Gate	W. P. and C. E. Teeter	294,823	Mar. 11	590	164	26	937
Gate	J. Wheeler	292,455	Jan. 22	1818	507	26	350
Gate	T. Williams and W. A. Preston	291,858	Jan. 8	1057	296	26	195
Gate-operating apparatus	H. Ziegler	293,550	Feb. 12	987	270	26	622
Gear. Combined friction and cog	N. W. Speers, Sr	294,819	Mar. 11	587	163	26	936
Gear cutter. Bevel-	H. Bilgram	294,844	Mar. 11	617	171	26	941
Gearing	R. Campbell	292,791	Feb. 5	17	5	26	445
Gearing. Changeable-speed	S. W. Martin	293,761	Feb. 19	1260	349	26	678
Gearing for changing speed	S. N. Gallup	295,536	Mar. 25	1517	419	26	1122
Generator: *See* Electrical generator. Steam-generator. Gas-generator. Magneto-electric generator.							
Glass: *See* Cupping-glass. Drinking-glass.							
Glass. Apparatus for the application of compressed air to the manufacture of	A. A. and L. A. Appert	292,730	Jan. 29	2161	608	26	118
Glass articles. Snap for holding	H. C. Schrader	292,685	Jan. 29	2126	591	26	409
Glass-cutting apparatus	W. H. Walker	295,603	Mar. 25	1606	445	26	1139

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr'g.	Vol.	Page.
Glass. Decorated plate	J. J. Carroll	293,947	Feb. 19	1508	415	26	722
Glass-furnace	H. Gasmire	294,122	Feb. 26	1746	480	26	770
Glass globe	J. Locke. (Reissue)	10,446	Feb. 5	563	150	26	540
Glass inanlators. Press for molding	E. J. Murphy	291,072	Jan. 1	69	20	26	16
Glass. Manufacture of articles from	C. T. Mustin	293,977	Feb. 19	1543	425	26	728
Glass. Manufacturing	L. Knafft	295,410	Mar. 18	1350	.....	26	1066
Glass-mold	A. J. and J. J. Christie	292,156	Jan. 22	1422	399	26	280
Glass-molding press	A. A. and L. A. Appert	291,265	Jan. 1	313	88	26	57
Glassware. Decorating	J. S. Dignam	293,639	Feb. 19	1094	303	26	649
Glassware. Manufacture of ornamental	W. F. Russell	292,765	Jan. 29	2250	623	26	431
Glassware. Manufacture of spangled	W. Leighton, Jr	292,663	Jan. 29	2100	583	26	404
Glassware. Mold for pressed	W. Haley	292,007	Jan. 15	1250	350	26	241
Glassware, &c. Ornamentation of	V. Blithgen	293,408	Feb. 12	834	225	26	595
Globe and globe-support	J. Davis	292,158	Jan. 22	1425	400	26	280
Glove	S. O. Parker	293,068	Feb. 5	359	97, 98	26	508
Glove-fastener	A. Trouttet	292,450	Jan. 22	1812	505	26	349
Glove-fastening	J. B. Chase	291,877	Jan. 15	1093	305	26	212
Gloves. Die for cutting	G. A. Hathorn	293,872	Feb. 19	1410	390	26	703
Gloves, gaiters, &c. Fastener for	C. A. Pfenning	295,583	Mar. 25	1582	438	26	1135
Glover tower	M. A. Walsh	292,078	Jan. 15	1328	371	26	255
Glue-stock from bones, horn-pitbs, &c. Preparation of	E. F. Cruaé	291,302	Jan. 1	362	.....	26	65
Glycerine from fatty matters. Extracting	E. F. and E. N. Michaud	293,344	Feb. 12	742	.....	26	577
Gold and silver from their ores by combined electrolytic and amalgamating processes. Process of and apparatus for obtaining	M. Body	291,670	Jan. 8	838	235	26	156
Gold and silver ores. Roasting and amalgamating	E. O. and C. Francke	293,157	Feb. 5	492	.....	26	526
Gold by means of alkaline sulphides. Extracting	C. P. Williams	292,605	Jan. 29	2027	.....	26	392
Gong. Electric	J. Redding	293,980	Feb. 19	1546	426	26	729
Governor. Centrifugal	J. Selwig	292,512	Jan. 29	1899	530	26	371
Governor or shifting eccentric	D. W. Payne and C. R. Williams	294,070	Feb. 26	1669	460	26	758
Governor or shifting eccentric. Steam	D. W. Payne and C. R. Williams	294,069	Feb. 26	1668	460	26	757
Governor. Water-wheel	C. J. Shuttleworth	295,060	Mar. 11	902	247	26	990
Grading and ditching machine. Road	J. W. Otterman and C. A. R. L. Ver Genina.	294,330	Feb. 26	2007	550	26	816
Grain and fertilizer distributing apparatus	A. J. Martin	295,655	Mar. 25	1669	463	26	1150
Grain and flour sampler. Automatic	J. M. Finch	291,474	Jan. 1	571	161	26	102
Grain-binder	J. H. Anderson	295,711	Mar. 25	1746	485	26	1163
Grain-binder	E. M. Deane	291,497	Jan. 8	608	{171, 179}	26	116
Grain-binder	J. H. Gordon	293,649	Feb. 19	1104	{306, 307}	26	650
Grain-binder	H. Guyer and L. F. King	292,907	Feb. 5	158	43	26	472
Grain-binder	H. E. Pridmore	292,259	Jan. 22	1561	437	26	302
Grain-binder bundle-carrier	W. Collins	291,985	Jan. 15	1223	341	26	235
Grain-breaker and grinding-mill	J. M. Speer, Jr	291,634	Jan. 8	790	222	26	148
Grain-cleaner	E. Phelps	292,044	Jan. 15	1290	361	26	249
Grain-cleaning machine	F. E. Curtis and W. H. Helfrich	294,295	Feb. 26	1656	506	26	787
Grain-crushing roll	J. M. Case	293,306	Feb. 12	698	186	26	569
Grain-cutting machine	A. Wemple	295,699	Mar. 25	1729	481	26	1160
Grain-drier	W. H. Applegate	293,133	Feb. 5	458	122	26	522
Grain-drier	S. P. Cook	294,367	Mar. 4	35	10	26	835
Grain-drier	R. S. Jennings	295,643	Mar. 25	1654	{458, 459}	26	1147
Grain-drier	M. A. Sutherland	294,287	Feb. 26	1951	535	26	806
Grain-drill	M. F. and T. A. Foley	294,603	Mar. 4	323	90	26	884
Grain-drill	T. D. Gere	291,183	Jan. 1	215	59, 60	26	39
Grain-drill	H. H. Koeller	292,235	Jan. 22	1534	430	26	297
Grain-drill	A. N. Norris	293,062	Feb. 5	348	95	26	506
Grain-drill	H. P. Tenant	291,809	Jan. 8	994	279	26	183
Grain-drill roller attachment	J. M. Wishart and W. F. Buzick	293,389	Feb. 12	811	218	26	590
Grain. Machine for breaking or reducing	A. C. Nagel, E. H. Kaemp, and A. Linnenbrügge.	293,496	Feb. 12	927	252	26	611
Grain-sacker	R. H. Purnell	293,504	Feb. 12	1037	286	26	631
Grain-scourer	C. M. Gilbert	293,159	Feb. 5	485	130	26	527
Grain scourer and cleaner	R. H. Griffiths	294,225	Feb. 26	1879	514	26	792
Grain, &c. Separator for	F. L. Kidder	292,656	Jan. 29	2087	581	26	402
Grain-shoveler. Automatic	J. B. Pugh	294,333	Feb. 26	2011	552	26	817
Granary	R. M. Grier	293,574	Feb. 19	1016	279	26	627
Grapnel	H. C. Chester	295,359	Mar. 18	1281	355	26	1072
Grate	L. Baunister	291,864	Jan. 15	1076	300	26	208
Grate	D. M. Graham	292,215	Jan. 22	1509	424	26	293
Grate	J. G. Smith	295,063	Mar. 11	907	248	26	991
Grate-bar	W. H. Cambry	291,292	Jan. 1	348	98	26	63
Grate-bar	J. Mailer	292,337	Jan. 22	1661	463	26	319
Grater. Nutmeg	L. J. Church	295,736	Mar. 25	1774	493	26	1168
Greenhouse	E. M. Wood	293,696	Feb. 19	1166	{325, 326}	26	662
Grinding apparatus	J. S. Dronsfield	292,290	Jan. 22	1604	448	26	309
Grinding-machine	J. B. H. Leonard	291,609	Jan. 8	759	{213, 214}	26	143
Grinding-machine	J. H. Reed	291,537	Jan. 8	602	{187, 188}	26	125
Grinding-mill	J. Q. Adams	292,612	Jan. 29	2036	566	26	393
Grinding-mill	J. H. Bear	294,956	Mar. 11	749	209	26	966
Grinding-mill	W. E. Gorton	292,746	Jan. 29	2214	{616, 617}	26	425
Grinding-mill	D. Hess	294,735	Mar. 4	474	{132, 133}	26	910
Grinding-mill	H. Hungerford	295,764	Mar. 25	1809	502	26	1175
Grinding-mill	G. and A. Raymond	295,049	Mar. 11	882	242	26	987
Grinding-mill	E. Rhodes	294,673	Mar. 4	407	{112, 113}	26	898
Grinding-mill	S. C. Schofield	292,238	Jan. 22	1509	438	26	303
Grinding-mill	F. Wilson	292,524	Jan. 29	1914	536	26	373
Grinding-mill feed mechanism	E. C. Clark and A. Dewey	291,031	Jan. 1	21	6	26	6

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr'g.	Vol.	Page.
Grinding-mill. Roller	W. Ager	291,018	Jan. 1	3	1, 2	26	3
Grinding-mill roller	G. Van Name	291,654	Jan. 8	920	229	26	153
Grinding roll-bars. Device for	C. J. Bradbury	291,469	Jan. 1	566	160	26	101
Grindstone	E. R. Mason	292,242	Jan. 22	1548	433	26	299
Grindstone-dressing machine	F. Trier	295,081	Mar. 11	931	{254, 255}	26	996
Grindstone-truing machine	F. Trier	293,203	Feb. 5	550	{146, 147}	26	538
Guard: *See* Buckle-guard. Clutch-guard. Handle-guard. Hatchway-guard. Life-guard. Molding-machine guard. Molding-machine safety-guard. Rein-guard. Saw-guard.							
Guide-plate. Luminous	S. T. Ayres	292,090	Jan. 15	1341	376	26	258
Gun. Bomb	P. Cunningham	294,017	Feb. 26	1590	441	26	745
Gun-carriage	H. Gruson	295,245	Mar. 18	1146	{315, 316}	26	1046
Gun-carriage. Armor-plated	H. Gruson and M. Schumann	295,246	Mar. 18	1147	{316, 317}	26	1046
Gun. Magazine	A. H. Russell	295,285	Mar. 18	1196	332	26	1057
Gun. Magazine	A. H. Russell	295,286	Mar. 18	1199	333	26	1057
Gun-wad	M. S. Alexander	294,177	Feb. 26	1622	497	26	782
Gun-wad	J. W. Dennis	295,235	Mar. 18	1135	313	26	1044
Gun-wad	J. W. Dennis	295,234	Mar. 18	1133	312	26	1044
Gun-wad retainer	N. R. Davis	294,772	Mar. 11	921	145	26	925
Guns. Barrel-lock for breakdown	M. Campbell	294,309	Feb. 26	1982	541	26	811
Hair-crimper	H. P. Stultz	293,372	Feb. 12	785	210	26	585
Hair-dressing and wash for silks, laces, &c	J. P. Wathier	293,127	Feb. 5	450	120	26	521
Hair-spring studs. Gage for	E. Barnard	293,999	Feb. 26	1569	433	26	741
Halter	J. C. Lighthouse	291,365	Jan. 1	430	122	26	78
Halter	J. Roy and E. Waldt	294,061	Feb. 26	1684	463	26	760
Halter-weight	F. Frazer	291,325	Jan. 1	388	108	26	70
Hame	J. W. Hudson	295,012	Mar. 11	839	229	26	980
Hame	A. B. Conde	294,302	Feb. 26	1851	505	26	787
Hame-fastener	C. N. Hart	292,008	Jan. 15	1251	350	26	241
Hame-fastener	W. H. Johnson	293,655	Feb. 19	1111	308	26	652
Hame-fastener	B. F. Jones	295,496	Mar. 18	1460	402	26	1107
Hame-fastener	M. Noe	291,390	Jan. 1	465	131	26	83
Hame-fastener	A. A. Potter	293,516	Feb. 12	951	259	26	616
Hammer and tack-holder. Tack	J. Withington	292,608	Jan. 29	2032	565	26	392
Hammer-die	J. L. Painter	292,348	Jan. 22	1678	467	26	322
Hammer. Foot-power	W. D. Wood	293,611	Feb. 12	1057	292	26	634
Hammering-machine feed-table	E. C. Cook	292,204	Jan. 22	1489	418	26	290
Hammock-support. Portable	H. F. Osborne	294,802	Mar. 11	566	156	26	932
Hand-press							
Handle: *See* Detachable handle. Tool-handle. Saw-handle.							
Handle-covering	H. C. Milligan	294,492	Mar. 4	195	55	26	862
Handle for trunks, &c	G. S. Gates	294,988	Mar. 11	798	221	26	974
Handle guard. Ax and tool	G. P. Morrill	291,216	Jan. 1	251	71	26	45
Hanger: *See* Shafting-hanger.							
Hangers to ceilings. Implement for attaching	P. Lorillard, Jr	295,880	Mar. 25	1969	545	26	1203
Hangers to coats, &c. Machine for attaching and setting metallic	E. P. Haff and J. H. Walbridge	294,033	Feb. 26	1609	447	26	749
Harmony. Apparatus for use in studying	B. S. Maitland	294,139	Feb. 26	1768	{485, 486}	26	773
Harness	S. L. Bligh	294,005	Feb. 26	1576	436	26	742
Harness	J. T. Clarkson	293,950	Feb. 19	1512	417	26	723
Harness	S. Funk	292,742	Jan. 29	2203	614	26	423
Harness	G. H. Ingalls	295,642	Mar. 25	1652	458	26	1147
Harness	G. Thompson	291,812	Jan. 8	996	279	26	184
Harness	H. C. Babcock	293,700	Feb. 19	1175	328	26	664
Harness-covering	D. D. Briggs	295,344	Mar. 18	1273	353	26	1071
Harness-holder	S. B. Edson	295,374	Mar. 18	1308	363	26	1078
Harness-hook	J. M. Basinger	292,618	Jan. 29	2043	568	26	394
Harness loop	A. Coffman	293,421	Feb. 12	846	229	26	596
Harness-loop	E. R. Northcutt	292,844	Feb. 5	81	22	26	457
Harness-loop	F. Richeson	292,053	Jan. 15	1300	363	26	251
Harness-loop	J. Stanley and T. F. Lemassena	293,535	Feb. 12	968	264	26	619
Harness. Manufacture of portions of a	W. H. Felker	291,887	Jan. 15	1104	308	26	213
Harness-pad	A. Stenger	291,418	Jan. 1	502	141	26	90
Harness-rosette, door-plate, &c	E. E. Bostwick	291,869	Jan. 15	1083	302	26	210
Harrow	W. E. Budd	293,304	Feb. 12	696	186	26	568
Harrow	E. Y. Caldwell	292,985	Feb. 5	956	70	26	489
Harrow	J. H. Christy	294,011	Feb. 26	1583	439	26	744
Harrow	A. C Evans	291,174	Jan. 1	199	56	26	37
Harrow	J. L. Laughlin	294,393	Mar. 4	70	18	26	842
Harrow	I. Lemon	295,124	Mar. 11	981	269	26	1004
Harrow	S. Shoemaker	291,414	Jan. 1	498	139	26	89
Harrow	C. A. McElroy	294,652	Mar. 4	386	107	26	895
Harrow attachment	B. Clark	293,227	Feb. 12	591	156	26	550
Harrow for cultivating listed corn	C. La Dow	294,792	Mar. 11	546	151	26	929
Harrow or cultivator	J. Schindler	295,820	Mar. 25	1880	521	26	1187
Harrow or soil-pulverizer	D. W. Brown	294,112	Feb. 26	1724	474	26	767
Harrow. Rotary	J. H. Hoof	291,515	Jan. 8	633	179	26	120
Harrow. Rotary	W. W. Hill	291,906	Jan. 15	1125	314	26	218
Harrow-rudder	E. C. Comstock	291,840	Jan. 8	1033	288	26	190
Harrow. Spring-tooth	J. E. Beams	293,621	Feb. 19	1072	297	26	644
Harrow. Sulky	F. C. Merrill	292,836	Feb. 5	72	20	26	456
Harrow-tooth	P. B. Viele	294,292	Feb. 26	1958	537	26	807
Harrow-tooth	B. F. Eaton	291,038	Jan. 1	27	8	26	7
Harrow-tooth. Spring	T. D. Gere and B. Maltby	292,214	Jan. 22	1508	423	26	293
Harrow. Wheel	F. L. Rumble	293,520	Feb. 12	955	260	26	616
Harrow. Wheel							

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Harrow. Wheel	A. Scheaffer	292,955	Feb. 5	221	61	26	483
Harvester	S. C. Cobb and N. A. Wheeler	291,295	Jan. 1	351	99	26	63
					100		
Harvester	G. G. Crowley	292,209	Jan. 22	1496	421	26	291
					422		
Harvester	S. D. Locke	295,777	Mar. 25	1825	508	26	1178
					509		
Harvester	L. Miller	293,345	Feb. 12	743	198	26	577
Harvester	A. Robinson	293,358	Feb. 12	763	203	26	581
Harvester	C. S. Stickle	293,202	Feb. 5	549	146	26	538
Harvester and binder	C. Whitney and W. W. Marsh	295,510	Mar. 18	1478	407	26	1109
					408		
Harvester and husker. Corn	J. W. Terman	291,643	Jan. 8	802	226	26	150
Harvester. Clover-seed	H. H. Spears	292,377	Jan. 22	1717	479	26	331
Harvester. Corn	G. E. Allinder	294,715	Mar. 4	455	127	26	907
Harvester. Corn	J. Wagner and H. Dryer	295,602	Mar. 25	1604	444	26	1139
					445		
Harvester. Cotton	G. N. Todd	295,463	Mar. 18	1411	390	26	1099
					391		
Harvester. Cotton	F. L. Warner	291,438	Jan. 1	522	147	26	94
					148		
Harvester-cutting apparatus	E. D. Roth	295,813	Mar. 25	1874	520	26	1186
Harvester cutting apparatus	G. H. Schulte and C. Martincourt	292,370	Jan. 22	1710	477	26	330
Harvester frame. Grain	C. Whitney	291,449	Jan. 1	535	151	26	96
					152		
Harvester. Grain-binding	C. Whitney and W. W. Marsh	291,452	Jan. 1	541	153	26	98
					154		
					155		
Harvester pawl-and-ratchet mechanism	L. Miller	293,767	Feb. 19	1269	351	26	679
Harvester-platform	C. Whitney	291,448	Jan. 1	533	151	26	96
Harvester-rake	S. Johnston	295,872	Mar. 25	1952	540	26	1200
Harvester-reel	S. D. Locke	292,238	Jan. 22	1539	431	26	297
					432		
Harvester-reel	W. A. Wood	294,103	Feb. 26	1713	471	26	765
Harvester sheaf-carrier	E. S. Williams and J. E. Harder	291,118	Jan. 1	130	37	26	26
Harvesters. Endless carrier for	J. Wagner	293,383	Feb. 12	803	216	26	588
Harvesters. Friction-brake for	H. Wagner, Sr.	294,416	Mar. 4	100	25	26	846
Harvesting-machine	W. E. Crane	291,987	Jan. 15	1225	341	26	236
					342		
Harvesting-machine	C. Young	294,837	Mar. 11	609	168	26	939
Hasp-lock	E. Knight	292,323	Jan. 22	1643	459	26	316
Hasp-lock	D. Smith	295,927	Mar. 25	1837	523	26	1189
Hasp-lock	B. D. West	293,693	Feb. 19	1163	324	26	662
Hat	R. D. Greenlees	294,379	Mar. 4	54	13	26	839
Hat	W. Reitmeyer	292,049	Jan. 15	1227	362	26	250
Hat-bodies. Apparatus for stretching	J. Eaton	292,634	Jan. 29	2059	573	26	397
Hat-bodies. Apparatus for trimming	E. Tweedy	293,380	Feb. 12	795	213	26	587
					214		
Hat-bodies. Device for flanging	M. H. Ryder	294,745	Mar. 4	484	135	26	912
					136		
Hat-bodies. Machine for felting and sizing	J. J. Perine	292,578	Jan. 29	1990	554	26	385
Hat-body felting and sizing machines. Roller for	C. W. Glover	292,111	Jan. 15	1366	383	26	263
Hat-brim curling and finishing machine	C. H. Reid	292,358	Jan. 22	1694	472	26	326
Hat-brims. Wire frame for	G. B. Sherman	294,515	Mar. 4	217	61	26	866
Hat-case	J. Linker	293,183	Feb. 5	526	139	26	533
Hat-hanging attachment	W. H. Barry	291,485	Jan. 8	594	167	26	113
Hat-ironing machine	N. B. Hooper	291,598	Jan. 8	740	208	26	140
Hat-lining	C. Raymond, 2d	291,536	Jan. 8	661	187	26	125
Hat lining and cover	J. H. Canning	291,679	Jan. 8	847	237	26	158
Hat-linings. Manufacture of	A. Solmans	292,596	Jan. 29	2018	502	26	390
Hat-manufacturing machine	C. H. Reid	292,356	Jan. 22	1686	469	26	324
					470		
					471		
Hat-pouncing machine	F. F. Campbell	292,892	Feb. 5	138	37	26	468
Hat-pouncing machine	F. F. Campbell	293,715	Feb. 19	1199	332	26	668
Hat-pouncing machine and lathe	W. Thompson and J. A. George	295,690	Mar. 25	1715	474	26	1158
Hat-protector	C. A. Helbig	292,487	Jan. 29	1862	520	26	365
Hat-shaping machine	J. R. Kelsey	295,650	Mar. 25	1664	461	26	1149
					462		
Hat-sizing apparatus	N. Harper	293,015	Feb. 5	202	81	26	495
Hat sizing or felting machine	J. J. Perine	292,579	Jan. 29	1991	555	26	386
Hat sweat-band	A. C. Couch	291,157	Jan. 1	180	52	26	34
Hat-tip	A. C. Couch	291,034	Jan. 1	23	7	26	7
Hat trimming and curling machine	C. H. Reid	292,357	Jan. 22	1691	471	26	325
Hat. Ventilated	E. M. Lebkicher	295,024	Mar. 11	853	233	26	992
Hat-ventilator	W. M. Protheroe	294,149	Feb. 26	1779	488	26	775
Hats, &c. Apparatus for paring the brims of silk and felt	L. F. Marsh and J. Cree	294,246	Feb. 26	1901	521	26	796
Hatch-cover. Self-closing	A. J. Ballard	294,108	Feb. 26	1719	473	26	766
Hatchway-guard	H. J. Bleuler	292,092	Jan. 15	1343	377	26	259
Hatchway. Self opening and closing	D. Humphreys	291,737	Jan. 8	915	256	26	169
Hawse-pipe	H. Winter	293,610	Feb. 12	1056	292	26	634
Hay and straw stacker	M. B. Fitts	294,981	Mar. 11	790	218	26	973
					219		
Hay-carrier	F. H. Bolte	293,937	Feb. 19	1495	412	26	719
Hay-carrier	A. J. Burbank and H. D. Page	291,874	Jan. 15	1089	303	26	211
Hay-carrier	L. C. Chase	292,098	Jan. 15	1350	379	26	260
Hay-carrier	F. P. Grosscup	293,451	Feb. 12	880	238	26	603
Hay-carrier	F. P. Grosscup	293,452	Feb. 12	881	238	26	603
Hay-carrier	P. A. Myers	291,852	Jan. 8	1050	293	26	193
					294		
Hay-elevator	P. Werum	291,892	Jan. 8	1008	289	26	186
Hay elevator and carrier	J. H. and P. Lux	291,368	Jan. 1	434	123	26	79
Hay-fork	W. H. Cowdery	294,587	Mar. 4	308	86	26	881
Hay-fork	J. G. Kanouse and R. Miller	294,050	Feb. 26	1639	454	26	753

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Hay-fork	H. Stahl	292,378	Jan. 22	1718	479	26	331
Hay-loading machine	M. M. Sornborger	294,693	Mar. 4	497	119	26	902
Hay-press and horse-power. Combined	W. Randle, Sr	291,092	Jan. 1	80	23	26	18
Hay-rake. Horse	J. M. Clark	292,988	Feb. 5	259	71	26	489
Hay-rake. Horse	W. H. Hall	292,218	Jan. 22	1512	424	26	293
Hay-rake. Horse	C. T. Holman	292,013	Jan. 15	1256	351	26	242
					352		
Hay-rake. Horse	J. M. Wishart	292,457	Jan. 22	1820	508	26	351
Hay-rake. Horse	J. N. and T. Wallis	292,776	Jan. 29	2263	626	26	433
Hay-rake. Horse	S. F. Weaver	292,520	Jan. 29	1911	535	26	373
Hay-ricker	D. F. Oliver	292,038	Jan. 15	1281	358	26	247
					359		
Hay-stacker	A. Cooley	294,768	Mar. 11	518	144	26	924
Hay-stacker	J. Coombs	291,694	Jan. 8	867	242	26	161
					243		
Hay-stacker	J. H. Johnson	293,031	Feb. 5	313	86	26	499
Hay-stacker	A. A. Noyes	294,602	Mar. 4	395	110	26	896
Hay-tedder fork	J. R. Fry, Jr	292,425	Jan. 22	1786	498	26	344
Heat and fire resisting valve	W. A. Goodyear	292,745	Jan. 29	2212	616	26	494
Heater: *See* Car-heater. Steam and water heater. Feed-water heater.	J. H. Manny	293,260	Feb. 12	631	168	26	557
					169		
Heating and ventilating buildings. Apparatus for	J. R. Moore	295,663	Mar. 25	1681	466	26	1152
Heating apparatus and drying-rack. Combined	F. Tudor	291,818	Jan. 8	1001	281	26	185
Heating apparatus. Steam	M. S. Foote	294,982	Mar. 11	791	219	26	973
Heating. Method of and apparatus for steam	W. A. Goodyear	294,992	Mar. 11	801	222	26	975
Heating water, &c., for domestic and other purposes. Apparatus for	M. A. Tyler and D. S. Smith	293,604	Feb. 12	1048	289	26	533
					290		
Heel-bottoms. Machine for finishing	P. J. Lapham	291,608	Jan. 8	756	213	26	142
Heel burnishing and milling machine	H. Bond	292,787	Feb. 5	12	3	26	445
Heel-burnishing machine	A. F. Stirckler	292,597	Jan. 29	2019	562	26	390
Heel-burnishing tool	E. Hoxie	291,599	Jan. 8	742	209	26	140
Heel-plate	H. Schnarr	291,943	Jan. 15	1170	326	26	226
Heel-plate and counter-support. Combined	L. Coté	294,444	Mar. 4	134	35	26	852
Heel-stiffener-shaping machine	C. S. Dwyer	292,633	Jan. 29	2058	572	26	696
Heel-trimmer	U. D. Byron	293,628	Feb. 19	1081	300	26	646
Heel trimming and breasting machine	W. S. Barstow	292,198	Jan. 22	1477	415	26	288
Heliostat or porte lumière	A. Whiting	292,723	Jan. 29	2173	605	26	417
Hide scouring and fleshing apparatus	A. H. Stone	291,953	Jan. 15	1183	.....	26	228
Hides and skins. Depilating	A. Schultz	291,784	Jan. 8	964	.....	26	179
Hides and skins. Tawing	A. Schultz	291,785	Jan. 8	965	.....	26	179
Hides and skins. Tawing	T. Shaw	294,410	Mar. 4	92	24	26	845
Hides. Apparatus for preparing	J. Decombe	292,416	Jan. 22	1770	493	26	340
Hinge	W. Gilfillan	292,005	Jan. 15	1249	349	26	240
Hinge	C. E. Hart	294,035	Feb. 26	1611	447	26	749
Hinge	W. Patterson	292,574	Jan. 29	1985	553	26	385
Hinge	W. Hull	293,327	Feb. 12	723	193	26	573
Hinge. Automatic gate	J. B. Merriam	295,634	Mar. 11	865	237	26	984
Hinge. Blind	A. W. Sangster	295,816	Mar. 25	1879	521	26	1187
Hinge. Brace	C. C. Richmond	294,809	Mar. 11	575	159	26	934
Hinge. Double	A. W. Sangster	295,817	Mar. 25	1878	521	26	1187
Hinge. Duplex brace	T. P. Straup and L. Morgenstern	294,746	Mar. 4	486	136	26	912
Hinge. Lock	W. H. Carter	293,416	Feb. 12	842	228	26	506
Hinge. Scuttle	H. B. Dodge	292,210	Jan. 22	1503	422	26	292
Hinge. Spring	W. Duncan	291,169	Jan. 1	194	54	26	36
Hinge. Spring	H. Miller	293,662	Feb. 19	1119	311	26	654
Hinge-tip	F. Taylor	292,519	Jan. 29	1910	534	26	373
Hitching bar. Horse	J. L. Kennedy	291,357	Jan. 1	419	119	26	77
Hitching device	R. W. Jones	292,561	Jan. 29	1971	550	26	382
Hitching loop and strap. Safety	M. Bohlig	293,130	Feb. 5	465	124	26	523
Hobby-horse	J. R. Wharry	291,657	Jan. 8	824	231	26	154
Hobby-horse	S. Ashworth	293,551	Feb. 12	988	271	26	622
Hod. Builder's	H. Gates	291,504	Jan. 8	619	174	26	118
Hoe. Weeding	M. W. Locke	295,776	Mar. 25	1822	507	26	1177
					508		
Hoisting and conveying apparatus	A. E. Brown	295,727	Mar. 25	1761	489	26	1166
					490		
Hoisting and conveying machine	P. J. Mitchell	292,344	Jan. 22	1670	465	26	321
Hoisting apparatus	T. Scheffler	295,289	Mar. 18	1206	335	26	1058
Hoisting-engine. Steam	J. L. Booth	295,725	Mar. 25	1759	489	26	1166
Hoisting-gear	W. L., H. L., and A. O. Beatty	292,781	Feb. 5	2	1, 2	26	443
Hoisting-machine	F. Brown	295,730	Mar. 25	1765	491	26	1166
Hoisting-machine	S. A. Morse and C. Tyson	291,217	Jan. 1	252	71	26	45
Hoisting-machine	J. J. White	291,251	Jan. 1	291	82	26	53
Hoisting mechanism for pianos, &c	W. H. Young	291,122	Jan. 1	135	38	26	27
Holder: *See* Bag-holder. Bill-holder. Bouquet and ticket holder. Broom-holder. Cigar-holder. Cuff-holder. Dish-holder. Egg-holder. File-holder. Harness-holder. Knife-holder. Lamp-holder. Lantern-globe holder. Lead and crayon holder. Map-holder. Paper-holder. Paper-bag holder. Pen-holder. Pencil-holder. Pillow-sham holder. Rein-holder. Rule-holder. Sash-holder. Tag-holder. Tag or label holder. Tool-holder. Type-holder. Whip-holder.							
Hominy-mill	T. Hudnut	295,554	Mar. 25	1543	427	26	1127

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Hook: *See* Back-band hook. Button-hook. Harness-hook. Rein-hook. Snap-hook. Screw-hook. Trace-hook. Trellis-hook. Trolling-hook. Whiffletree-hook.							
Hook-and-eye fastening	F. G. Whelan	294,554	Mar. 4	272	74	26	875
Hoop: *See* Mast-hoop.							
Hoop	A. R. Sprout	293,916	Feb. 19	1463	404	26	713
Hoop bending and scoring machine	A. R. Sprout	293,917	Feb. 19	1464	405	26	713
Hoop-fastener	A. R. Sprout	293,919	Feb. 19	1466	405	26	713
Hoop-fasteners. Machine for applying	A. R. Sprout	293,918	Feb. 19	1465	405	26	713
Hoop-flaring machine	J. Bäumle	291,273	Jan. 1	322	90	26	59
Hoop-lapping machine	J. Connell	292,157	Jan. 22	1424	399	26	280
Hoop-nailing machine	A. C. Batcheller	295,516	Mar. 25	1492	412	26	1118
Hoop-pole-splitting machine	J. Winterbotham	292,973	Feb. 5	246	67	26	487
Hoops. Machine for lap-shaving	H. F. Campbell	293,224	Feb. 12	588	155	26	550
Hop-box shade	T. Prior	294,332	Feb. 26	2011	552	26	817
Hop-training device	C. T. Bush	294,723	Mar. 4	463	130	26	908
Hopper. Feed-	J. T. Walter	293,126	Feb. 5	447	120	26	520
Hopple	L. Stow	291,105	Jan. 1	115	32	26	23
Hopple for horses	J. O. Cottle and R. Ivie	293,312	Feb. 12	704	188	26	569
Horizon. Artificial	G. W. Melville	294,653	Mar. 4	387	108	26	895
Horse-armor	J. H. Anderson	295,712	Mar. 25	1746	485	26	1163
Horse-blinder	B. Rice	291,229	Jan. 1	266	75	26	48
Horse-checker	D. O. Cox	294,445	Mar. 4	136	36	26	852
Horse-checking device	W. S. and H. Bentz	294,187	Feb. 26	1836	501	26	784
Horse-detacher	C. L. Crowell	292,268	Jan. 22	1495	421	26	291
Horse-detacher	N. R. Shealy	291,757	Jan. 8	967	271	26	179
Horse-detacher	W. M. Walker	293,125	Feb. 5	446	120	26	520
Horse-power	C. B. and J. S. Boren	291,223	Jan. 1	333	94	26	61
Horse-power	J. Dick, Jr	294,372	Mar. 4	42	11	26	837
Horse-power	A. Robinson	293,087	Feb 5	380	104	26	511
Horse-power transmitters. Removable post for	F. B. Bignell	294,568	Mar. 4	285	78	26	877
Horses. Device for stopping runaway	A. Knegenberg	292,589	Jan. 29	2007	558	26	389
Horses. Shoe for hoof-bound	W. H. Hendricks	291,055	Jan. 1	48	14	26	12
Horseshoe	M. Caspari	295,616	Mar. 25	1624	449	26	1142
Horseshoe	G. A. Dean	295,620	Mar. 25	1629	450	26	1142
Horseshoe	T. C. Evans	293,439	Feb. 12	867	235	26	600
Horseshoe	G. C. Goodloe	294,990	Mar. 11	790	221	26	974
Horseshoe	A. E. Hall	292,302	Jan. 22	1619	453	26	312
Horseshoe	O. H. Merrill	294,062	Feb. 26	1656	457	26	755
Horseshoe-nail machine	G. J. Capewell	292,201	Jan. 22	1480	416, 417	26	288
Horseshoes. Device for welding steel calks to	J. D. Hall	293,266	Feb. 19	1404	388	22	702
Hose-coupling	W. H. Bulcroft	295,109	Mar. 11	965	263	26	1001
Hose-coupling	C. Cummins	295,151	Mar. 18	1020	282	26	1025
Hose-coupling	S. Hamer	293,453	Feb. 12	882	238	26	603
Hose-nozzle	J. Richter	294,675	Mar. 4	400	113	26	899
Hose-nozzle attachment	R. F. Tobin	291,107	Jan. 1	117	33	26	24
Hose-patch	G. W. Towle, Jr	294,937	Mar. 11	794	202	26	961
Hose-reel	B. Heywood and J. Jones	292,226	Jan. 22	1524	427	26	295
Hot-air engine	J. S. Baldwin	292,400	Jan. 22	1744	486	26	336
Hot-air-furnace regulator. Electric	F. M. Sparrow	295,686	Mar. 25	1711	473	26	1158
Hot-air or gas engine	H. S. Maxim	293,185	Feb. 5	529	140	26	534
Hot-air-register frame	C. W. Trotter	291,498	Jan. 1	513	145	26	92
Hot-houses. Watering apparatus for	W. H. Howe	293,577	Feb. 12	1019	280	26	628
House: *See* Sheep-house.							
House-cleaning implement	L. F. Johnston	293,034	Feb. 5	315	87	26	499
Housing for sugar and other mills	B. Thoens	291,435	Jan. 1	510	144	26	91
Hub cap. Wheel-	F. Kramer	291,361	Jan. 1	496	120	26	78
Hub. Vehicle-wheel	J. T. Brown	291,873	Jan. 15	1068	303	26	210
Hub. Wheel-	A. M. Brown	295,728	Mar. 25	1763	490	26	1166
Huller, cleaner, and separator	W. W. Jackson	293,029	Feb. 5	310	86	26	499
Hydrant	C. Meyer and W. H. Lanfersick	291,068	Jan. 1	65	18	26	15
Hydrant	W. Race and S. R. C. Mathews. (Reissue.)	10,452	Feb. 26	2034	557	26	821
Hydrant	B. C. Vanduzen	295,600	Mar. 25	1601	444	26	1138
Hydraulic machinery	W. Donaldson	293,641	Feb. 19	1095	303, 304	26	649
Hydraulic motor	J. H. Hinch	291,189	Jan. 1	221	61	26	40
Hydro-transmitter. Reciprocating	W. Baxter	292,779	Feb. 5	1	1	26	443
Hydrocarbon-burner	W. L. Gregg	294,614	Mar. 4	336	93	26	885
Hydrocarbon-burner	B. Martin	293,973	Feb. 19	1536	423	26	727
Hydrocarbon-furnace	R. B. Avery	291,530	Jan. 8	1019	284	26	188
Hydrocarbon-furnace	W. H. Brooks	293,560	Feb. 12	999	274, 275, 276	26	624
Hydrocarbon-vapor burners. Attachment to	B. Martin	291,918	Jan. 15	1145	319	26	221
Hydrocarbon with pulverized earth. Mixing and consuming	J. Leede	292,236	Jan. 22	1536	430	26	297
Hypotenuse calculator and indicator	D. Patten	293,069	Feb. 5	360	98	26	508
Ice and refrigerating machine	D. L. Holden	291,477	Jan. 1	576	162	26	103
Ice-cream freezer	V. Clad	291,685	Jan. 8	857	239	26	159
Ice-creeper	H. Cottrell	291,880	Jan. 15	1097	306	26	212
Ice-creeper	J. Reist	292,509	Jan. 29	1886	526	26	370
Ice-creeper	F. M. West	294,929	Mar. 11	601	165	26	938
Ice-crushing machine	J. Y. Fahrman	291,999	Jan. 15	1242	347	26	239
Ice-machine	G. Taylor	294,093	Feb. 26	1701	468	26	763
Ice-machine cooler or refrigerator	W. Eberhardt	294,977	Mar. 11	784	217	26	971
Ice-making and refrigerating apparatus	G. H. Reynolds and L. Allen	291,774	Jan. 8	950	267, 268	26	176

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Ice-making apparatus. Condenser for ammonia	M. S. Conly	294,763	Mar. 11	512	142, 143	26	923
Ice-making machine	G. Taylor and F. S. Pearson	294,935	Mar. 11	723	202	26	961
Ice-plows. Inserted-tooth fastening for	J. G. Bodenstein	295,724	Mar. 25	1758	489	26	1165
Ice-shaver	G. B. Webb	295,467	Mar. 18	1417	392	26	1099
Ice-tongs	W. Dimond	294,975	Mar. 11	782	216	26	971
Incrustation preventive	F. Troxel	295,309	Mar. 18	1229	.....	26	1062
Indicating-lock	E. C. Nichols	292,939	Feb. 5	205	56	26	480
Indicator: *See* Electrical indicator. Speed-indicator. Latitude-indicator. Station-indicator.							
Indicator	C. W. Musgrove	292,132	Jan. 15	1393	390	26	267
Ingots. Apparatus for equalizing the temperature of steel	J. Gjers	291,044	Jan. 1	35	10, 11	26	9
Ingots. Apparatus for equalizing the temperature of steel	J. Gjers	291,045	Jan. 1	37	11	26	9
Ingots. Apparatus for equalizing the temperature of steel	J. Gjers	291,046	Jan. 1	38	11	26	10
Ingots. Apparatus for equalizing the temperature of steel	J. Gjers	291,047	Jan. 1	39	12	26	10
Ingots. Apparatus for equalizing the temperature of steel	J. Gjers	291,048	Jan. 1	40	12	26	10
Ingots. Apparatus for equalizing the temperature of steel	J. Gjers	291,331	Jan. 1	393	110	26	71
Inhaler	W. A. Johnston and A. W. Browne	291,196	Jan. 1	231	64	26	41
Inhaler for anæsthetics	H. Cook	294,585	Mar. 4	306	85	26	880
Inhaler for anæsthetics	G. H. Hurd	294,047	Feb. 26	1635	453	26	750
Ink or color fountain. Stencil	L. R. Rockwood	292,856	Feb. 5	95	26	26	460
Inking apparatus. Automatic registering	J. W. Jones and A. Cooper	295,767	Mar. 25	1812	503, 504	26	1175
Inking-pad	C. W. Crutsinger	294,856	Mar. 11	632	175	26	944
Inkstand	T. B. Knowles	291,604	Jan. 8	752	212	26	141
Ink stand or receiver	J. B. Davids	295,739	Mar. 25	1779	494	26	1169
Insect-destroying device	C. J. Gustaveson	294,616	Mar. 4	337	94	26	886
Insecticide	I. S. Graves	293,330	Feb. 12	716	.....	26	572
Insecticide compound	H. Pool	295,426	Mar. 18	1368	.....	26	1060
Insecticide mixture	J. M. Jaques, Sr	292,015	Jan. 15	1256	.....	26	242
Insects from plants. Machine for gathering	F. Wiskocil	292,083	Jan. 15	1334	374	26	257
Insulated conductor of electricity	W. A. Shaw	292,694	Jan. 29	2137	595	26	411
Insulating connection for electric-light fixtures	C. H. Hinds	291,731	Jan. 8	904	254	26	168
Insulating material. Electrical	J. Greives	291,716	Jan. 8	891	.....	26	166
Insulating material. Electrical	J. Greives	291,717	Jan. 8	892	.....	26	166
Insulating material. Electrical	J. Greives	291,718	Jan. 8	893	.....	26	166
Insulation. Composition for electrical	J. Fottrell	294,457	Mar. 4	149	.....	26	855
Insulation of railway-tracks used for electric circuits	T. A. Edison	293,433	Feb. 12	861	233	26	599
Insulation. Manufacture of material for electric	W. V. Wilson	294,557	Mar. 4	274	.....	26	875
Insulator for electric conductors	A. W. Hale	294,384	Mar. 4	59	15	26	840
Insulator for electric wires	W. W. Beach	294,563	Mar. 4	280	76	26	876
Insulator for electric wires	A. W. Hale	293,242	Feb. 12	609	161	26	553
Insulator. Lock-wire	T. McGrory	293,901	Feb. 19	1444	400	26	710
Interest. Machine for computing	J. W. Robinson	294,079	Feb. 26	1680	463	26	760
Interlocking apparatus. Hydraulic and electric	O. Gassett. (Reissue)	10,434	Jan. 8	1058	296, 297	26	195
Interlocking apparatus. Hydraulic and electric	O. Gassett. (Reissue)	10,435	Jan. 8	1062	297	26	196
Interlocking-switch apparatus	O. Gassett	292,743	Jan. 29	2204	614, 615	26	423
Intestines. Machine for scraping and cleaning	A. M. Woods	293,392	Feb. 12	816	220	26	591
Invalid-lift	G. J. Goodhue Jr	292,801	Feb. 5	301	8	26	448
Invalids. Apparatus for holding and moving	C. F. Reed	292,048	Jan. 15	1294	362	26	250
Iron: *See* Sad-iron.							
Iron and steel. Apparatus for the manufacture of ingot	J. F. Bennett	294,002	Feb. 26	1572	434	26	742
Iron and steel rods. Hardening and straightening	J. H. Helm	294,130	Feb. 26	1755	483	26	771
Iron. Apparatus for treating sheet	W. D. Wood	294,559	Mar. 4	275	75	26	875
Iron breaker. Pig	T. A. Blake	293,405	Feb. 12	831	225	26	594
Iron. Making wrought	L. D. Chapin	291,470	Jan. 1	566	.....	26	101
Iron. Manufacturing planished sheet	W. D. Wood	291,260	Jan. 1	306	.....	26	56
Iron. Manufacture of wrought	C. Zug	294,949	Mar. 11	741	.....	26	964
Iron or steel. Mode of and mechanism for producing surfaces on	L. D. York	295,217	Mar. 18	1107	306	26	1040
Iron wheel	L. H. Goodwin	293,006	Feb. 5	283	79	26	493
Ironing-board	R. W. Ferguson	292,904	Feb 5	155	43	26	472
Ironing-board	J. C. West	294,708	Mar. 4	444	123	26	905
Ironing-board	W. H. Davey and H. Fabian	291,035	Jan. 1	24	7	26	7
Ironing-machine	H. Podger and W. H. Davey	293,514	Feb. 12	949	258	26	615
Ironing-machine	L. H. Watson	293,290	Feb. 12	674	180, 181	26	564
Ironing-machine	C. O. White	292,883	Feb. 5	127	35	26	467
Ironing-machine roller	H. E. Smith	292,958	Feb. 5	225	62	26	484
Irrigating apparatus	C. M. Skillen	291,947	Jan. 15	1174	327	26	226
Jack: *See* Boot and shoe last-ing jack. Boot or shoe stitch-ing-jack. Floor-jack. Lifting-jack. Power-jack. Railway-jack. Screw-jack. Shoe-maker's jack. Wagon-jack.							
Jack	S. J. Wisdom	292,725	Jan. 29	2175	606	26	417
Jackknife. Sailor's	T. J. Cowie	293,634	Feb. 19	1089	301	26	648
Jacket. Knit	O. Kreisel	294,637	Mar. 4	361	101	26	891
Jail-bar	L. D. York	292,527	Jan. 29	1921	537	26	374
Jar: *See* Fruit-jar.							
Jar caps, &c. Fastening for fruit	C. A. Tatum	292,396	Jan. 22	1727	481	26	333

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Jar-wrench and can-opener. Combined	A. Van Slyke	292,710	Jan. 29	2157	601	26	414
Jewel show-case	C. W. Schnmann	294,685	Mar. 4	418	117	26	909
Jeweling-machine	E. Homrighous	293,249	Feb. 12	618	164	26	555
Jeweling-tool	J. R. Parsons	292,676	Jan. 29	2117	589	26	407
Joiner's marking-gage	E. Hester	291,728	Jan. 8	902	253	26	167
Joint: *See* Furnace-joint. Railway-rail joint. Rail-joint. Telegraph-wire joint. Railway-joint.							
Journal box and bearing	R. W. Traylor	291,243	Jan. 1	282	79	26	51
Journal-box. Anti-friction	T. Tripp	295,308	Mar. 18	1227	341	26	1062
Journals. Alarm-signal for hot	O. H. P. Cornelius and G. H. Turner	292,992	Feb. 5	265	73	26	491
Jug	J. S. Dignam	293,640	Feb. 19	1065	303	26	649
Jug-top	G. P. Lang and P. Lauster	292,660	Jan. 29	2091	582	26	403
Key-fastener	N. B. Little	293,756	Feb. 19	1253	347	26	677
Key-fastener	E. W. Wagner	291,434	Jan. 1	519	146	26	93
Key-ring	G. W. Jopson	292,231	Jan. 22	1530	429	26	296
Kiln: *See* Brick-kiln. Lumber-kiln. Brick and tile kiln. Pottery-kiln. Lime-kiln.							
Kiln	J. P. Cramp	292,413	Jan. 22	1763	491	26	339
Kiln and furnace	J. Druecker	294,453	Mar. 4	143	38	26	854
Kiosk	A. C. y Ribot	293,595	Feb. 12	1039	286	26	631
Kitchen-cabinet	H. Hanna	295,120	Mar. 11	976	{267 268}	26	1003
Kite. Folding	J. Stumpp	294,526	Mar. 4	228	65	26	869
Knapsacks. Means for carrying	A. Mendel	292,566	Jan. 29	1976	551	26	383
Knife: *See* Cigar-dealer's knife. Planer-knife. Jackknife. Pocket-knife. Mincing-knife.							
Knife	C. Wingfield	294,558	Mar. 4	275	74	26	875

Knife-scourer	C. A. Bryant	293,840	Feb. 19	1382	382	26	698
Knitted or woven wear. Article of	W. Goddard	294,779	Mar. 11	529	147	26	926
Knitting-machine	L. T. Gross and J. Adams	294,381	Mar. 4	55	14	26	839
Knitting-machine	W. H. H. Hollen	294,784	Mar. 11	534	{148 149}	26	927
Knitting-machine	W. D. Huse	292,490	Jan. 29	1865	521	26	366
Knitting-machine	J. M. Merrow	291,377	Jan. 1	443	{125 126}	26	81
Knitting-machine. Stop-motion	M. J. Walsh	291,965	Jan. 15	1196	{333 334}	26	230
Knob attachment	W. H. Gonne	291,712	Jan. 8	887	240	26	165
Knob attachment	O. Stoddard	294,822	Mar. 11	589	163	26	937
Knob. Door	J. K. Clark	291,687	Jan. 8	859	240	26	159
Knob or handle	C. S. Lewis	294,643	Mar. 4	376	105	26	893
Knob-spindle attachment	H. K. Jones	294,881	Mar. 11	666	186	26	950
Knobs. Handle for dial-lock	T. L. Paine	295,589	Mar. 25	1582	478	26	1135
Knockdown box	J. Blakely	291,281	Jan. 1	331	94	26	60
Labeling machine. Spool	S. A. Calmar and H. W. Carr	291,291	Jan. 1	341	{96 97 98}	26	62
Lace fastener. Shoe	H. H. V. Lilley	294,054	Feb. 26	1646	455	26	754
Lace fastener. Shoe	H. M. Snyder	295,452	Mar. 18	1395	386	26	1095
Lace-fastening	H. H. Porter	294,909	Mar. 11	697	194	26	956
Lace, &c. Shoe	F. P. Shorey	293,599	Feb. 12	1043	288	26	632
Lacing-hooks. Method of and machine for making	S. N. Smith	291,795	Jan. 8	975	274	26	181
Lactometer	A. R. Leeds	294,052	Feb. 26	1643	454	26	754
Ladder	G. H. Cloyes	294,199	Feb. 26	1848	504	26	786
Ladder	C. G. Work	292,150	Jan. 15	1411	396	26	271
Ladder. Adjustable step	E. Markwick	292,032	Feb. 5	197	54	26	478
Ladder chair. Step	F. Reindel	294,808	Mar. 11	574	159	26	934
Ladder. Extension fire	G. Witte and O. Greiner	291,259	Jan. 1	302	{85 86 87}	26	55
Ladder. Folding step	A. Bohman	295,518	Mar. 25	1494	412	26	1118
Ladder. Folding step	G. A. Sommer	295,299	Mar. 18	1215	338	26	1060
Ladder. Step	D. Page	292,041	Jan. 15	1284	360	26	247
Lamp	C. H. Bennett	291,024	Jan. 1	13	4	26	5
Lamp	C. B. Boyle	295,479	Mar. 18	1439	398	26	1103
Lamp	L. O. Brekke	293,559	Feb. 12	998	273	26	624
Lamp	L. Henkle	292,114	Jan. 15	1370	384	26	264
Lamp alarm. Electric	J. Olmsted	292,761	Jan. 29	2243	622	26	430
Lamp bracket. Electric	H. Edmunds, Jr	291,171	Jan. 1	196	55	26	36
Lamp-burner	C. G. Webber	294,417	Mar. 4	101	26	26	846
Lamp. Double carbon-arc	E. Thomson	295,836	Mar. 25	1898	526	26	1191
Lamp. Double electric-arc	W. Hochhausen	294,042	Feb. 26	1626	{450 451}	26	751
Lamp. Double electric-arc	A. G. Waterhouse	294,294	Feb. 26	1659	537	26	807
Lamp cut-out. Electric	C. L. Buckingham and H. C. Townsend.	293,943	Feb. 19	1502	414	26	721
Lamp cut-out. Electric-arc	H. C. Townsend and C. L. Buckingham.	293,921	Feb. 19	1468	406	26	714
Lamp. Electric	T. H. Blamires	291,867	Jan. 15	1080	307	26	209
Lamp. Electric	T. L. Dennis	295,367	Mar. 18	1300	360	26	1076
Lamp. Electric	W. Morava	295,664	Mar. 25	1622	466	26	1152
Lamp. Electric	L. Piette and F. Krizik	293,076	Feb. 5	370	100	26	509
Lamp. Electric	C. J. Van Depoele	291,651	Jan. 8	814	227	26	152
Lamp. Electric	C. J. Van Depoele	294,533	Mar. 4	240	67, 68	26	870
Lamp. Electric	A. Welsh	295,088	Mar. 11	941	257	26	997
Lamp. Electric-arc	C. L. Buckingham and H. C. Townsend.	293,944	Feb. 19	1504	414	26	721
Lamp. Electric-arc	H. A. Earle and E. Goltstein	294,455	Mar. 4	147	39	26	854

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Lamp. Electric-arc	F. K. Fitch	292,293	Jan. 22	1607	449	26	310
Lamp. Electric-arc	W. P. Freeman	294,027	Feb. 26	1602	445	26	747
Lamp. Electric-arc	C. H. Hayes	292,113	Jan. 15	1368	{383 384}	26	263
Lamp. Electric-arc	C. J. Van Depoele	291,553	Jan. 8	678	{192 193}	26	128
Lamp. Electric-arc	C. J. Van Depoele	291,653	Jan. 8	819	228	26	153
Lamp. Electric-arc	C. J. Van Depoele	294,532	Mar. 4	238	67	26	870
Lamp fixture. Combined gas and electric	S. Bergmann	293,553	Feb. 12	991	271	26	623
Lamp holder. Incandescent-electric	J. Languereau	293,256	Feb. 12	626	166	26	556
Lamp holder. Incandescent-electric	A. Swan	292,447	Jan. 22	1809	504	26	349
Lamp. Hot-air oil	C. H. Murray	295,660	Mar. 25	1685	467	26	1153
Lamp. Incandescent	E. Weston	292,720	Jan. 29	2169	604	26	417
Lamp. Incandescent	T. A. Edison	293,434	Feb. 12	862	233	26	599
Lamp. Incandescent electric	W. Hochhausen	294,044	Feb. 26	1631	452	26	752
Lamp. Incandescent electric	E. R. Knowles and F. E. Idell	292,324	Jan. 22	1644	460	26	316
Lamp. Incandescent electric	C. F. Martine	293,586	Feb. 12	1028	283	26	629
Lamp-lens attachment	W. D. Doremus	291,995	Jan. 15	1235	{344 345}	26	238
Lamp lighting and extinguishing apparatus	L. Banmeister	295,332	Mar. 18	1255	348	26	1068
Lamp. Portable	W. Scott and M. W. Manwaring	291,630	Jan. 8	785	221	26	147
Lamp. Self-extinguishing	S. Bergmann	293,552	Feb. 12	989	271	26	623
Lamp-socket. Electric	O. A. Moses	292,840	Feb. 5	76	21	26	457
Lamp. Voltaic-arc	O. A. Moses	293,495	Feb. 12	925	251	26	611
Lamp. Voltaic-arc	W. Hochhausen	294,045	Feb. 26	1633	452	26	752
Lamps. Hanger-board for electric	A. Welsh	295,087	Mar. 11	940	256	26	997
Lamps. Holder for the carbons of incandescing electric	W. Holzer	293,879	Feb. 19	1418	392	26	705
Lamps. Manufacture of incandescing electric	W. Holzer	295,398	Mar. 18	1337	372	26	1084
Lamps. Manufacture of incandescing electric	C. J. Van Depoele	291,652	Jan. 8	817	228	26	153
Lamps. Safety cut-out for series of electric	J. S. Beeman	291,464	Jan. 1	561	158	26	100
Lamps. Support for filaments of incandescent	F. Dietz	292,288	Jan. 22	1602	448	26	309
Lantern-globe holder	W. Schofield	293,790	Feb. 19	1301	361	26	685
Lapping-machines. Automatic reversing mechanism for	H. Rall	291,535	Jan. 8	659	187	26	125
Lard and oil tank	A. W. Cox	292,792	Feb. 5	18	5	26	446
Last	G. W. Day	291,991	Jan. 15	1230	343	26	237
Last	G. A. Reynolds	293,913	Feb. 19	1459	404	26	712
Last	E. F. Beal. (Reissue)	10,454	Feb. 26	2037	558	26	821
Lasting-machine	A. W. Pearson	292,575	Jan. 29	1985	{553 554}	26	385
Latch	W. Sallade	291,539	Jan. 8	664	188	26	125
Latch. Door	E. S. Morton	294,326	Feb. 26	2002	549	26	815
Latch. Door	W. F. Oliver	295,795	Mar. 25	1851	515	26	1183
Latch. Door	M. H. Palmer	292,042	Jan. 15	1286	360	26	248
Latch. Door	C. W. Pierce	293,512	Feb. 12	946	257	26	615
Latch. Door and gate	C. Wornuth	292,727	Jan. 29	2177	607	26	418
Latch. Extensible	B. Copeland and F. Wright	293,424	Feb. 12	849	230	26	597
Latch. Gate	J. B. Hasenohr	295,753	Mar. 25	1794	498	26	1172
Latch. Gate	W. Hull	293,253	Feb. 12	622	165	26	556
Latch. Locking	E. Nyswonger	291,392	Jan. 1	467	131	26	84
Latch. Locking	H. Sundquist	293,987	Feb. 19	1553	428	26	730
Latch. Locking	T. Rogers	292,510	Jan. 29	1886	526	26	370
Latching device for gates for iron fences	W. E. Hill	295,173	Mar. 18	1048	289	26	1029
Lath-sawing machine	A. Wood	291,455	Jan. 1	550	156	26	99
Lathe	O. F. Main	291,754	Jan. 8	929	260	26	172
Lathe attachment. Watch-maker's	S. W. Putnam	291,398	Jan. 1	475	134	26	85
Lathe-bed	D. Houghton	292,227	Jan. 22	1525	427	26	295
Lathe-center-grinding machine	F. Armstrong	295,713	Mar. 25	1747	485	26	1163
Lathe-dog	J. Winslow, Jr., and R. Atkins	293,293	Feb. 12	684	192	26	566
Lathe-dog	W. H. Lenhart	293,801	Feb. 19	1431	396	26	707
Lathe for turning eccentric or polygonal forms	S. K. White	291,451	Jan. 1	537	{152 153}	26	97
Lathe-mandrel	W. H. Bine	291,282	Jan. 1	332	94	26	60
Lathe. Metal-turning	J. E. Atwood	291,971	Jan. 15	1202	336	26	232
Lathe. Pulley	G. T. Reiss	292,948	Feb. 5	213	58, 59	26	492
Lathe. Shaft-centering	A. Wood	291,456	Jan. 1	553	156	26	99
Lathe. Tubular cutter	L. S. Hayes	291,727	Jan. 8	901	{252 253}	26	167
Lathe. Turning	H. W. Farley	294,601	Mar. 4	319	89	26	883
Lathes. Cutter-head for handle-turning	J. D. Westcott	293,829	Feb. 19	1354	375	26	693
Latitude-indicator	P. Boyhan	291,570	Jan. 8	698	197	26	131
Laundry jack or bracket	F. Lyford	293,971	Feb. 19	1536	423	26	727
Lead and crayon holder	C. W. Brown	294,756	Mar. 11	504	141	26	922
Lead and crayon holder	W. L. Butterfield	291,539	Jan. 8	1032	288	26	100
Lead and crayon holder	J. H. Knapp	295,497	Mar. 18	1461	402	26	1107
Lead and crayon holder	B. G. Platt	292,136	Jan. 15	1397	391	26	268
Lead. Making sponge	J. K. Kessler	292,753	Jan. 29	2229	.....	26	428
Lead. Making white	J. K. Kessler	292,119	Jan. 15	1378	.....	26	264
Leaf-table	J. A. Conover	293,565	Feb. 12	1006	277	26	626
Leather. Coloring and bronzing	L. Klöpfer	295,653	Mar. 25	1668	.....	26	1150
Leather-folding machine	R. H. Lufkin	294,394	Mar. 4	71	18	26	842
Leather-polishing machine	A. Cerf-Lanzenberg	293,308	Feb. 12	700	187	26	569
Leather-scouring-machine table	T. L. Daheney	291,892	Jan. 15	1099	306	26	212
Leather-splitting machine	F. S. Strong	291,641	Jan. 8	800	224	26	150
Leather-staining machine	J. H. Hovey	294,320	Feb. 26	1997	547	26	814
Leg. Artificial	K. R. Collins	295,675	Mar. 25	1698	470	26	1155
Leg. Artificial	J. Furrer	292,800	Feb. 5	30	8	26	448
Leggin	J. N. Goldbacher	295,538	Mar. 25	1520	420	26	1122
Leggin	J. H. Howarth, Jr	292,819	Feb. 5	52	14	26	452
Leggin	J. A. King	293,475	Feb. 12	905	245	26	607
Letter-box	J. B. Broome	292,533	Jan. 29	1929	540	26	375
Letter-box	C. F. Maize	294,483	Mar. 4	182	50	26	860
Letter-box and mail-bag. Combined	C. F. Teller	292,069	Jan. 15	1317	368	26	254

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Leveling-instrument	W. T. Comstock	294,014	Feb. 26	1585	440	26	745
Lever-power mechanism	F. Kubec	295,498	Mar. 18	1462	403	26	1107
Life-guard and track-clearer	C. W. Held and R. B. Locke	293,653	Feb. 19	1109	308	26	652
Life-line. Buoyant	F. W. Brewster	292,281	Jan. 22	1595	446	26	307
Life-protector for railway-rails	E. J. Hoffman	293,024	Feb. 5	905	84	26	497
Lifter: *See* Transom-lifter.							
Lifting-jack	J. Barrett	293,400	Feb. 12	825	222	26	593
Lifting-jack	J. F. Bazill	293,703	Feb. 19	1178	328	26	664
Lifting-jack	M. Brown	295,105	Mar. 11	960	262	26	1000
Lifting-jack	W. B. Carpenter	293,946	Feb. 19	1507	415	26	722
Lifting-jack	E. Emmert	292,739	Jan. 29	2201	613	26	422
Lifting-jack	B. F. Mansfield	292,666	Jan. 29	2106	585	26	405
Lifting-jack	J. T. Mason	294,398	Mar. 4	77	19	26	843
Lifting-jack	R. R. Spears	295,300	Mar. 18	1216	338	26	1061
Lifting-jack for starting cars	H. Grimm	294,380	Mar. 4	54	14	26	839
Lifting or hoisting machine	T. Thomas	293,114	Feb. 5	419	112, 113	26	517
Light: *See* Marine-signal light. Skylight.							
Lighting streets, &c. Apparatus for	B. W. Mitchell	292,127	Jan. 15	1386	388	26	266
Lighting streets. Apparatus for	B. W. Mitchell	292,128	Jan. 15	1387	388	26	266
Lightning-arrester for electric lines	C. W. McDaniel	295,267	Mar. 18	1176	326	26	1052
Lightning-diffuser	L. G. Woolley	293,612	Feb. 12	1058	292	26	634
Limekiln	J. T. Meredith	291,212	Jan. 1	248	69, 70	26	44
Link. Open	T. J. Terry	293,817	Feb. 19	1338	372	26	691
Link-welding die	A. McInnes	294,060	Feb. 26	1654	457	26	755
Liquid-cooler	H. Lindenberg	294,889	Mar. 11	676	189	26	952
Liquid or water gage	E. Beggs	292,532	Jan. 29	1927	539, 540	26	375
Lock: *See* Alarm-lock. Bag-lock. Bottle-stopper lock. Cabinet-lock. Car-door lock. Chain-lock. Combination-lock. Door-lock. Hasp-lock. Indicating-lock. Nut-lock. Oar-lock. Permutation-lock. Piano-lock. Railway-rail lock. Safe-lock. Seal-lock. Time-lock. Vehicle-seat lock. Wagon-lock.							
Lock	W. H. Andrews and H. H. Sparks	291,663	Jan. 8	830	232	26	155
Lock	F. P. Clark	291,686	Jan. 8	857	240	26	159
Lock	M. Jackson	293,885	Feb. 19	1424	394	26	706
Lock	F. W. Mix	295,660	Mar. 25	1676	464	26	1151
Lock	D. Morris	294,901	Mar. 11	987	192	26	954
Lock	P. S. Svenson	295,077	Mar. 11	995	253	26	994
Lock	W. H. Taylor	294,702	Mar. 4	438	122	26	904
Lock	E. P. Teeters	293,375	Feb. 12	787	211	26	586
Lock	A. B. Todd	291,646	Jan. 8	807	226	26	151
Lock	R. E. Woodrich and C. Langbein	294,560	Mar. 4	277	75	26	875
Lock and latch. Combined	A. D. Holland	293,248	Feb. 12	617	164	26	555
Lock-nut	O. F. Garvey	291,328	Jan. 1	390	109	26	71
Lock-nut	N. E. Shaller	292,063	Jan. 15	1310	366	26	252
Lock-nut	N. E. Shaller	292,513	Jan. 29	1901	530	26	371
Lock-trimming	E. T. Taylor	294,934	Mar. 11	722	202	26	961
Lock-tumbler	C. A. Ludlow	295,260	Mar. 18	1167	323	26	1050
Locks. Gage for adjusting	M. H. Bassett	292,463	Jan. 29	1831	510, 511, 523, 524	26	360
Locomotive	A. Mitchell	294,252	Feb. 26	1909	532	26	798
Locomotive ash-pan	W. H. D. Newth	293,350	Feb. 12	752	200	26	579
Locomotive ash-pan	C. F. Smith. (Reissue)	10,453	Feb. 26	2035	558	26	921
Locomotive attachment	L. W. Page	292,504	Jan. 29	1881	525	26	369
Locomotive bell-ringing attachment	P. M. Way	292,712	Jan. 29	2158	601	26	414
Locomotive-boiler	J. E. Wootten	291,120	Jan. 1	133	38	26	26
Locomotive-grate	I. W. Swallow	293,602	Feb. 12	1046	289	26	632
Locomotive-lubricator	C. B. and C. H. Hodges	291,847	Jan. 8	1042	291	26	192
Locomotive snow-plow attachment	F. Halnsworth	294,383	Mar. 4	58	14	26	840
Locomotive steam-engine	T. Ricour	292,588	Jan. 29	2006	558	26	388
Locomotives and cars. Device for arresting	M. F. Bonzano	293,846	Feb. 19	1380	381	26	698
Log-loader	J. P. Hanson	293,244	Feb. 12	612	162, 163, 189, 190	26	554
Log-turner	W. Frey	293,316	Feb. 12	710	190	26	571
Log-turner	S. T. Haviland	295,549	Mar. 25	1534	425	26	1126
Loom for weaving double pile fabrics	C. Coupland	294,967	Mar. 11	761	212	26	968
Loom for weaving double pile fabrics	C. Coupland	294,968	Mar. 11	763	212	26	968
Loom for weaving double pile fabrics	S. C. Lister and J. Reixach	292,664	Jan. 29	2101	583, 584, 585	26	404
Loom-harnesses with their actuating mechanism. Device for connecting	J. P. Kelly	293,334	Feb. 12	731	195	26	575
Loom-picker-staff check	O. A. Sawyer and C. S. Foss	294,680	Mar. 4	413	115	26	900
Loom shedding mechanism	T. Shillcock	293,798	Feb. 19	1313	364, 365	26	687
Loom-shuttles. Tension-regulating device for	G. Baldwin	291,831	Jan. 8	1021	285	26	188
Looms for weaving double pile fabrics. Mechanism for delivering pile-warps in	F. Charcot	294,965	Mar. 11	759	212	26	967
Looms. Positive shuttle-motion for	H. H. Greenman	291,844	Jan. 8	1040	290	26	191
Lounge and sofa	L. C. Van Nest	291,244	Jan. 1	283	79	26	59
Low-water alarm	W. T. Bate	291,272	Jan. 1	291	90	26	59
Lubricating box. Journal	G. F. Senter	293,614	Feb. 12	1061	293	26	635
Lubricating compound	B. F. Bartlett	294,840	Mar. 11	613	.....	26	940

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Lubricating device for cutter-bars	E. D. Roth	295,814	Mar. 25	1875	520	26	1186
Lubricating device for wheels	G. Peacock	293,070	Feb. 5	362	98	26	508
Lubricating material. Metal-mold	C. F. Brush	293,708	Feb. 19	1184	.....	26	665
Lubricating pistons, &c. Apparatus for	R. H. Fronde	295,381	Mar. 18	1318	367	26	1060
Lubricating wheels and pulleys. Device for	W. P. Daniell	291,307	Jan. 1	368	103	26	66
Lubricator: *See* Automatic lubricator. Locomotive-lubricator. Pulley-lubricator. Steam-cylinder lubricator. Steam-engine lubricator. Universal lubricator.							
Lubricator	P. J. Baltes	295,474	Mar. 18	1429	395	26	1101
Lubricator	J. Bissett	294,720	Mar. 4	461	129	26	908
Lubricator	A. Bradford	293,705	Feb. 19	1180	329	26	665
Lubricator	A. Bradford	293,706	Feb. 19	1182	329	26	665
Lubricator	D. B. Brindle	294,437	Mar. 4	126	33	26	851
Lubricator	C. E. Collins	291,154	Jan. 1	175	51	26	33
Lubricator	W. U. Fairbairn	291,042	Jan. 1	32	9	26	8
Lubricator	W. S. Germeyer and J. A. Durnin	294,315	Feb. 26	1990	544	26	812
Lubricator	N. H. Heft	295,757	Mar. 25	1798	499	26	1173
Lubricator	W. A. Lovelis	294,480	Mar. 4	177	49	26	859
Lubricator	C. B. McAlvay	294,399	Mar. 4	77	20	26	843
Lubricator	L. C. Nielsen	295,793	Mar. 25	1849	514	26	1182
Lubricator	A. Noteman	293,590	Feb. 12	1033	285	26	630
Lubricator	J. W. Reed	295,198	Mar. 18	1084	298	26	1035
Lubricator	S. Reid	294,151	Feb. 26	1783	489	26	776
Lubricator	S. Reid	294,152	Feb. 26	1787	489	26	776
Lubricator	S. Reid	294,153	Feb. 26	1788	489	26	776
Lubricator	W. A. Reid	291,400	Jan. 1	477	135	26	86
Lubricator	J. J. Renchard	292,050	Jan. 15	1298	363	26	250
Lubricator	G. C. Sims	292,446	Jan. 22	1808	504	26	348
Lubricator	J. C. Thayer	294,161	Feb. 26	1798	492	26	778
Lubricator	J. Sealey	291,796	Jan. 8	966	271	26	179
Lumber-binder	D. Goodwillie	293,961	Feb. 19	1524	420	26	725
Lumber-drier	L. Rollins	295,284	Mar. 18	1194	332	26	1057
Lumber-drier	A. S. Nichols	295,418	Mar. 18	1360	378	26	1089
Lumber-drying apparatus	E. Myers	295,667	Mar. 25	1687	467, 468	26	1153
Lunch-box and drinking-flask. Combined	J. F. Moran	292,502	Jan. 29	1879	525	26	369
Lunch-heater	G. S. Iredell	295,400	Mar. 18	1339	373	26	1084
Machinery. Sliding bed for	F. Outram	293,591	Feb. 12	1034	285	26	630
Magnet	C. M. Many	293,338	Feb. 12	736	196	26	576
Magnet and armature. Electro-	I. A. Timmis and S. C. C. Currie	293,116	Feb. 5	423	113	26	518
Magneto and dynamo electric machine	F. G. Frick	295,534	Mar. 25	1514	414	26	1122
Magneto-electric generator	W. J. Bowen	292,153	Jan. 22	1416	397	26	279
Magneto-electric machines. Driving-gear for	E. T. Gilliland	293,160	Feb. 5	487	130	26	527
Magneto-electrical alarm	J. R. H. Hinton	292,311	Jan. 22	1629	456	26	314
Magneto or dynamo-electric machines. Commutator for	Z. T. Grammo	294,613	Mar. 4	334	93	26	885
Mail-bag	S. O. Campbell	295,733	Mar. 25	1768	491	26	1167
Mail-bag	H. Clipp and F. M. Brock	291,152	Jan. 1	173	50	26	33
Mail-bag	H. C. Evans and G. Jones	291,501	Jan. 8	614	173	26	117
Mail-bag	W. Hawn	293,459	Feb. 12	889	241	26	604
Mail-bag	A. Severin, Jr	295,439	Mar. 18	1381	383	26	1093
Mail-bag	W. A. Van Camp	293,123	Feb. 5	444	119	26	590
Mail-bag	W. Angle	292,975	Feb. 5	247	68	26	488
Mail-bag catcher	H. E. and C. L. Lundy	294,799	Mar. 11	561	155	26	931
Mail-bag cord-fastener and label-holder combined	J. Moore	291,384	Jan. 1	458	129	26	82
Mail-bag fastener	R. B. Scott	295,294	Mar. 18	1211	337	26	1060
Mail-bag fastening	G. W. Wentworth	294,707	Mar. 4	443	123	26	905
Mail-bags. Tag or label for	F. E. Frey	292,741	Jan. 29	2202	614	26	423
Mail-box	E. Lemry	292,327	Jan. 22	1648	460	26	317
Mallet	C. J. Hexamer	292,488	Jan. 29	1862	520	26	365
Malt and grain mills. Construction of	H. Herrmann	294,232	Feb. 26	1886	516	26	793
Malt-drier	R. S. Waring	294,544	Mar. 4	257	71	26	872
Mandrel and die for cable-presses	A. E. Lytle	292,167	Jan. 22	1437	403	26	282
Mandrel. Expanding	R. S. Waring	294,537	Mar. 4	246	69	26	871
Mandrel for cable-presses	R. S. Waring	294,539	Mar. 4	250	69	26	872
Mandrel for cable-presses	R. S. Waring	294,540	Mar. 4	251	70	26	872
Mandrel for cable-presses	R. S. Waring	294,542	Mar. 4	254	70	26	872
Mandrel for cable-presses	R. S. Waring	294,547	Mar. 4	261	71	26	873
Mandrel for cable-presses	R. S. Waring	294,548	Mar. 4	263	72	26	873
Mandrel for cable-presses	R. S. Waring	294,550	Mar. 4	265	72, 73	26	874
Manikin, automaton, or jointed doll	C. A. Kihlgren	292,919	Feb. 5	175	47	26	475
Map case and holder. Combined	J. Travis	294,162	Feb. 26	1801	492, 493	26	778
Map-holder	J. W. H. Doubler	292,902	Feb. 5	151	41, 42	26	471
Map-rack. Folding	F. P. Montgomery	294,254	Feb. 26	1911	524	26	798
Map-stand. Revolving	H. E. Hayes	295,636	Mar. 25	1645	456	26	1145
Marine-signal light	R. J. Baker and J. P. Roberts	295,717	Mar. 25	1750	486, 487	26	1164
Marker. Land-	A. W. Hitchcock	295,761	Mar. 25	1807	501	26	1174
Marker. Land-	W. H. King	295,254	Mar. 18	1160	320, 321	26	1049
Marker. Land-	J. W. Maddox and C. E. Adamson	294,138	Feb. 26	1767	485	26	773
Mash, &c. Apparatus for cooling	T. Hayes	295,005	Mar. 11	830	227	26	978
Mash-cooling apparatus	J. Woelner	292,885	Feb. 5	130	36	26	467
Mashing apparatus. Grain-	T. Hayes	295,004	Mar. 11	827	227	26	978
Mast-hoop	J. H. Wygant	292,191	Jan. 22	1468	412	26	287
Mat: *See* Floor-mat.							
Mat	R. Martinez	295,782	Mar. 25	1835	510	26	1180
Match-box	J. C. Baner	295,098	Mar. 11	953	260	26	999
Match-making machine	C. J. and J. M. Donnelly	292,474	Jan. 29	1844	514	26	362
Match-safe	J. M. Wheeler	293,694	Feb. 19	1164	324	26	662

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Match-splint machine	W. I. Ely	291,314	Jan. 1	377	105	26	68
Match-splint machine	G. H. Millen and E. Mousseau	295,191	Mar. 18	1075	296	26	1034
Match-splints. Machine for making	G. Sebold	293,794	Feb. 19	1307	362, 363	26	686
Match-splints. Machine for making and sticking	G. A. Faas	292,423	Jan. 22	1779	495, 496, 497	26	343
Matrices. Machine for making	R. L. Kimberly	295,878	Mar. 25	1958	542, 543, 544, 545	26	1202
Measure, register and sacker. Automatic grain	J. M. Fulton	294,459	Mar. 4	152	41, 42	26	855
Measuring incompressible fluids. Machine for	J. E. Crisp	295,858	Mar. 25	1933	534	26	1197
Measuring device. Cloth-	W. J. Sampson	293,914	Feb. 19	1460	404	26	713
Measuring machine. Grain-	J. Nafziger	292,346	Jan. 22	1672	466	26	321
Measuring-tank	W. E. Barcus	294,181	Feb. 26	1630	499	26	763
Measuring velocity by electricity	F. W. Cushing	293,426	Feb. 12	852	231	26	398
Meat-mincing machine	D. H. Lintner	293,754	Feb. 19	1251	346	26	676
Mechanical motor	F. N. Brett	293,624	Feb. 19	1075	297, 298	26	645
Mechanical motor	D. C. Camp	294,850	Mar. 11	695	173	26	943
Mechanical movement	C. A. Bentzen	292,976	Feb. 5	248	68	26	488
Mechanical movement	G. Crompton and H. Wyman. (Reissue.)	10,433	Jan. 1	586	165	26	105
Mechanical movement	H. Errio	291,885	Jan. 15	1102	307	26	213
Mechanical movement	E. M. George	291,893	Jan. 15	1109	309, 310	26	214
Mechanical movement	F. Knbec	291,745	Jan. 8	921	258	26	170
Mechanical movement	M. J. Lawlor	292,828	Feb. 5	62	17	26	454
Mechanical movement	J. B. Martel	293,483	Feb. 12	914	248	26	609
Mechanical movement	G. Yeomans	292,974	Feb. 5	246	67	26	487
Mechanical power	J. H. Schaffer	294,681	Mar. 4	414	115, 116	26	900
Medical compound	D. A. Green	291,714	Jan. 8	888	.....	26	165
Medical compound	N. A. Lum	291,751	Jan. 8	926	.....	26	171
Medical compound	G. Seibert	294,687	Mar. 4	420	.....	26	901
Medical compound	G. Taylor	294,288	Feb. 26	1953	.....	26	806
Metal bars. Machine for drawing	P. M. Haas	293,167	Feb. 5	503	133	26	529
Metal bars. Upsetting and shaping	W. and G. H. Sellers	291,098	Jan. 1	102	28, 29	26	21
Metal-bending machine	H. A. Ainsworth	295,851	Mar. 25	1919	531	26	1195
Metal-coating compound	J. H. Legge	295,256	Mar. 18	1163	.....	26	1049
Metal drawing dog	P. M. Haas	293,166	Feb. 5	501	133	26	529
Metal in the earth. Electrically locating and following veins of	J. Prince	293,518	Feb. 12	953	259	26	616
Metal plates. Apparatus for scaling and pickling	H. and H. B. Chess	294,441	Mar. 4	131	34	26	852
Metal-spinning machine	F. C. Williams	291,253	Jan. 1	293	83	26	53
Metal-working machine. Compound	N. J. Rice	291,775	Jan. 8	955	268	26	177
Metals from ores and metallurgical products. Extracting	E. H. Russell	295,815	Mar. 25	1875	.....	26	1187
Metals from ores and metallurgical products. Separating	E. H. Russell	295,887	Mar. 25	1976	.....	26	1204
Metallurgical furnace	J. Altmeyer	293,131	Feb. 5	455	121, 122	26	521
Meter: *See* Electric-circuit meter. Fluid-meter. Water-meter. Electrical meter.							
Microscope	W. K. Kidder	295,770	Mar. 25	1817	505	26	1176
Microscope. Binocular	E. Bausch	293,217	Feb. 12	579	152	26	548
Middlings, &c. Bolt for purifying	O. P. Hurford	295,535	Mar. 25	1544	428, 429	26	1128
Middlings. Machine for treating	J. J. and E. T. Faulkner	293,236	Feb. 12	602	158, 159	26	552
Milk-can	W. F. Manz and C. H. Swab	292,440	Jan. 22	1803	502	26	347
Milk-can. Shipping	J. F. Swab	293,682	Feb. 19	1147	320	26	659
Milk-cooler	A. H. Martin	294,467	Mar. 4	100	53	26	861
Milk-cooler	J. G. Smith	293,805	Feb. 19	1321	367	26	698
Milk. Treating	G. Lawrence	295,180	Mar. 18	1058	292	26	1031
Mill: *See* Attrition-mill. Roller-mill. Cane-mill. Roller flour-mill. Cider-mill. Rolling-mill. Grinding-mill. Saw-mill. Hominy-mill. Windmill.							
Mill-feeding device	J. B. Allfree	295,859	Mar. 25	1921	531	26	1195
Mills. Attaching the grinding-plates of	W. J. Lane	294,738	Mar. 4	478	133	26	911
Milling and slotting machine. Convertible	W. O. Lincoln	293,892	Feb. 19	1433	396, 397	26	708
Milling apparatus	F. M. Mackey	293,047	Feb. 5	327	90, 91	26	502
Milling-cutter	S. Broadbent	294,192	Feb. 26	1941	502	26	785
Milling-machine. Universal	C. E. Lipe	292,928	Feb. 5	186	51, 52	26	477
Milling-machines. Index-head for	C. E. Lipe	292,927	Feb. 5	184	51	26	477
Millstone-adjusting mechanism	G. H. Cormack	292,626	Jan. 29	2052	571	26	396
Millstone-dress	G. W. Prior	294,911	Mar. 11	698	195	26	956
Mincing-knife	R. J. Victor	293,542	Feb. 12	978	268	26	621
Mine-draining apparatus	G. W. Dickie	294,859	Mar. 11	635	176, 177, 178	26	945
Mines. Winding apparatus for	A. Lindenberg	295,774	Mar. 25	1899	506	26	1177
Miner's combination-tool	J. Ryan	291,627	Jan. 8	782	220	26	147
Mining-machine	V. Lechner	295,183	Mar. 18	1060	292, 293	26	1032
Mining-machine	J. H. McDonald	294,247	Feb. 26	1903	521	26	797
Mining machine. Coal-	J. Lucas	291,916	Jan. 15	1142	318	26	221

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Mining machine. Placer-	R. V. F. De Guinon	293,852	Feb. 19	1384	383	26	699
Mirror and photographic album. Combined toilet-	L. Wolf	292,884	Feb. 5	129	35	26	467
Mirror for hat-tips, &c. Flexible	A. C. Couch	291,033	Jan. 1	23	6	26	7
Mitten	T. Munthe	294,063	Feb. 26	1657	457, 458	26	756
Mittens from woven or knitted fabric. Manufacturing felted	D. W. Northrup	292,250	Jan. 22	1557	436	26	301
Mold: *See* Casting-mold. Fire-kindler mold. Cigar-mold. Glass-mold.							
Mold	J. T. Copithorn	293,953	Feb. 19	1514	418	26	724
Molder's flask	S. P. Robinson	294,406	Mar. 4	87	23	26	844
Molding fruits, fancy-topped tables, birds, &c. Composition of matter for	E. Brady	291,284	Jan. 1	334	.....	26	61
Molding in sand. Machine for	W. Aikin and W. W. Drummond	291,124	Jan. 1	139	39, 40, 41	26	27
Molding-machine guard	J. O. Squires and J. K. Shriver	293,534	Feb. 12	968	264	26	619
Molding-machine safety-guard	G. H. Hanscom and H. P. and H. E. Brooks.	291,897	Jan. 15	1113	311	26	215
Molding-machine. Sand	W. N. Barrows	293,401	Feb. 12	826	223	26	593
Moldings, &c. Application of fabrics to	A. Freschl	293,158	Feb. 5	484	120	26	526
Moldings. Machine for dressing	J. C. Brandon	295,726	Mar. 26	1760	489	26	1166
Moldings. Ornamentation of frame-	P. E. Francke	292,532	Jan. 29	1959	546	26	380
Monkey-wrench	C. H. Miller	291,213	Jan. 1	249	70	26	45
Mortar	W. A. Harwood	291,054	Jan. 1	47	14	26	12
Mortar-mixer	W. Prochnow	295,196	Mar. 18	1062	297, 298	26	1035
Mortise-cleaner	S. Van Auken	294,097	Feb. 26	1708	470	26	764
Mortising-machine	W. W. Green	295,162	Mar. 18	1034	286	26	1027
Mortising-machine	E. J. Humphreys	294,389	Mar. 4	65	16, 17	26	841
Mortising-machine	H. A. Wilbur	293,607	Feb. 12	1052	291	26	633
Mortising-machine	W. H. Doane and G. W. Bugbee	295,236	Mar. 18	1136	313	26	1044
Mortising-machine boring attachment	D. C. Smith	294,088	Feb. 26	1696	466	26	702
Mosquito bar and canopy holder	G. Focke	291,321	Jan. 1	385	107	26	69
Motion and power. Device for transmitting rotary	J. W. Cheney	294,761	Mar. 11	710	142	26	923
Motion. Converting	E. Catlin	292,471	Jan. 29	1841	513	26	301
Motion. Device for converting	W. R. Lampton	293,477	Feb. 12	907	245	26	608
Motion. Device for converting	J. Barker	292,461	Jan. 29	1829	509, 510	26	359
Motion. Mechanism for converting rotary into vibrating	H. Gardner	294,608	Mar. 4	329	91	26	884
Motion-transmitter	J. Winter	291,119	Jan. 1	132	37, 38	26	26
Motive-power machine	J. A. Hart, H. Scott, and B. F. Pancoast.	295,121	Mar. 11	977	268	26	1003
Motor: *See* Cable-motor. Hydraulic motor. Churn-motor. Mechanical motor. Electric motor. Sewing-machine motor. Electro-dynamic motor. Spring-motor. Traction-motor. Gas-motor. Water-motor.							
Motor	E. M. and C. M. Kimball	291,522	Jan. 8	644	183	26	122
Motor	C. H. Kuhne	295,179	Mar. 18	1057	291	26	1031
Motor	H. E. Marchand	293,895	Feb. 19	1438	398	26	709
Motor	N. Mikkelsen	291,069	Jan. 1	66	19	26	15
Motor	T. Wall	295,314	Mar. 18	1235	343	26	1063
Motor	C. H. Paxson	293,507	Feb. 12	941	256	26	614
Mower. Lawn-	C. Dixon	292,289	Jan. 22	1603	448	26	309
Mowers and reapers. Pitman-box connection for	J. H. Wyms	293,208	Feb. 5	558	148	26	539
Mowers. Grass-collecting attachment for lawn-	H. R. Allen	291,019	Jan. 1	4	2	26	4
Mowing and reaping machines. Cutter-bar, &c., for	H. R. Allen	291,020	Jan. 1	7	2	26	4
Mowing-machine	J. E. Mendenhall	295,126	Mar. 11	983	270	26	1005
Mowing-machine	S. McCay	292,244	Jan. 22	1550	434	26	300
Mowing-machine knives. Machine for sharpening	N. B. Hubbard	292,116	Jan. 15	1374	385	26	264
Mucilage-bottle and holder	P. Norden	293,769	Feb. 19	1273	352	26	680
Muff	G. Beegen	294,564	Mar. 4	281	76	26	876
Mug	D. Prieto	291,397	Jan. 1	472	133	26	85
Music-leaf turner	J. M. Wittman	294,298	Feb. 26	1968	538	26	809
Music-leaf turner	J. McTammany, Jr	292,671	Jan. 29	2110	586, 587	26	406
Musical instrument. Automatic	N. R. Marshman	293,184	Feb. 5	527	140	26	533
Musical instrument. Mechanical	R. F. Flemminge, Jr	293,729	Feb. 19	1213	336	26	671
Musical instruments. Tuning-peg for	M. E. Patterson	295,048	Mar. 11	881	242	26	987
Musical instruments. Tuning-peg for	J. Heald	295,756	Mar. 25	1797	499	26	1173
Musical instruments. Water-key for brass	H. J. D. Miner	295,659	Mar. 25	1676	464	26	1151
Musical wagon	J. R. Husted	291,059	Jan. 1	51	15	26	12
Nail-machine	J. C. Gould	292,299	Jan. 22	1615	452	26	311
Nail-plate feeder	J. C. Gould	292,300	Jan. 22	1618	453	26	312
Nail-plate feeder	W. H. Brock	294,111	Feb. 26	1722	473	26	766
Nail-strip	E. F. Barton	295,515	Mar. 25	1490	411, 412	26	1117
Nailing-machine	H. Weeks	291,443	Jan. 1	527	140, 150	26	95
Nails and tacks. Device for cleaning	H. B. Chess	294,440	Mar. 4	130	34	26	851
Naphtha from oil. Extracting	J. W. Evans	291,175	Jan. 1	200	56	26	37
Napkin ring and holder	G. A. Bahn	293,396	Feb. 12	821	221	26	592
Neck-wear fastener	J. Weil	291,444	Jan. 1	528	150	26	95
Necktie	W. C. Cross	291,301	Jan. 1	361	102	26	65
Necktie	W. C. Cross	294,726	Mar. 4	466	130	26	909
Necktie-fastener	N. I. Dryfoos	294,507	Mar. 4	316	88	26	882
Necktie-fastener	O. M. Graves	294,869	Mar. 11	651	181	26	948
Necktie-fastener	J. Lochman	292,929	Feb. 5	192	53	26	478
Necktie-fastener	H. F. Miller	292,837	Feb. 5	73	20	26	456
Necktie holder and fastener	H. Heath	292,308	Jan. 22	1625	455	26	313
Necktie-retainer							

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Necktie-supporter	B. B. Scully	293,792	Feb. 19	1305	361	26	685
Needle-case	J. S. Sackett	292,050	Jan. 15	1306	365	26	252
Needle. Shoe-button	E. A. Bailey	295,612	Mar. 25	1620	448	26	1141
Needle. Shoe-maker's sewing	A. W. Austin	292,195	Jan. 22	1473	414	26	288
Neat. Hen's	I. B. Dillon	294,974	Mar. 11	781	216	26	971
Neat. Hen's	N. Mitchell	291,214	Jan. 1	249	70	26	45
Net. Fly	B. G. Sindley	295,459	Mar. 18	1407	389	26	1097
Nursery-chair. Convertible	A. B. Stevens	291,951	Jan. 15	1181	329	26	228
Nut. Divided screw	G. S. Hilts	294,781	Mar. 11	531	148	26	926
Nut-lock	F. H. Agnew	293,295	Feb. 12	685	183	26	566
Nut-lock	S. B. Cragin	292,627	Jan. 29	2053	571	26	396
Nut-lock	A. Edgell	291,039	Jan. 1	28	8	26	8
Nut-lock	J. W. Haley	292,301	Jan. 22	1619	453	26	312
Nut-lock	S. P. Kimball	291,913	Jan. 15	1135	316	26	220
Nut-lock	A. E. Koch	292,234	Jan. 22	1534	429	26	297
Nut-lock	W. L. Moore	294,900	Mar. 11	686	191	26	954
Nut-lock	J. F. Plummer and H. P. Chapman	292,507	Jan. 29	1884	526	26	370
Nut-lock	E. H. Ringer	293,085	Feb. 5	379	103	26	511
Nut-lock	H. Schwarzwalder	291,945	Jan. 15	1173	327	26	226
Nut-lock	A. Searls	291,541	Jan. 8	605	169	26	126
Nut-lock	J. B. Snteh and W. C. McElheny	291,642	Jan. 8	801	225	26	150
Nut-lock	G. W. Tegg	293,113	Feb. 5	419	112	26	517
Nut-lock	L. C. Thatcher	291,811	Jan. 8	995	279	26	184
Nut-lock	C. Van Dusen	292,601	Jan. 29	2027	563	26	391
Nut-machine conveyer	M. D. Stedman	293,370	Feb. 12	781	209	26	584
Oar-lock	T. Marshall	294,893	Mar. 11	680	190	26	953
Oat-drill	H. Kehl	291,356	Jan. 1	417	119	26	76
Oil-can	J. W. Jackson	293,468	Feb. 12	898	243	26	606
Oil-can	C. R. Peaslee	294,072	Feb. 26	1673	461	26	758
Oil-can	E. M. Turner	291,902	Jan. 15	1192	332	26	230
Oil-cloth. Manufacture of	J. McGavin and E. C. Sandford	293,487	Feb. 12	918	249	26	610
Oil-cloth. Shelf	E. R. Riesenfeld	291,939	Jan. 15	1167	325	26	225
Oil-cup	J. J. Fawcett	294,022	Feb. 26	1595	443	26	746
Oil-cup	R. A. Fisher	293,237	Feb. 12	603	159	26	552
Oil-cup	H. L. Johnston	294,134	Feb. 26	1763	484	26	772
Oil-cup	H. W. Stemmerich	293,681	Feb. 19	1146	320	26	659
Oil for lubricating, &c. Composite	G. W. Banker	294,752	Mar. 11	501	.....	26	921
Oil. Manufacture of linseed	A. J. Adams	294,425	Mar. 4	112	.....	26	848
Oil-press	J. H. Valle	291,112	Jan. 1	122	34, 35	26	25
Oil. Removing oleine from linseed	T. H. Gray	295,633	Mar. 25	1642	.....	26	1145
Oil-tank safety apparatus	J. P. Reinecke	291,085	Jan. 1	84	24	26	18
Oil-tanks. Preventing the accumulation of inflammable gases in	J. P. Reinecke	291,084	Jan. 1	82	24	26	18
Oils and fats from fish. Extracting	P. C. Vogelius	294,940	Mar. 11	730	.....	26	962
Oiler for car-axle boxes	G. K. Waterhouse	291,247	Jan. 1	286	80	26	52
Oiler for loose pulleys	W. D. Graves, Jr	291,334	Jan. 1	396	111	26	72
Oiler. Valve	S. D. Mershon	294,898	Mar. 11	684	191	26	954
Ointment for tetter	M. Huggins	294,876	Mar. 11	657	.....	26	949
Opera-chair	E. G. Durant and E. Shupe	293,724	Feb. 19	1207	334	26	670
Opera-chair	E. G. Durant and E. Shupe	294,454	Mar. 4	146	39	26	854
Ore-concentrating machine	J. W. Bailey and B. B. Warfield	291,270	Jan. 1	319	89	26	58
Ore-concentrator	A. D. Clarke	291,984	Jan. 15	1220	340	26	235
Ore-concentrator	W. McDermott	292,245	Jan. 22	1551	434	26	300
Ore drier and separator	A. Seneff	294,157	Feb. 26	1793	491	26	777
Ore-furnace	G. B. N. Tower	293,378	Feb. 12	792	{212 / 213}	26	587
Ore-pulverizer	J. B. Sweetland	292,384	Jan. 22	1723	481	26	332
Ore-reducing apparatus	N. Clement	291,294	Jan. 1	350	99	26	63
Ore-roasting furnace	N. M. Langdon	294,795	Mar. 11	551	153	26	930
Ore-separating machine. Magnetic	G. W. L. Carter	292,096	Jan. 15	1348	378	26	259
Ore-separator	F. R. Brown	291,872	Jan. 15	1086	303	26	210
Ore-separator	H. P. Fairfield	292,637	Jan. 29	2063	574	26	397
Ore-separator	H. P. Fairfield	292,638	Jan. 29	2064	574	26	397
Ore-separator	G. McKay and H. P. Fairfield	291,067	Jan. 1	63	18	26	15
Ore separator. Magnetic-iron	C. Faber	294,021	Feb. 26	1593	{442 / 443}	26	746
Ores, &c. Apparatus for pulverizing	F. A. Luckenbach	291,367	Jan. 1	431	{122 / 123}	26	79
Ores, &c. Machine for reducing	G. and A. Raymond	293,786	Feb. 19	1295	{358 / 359}	26	683
Ores, &c. Machine for reducing	G. and A. Raymond	293,787	Feb. 19	1297	{359 / 360}	26	684
Ores. Pulverizing, desulphurizing, and otherwise treating metalliferous	F. A. Luckenbach	295,125	Mar. 11	981	269	26	1004
Ores. Purifying hyposulphite solutions used in leaching	E. H. Russell	295,886	Mar. 25	1976	.....	26	1204
Organ-action	C. R. Ford	292,478	Jan. 29	1848	515	26	363
Organ attachment. Reed	W. Hofer	294,021	Mar. 4	340	95	26	887
Organ-case	J. A. Warren	295,214	Mar. 18	1104	305	26	1040
Organ. Reed	M. Clark	292,099	Jan. 15	1351	{379 / 380}	26	260
Organ. Reed	J. B. Hamilton	293,454	Feb. 12	883	239	26	603
Organ. Reed	J. B. Hamilton	295,868	Mar. 25	1948	539	26	1200
Organ-treadle	J. Hessler	293,462	Feb. 12	893	241	26	605
Organs. Tremolo for reed	E. H. Loring	292,439	Jan. 22	1802	502	26	347
Oscillating engine	J. O. Gilbert	294,219	Feb. 26	1871	511	26	790
Oven. Portable	L. Dathis	292,544	Jan. 29	1948	{543 / 544}	26	378
Overalls	W. A. Dawson	295,619	Mar. 25	1628	450	26	1142
Overcoat	H. Emanuel	294,599	Mar. 4	317	88	26	892
Oysters. Machine for opening	L. A. Amouroux	295,611	Mar. 25	1619	448	26	1141
Package-box	T. Schmidt	292,863	Feb. 5	103	28	26	462
Packer for oil-wells. Gas and water	E. B. Frew	295,747	Mar. 25	1789	497	26	1171
Packing. Asbestus joint	W. A. Fries	295,748	Mar. 25	1790	497	26	1171

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Packing. Asbestus steam	W. A. Fries	295,749	Mar. 25	1791	497	26	1171
Packing-box. Reshipping	J. S. Parker and W. M. Baker	295,046	Mar. 11	878	241	26	986
Packing-can	J. T. Walker	291,557	Jan. 8	685	194	26	129
Packing condenser-tubes	J. Wilson	295,136	Mar. 11	1000	276	26	1008
Packing for stuffing-boxes	A. Beldam	292,783	Feb. 5	6	2	26	444
Packing for stuffing-boxes. Metallic	J. J. Crowley	291,160	Jan. 1	184	53	26	35
Packing. Metallic rod	E. P. Monroe	293,189	Feb. 5	534	142	26	535
Packing vessels or cans. Construction of	F. A. Walsh	291,437	Jan. 1	522	147	26	94
Pad: *See* Corset-pad. Inking-pad. Harness-pad.							
Paddle-wheel. Feathering	C. L. Petersen	291,766	Jan. 8	941	264	26	174
Paddle-wheel. Feathering	C. L. Petersen	293,509	Feb. 12	943	257	26	614
Paddle-wheel. Feathering	A. F. Martens	294,058	Feb. 26	1652	456	26	755
Padlock	A. Jackson. (Reissue)	10,440	Jan. 29	2267	627	26	434
Padlock. Indicator	S. G. Cabell	292,407	Jan. 22	1752	486	26	338
Paging and numbering machine	C. Seybold	293,199	Feb. 5	544	{144 / 145}	26	537
Pail. Chamber	C. H. Paulus	293,776	Feb. 19	1281	354	26	681
Pail. Chamber	G. L. Reynolds	293,912	Feb. 19	1459	403	26	712
Pail. Dinner	W. H. Carbaugh	291,680	Jan. 8	848	237	26	158
Pail. Dinner	A. A. Foos	294,217	Feb. 26	1870	511	26	790
Paint	A. Buzolich and T. K. Smith	291,677	Jan. 8	846	.....	26	158
Paint	A. Buzolich and T. K. Smith	291,678	Jan. 8	847	.....	26	158
Paint and other cans. Stand and press for	F. R. Gront	295,402	Mar. 18	1457	401	26	1106
Paint-can	W. Knehn	294,790	Mar. 11	542	150	26	928
Paint-distributer	J. P. Whipple	292,189	Jan. 22	1465	412	26	286
Paint-mills. Cooling apparatus for	L. E. Fuller and J. H. Macauley	295,626	Mar. 25	1634	{453 / 454}	26	1143
Paint. Mixed	H. Little	293,045	Feb. 5	326	.....	26	502
Paints. Base for	A. E. Brockett	291,142	Jan. 1	163	.....	26	31
Paintings and other analogous works of art. Carrier for	C. Marot	295,030	Mar. 11	859	236	26	983
Panel	R. A. Adams	294,838	Mar. 11	611	169	26	940
Pantaloons	H. F. Engels	291,473	Jan. 1	571	161	26	102
Pants or drawers	P. Gottheimer	294,032	Feb. 26	1609	447	26	749
Paper bag	J. P. Onderdonk	294,403	Mar. 4	83	22	26	843
Paper-bag holder	A. Brown	294,489	Jan. 8	598	169	26	114
Paper-bag holder	G. N. Fenn	293,728	Feb. 19	1212	335	26	670
Paper-bag machine	W. B. Purvis	293,353	Feb. 12	756	204	26	579
Paper box	E. Gowdy and C. B. Russell	292,892	Feb. 5	32	9	26	448
Paper box	J. C. Hurd	292,228	Jan. 22	1596	427	26	295
Paper box	G. L. Jaeger	292,653	Jan. 29	2082	580	26	401
Paper box	G. L. Jaeger	292,654	Jan. 29	2084	580	26	401
Paper box	T. Marburg	291,615	Jan. 8	771	216	26	145
Paper box	H. S. Manson	293,061	Feb. 5	347	95	26	505
Paper box	J. W. Tatum	291,805	Jan. 8	989	278	26	183
Paper box	A. G. Wilson	292,606	Jan. 29	2028	564	26	392
Paper, cloth, &c. Manufacture of wood-grain	G. F. and J. W. McIndoe	295,657	Mar. 25	1673	.....	26	1151
Paper, cloth, &c. Manufacture of wood-grain	G. F. and J. W. McIndoe	295,658	Mar. 25	1674	.....	26	1151
Paper-cutting machine	E. R. Sheridan	293,200	Feb. 5	547	145	26	537
Paper-feeding device	J. Arkell	291,829	Jan. 8	1017	284	26	187
Paper-folding machine	C. Kahler	294,473	Mar. 4	108	46	26	858
Paper-folding machines. Tension device for tapes of	J. H. Stonemetz	295,634	Mar. 25	1607	525	26	1191
Paper from grain-enticles. Manufacture of	W. L. Teter	295,635	Mar. 25	1608	.....	26	1191
Paper from rolls. Device for holding and cutting	J. H. Earl	294,312	Feb. 26	1986	543	26	812
Paper-holder	M. F. Newbury	293,340	Feb. 12	751	200	26	579
Paper-holder, calendar, and blotter. Combined	C. De Vos	291,409	Jan. 8	612	172	26	117
Paper in shipment. Device for protecting the ends and corners of rolls of	H. Sanger	291,406	Jan. 1	490	137	26	87
Paper. Machinery for manufacturing ornamental	W. M. Crane	293,229	Feb. 12	593	156	26	551
Paper-making machine	J. J. Harris	293,870	Feb. 19	1408	389	26	703
Paper-making machines. Drive for	G. Kaffenberger	293,471	Feb. 12	901	244	26	606
Paper manufactnre from the plant gaiega	H. da Costa Corrêa Leite	293,566	Feb. 12	1008	.....	26	636
Paper. Manufactnre of ornamental	W. M. Crane	293,228	Feb. 12	592	156	26	551
Paper or pamphlet holder	J. O. Poor and R. E. Bean	292,581	Jan. 29	1994	535	26	386
Paper-perforating machine	I. C. Carpenter	291,293	Jan. 1	349	98, 99	26	63
Paper piping	J. McCausland	291,372	Jan. 1	438	124	26	80
Paper-pulp, &c. Bleaching	E. Hermite	294,619	Mar. 4	340	94	26	886
Paper-pulp-grinding engines. Securing the knives in	J. H. Horne	294,387	Mar. 4	61	15	26	840
Paper-pulp. Machine for forming hollow ware from	J. G. Bodge	293,220	Feb. 12	582	153	26	549
Paper-pulp. Machine for grinding	J. B. Shepler	294,689	Mar. 4	423	118	26	901
Paper-pulp. Machine for the reduction of wood, &c., to	F. G. Ritchie	291,777	Jan. 8	957	{268 / 269}	26	177
Paper-pulp. Manufacture of	D. O. Francke	295,865	Mar. 25	1945	537	26	1199
Paper-pulp-saving machine	J. T. and H. A. Porter	292,947	Feb. 5	212	58	26	481
Paper-stock. Method of and machinery for treating rags for	C. F. Taylor	292,873	Feb. 5	115	31, 32	26	464
Paper wrapper	D. Dick	294,858	Mar. 11	634	176	26	945
Parachinanisol. Manufacture of	Z. H. Skraup	295,925	Mar. 25	1885	.....	26	1189
Parer and seeder. Combined fruit	J. O. Beazley and L. L. Morris	295,476	Mar. 18	1431	396	26	1102
Parer and slicer. Vegetable	W. E. Brock	294,362	Mar. 4	26	7	26	834
Parer. Apple	W. A. C. Oaks	295,274	Mar. 18	1184	328	26	1054
Parer. Apple	L. H. Scott	292,592	Jan. 29	2013	560	26	389
Parer. Fruit	A. N. Keigwin and W. G. Talley	295,874	Mar. 25	1954	541	26	1201
Parer. Potato	G. Geer	292,554	Jan. 29	1961	547	26	390
Paste for cleaning metals	H. Barlet	293,998	Feb. 26	1569	.....	26	741
Pavement and roof-pavement and sub-structures for the same. Concrete and concreted	T. Hyatt	292,559	Jan. 29	1967	549	26	381
Pavement. Combined wood and broken-stone	W. A. Amberg	291,482	Jan. 8	589	167	26	113
Pavement. Wood	R. Albrecht	295,610	Mar. 25	1618	447	26	1141
Paving-blocks, bricks, &c. Machine for making	J. Gaunt, W. F. Poleaz, W. Calhoun, and J. C. Daubmann.	291,505	Jan. 8	620	{174 / 175}	26	118
Paving-blocks. Machine for forming	D. G. Ross	292,365	Jan. 22	1706	475	26	329

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Pawl and ratchet	R. C. Ellrich	293,957	Feb. 19	1519	419	26	724
Peanut cleaning and separating device	J. Johnson	293,332	Feb. 12	730	195	26	575
Peg-cutter	S. Yeatman	291,460	Jan. 1	558	157	26	100
Pelts. Method of and apparatus for treating	C. F. Ritchel and G. Doolittle	295,050	Mar. 11	885	243	26	987
Pen and pencil case	L. W. Fairchild	291,886	Jan. 15	1103	307	26	213
Pen-cleaner	T. C. Gorman	293,650	Feb. 19	1106	307	26	651
Pen. Fountain-	H. Madeheim	293,759	Feb. 19	1257	348	26	677
Pen. Fountain-	H. Stockmann	294,700	Mar. 4	436	121	26	904
Pen. Fountain-	E. Tyrrell	294,340	Feb. 26	2024	554	26	819
Pen. Fountain-	W. H. Wales	291,964	Jan. 15	1195	333	26	230
Pen. Fountain-	L. E. Waterman	293,545	Feb. 12	981	269	26	621
Pen fountain attachment	G. W. Price	292,137	Jan. 15	1399	391	26	268
Pen. Fountain stylus-	W. W. Stewart	291,800	Jan. 8	965	276	26	182
Pen-holder	J. S. Halsey	291,723	Jan. 8	898	251	26	167
Pen-holder	F. M. Libby	294,477	Mar. 4	173	48	26	859
Pen-holder	F. M. Libby	294,478	Mar. 4	174	48	26	859
Pen-holder	A. H. Spencer	291,416	Jan. 1	500	140	26	89
Pen-holder, pencil, and tooth-pick. Combined	R. M. Collard	291,879	Jan. 15	1095	305	26	212
Pen. Metallic	H. Hewitt	295,395	Mar. 18	1334	371	26	1083
Pen. Shading-	R. H. Beazley	292,782	Feb. 5	5	2	26	444
Pen-staff and hand-support	W. H. Lamson	292,495	Jan. 29	1872	523	26	367
Pen. Stylographic fountain-	E. W. Morton	291,925	Jan. 15	1153	321	26	223
Pens. Clamp for ruling-	J. W. Dirbold	295,370	Mar. 18	1304	361	26	1077
Pencil	R. M. Collard	291,297	Jan. 1	354	101	26	64
Pencil and analogous articles	G. Hacker	294,317	Feb. 26	1993	545	26	813
Pencil and eraser combined. Self-sharpening	H. B. Scammell	293,280	Feb. 12	662	177	26	562
Pencil-case	J. C. Haring	292,909	Feb. 5	161	44	26	473
Pencil-holder	B. Eybel	291,998	Jan. 15	1241	347	26	239
Pencil-pointing device	H. G. Schramm	295,680	Mar. 25	1703	471	26	1156
Pencil. Shading-	G. B. Hecklinger	292,650	Jan. 29	2080	579	26	400
Pencil-sharpener	J. Hoffman	291,597	Jan. 8	739	208	26	139
Pencil-sharpener	W. E. Sibley	291,235	Jan. 1	273	77	26	50
Pencil-sharpener	A. M. Smith	295,296	Mar. 18	1213	337	26	1060
Pencil-sharpener holder	W. K. Foster	292,102	Jan. 22	1432	401	26	282
Pencils. Lead-holder for	J. Holland	292,313	Jan. 22	1632	457	26	314
Pendulum. Compensating	F. C. Greenleaf	293,865	Feb. 19	1402	388	26	702
Pendulum escapement. Torsion-	C. Stahlberg	292,870	Feb. 5	112	30	26	464
Percolator. Vacuum-press	C. R. Knapp	293,335	Feb. 12	733	195	26	575
Perfumery-charged cane and other handles	E. R. and H. A. Cowles and M. Osborn	295,359	Mar. 18	1291	358	26	1074
Permutation-lock	W. B. Atkinson and J. H. Foster	291,665	Jan. 8	833	233	26	155
Permutation-lock	L. Bilau	291,467	Jan. 1	563	159	26	101
Permutation-lock	D. R. Stedman	293,810	Feb. 19	1328	368	26	689
Permutation-lock	E. Stockwell	294,701	Mar. 4	437	{121 122	26	904
Photographer's retouching-point	H. H. McElhiney	294,059	Feb. 26	1653	456	26	755
Photographic camera	A. Herzog	295,638	Mar. 25	1648	457	26	1146
Photographic camera	G. S. North. (Reissue)	10,448	Feb. 5	565	150	26	540
Photographic paper. Apparatus for drying	B. F. Hale	291,722	Jan. 8	897	251	26	166
Photographic pictures. Printing and mounting	J. D. Terreforte	295,668	Mar. 25	1713	.....	26	1158
Photographic shutter	D. B. Sweet	292,707	Jan. 29	2153	600	26	413
Photographs. Coloring	I. B. Snell	291,544	Jan. 8	669	.....	26	126
Photometer	T. O. Sloane	292,515	Jan. 29	1905	533	26	372
Piano	J. R. Perry	292,580	Jan. 29	1992	555	26	386
Piano-action	F. St. Amant	293,369	Feb. 12	780	209	26	584
Piano-action	A. Biese and K. G. Zierold	294,004	Feb. 26	1575	{435 436	26	742
Piano-actions. Harmonic coupler for	W. S. Wright	295,512	Mar. 18	1485	409	26	1110
Piano or organ key-rail	P. Gmehlin	295,383	Mar. 18	1321	367	26	1080
Piano bell attachment	W. Hofer	292,815	Feb. 5	48	12	26	451
Piano cover. Upright	T. F. Kraemer. (Reissue)	10,450	Feb. 26	2039	557	26	820
Piano-damper	O. Wessell, A. Nickel, and R. Gross	295,317	Mar. 18	1238	343	26	1064
Piano-damper attachment	G. W. Neill	291,529	Jan. 8	651	185	26	123
Piano-damper attachment	G. W. Neill	291,530	Jan. 8	652	185	26	123
Piano-forte	J. Doyle	293,855	Feb. 19	1390	{384 385	26	700
Piano-forte bridge	J. R. Brown	291,143	Jan. 1	164	47	26	31
Piano-forte-damper action	G. W. Neill	291,528	Jan. 8	650	184	26	123
Piano-forte stringing device	J. R. Lomas	295,778	Mar. 25	1831	509	26	1179
Piano-hammer	E. R. Ober	295,670	Mar. 25	1692	469	26	1154
Piano-lock	F. W. Mix	295,270	Mar. 18	1180	327	26	1053
Piano sounding-board	G. Caddick	293,414	Feb. 12	839	227	26	586
Pianos and organs. Arm and finger guide for	T. Giddings	291,330	Jan. 1	392	110	26	71
Pianos. Stringing	C. E. Rogers	293,088	Feb. 5	381	104	26	511
Picker: *See* Fruit-picker.							
Picture-exhibitor	A. J. Dworsky, M. B. Kramer, and S. Phillips	294,976	Mar. 11	783	217	26	971
Picture. Sliced	W. Stranders	291,639	Jan. 8	798	224	26	149
Picture. Sliced	W. Stranders	292,598	Jan. 29	2020	562	26	390
Pie-crust. Machine for rolling	H. H. Olds	293,504	Feb. 12	936	{254 255	26	613
Pillow. Dress-	G. Noble	293,499	Feb. 12	932	253	26	612
Pillow-sham holder	C. P. Hawley	292,224	Jan. 22	1521	426	26	295
Pillow-sham holder	F. T. Maynard	293,900	Feb. 19	1444	399	26	710
Pin: *See* Safety-pin.							
Pipe: *See* Hawse-pipe. Tuyere-pipe. Tobacco-pipe.							
Pipe and other joints	J. A. Baldwin, Jr.	294,592	Mar. 4	279	76	26	876
Pipe-bending machine	E. Devine	292,418	Jan. 22	1772	{483 484	26	341
Pipe connection. Metallic steam-	J. M. Sweeney	294,160	Feb. 26	1797	492	26	778

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Pipe-coupling	R. M. Reilly	291,373	Jan. 8	950	267	26	176
Pipe-cutter	W. L. Sweetland	294,339	Feb. 26	2023	554	26	819
Pipe joint. Air-	B. R. Hawley	292,306	Jan. 22	1624	454	26	313
Pipe machine. Sewer-	J. R. Burdick and W. H. Davis	292,535	Jan. 29	1932	541	26	376
Pipe-molding apparatus	F. Shickle	295,205	Mar. 18	1093	302	26	1037
Pipe-molding pit	D. M. Long and J. Killer	293,480	Feb. 12	911	247	26	608
Pipe-return	R. H. D. Morrison	293,976	Feb. 19	1542	425	26	728
Pipe-threading-machine gage	G. F. Smith	294,518	Mar. 4	220	62	26	867
Pipe-wrench	F. Armstrong and N. W. Vandegrift	291,266	Jan. 1	315	89	26	57
Pipe-wrench	F. Armstrong and N. W. Vandegrift	291,267	Jan. 1	316	89	26	57
Pipe-wrench	D. S. Brown	293,848	Feb. 19	1382	381	26	698
Pipe-wrench	J. Jewell	293,175	Feb. 5	512	136	26	531
Pipe-wrench	F. A. Schramm and A. Modery	295,204	Mar. 18	1092	301	26	1037
Pipe-wrench	W. Rowan	292,445	Jan. 22	1807	504	26	348
Piston	F. Darling	292,994	Feb. 5	269	73	26	491
Pitman-box	G. E. Waggoner	292,077	Jan. 15	1327	371	26	255
Pitman-rod connection	R. W. Ferguson	292,905	Feb. 5	155	43	26	472
Plaiting-machine	J. B. Foley	293,939	Feb. 12	607	161	26	553
Plaiting-machine	W. B. Fenn	291,178	Jan. 1	203	57	26	37
Plane	C. A. Warfield	295,316	Mar. 18	1237	343	26	1004
Plane attachment. Rabbet	A. T. Goldsborough	293,863	Feb. 19	1400	387	26	702
Plane. Bench-	A. T. Goldsborough	293,864	Feb. 19	1401	388	26	702
Plane. Bench-	C. A. Meekins	295,414	Mar. 18	1355	377	26	1087
Plane. Bench-	J. Siegley	294,919	Mar. 11	706	197	26	958
Plane. Bench-	J. A. Trant	291,815	Jan. 8	999	280	26	184
Plane. Bench-	J. A. Trant	294,825	Mar. 11	594	164	26	937
Plane. Bench-	J. A. Trant	293,822	Feb. 19	1344	373	26	691
Plane-bit gage	H. P. Cope	294,724	Mar. 4	464	130	26	908
Planer-knife	E. Benjamin	293,135	Feb. 5	461	123	26	522
Planer. Metal-	F. P. Rosback	293,675	Feb. 19	1139	{317 318	26	657
Planing and printing wood. Machine for	W. A. Compton	291,155	Jan. 1	175	51	26	33
Planing-machine	J. A. Roberts	294,914	Mar. 11	701	195	26	957
Planing-machine jointing attachment	E. Benjamin	295,101	Mar. 11	957	261	26	999
Planing machine. Metal-	E. P. and H. C. Walter	293,289	Feb. 12	673	180	26	564
Planing machine. Wood-	E. Benjamin	294,001	Feb. 26	1571	434	26	742
Planter and check-row attachment. Corn-	C. S. Page	291,393	Jan. 1	469	132	26	84
Planter and fertilizer-distributer. Combined corn-	W. N. Arnold	293,615	Feb. 19	1065	295	26	643
Planter and fertilizer-distributer. Combined seed-	W. H. Albach	292,460	Jan. 29	1827	509	26	359
Planter and fertilizer-distributer. Corn-	E. Kolb	294,636	Mar. 4	300	101	26	891
Planter and fertilizer-distributer. Seed-	J. G. Ringer	291,402	Jan. 1	478	135	26	86
Planter and fertilizer-distributer. Walking corn-	A. Runstetler	295,132	Mar. 11	989	{272 273	26	1006
Planter check-row attachment. Corn-	H. Farmer	295,375	Mar. 18	1309	363	26	1078
Planter check-row attachment. Corn-	W. W. Robinson	292,056	Jan. 15	1303	364	26	251
Planter check-row attachment. Seed-	A. Van Fleet	292,771	Jan. 29	2257	625	26	432
Planter. Check-row corn-	C. M. Babcock	294,839	Mar. 11	611	169	26	940
Planter. Check-row corn-	E. W. Quincy	294,269	Feb. 26	1927	528	26	801
Planter. Check-row corn-	E. H. Reynolds	293,672	Feb. 19	1132	316	26	656
Planter. Check-row corn-	E. B. White	294,555	Mar. 4	272	74	26	875
Planter. Check-row corn-	A. Woodward	292,273	Jan. 22	1568	443	26	306
Planter check-rower. Corn-	A. Anderson	293,395	Feb. 12	819	{220 221	26	592
Planter check-rower. Corn-	G. W. Brown	294,964	Mar. 11	758	211	26	967
Planter check-rower. Corn-	J. P. Moos	295,883	Mar. 25	1972	{545 546	26	1203
Planter. Corn-	T. Bell	292,619	Jan. 29	2044	568	26	394
Planter. Corn-	W. Hopper and I. J. Allen	294,023	Mar. 4	345	96	26	887
Planter. Corn-	W. P. Marshall	291,757	Jan. 8	932	{261 262	26	172
Planter. Corn-	C. J. Mikesh	295,268	Mar. 18	1178	326	26	1052
Planter. Corn-	B. Scott	293,365	Feb. 12	772	{206 207	26	583
Planter. Corn-	W. G. Selby	291,093	Jan. 1	93	27	26	20
Planter. Cotton-seed	G. H. Port	291,768	Jan. 8	942	265	26	174
Planter fertilizer distributer. Seed-	A. C. Evans	295,528	Mar. 25	1505	415	26	1120
Planter fertilizing attachment. Seed-	A. C. Evans	295,529	Mar. 25	1507	{415 416	26	1120
Planter. Hand corn-	F. A. Westbrook	294,709	Mar. 4	445	124	26	905
Planter. Hand seed-	A. Hoag	295,762	Mar. 25	1807	502	26	1174
Planter. Potato-	J. P. Wick	295,846	Mar. 25	1914	529	26	1194
Planter. Seed-	J. W. Dawson	291,579	Jan. 8	712	200	26	134
Planter. Seed-	W. L. Hutson	295,765	Mar. 25	1810	503	26	1175
Planter. Seed-	A. J. Madra	294,800	Mar. 11	563	155	26	932
Planter. Seed-	J. F. W. Neltzel	293,666	Feb. 19	1123	313	26	654
Planter. Seed-	A. Smith	295,297	Mar. 18	1214	338	26	1060
Planters. Combined drill and fertilizer-distributer for one-horse	A. C. Evans	294,313	Feb. 26	1987	543	26	812
Plaques, frames, &c. Suspending attachment for	G. R. Osborn	291,221	Jan. 1	258	72	26	47
Plaster. Voltaic	W. F. Stark	293,679	Feb. 19	1144	319	26	658
Plastering composition	H. Graf	291,508	Jan. 8	625	.....	26	119
Plastering compound	H. E. Scales	291,408	Jan. 1	492	.....	26	88
Plate-holder	T. H. Blair	294,959	Mar. 11	752	210	26	966
Plates. Refuse attachment for table	A. Hentschke	292,651	Jan. 29	2081	579	26	401
Pliers. Cutting-	T. G. Hall	294,034	Feb. 26	1610	447	26	749
Pliers for attaching pin-tickets	A. J. Platt	295,424	Mar. 18	1366	379	26	1090
Plow	A. Ball	291,667	Jan. 8	836	234	26	156
Plow	A. G. Christman	293,309	Feb. 12	701	187	26	569
Plow	J. Elcock	292,636	Jan. 29	2061	{573 574	26	397
Plow	J. T. Ellyson	292,998	Feb. 5	274	75	26	492
Plow	O. A. Essig	292,549	Jan. 29	1957	545	26	380
Plow	D. A. and J. L. Funderburk	294,980	Mar. 11	796	220	26	974
Plow	C. Huehn	293,252	Feb. 12	621	165	26	555

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Plow	J. A. Kneedler	291,339	Jan. 1	420	119	26	77
Plow	T. A. Lanacha	291,524	Jan. 8	646	183	26	122
Plow	J. T. Millen	292,343	Jan. 22	1609	465	26	321
Plow	H. L. Moore	292,501	Jan. 29	1878	524	26	369
Plow	A. A. Roberts	291,087	Jan. 1	86	25	26	19
Plow	R. B. Sigafoos	294,281	Feb. 26	1942	533	26	804
Plow	G. B. St. John	294,699	Mar. 4	435	121	26	903
Plow	G. Stendel	295,009	Mar. 11	916	251	26	993
Plow	W. E. Venable	292,876	Feb. 5	120	33	26	465
Plow	S. A. Ware	292,300	Jan. 22	1731	492	26	334
Plow	H. Wiard and W. R. Bullock	295,702	Mar. 25	1731	492	26	1161
Plow and cultivator. Combined	H. Rea	291,772	Jan. 8	948	266, 267	26	175
Plow attachment	J. O. Caldwell	294,578	Mar. 4	296	81	26	879
Plow attachment	J. Comeaux	295,149	Mar. 18	1018	289	26	1024
Plow attachment	V. Wood	292,272	Jan. 22	1586	443	26	306
Plow-beam. Jointed	A. W. Green	292,006	Jan. 15	1250	350	26	240
Plow beams. Bed-plate for sulky	B. C. Bradley	293,930	Feb. 19	1497	412	26	720
Plow. Combination	J. D. Pace	293,505	Feb. 12	999	255	26	614
Plow gage and guide	W. H. Ammons	291,602	Jan. 8	829	232	26	155
Plow. Gang	H. M. Cormack	291,156	Jan. 1	177	51, 52	26	34
Plow-point	G. P. Swift	292,448	Jan. 22	1810	505	26	349

Pocket-knife	O. Huff	294,471	Mar. 4	165	45	26	857
Pocket-knife	F. W. Kaldenbach	292,917	Feb. 5	172	47	26	475
Pocket-knife	J. E. Deupree	291,702	Jan. 8	877	246	26	163
Poke. Animal	F. E. Shaw	291,633	Jan. 8	790	221	26	148
Pole. Clothes	A. H. and R. H. Beach	291,131	Jan. 1	150	43	26	29
Pole. Wagon	W. Heard	292,640	Jan. 29	2079	579	26	400
Polisher and cleaner for metal and other surfaces	J. Pierron	292,677	Jan. 29	2119	589	26	407
Polishing-machine	J. S. Hanaman	293,458	Feb. 12	888	240	26	604
Pool-playing. Ball-rack for	H. W. Collender	295,857	Mar. 25	1931	534	26	1197
Pool-rack	H. W. Collender and S. De Gaetano	294,584	Mar. 4	304	84	26	880
Pool-rack	P. W. Farly and A. L. Trowbridge	292,903	Feb. 5	153	42	26	471
Pool-rack	L. Widmayer	294,422	Mar. 4	109	29	26	847
Pool triangle and box	H. W. Collender	294,200	Feb. 26	1849	504	26	786
Post: *See* Fence-post.							
Post-base	J. Newton	291,927	Jan. 15	1154	322	26	223
Post-driver	E. Hiatt	293,021	Feb. 5	301	83	26	497
Post-shield	O. S. Leslie	291,308	Jan. 1	244	68	26	44
Postal-bag rack	C. R. Harrison	292,911	Feb. 5	163	44, 45	26	473
Pot: *See* Coffee-pot.							
Potato-digger	L. Habeck	292,804	Feb. 5	35	10	26	449
Potato digger and ridger	B. W. Binford	293,403	Feb. 12	899	224	26	594
Potato-screen	O. J. Smith	293,368	Feb. 12	779	209	26	584
Pottery. Composition for fire-proof	E. F. Zinns	295,321	Mar. 18	1242	.....	26	1065
Pottery-kiln	L. Lawton	295,419	Mar. 18	1352	376	26	1087
Poultry-fountain	J. C. Tappeiner	294,932	Mar. 11	720	201	26	961
Powder-warming apparatus	S. Poole	291,932	Jan. 15	1160	324	26	224
Power: *See* Animal-power. Treadle-power. Horse-power. Wave-power. Mechanical power.							
Power. Device for transmitting	A. D. Whitton	295,701	Mar. 25	1731	482	26	1161
Power from a central station. Device for transmitting	W. McCall and J. V. De Vry	292,025	Jan. 15	1267	354, 355	26	244
Power-jack	J. W. Massey	291,370	Jan. 1	436	123	26	79
Power. Metallic band for transmitting	A. Jarolimek	294,472	Mar. 4	166	46	26	858
Power-press	G. B. Lamb	295,411	Mar. 18	1351	375	26	1086
Preciona metals from ores. Extracting	E. H. Russell	295,816	Mar. 25	1877	.....	26	1187
Preserving and transporting food. Method of and apparatus for	S. H. Linn	291,914	Jan. 15	1136	317	26	220
Press: Baling-press. Hand-press. Cider-press. Hay-press. Cotton-press. Oil-press. Die-press. Power-press. Drop-press. Printing-press. Fruit-press. Wool-press. Glass-molding press.

Primer	R. F. Mitchell	294,657	Mar. 4	390	109	26	895
Printer's damping-roller	J. H. Bingham	294,436	Mar. 4	125	33	26	851
Printer's dry-rack	G. A. Clapper	291,030	Jan. 1	20	6	26	6
Printers' rollers. Shell or cover for	A. Campbell	294,438	Mar. 4	127	33	26	851
Printing and embossing machine. Case	H. F. Shepherd	293,797	Feb. 19	1312	364	26	687
Printing-machine	W. P. Kidder	291,521	Jan. 8	641	181, 182	26	121
Printing-machine delivery apparatus	C. Kahler	291,912	Jan. 15	1133	316	26	219
Printing-machine sheet-delivery apparatus	L. C. Crowell	292,993	Feb. 5	266	73	26	491
Printing-machine sheet-delivery apparatus	S. D. Tucker	293,120	Feb. 5	432	114, 115, 116	26	518
Printing-machine sheet-delivery apparatus	S. D. Tucker	293,121	Feb. 5	438	117, 118	26	519
Printing-machine. Stop-cylinder	W. Scott	295,057	Mar. 11	895	245	26	989
Printing-plates. Making lithographic	P. C. Möller	295,661	Mar. 25	1678	464	26	1151
Printing plates or blocks. Making relief	P. R. Shugg and G. Boyle	292,181	Jan. 22	1454	.....	26	285
Printing-press	C. R. Cottrell	293,313	Feb. 12	704	188, 189	26	570
Printing-press	M. Gally	291,843	Jan. 8	1038	290	26	191
Printing-press	A. F. Hyde	294,048	Feb. 26	1636	453	26	753
Printing-press	W. Scott	293,678	Feb. 19	1142	318, 319	26	658
Printing press. Color	J. W. Osborne	293,668	Feb. 19	1126	314	26	655
Printing-press inking attachment	B. S. Whitehead	291,969	Jan. 15	1200	335	26	231
Printing press. Stencil	J. C. Hill	291,905	Jan. 15	1125	313	26	218
Printing-presses. Air cushion for the reciprocating beds of	A. Campbell	291,875	Jan. 15	1090	304	26	211
Printing-presses. Electrically-actuated sheet-stop for	A. Campbell	291,575	Jan. 8	706	198, 199	26	133
Projectile	H. F. Mann	293,337	Feb. 12	734	196	26	576
Projectile for carrying high explosives	F. H. Snyder	295,830	Mar. 25	1889	524	26	1189
Propeller. Screw	H. C. Pearsons	293,777	Feb. 19	1282	354, 355, 606, 607	26	681
Propulsion of vessels	C. Worch	292,726	Jan. 29	2176	.....	26	418
Protector: *See* Book-leaf protector. Tree-protector.							
Pruning implement	G. F. Waters	291,966	Jan. 15	1197	334	26	231
Puddling-furnace	R. H. Oates	293,770	Feb. 19	1273	352	26	680
Puddling-furnace. Rotary	J. Hall, Jr	295,751	Mar. 25	1793	498	26	1172
Puddling-furnaces. Water-joint for rotary	J. Griffen and J. Hall, Jr	295,867	Mar. 25	1947	538	26	1199
Puddling-machine	H. B. Van Benthuysen	291,963	Jan. 15	1193	332, 333	26	230
Puller: *See* Staple-puller. Stump-puller.							
Pulley	J. Braun	294,110	Feb. 26	1721	473	26	766
Pulley	F. C. Caldwell	295,732	Mar. 25	1767	491	26	1167
Pulley	C. Kemble	293,255	Feb. 12	625	166	26	556
Pulley	O. R. Olsen	295,796	Mar. 25	1852	515	26	1183
Pulley	W. E. Rockwood	291,779	Jan. 8	960	269	26	177
Pulley	J. E. Waterous and J. N. Peel	295,698	Mar. 25	1727	480	26	1160
Pulley-block for hay-elevators	H. L. Ferris	292,476	Jan. 29	1847	515	26	362
Pulley-centers. Die for forming	N. C. Stiles	294,698	Mar. 4	434	121	26	903
Pulley-clothing	G. Jaquith	293,469	Feb. 12	900	243	26	606
Pulley. Differential	G. Smith, Jr	293,281	Feb. 12	663	178	26	562
Pulley. Friction	V. W. Mason	295,656	Mar. 25	1672	464	26	1151
Pulley lubricator. Loose	L. E. Kane	293,036	Feb. 5	317	88	26	500
Pulley or wheel. Compound	H. H. Blake	295,337	Mar. 18	1260	349	26	1068
Pulley. Screw	C. F. Pope	293,078	Feb. 5	372	101	26	510
Pulley. Self-shipping belt	H. P. Christie	292,987	Feb. 5	258	71	26	489
Pulleys, &c. Manufacture of	H. H. Blake	295,336	Mar. 18	1259	349	26	1068
Pulp and fiber. Machine for reducing wood to	G. F. Evans	293,235	Feb. 12	599	158	26	552
Pulp caster-wheel	W. S. Ravenscroft	293,784	Feb. 19	1293	.....	26	683
Pulp. Manufacture of articles from wood	W. H. and W. S. Ravenscroft	293,785	Feb. 19	1293	358	26	683
Pulverizer. Clay	A. Ittner	291,191	Jan. 1	225	62	26	40
Pulverizer. Soil	J. D. Rankin and W. C. Knox	293,080	Feb. 5	374	101	26	510
Pulverizing apparatus	L. S. Chichester	295,856	Mar. 25	1920	533	26	1197
Pulverizing-machine	L. S. Chichester	295,617	Mar. 25	1625	449, 450	26	1142
Pulverizing-machine hopper	H. B. Feldmann	294,375	Mar. 4	46	12	26	838
Pump	L. G. Carcaga y Saenz	295,734	Mar. 25	1769	492	26	1167
Pump	J. W. Douglas	294,210	Feb. 26	1861	508	26	788
Pump	N. Hemenway	293,461	Feb. 12	891	241	26	605
Pump	A. W. White	291,250	Jan. 1	290	82	26	53
Pump. Air	M. Boom	295,341	Mar. 18	1269	352	26	1070
Pump. Air	G. Ross	295,676	Mar. 25	1699	470	26	1155
Pump. Air	W. Stanley, Jr	294,412	Mar. 4	94	24	26	845
Pump. Automatic bilge	J. R. Jobin	291,333	Jan. 1	414	116	26	76
Pump. Chain	A. Beckmann	294,434	Mar. 4	124	32	26	850

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Pump. Double-acting force	A. Crawford	291,859	Jan. 8	1057	296	26	195
Pump for fire-extinguishers, &c	C. F. Conrad	293,952	Feb. 19	1514	418	26	723
Pump. Force	F. Grote	291,845	Jan. 8	1041	290	26	192
Pump. Force	H. M. Wyeth	291,121	Jan. 1	134	38	26	27
Pump. Hollow-piston	J. F. Hess, F. H. Snyder, L. Hess, J. F. and C. F. Snyder.	295,639	Mar. 25	1649	457	26	1146
Pump. Lifting	C. J. Curtis and J. E. Caine	292,105	Jan. 15	1358	381	26	261
Pump-regulating device	J. H. Baker	291,271	Jan. 1	320	90	26	58
Pump. Rotary	J. Lee	292,192	Jan. 15	1380	386	26	265
Pump. Rotary	F. S. Troutman	295,597	Mar. 25	1598	443	26	1138
Pump. Rotary	J. M. Wiles	295,704	Mar. 25	1734	482 / 483	26	1161
Pump. Steam	M. F. Bagley and J. C. Dawson	291,021	Jan. 1	9	3	26	4
Pump-valve	C. Ahrens	292,306	Jan. 22	1740	485	26	335
Pumps. Automatic device for stopping steam	T. C. Townsend	294,529	Mar. 4	235	66	26	870
Pumps. Crank-pin slide of direct-acting steam	J. P. Griscom	291,720	Jan. 8	895	250	26	166
Pumps. Valve-gear for hydraulic	G. W. Dickie	295,692	Mar. 25	1631	451 / 452	26	1143
Pumps. Vapor and atmospheric valve for steam	H. S. Pugsley	292,177	Jan. 22	1448	406	26	284
Pumping-engine. Direct-acting duplex	R. W. Hamilton	293,243	Feb. 12	610	169	26	353
Pumping-engine. Duplex	C. C. Worthington	292,525	Jan. 29	1916	536 / 537	26	374
Pumping-engine. Oscillating steam	F. D. Maltby	293,585	Feb. 12	1027	282 / 283	26	699
Pumping-engine. Steam	E. G. Shortt	292,697	Jan. 29	2140	596 / 597	26	411
Pumping-engine. Steam and hydraulic	H. F. Gaskill	291,892	Jan. 15	1108	309	26	214
Pumping-engines. Valve arrangement for duplex	J. R. Maxwell	295,500	Mar. 18	1464	403	26	1107
Punch	E. W. Briggs and J. D. Walton	295,227	Mar. 18	1123	310	26	1042
Punch	G. H. Goodman and J. B. Hunt	294,991	Mar. 11	800	221	26	974
Punch	R. M. Rose	295,052	Mar. 11	890	244	26	988
Punch. Blacksmith's	W. P. Holman	295,397	Mar. 18	1336	372	26	1083
Punching and forging machine. Combined	J. P. Siegfried	292,262	Jan. 22	1574	439 / 440	26	303
Punching and forming presses. Automatic stop-motion for	W. I. Macomber	292,756	Jan. 29	2234	620	26	428
Punching metal tubes. Device for	G. W. Whitman	295,090	Mar. 11	944	257	26	997
Purse	N. J. Wheeler	291,447	Jan. 1	532	151	26	96
Pyroxyline and mica. Plastic compound from	G. M. Mowbray	294,661	Mar. 4	394	.....	26	896
Quartz-crushing machine	C. Dandnrand and L. M. Lafrance	292,543	Jan. 29	1947	543	26	378
Quilting-frame	L. E. Dickson	293,638	Feb. 19	1093	303	26	648
Rack: *See* Fruit-drying rack. Map-rack. Pool-rack. Postal-bag rack. Towel-rack. Wheel-rack.							
Racket	R. Reach	294,271	Feb. 26	1930	529	26	802
Radiator	L. C. Rodier	292,302	Jan. 22	1703	474	26	328
Radiator for hot-air furnaces	C. S. Hood	293,025	Feb. 5	306	84, 85	26	498
Radiator. Steam	R. Brass and J. Chapman	295,343	Mar. 18	1271	352	26	1071
Radiator. Steam	W. H. Brooks	291,026	Jan. 1	15	4	26	5
Radiator. Steam	C. Comstock	294,854	Mar. 11	630	175	26	944
Radiator. Steam	D. F. Morgan and J. Robb	295,040	Mar. 11	872	239	26	985
Radiator. Steam	E. T. Weymouth	295,700	Mar. 25	1730	481	26	1160
Rail-joint	C. F. Hartman	292,223	Jan. 22	1590	426	26	294
Rail-joints. Method of and die for forming	F. Lightfoot	294,053	Feb. 26	1644	454	26	754
Rail-straightening apparatus	L. Richards	294,273	Feb. 26	1932	529 / 530	26	802
Railway block signal	J. K. Knight	291,360	Jan. 1	421	119 / 120	26	77
Railway. Cable	J. B. Casebolt	295,147	Mar. 18	1016	281	26	1024
Railway. Cable	J. B. Casebolt	295,148	Mar. 18	1017	281	26	1024
Railway carriage. Marine	W. H. H. Hunter and J. Hargitt	295,014	Mar. 11	841	230	26	980
Railway. Circular gravity	A. Wood	291,261	Jan. 1	308	87	26	56
Railway-crossing	D. Lippy	293,568	Mar. 25	1563	433	26	1131
Railway-crossing	M. Wallack and J. B. Rohrer	295,844	Mar. 25	1912	528	26	1193
Railway-crossing gate	J. Coty	294,765	Mar. 11	514	143	26	923
Railway-crossing safety-gate	B. Atkinson	295,324	Mar. 18	1245	345	26	1065
Railway-crossings. Alarm-signal for	J. B. Deeds and J. H. Blake	294,207	Feb. 26	1858	507	26	788
Railway-crossings. Electric signaling apparatus for	O. Gassett	292,744	Jan. 29	2208	615	26	423
Railway. Endless rope	W. H. H. Sisum	295,446	Mar. 18	1389	385	26	1094
Railway-frog	J. F. Penrod	294,664	Mar. 4	396	110	26	896
Railway frog and switch guard	P. S. Dusenbury	294,598	Mar. 4	316	88	26	882
Railway-frog safety-guard	J. Lynch	292,834	Feb. 5	70	19	26	453
Railway-frogs. Filling for	G. C. Lucas and J. A. Patterson	291,749	Jan. 8	925	259	26	171
Railway-gate	D. W. Copeland	295,358	Mar. 18	1290	357	26	1074
Railway-gate	L. C. Walsh	295,696	Mar. 25	1723	479	26	1159
Railway-gate	H. F. Wight and H. P. Aldrich	294,172	Feb. 26	1816	496	26	781
Railway gate and signal	G. F. Forbes	292,641	Jan. 29	2067	575	26	398
Railway-gate. Automatic	M. B. Somes	292,702	Jan. 29	2148	598	26	412
Railway-jack	S. Shaw	291,232	Jan. 1	270	76	26	40
Railway-joint and fastening device	J. Dolbeer	293,853	Feb. 19	1387	383	26	699
Railway. Portable	W. W. Hanscom	291,898	Jan. 15	1114	311	26	215
Railway propulsion. Cable	W. W. Hanscom	292,165	Jan. 22	1435	402	26	292
Railway propulsion. Cable	F. Lightfoot	294,245	Feb. 26	1900	520	26	796
Railway-rail	G. Weeks	293,540	Feb. 12	983	269	26	602
Railway-rail chair	F. C. Weir	294,101	Feb. 26	1711	471	26	764
Railway-rail joint	J. Patterson	293,592	Feb. 12	1035	285	26	630
Railway-rail lock	H. D. Morrell	294,743	Mar. 4	482	135	26	912
Railway-rail. Reversible sectional lap-joint	D. L. Emry	293,644	Feb. 19	1099	305	26	650
Railway-rails. Device for securing the splice-joints of	G. W. Bloodgood	293,302	Feb. 12	694	185	26	508
Railway-rails to metallic ties. Fastening	B. Buys	294,116	Feb. 26	1737	478	26	769
Railway-signal	O. Gassett	294,030	Feb. 26	1605	446	26	748
Railway-signal	H. Johnson	294,880	Mar. 11	663	185	26	950

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Railway-signal	J. Mayne	295,264	Mar. 18	1174	325	26	1052
Railway-signal	J. R. Park	291,929	Jan. 15	1157	322	26	223
Railway-signal	A. B. Snyder	291,545	Jan. 8	670	189	26	127
Railway-signal. Electric	J. C. Upham and J. P. Rogers	293,381	Feb. 12	797	214	26	588
Railway-signal. Electric	W. Vogel	291,556	Jan. 8	683	193	26	129
Railway-signal. Magneto-electric	W. W. Gary	291,590	Jan. 8	732	206	26	138
Railway-signal system	W. Hadden	291,721	Jan. 8	896	251	26	166
Railway signaling apparatus	W. N. Dawson	294,206	Feb. 26	1857	506 / 507	26	787
Railway signaling apparatus. Electric	F. L. Pope	295,427	Mar. 18	1368	390	26	1090
Railway. Single-cable-track	J. J. Clisham	291,691	Jan. 8	864	241	26	160
Railway-switch	J. H. Crowley and B. M. Temple	291,988	Jan. 15	1327	349	26	236
Railway-switch	R. H. Isbell	291,906	Jan. 15	1128	315	26	218
Railway-switch	W. W. Pennell	294,904	Mar. 11	690	192	26	955
Railway-switch	B. Rice	291,694	Jan. 8	780	219	26	146
Railway-switch	E. Stone	292,144	Jan. 15	1405	394	26	268
Railway-switch	E. Stone	292,145	Jan. 15	1406	394	26	270
Railway-switch	D. McCarthy	293,660	Feb. 19	1117	311	26	653
Railway switch and crossing	E. Bill	291,138	Jan. 1	155	46	26	30
Railway switch. Automatic street	C. A. Scott	292,687	Jan. 29	2128	592	26	409
Railway-switch circuit-closer	G. W. Horne	293,096	Feb. 5	308	85	26	498
Railway-switch mover	C. H. Talmage	291,804	Jan. 8	988	277	26	182
Railway-switch stand	J. A. Bonnell	291,868	Jan. 15	1092	302	26	209
Railway-switches. Detecting-bar for	T. L. Johnson	292,655	Jan. 29	2085	580	26	401
Railway T-rail	T. Breen	294,191	Feb. 26	1836	509	26	784
Railway-tie	J. J. Du Bois	292,421	Jan. 22	1777	495	26	342
Railway-tie	H. R. Holbrook	291,514	Jan. 8	632	179	26	120
Railway-tie	C. H. Van Orden	294,166	Feb. 26	1807	494	26	779
Railway-tie. Metallic	D. Servis	294,816	Mar. 11	592	161	26	935
Railway-ties. Wear-plate for	J. G. Krichbaum	291,523	Jan. 8	645	183	26	122
Railway-track	H. C. Lowrie	291,613	Jan. 8	767	215	26	144
Railway-track and road-bed	C. R. Goodman	291,049	Jan. 1	40	13	26	10
Railway-tracks. Apparatus for laying	J. Reven	293,194	Feb. 5	539	143	26	536
Railway-tracks from spreading. Preventing	C. F. Findlay	294,213	Feb. 26	1865	509	26	789
Railway. Traction-rope	E. S. Gardner	291,589	Jan. 8	731	205 / 206	26	137
Railway. Traction-rope	C. Selden	291,095	Jan. 1	95	27	26	20
Railway-train signal apparatus	B. Frese	291,180	Jan. 1	206	57 / 58 / 59	26	38
Railway-trains. Apparatus for operating	J. W. Cloud	291,495	Jan. 8	605	171	26	115
Railway-trains. Device for stopping	E. C. Bacon	294,953	Mar. 11	744	208	26	965
Railways. Friction-drum for inclined-plane cable	J. W. Young	294,948	Mar. 11	739	207	26	964
Railways. Gripping mechanism for traction-cable	P. H. Mayor	293,049	Feb. 5	332	91	26	503
Railways. Operating trains on cable							
Rake: *See* Cornstalk-rake. Hay-rake.							
Rake	S. Booker	295,103	Mar. 11	958	261	26	1000
Rake	J. Moore	294,658	Mar. 4	391	109	26	895
Rake shoe or runner	C. O. Dennen, W. C. Gray, and H. C. Nellis.	293,210	Feb. 5	560	149	26	540
Rams arranged in series. Hydraulic	L. Schutte	294,085	Feb. 26	1688	464 / 465	26	761
Rat-trap	J. L. Symonds	293,683	Feb. 19	1148	320	26	659
Rat-trap for buildings	T. M. Beverage	295,720	Mar. 25	1754	487	26	1164
Ratchet-drill	W. Brede	292,290	Jan. 22	1594	445	26	307
Ratchet-drill	W. Moritz	292,345	Jan. 22	1671	466	26	321
Ratchet-drill	J. E. Sinclair	294,292	Feb. 26	1943	533	26	804
Ratchet-drill	R. Stephens	291,419	Jan. 1	502	141	26	90
Ratchet-drill	J. H. Vinton	295,694	Mar. 25	1720	475	26	1159
Ratchet-drill	P. A. Whitney	292,522	Jan. 29	1912	535	26	373
Ratchet-drill	A. E. Osborn	295,797	Mar. 25	1853	515	26	1183
Ratchet-wrench	C. Wechsler	293,128	Feb. 5	451	121	26	521
Ratchet-wrench	G. W. Lombard	292,239	Jan. 22	1543	432	26	298
Rattan. Working	H. A. Meyer	293,343	Feb. 12	741	198	26	577
Rattan-working machine	J. R. Torrey	295,840	Mar. 25	1905	527	26	1193
Razor-strop	J. H. White	294,830	Mar. 11	602	166	26	938
Razor-strop	P. S. Wold	293,994	Feb. 19	1563	431	26	731
Razor-strop attachment	E. F. Wiegleb	294,944	Mar. 11	734	204	26	963
Reamer	C. H. Malmedie	294,494	Mar. 4	184	50	26	860
Reamer. Expanding	C. Wren	294,714	Mar. 4	453	127	26	907
Reapers and mowers. Cutting apparatus for	J. Woodley	291,563	Jan. 8	691	195	26	130
Reclining and folding chair	F. E. Young	293,393	Feb. 12	817	220	26	592
Reclining-chair	I. Deppen	294,973	Mar. 11	780	216	26	971
Recording table or desk	M. S. Holt	292,749	Jan. 29	2223	618	26	426
Reed-board	M. Bray	293,558	Feb. 12	997	273	26	624
Reel: *See* Bolting-reel. Clothes-reel. Harvester-reel. Hose-reel. Thrashing-machine belt-reel. Wire-reel. Yarn-reel.							
Reels. Skein lacing and tying attachment for	G. Grimshaw, Jr	293,164	Feb. 5	495	132	26	528
Reflector and globe for lamps and lanterns. Combined	B. D. Stevens	292,871	Feb. 5	113	30, 31	26	464
Reflector for gas-burners	J. Kaaschan	291,199	Jan. 1	235	65	26	42
Reflector for incandescent lamps	J. S. Beeman	292,403	Jan. 22	1748	487	26	337
Reflector. Solar	W. Calver	291,146	Jan. 1	166	48	26	32
Refrigerating apparatus	F. A. Dodge	291,166	Jan. 1	190	54	26	35
Refrigerating apparatus for cars, &c	W. H. Doughty	294,209	Feb. 26	1860	508	26	788
Refrigerating-car and apparatus for shipping meat	H. G. Widman	293,832	Feb. 19	1357	376 / 377	26	693
Refrigerating-chamber	A. Myers	291,074	Jan. 1	71	20	26	16
Refrigerating-counter for bar-rooms	C. E. Crockett	293,425	Feb. 12	850	230 / 231	26	597
Refrigerating dish-cover	A. C. Pecor	293,074	Feb. 5	367	99 / 100	26	509

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Refrigerating-machine	C. B. Lee	292,925	Feb. 5	181	50	26	476
Refrigerating paraffine and other oils. Method of and apparatus for	B. F. Shakespeare	291,632	Jan. 8	788	221	26	148
Refrigerator	C. J. Berens	291,278	Jan. 1	328	92, 93	26	60
Refrigerator	J. Burke	295,110	Mar. 11	965	264	26	1001
Refrigerator	W. H. Davis	291,036	Jan. 1	25	7	26	7
Refrigerator	J. Linsley	292,926	Feb. 5	183	50	26	477
Refrigerator	H. H. and H. T. Lovell	295,259	Mar. 18	1166	322	26	1050
Refrigerator	G. R. Prowse	295,197	Mar. 18	1092	296	26	1035
Regenerator-furnace	W. Swindell	295,209	Mar. 18	1099	304	26	1039
Register: *See* Automatic register. Fare-register. Bottle-register. Game-register. Counting-register.							
Registering apparatus. Thermostatic electric	C. W. Weiss	293,828	Feb. 19	1352	375	26	692
Regulator: *See* Automatic regulator. Gas-regulator. Gas and water regulator. Damper-regulator. Gas-pressure regulator. Draft-regulator. Pressure-regulator. Electric-machine regulator. Secondary-battery regulator. Feed-water regulator. Watch-regulator.							
Rein button. Driving	S. A. Marker	293,760	Feb. 19	1258	349	26	677
Rein-guard	C. W. Speaks	294,521	Mar. 4	224	63	26	868
Rein-holder	L. A. Koplin	293,476	Feb. 12	906	245	26	607
Rein-holder	N. C. Moody	294,325	Feb. 26	2002	548	26	815
Rein-holder	J. L. Thomson	293,819	Feb. 19	1340	372	26	691
Rein hook. Check	T. A. Crabtree	294,310	Feb. 26	1983	542	26	811
Rein-protector	S. J. Spurgeon	291,797	Jan. 8	978	275	26	181
Remedy for hernia	E. C. Thatcher	295,078	Mar. 11	926	.....	26	995
Reservoir and palette. Combined	F. S. Dellenbaugh	294,591	Mar. 4	311	86	26	881
Retouching-machine	C. H. Shaffer	294,817	Mar. 11	583	161, 162	26	936
Reverberatory ore-furnace	G. W. Jones	295,646	Mar. 25	1660	460	26	1148
Reversible seat	F. H. Henry	294,874	Mar. 11	655	182	26	948
Revolver	W. H. Bliss	294,188	Feb. 26	1837	501	26	784
Revolver	J. T. Smith	295,064	Mar. 11	907	248	26	991
Revolvers. Cylinder-stop for	F. H. Allen	294,950	Mar. 11	742	207	26	964
Rice hulling and cleaning machine	J. W. Lane	291,302	Jan. 1	426	120, 121	26	78
Ring: *See* Ear-ring. Key-ring. Finger-ring. Split ring.							
Ring for securing finger-cots in position	W. H. Wickers	293,831	Feb. 19	1356	376	26	693
Rivet	A. Eppler, Jr.	294,979	Mar. 11	788	218	26	972
Riveting-machine. Hydraulic	W. R. Webster	292,521	Jan. 29	1912	535	26	373
Riveting sheet-metal pipe. Machine for	J. B. Root	292,364	Jan. 22	1704	475	26	328
Road-making machine	W. H. Tidland	291,427	Jan. 1	512	144, 145	26	91
Roasting-furnace	N. A. Foss and J. M. Gray	293,002	Feb. 5	279	77, 78	26	483
Rock-drill	C. O. Barlow and G. T. Emery	294,430	Mar. 4	117	31	26	849
Rock-drill	H. Borchardt	291,568	Jan. 8	696	196	26	131
Rock-drill	F. W. Coe and C. A. Hoffnagle	295,737	Mar. 25	1776	494	26	1168
Rock-drill	H. C. Sergeant	295,682	Mar. 25	1704	472	26	1157
Rock-drill. Steam	F. A. Halsey	294,999	Mar. 11	811	224	26	976
Rock-drill. Steam	F. A. Halsey	295,000	Mar. 11	815	225	26	977
Rock-drill. Steam	F. A. Halsey	295,001	Mar. 11	817	225	26	977
Rock-drill. Steam	A. and A. L. Stevens	293,371	Feb. 12	792	210	26	585
Rock-drill valve-gear	F. A. Halsey	295,002	Mar. 11	820	226	26	977
Rock-drill valve-gear	F. A. Halsey	295,003	Mar. 11	825	226	26	977
Rock-drilling machine. Hand	R. Magill	292,605	Jan. 29	2104	585	26	404
Rocker. Shoo-fly	G. P. Steinbach	295,457	Mar. 18	1405	388	26	1097
Rod-coupling	G. B. Turrell	291,819	Jan. 8	1004	281	26	185
Roller: *See* Clay-crushing roller. Shade-roller. Grinding-mill roller. Trunk-roller.							
Roller flour-mill	A. N. Wolf	294,947	Mar. 11	737	205, 206	26	964
Roller-fixture	J. H. Skidmore	292,699	Jan. 29	2146	597	26	412
Roller-mill	N. W. Holt	294,236	Feb. 26	1890	517	26	795
Roller-mill	J. W. Jackson	291,517	Jan. 8	634	179, 180	26	120
Roller-mill	E. R. and F. Turner and J. H. Carter	293,990	Feb. 19	1558	429, 430	26	730
Roller-mill	F. Wegmann	294,418	Mar. 4	102	26, 27	26	846
Roller-mill feed mechanism	N. W. Holt	293,464	Feb. 12	894	242	26	605
Roller-mill feed mechanism	B. F. Ortman	295,043	Mar. 11	875	240	26	985
Roller-mills, purifiers, &c. Feeding mechanism for	H. C. Potts	295,504	Mar. 18	1469	405	26	1108
Rolling apparatus. Indicator for tire	J. Munton	293,768	Feb. 19	1271	351, 352	26	679
Rolling car-rails. Roll for	A. J. Moxham and J. R. Tranter	292,759	Jan. 29	2238	621, 622	26	429
Rolling coupling-pins. Machine for	R. R. Turner	291,110	Jan. 1	119	33	26	24
Rolling-mill	P. M. Haas	293,165	Feb. 5	496	132, 133	26	528
Rolling-mill	D. B. Oliver	292,943	Feb. 5	208	57	26	481
Rolling-mill reversing mechanism	T. A. Weston	292,968	Feb. 5	235	64, 65	26	485
Rolling threads on metal. Machine for	J. S. Wilson and J. H. Haskins	295,605	Mar. 25	1608	445	26	1139
Roof. Felt and gravel	W. H. H. Childs	294,579	Mar. 4	297	81	26	879
Roofing-clamp	N. W. West	291,248	Jan. 1	287	80	26	52
Roofing composition	J. F. Perry	294,665	Mar. 4	397	.....	26	897
Roofing composition	W. White	295,604	Mar. 25	1607	.....	26	1139

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Roofing fabric	H. M. Miner	293,491	Feb. 12	922	250	26	611
Roofing fabric and applying the same	C. M. Warren	291,440	Jan. 1	524	149	26	94
Roofing fabrics. Manufacture of	H. M. Miner	293,492	Feb. 12	922	251	26	611
Roofing-felt and mechanism for making the same	A. Sackett	291,628	Jan. 8	792	220	26	147
Roofing-felt, &c. Apparatus for making	J. Jowitt	291,600	Jan. 8	742	209	26	140
Rope-clamp	H. S. Cole	291,693	Jan. 8	866	242	26	161
Rope or line clasp	A. L. Pitney	295,194	Mar. 18	1079	297	26	1035
Rope or line clasp	A. L. Pitney	295,802	Mar. 25	1860	517	26	1184
Rope or line clasp	A. L. Pitney	295,803	Mar. 25	1861	517	26	1184
Ropes. Clamp for attaching	C. Kortüm	294,392	Mar. 4	69	17	26	841
Rotary cutter	J. B. Emery	295,490	Mar. 18	1455	401	26	1106
Rotary engine	J. T. Davis	295,859	Mar. 25	1936	534	26	1198
Rotary engine	J. H. Phelps	293,511	Feb. 12	*945	257	26	615
Rotary engine and pump	R. H. Froude	295,380	Mar. 18	1316	365, 366	26	1079
Rotary meter	B. Fitts	294,026	Feb. 26	1601	444, 445	26	747
Rotary steam-engine	L. D'Andrée	292,898	Feb. 5	148	39	26	470
Rotary steam-engine	T. E. Jones	293,887	Feb. 19	1427	394	26	706
Roundabout	T. Oldroyd	291,621	Jan. 8	777	218	26	146
Row-guide	R. W. Chappell	293,636	Feb. 19	1393	390	26	647
Rowlock	J. Edson	293,858	Feb. 19	1394	390	26	701
Rowlock	S. H. Haas	294,903	Mar. 11	802	222	26	975
Rubber belting. Utilizing discarded	F. A. Magowan	292,020	Jan. 15	1263	353	26	243
Rubber clothing	G. Platt	291,854	Jan. 8	1052	294	26	194
Rubber clothing. Stay-press for	T. Hawley	294,318	Feb. 26	1994	545	26	813
Rubber hose. Utilizing discarded	F. A. Magowan	292,021	Jan. 15	1263	353	26	243
Rubber waste for the recovery of the rubber or caoutchouc therefrom. Treating fibrous	A. O. Bourn	295,615	Mar. 25	1624	.....	26	1141
Rubber waste. Treating fibrous	A. O. Bourn	292,891	Feb. 5	136	.....	26	468
Rule and try-square	W. N. Nash	293,497	Feb. 12	930	252	26	612
Rule-holder. Mechanic's	J. S. Borden	293,623	Feb. 19	1074	297	26	645
Ruler	M. Green	294,870	Mar. 11	652	181	26	948
Rumble for scouring castings, washing ores, &c	E. W. Vanduzen	292,075	Jan. 15	1292	370	26	255
Saccharine liquids. Defecating	G. B. Boomer	293,409	Feb. 12	835	226	26	595
Sad-iron	A. R. White	292,782	Jan. 29	2179	605	26	417
Sad-iron handles. Machine for bending shanks of	J. Sabold, Jr.	294,509	Mar. 4	211	59, 60	26	865
Sad-iron holder	S. M. Carnes	294,196	Feb. 26	1846	503	26	786
Sad-iron. Reversible	J. A. Yarger	292,087	Jan. 15	1338	375	26	258
Saddle-board	J. A. Wilson	295,847	Mar. 25	1916	530	26	1194
Saddle. Harness	A. C. Rickey and E. D. Myers	292,360	Jan. 22	1696	472, 473	26	327
Saddle or saddle-tree	J. Stanley and T. F. Lemassena	293,601	Feb. 12	1045	288	26	632
Saddle. Pack	W. C. Smith and W. L. Hunter	294,925	Mar. 11	712	199	26	950
Saddle. Riding	W. Frazier	295,623	Mar. 25	1632	453	26	1143
Saddle tree. Harness	L. A. Ringwalt	295,810	Mar. 25	1871	519	26	1186
Safe	T. M. Brintnall	292,155	Jan. 22	1419	398, 399	26	279
Safe. Burglar-proof	G. W. Kennedy	294,631	Mar. 4	356	99	26	890
Safe. Fire-proof	M. Mosler	295,272	Mar. 18	1182	327	26	1054
Safe-lock	J. T. Hough	294,625	Mar. 4	348	97	26	888
Safe-lock	E. Stockwell	294,821	Mar. 11	588	163	26	936
Safe-lock	J. White	293,388	Feb. 12	808	217, 218	26	589
Safety-pin	F. Meyers	295,036	Mar. 11	868	238	26	984
Salt-cellar	S. C. Wilcox	294,341	Feb. 26	2025	555	26	819
Salve	W. Richardson	292,255	Jan. 22	1566	.....	26	302
Sampling-tube	P. Contant	293,423	Feb. 12	848	230	26	597
Sand-bars, &c., in rivers and harbors. Apparatus for loosening up and removing	L. A. Johnson and N. E. Johnson	294,737	Mar. 4	477	133	26	911
Sash-balance	M. B. Gladman	295,630	Mar. 25	1639	455	26	1144
Sash-balance	G. M. Jewett	291,740	Jan. 8	917	257	26	169
Sash-cord fastener	H. L. Blodgett	293,554	Feb. 12	902	272	26	623
Sash-cord fastener	W. A. Sinsel	293,100	Feb. 5	396	109	26	514
Sash-fastener	H. H. Aelmont	295,142	Mar. 18	1011	279	26	1023
Sash-fastener	N. B. Beady	294,435	Mar. 4	125	32	26	850
Sash-fastener	G. W. Curry	291,303	Jan. 1	303	102	26	65
Sash-fastener	F. Eberlein	294,774	Mar. 11	523	146	26	925
Sash-fastener	S. Farquhar	295,530	Mar. 25	1509	416	26	1121
Sash-fastener	R. B. Hinguin	292,117	Jan. 15	1375	385	26	264
Sash-fastener	E. Kempshall	294,787	Mar. 11	530	150	26	928
Sash-fastener	F. W. Otis	294,329	Feb. 26	2006	550	26	816
Sash-fastener	S. M. Tinkham	293,820	Feb. 19	1341	372	26	691
Sash-fastening	J. Chambers	292,202	Jan. 22	1487	418	26	289
Sash-holder	M. Bourke	291,672	Jan. 8	840	235	26	156
Sash-holder	G. P. Clements	293,310	Feb. 12	702	188	26	569
Sash-holder	H. Cutting	291,697	Jan. 8	870	244	26	169
Sash-holder	T. B. Jones	295,253	Mar. 18	1159	320	26	1049
Sash-holder	W. A. McDonald	292,670	Jan. 29	2109	586	26	405
Sash-holder	C. E. Murray	292,442	Jan. 22	1805	503	26	348
Sash-holder	H. W. Schroder	293,527	Feb. 12	961	262	26	617
Sash. Window	W. A. Sinsel	293,099	Feb. 5	397	108	26	514
Sash. Window	F. W. Tuerk, Jr.	294,826	Mar. 11	596	165	26	938
Sausage-stuffing machine. Hydraulic	W. H. Hankin, Jr.	295,385	Mar. 18	1323	368	26	1080
Saw	J. H. Riley	293,276	Feb. 12	659	176	26	562
Saw	G. W. Wills	293,130	Feb. 5	454	121	26	521
Saw-buck	B. R. Baker	294,718	Mar. 4	457	128	26	908
Saw-buck	T. Beard	291,669	Jan. 8	837	234	26	156
Saw. Crosscut	E. C. Atkins	292,194	Jan. 22	1473	414	26	287
Saw-dipping machine	E. C. Atkins	294,346	Mar. 4	2	1	26	829
Saw. Drag	W. A. Bennett	291,277	Jan. 1	327	92	26	60
Saw. Drag	G. Valentine	294,096	Feb. 26	1707	469	26	764
Saw elevator. Drag	W. J. Perkins	294,804	Mar. 11	567	156, 157, 158	26	932

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Saw-envelope	F. Schlüchtner	292,369	Jan. 22	1709	476	26	329
Saw fastening and frame	H. L. Pratt	292,176	Jan. 22	1447	406	26	284
Saw filing and setting machine	J. S. Detrick and W. T. Smith	295,115	Mar. 11	971	265 / 266	26	1002
Saw-filing machine	W. Tucker	295,133	Mar. 11	992	273 / 274	26	1007
Saw-frame rod	J. M. Koeberle	292,494	Jan. 29	1871	522	26	367
Saw-guard	J. G. Groff	291,187	Jan. 1	219	61	26	39
Saw-guide	W. J. F. Liddell	292,331	Jan. 22	1654	461	26	318
Saw-guide	T. J. Neacy	295,792	Mar. 25	1848	514	26	1192
Saw. Hand-	C. Tenney	291,424	Jan. 1	509	143	26	91
Saw-handle	R. E. Poindexter	292,946	Feb. 5	212	58	26	461
Saw-handle	C. Richardson	292,951	Feb. 5	218	60	26	483
Saw-handle	M. E. True	291,108	Jan. 1	118	33	26	24
Saw-handle	M. E. True	294,164	Feb. 26	1805	493	26	779
Saw-handle	J. W. Phillips	292,352	Jan. 22	1681	468	26	323
Saw-horse and scaffold. Combined extension	W. H. Dodge	294,452	Mar. 4	142	37	26	854
Saw machine. Band-	D. F. and J. T. Milne	295,791	Mar. 25	1846	513 / 514	26	1192
Saw-mill	J. M. Story	295,303	Mar. 18	1220	339	26	1061
Saw mill. Band-	H. F. Campbell	291,402	Jan. 8	601	170	26	115
Saw-mill carriages. Truck-box for	G. M. Hinkley	291,345	Jan. 1	405	115	26	74
Saw mill. Circular	W. P. Clark	294,442	Mar. 4	132	34, 35	26	852
Saw mill. Circular	J. B. Gorrell and J. Miller	294,221	Feb. 26	1875	512 / 513	26	791
Saw-mill dog	J. J. McGillis	293,186	Feb. 5	531	141	26	534
Saw-mill dog	W. F. Schowe	291,409	Jan. 1	492	138	26	88
Saw-mill dog	W. H. Snyder	294,692	Mar. 4	426	118	26	902
Saw-mill dog	W. M. Wilkin	294,710	Mar. 4	446	124	26	905
Saw-mill dog	W. M. Wilkin	294,711	Mar. 4	448	124	26	905
Saw-mill-feed mechanism	S. Dickson	294,208	Feb. 26	1859	507	26	788
Saw-mill-feed mechanism	T. J. Reamy	294,272	Feb. 26	1931	529	26	802
Saw-mill frame. Gang-	T. S. Wilkin	291,255	Jan. 1	296	83, 84	26	54
Saw-mill gage	J. Walrath	291,758	Jan. 8	686	194	26	129
Saw mill. Gang-	T. S. Wilkin	291,256	Jan. 1	297	84	26	54
Saw mill. Gang-	T. S. Wilkin	291,257	Jan. 1	298	84	26	54
Saw mill. Gang-	T. S. Wilkin	291,258	Jan. 1	301	85	26	55
Saw-mill head-block	V. Martin and C. W. Metcalfe	295,572	Mar. 25	1570	435	26	1132
Saw-mill head-block	T. S. Wilkin	291,453	Jan. 1	548	155	26	98
Saw-mill-refuse conveyor	W. J. Perkins	294,073	Feb. 26	1674	461	26	759
Saw-mill set-works	G. M. Hinkley	291,344	Jan. 1	403	114 / 115	26	73
Saw-mill set-works	W. J. F. Liddell	292,330	Jan. 22	1651	461	26	318
Saw-mill set-works	T. S. Wilkin	292,271	Jan. 22	1584	442 / 443	26	305
Saw-mills. Log-jacking mechanism for	J. P. Hanson	293,245	Feb. 12	613	163	26	554
Saw mills. Press-roller mechanism for gang-	H. D. and E. N. Wickes	291,823	Jan. 8	1009	282	26	186
Saw-set	F. L. Bailey	291,269	Jan. 1	318	89	26	58
Saw-set	J. S. Long	292,755	Jan. 29	2232	620	26	428
Saw-set	J. M. Morehead	293,588	Feb. 12	1030	283	26	629
Saw-set	R. E. Poindexter	291,224	Jan. 1	262	73	26	48
Saw-setting machine	H. Marstall	291,917	Jan. 15	1143	319	26	221
Saw-swage	J. Miller	294,251	Feb. 26	1908	523	26	798
Saw-swaging machine	P. B. Charbonean	294,439	Mar. 4	128	33, 34	26	851
Saw-tooth	E. Harris	292,809	Feb. 5	40	11	26	450
Saw-tooth	R. W. Kellen	295,649	Mar. 25	1663	461	26	1149
Saw-tooth	A. Krieger	292,659	Jan. 29	2090	582	26	402
Saw-tooth swage	S. J. Chalfant	292,907	Jan. 15	1350	379	26	260
Saws. Hanging circular	W. D. Sherman	292,594	Jan. 29	2016	560	26	390
Saws. Mandrel attachment for circular	E. W. Johnson	292,316	Jan. 22	1635	458	26	315
Saws. Operating butting-	J. Cardy	291,148	Jan. 1	169	49	26	32
Sawing machine. Band	A. L. Gray	293,163	Feb. 5	494	132	26	528
Sawing machine. Circular	G. J. Kautz	293,037	Feb. 5	318	88	26	500
Sawyer's gage	G. S. Black	292,465	Jan. 29	1834	511	26	360
Scaffold and fire-escape	J. Klein	292,321	Jan. 22	1641	459	26	316
Scaffolding	J. T. Haskell	295,389	Mar. 18	1326	369	26	1082
Scaffolding	T. N. Subers	295,592	Mar. 25	1503	441	26	1137
Scaffolding attachment	J. T. O'Brien	295,578	Mar. 25	1577	436	26	1134
Scaffolding-bracket	M. N. Knight	293,040	Feb. 5	322	89	26	501
Scaffolding. Interior and exterior	J. T. O'Brien	295,579	Mar. 25	1578	437	26	1134
Scaffolding-trestle	J. T. O'Brien	295,369	Mar. 18	1179	326	26	1053
Scale and coin-tester. Combined letter	E. C. Purnelle	292,763	Jan. 29	2246	623	26	430
Scale, bagger, and register. Combined grain	C. J. Leach and A. Olds	292,326	Jan. 22	1647	460	26	317
Scale-beam. Duplex-check	J. A. Demuth	293,637	Feb. 19	1091	302	26	648
Scale. Coin and letter	C. Richtmann	295,809	Mar. 25	1870	519	26	1166
Scale. Graduated	G. F. Tuttle	291,429	Jan. 1	514	145	26	92
Scale-pan. Folding	W. Maguire	295,795	Mar. 25	1841	512	26	1161
Scale. Platform-	E. Bell	291,276	Jan. 1	325	91, 92	26	59
Scarf. Neck-	H. T. Blake	292,623	Jan. 23	2048	569	26	395
Scarf. Neck-	S. Marcus	293,896	Feb. 19	1440	398	26	709
Scarf-retainer	J. Sandilands	293,093	Feb. 5	389	105	26	512
Scenery. Wire-cloth	F. W. Roebling and W. Orr, Jr.	293,991	Feb. 19	1547	426	26	728
Scholar's companion	M. J. Spencer	291,415	Jan. 1	499	140	26	89
School-bag	M. Höninger	294,692	Mar. 4	344	96	26	887
Scissors and shears	W. J. Bayrer	295,718	Mar. 25	1732	487	26	1164
Scissors and shears	S. R. Plumb	291,623	Jan. 8	779	219	26	146
Scissors for cutting felt on a bevel	J. S. Gorton	291,591	Jan. 8	733	206	26	138
Scissors. Manufacture of	J. D. Frary	294,605	Mar. 4	326	90	26	884
Scissors. Ripping attachment for	F. S. Loockerman	293,122	Feb. 5	525	139	26	533
Scoop and riddle. Combined potato	H. Peggs	291,395	Jan. 1	471	132	26	84
Scourer: *See* Knife-scourer.							
Scraper. Dirt-	C. Endicott	291,585	Jan. 8	726	204	26	136
Scraper. Road-	L. Smith	292,375	Jan. 22	1714	478	26	331
Scraper-runner	L. D. York	295,892	Mar. 25	1983	548	26	1206

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Scrapers. Blank for road-	G. D. Matcham	293,261	Feb. 12	634	169	26	558
Screen: *See* Coal-screen. Fly-screen. Potato-screen. Sleigh-dasher screen. Window-screen.							
Screen	J. Norwood	291,220	Jan. 1	257	72	26	47
Screen	J. E. Wakefield	291,246	Jan. 1	285	80	26	52
Screen	E. Stiemke	294,524	Mar. 4	227	64	26	868
Screw. Capped wood-	F. A. Moore	293,058	Feb. 5	342	94	26	505
Screw-clamp	A. J. Peavey	295,422	Mar. 18	1364	379	26	1069
Screw-cutter	W. Hargrave	293,868	Feb. 19	1405	389	26	702
Screw-cutting implement	G. E. Gay and J. H. Parsons	292,298	Jan. 22	1615	452	26	311
Screw-driver	W. L. Parmelee	294,663	Mar. 4	396	110	26	896
Screw-driver	A. D. Wallen	294,828	Mar. 11	600	165	26	938
Screw-driver	C. F. Pope	293,079	Feb. 5	373	101	26	510
Screw hook or ring	E. H. Middleton	292,567	Jan. 29	1977	551	26	383
Screw-jack	E. H. Middleton	292,568	Jan. 29	1978	552	26	383
Screw-jack	A. R. Tiffany	295,837	Mar. 25	1901	526	26	1192
Screw-jack	A. R. Tiffany	295,838	Mar. 25	1902	526 / 527	26	1192
Screw machine. Metal-	A. Johnston	293,176	Feb. 5	513	136 / 137	26	531
Screw machine. Metal-	C. F. Roper	292,683	Jan. 29	2124	590 / 591	26	408
Screw stock and die	W. J. McCormack	294,143	Feb. 26	1774	487	26	774
Screw-tap	A. J. Peavey	295,421	Mar. 18	1363	378	26	1069
Screw-threading machine. Sheet-metal	W. Werts	291,656	Jan. 8	822	229 / 230	26	153
Screw-threads. Machine for cutting	E. A. Sperry	294,099	Feb. 26	1700	467	26	763
Screw. Wheel or felly	C. Rotzien	291,626	Jan. 8	781	220	26	146
Screw. Wood-	S. Montgomery	294,255	Feb. 26	1912	524	26	799
Screw. Wood-	G. A. Stiles	295,833	Mar. 25	1896	525	26	1191
Screw. Wood-	C. V. Woerd	293,930	Feb. 19	1485	408	26	717
Screws. Machine for threading sectional leading-	P. O. King and A. M. Carlson	294,634	Mar. 4	358	100	26	890
Scrubber	T. H. Malone and G. A. Whiting	292,499	Jan. 29	1875	524	26	368
Seal. Car-	E. J. Brooks	294,193	Feb. 26	1842	503	26	785
Seal. Lead-and-wire	A. B. Barnard	295,514	Mar. 25	1489	411	26	1117
Seal-lock	R. Frew	292,296	Jan. 22	1612	451	26	311
Seal-lock	C. A. Jewett	291,352	Jan. 1	413	117 / 118	26	75
Seal-lock	J. Jordan and A. P. Powers	291,354	Jan. 1	415	118	26	76
Seal-lock	E. J. Brooks	294,576	Mar. 4	292	81	26	878
Seal. Metallic	E. J. Brooks	294,577	Mar. 4	294	81	26	879
Seal. Metallic	E. J. Brooks	295,346	Mar. 18	1275	353	26	1071
Seal. Metallic	E. C. Sloan	293,600	Feb. 12	1044	288	26	632
Seals. Lead ribbon for metallic	F. A. Walsh	294,167	Feb. 26	1808	494	26	780
Seam for sheet-metal vessels	A. Wright	291,459	Jan. 1	557	157	26	100
Seam trimmers. Device for sharpening the blades of fabric-	T. L. Smith and W. S. Doig	294,520	Mar. 4	223	63	26	867
Seaming machine. Can-	M. Benedict	291,467	Jan. 8	596	168	26	114
Seat: *See* Car-seat. Folding seat. Reversible seat. Wagon-seat.							
Seat	G. H. Thompson	292,071	Jan. 15	1319	368	26	254
Seat for public buildings	G. H. Thompson	295,461	Mar. 18	1409	389	26	1097
Seat for public buildings	A. Haid	294,464	Mar. 4	157	43	26	856
Secondary battery	A. Haid	294,465	Mar. 4	158	43	26	856
Secondary battery	E. J. Molera and J. C. Cebrian	291,598	Jan. 8	647	184	26	123
Secondary battery	E. J. Molera and J. C. Cebrian	292,034	Jan. 15	1277	357	26	246
Secondary battery	C. A. Smyth	292,142	Jan. 15	1403	393	26	269
Secondary battery and constructing electrodes therefor.	E. T. Starr	295,456	Mar. 18	1404	388	26	1096
Secondary-battery element	W. E. Case	292,469	Jan. 29	1840	.....	26	361
Secondary-battery plate or electrode	E. T. Starr	295,455	Mar. 18	1402	388	26	1096
Secondary-battery regulator	J. S. Beeman, W. Taylor, and F. King	291,465	Jan. 1	561	158	26	100
Seed-cleaner. Flax-	G. Beal	294,841	Mar. 11	613	169 / 170	26	940
Seed-drill	J. H. Purdy and C. T. Welch	293,671	Feb. 19	1130	315	26	656
Seed drill and cultivator. Combined	A. H. Matthews and J. B. Small	295,263	Mar. 18	1171	324 / 325	26	1051
Seed-drill feed	W. H. Jullan	295,647	Mar. 25	1662	461	26	1149
Seed-hulling machine. Cotton-	D. Kahnweiler	294,241	Feb. 26	1896	519	26	796
Seeder, plow, and harrow. Combined	F. S. Armstrong	291,125	Jan. 1	141	41	26	26
Seeding-machine	G. S. Briggs	295,480	Mar. 18	1440	398	26	1103
Seeding-machine	A. N. Norris and H. D. Spangler	294,328	Feb. 26	2005	550	26	816
Seeding-machine	A. Shaffer	294,158	Feb. 26	1795	491	26	777
Seeding-machine	H. D. Spangler	294,694	Mar. 4	428	119 / 120	26	902
Seeding-machine cup	R. S. Carr	292,893	Feb. 5	139	37	26	469
Seeding-machines. Spring-hoe for	R. B. Sheldon	292,868	Feb. 5	109	30	26	463
Separator: *See* Cockle-separator. Ore-separator.							
Separator	A. W. Roper	293,983	Feb. 19	1549	427	26	729
Separator and conveyer	J. S. Fairly	292,550	Jan. 29	1958	546	26	380
Sewer-basin	W. Sievering	295,823	Mar. 25	1884	522	26	1188
Sewer-gas check	C. A. Scheffler	294,511	Mar. 4	214	60	26	866
Sewing loops to the surface of fabrics. Machine for	S. M. Levy and A. J. Sedmihradsky	293,478	Feb. 12	908	246	26	609
Sewing-machine	C. W. Davis	291,309	Jan. 1	370	104	26	67
Sewing-machine	J. H. Griffin	291,719	Jan. 8	894	250	26	166
Sewing-machine	J. Keith	292,005	Jan. 8	749	211	26	141
Sewing-machine	J. W. Post	292,045	Jan. 15	1291	361	26	249
Sewing-machine	J. Hegeman and B. Thackrah	294,037	Feb. 26	1613	448	26	749
Sewing-machine attachment for sewing buttons on fabrics	R. Hilgner	293,022	Feb. 5	302	83, 84	26	497
Sewing-machine binding attachment							

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Sewing-machine brake mechanism	J. B. Desnoyers and C. Sinning	291,700	Jan. 8	875	245	26	163
Sewing-machine. Button-hole	J. B. Desnoyers and C. Sinning	291,701	Jan. 8	876	246	26	163
Sewing-machine button-hole attachment	H. C. Hartley and J. L. Rodgers	292 647	Jan. 29	2077	578	26	400
Sewing-machine button-hole attachment	W. Schott	292,591	Jan. 29	2009	559	26	389
Sewing-machine cord attachment	J. S. Sackett	295,055	Mar. 11	893	244	26	989
Sewing-machine feeding mechanism	C. W. Healey	295,551	Mar. 25	1537	426	26	1126
Sewing-machine frame	S. C. Tatum, Jr	293,109	Feb. 5	410	111	26	516
Sewing-machine guide	W. B. Thayer	295,079	Mar. 11	927	254	26	995
Sewing-machine hemstitch attachment	J. S. Sackett	292,060	Jan. 15	1307	365	26	252
Sewing-machine motor	J. H. Crandell	293,149	Feb. 5	475	127	26	525
Sewing-machine needle-threader	E. N. McPherron	294,061	Feb. 26	1655	457	26	755
Sewing-machine optical attachment	J. Watts	294,171	Feb. 26	1815	496	26	780
Sewing-machine overseaming attachment	W. F. Weber	292,451	Jan. 22	1814	506	26	349
Sewing-machine presser-foot	S. Halliwell	293,867	Feb. 19	1405	388	26	702
Sewing-machine ruffler	J. Heberling	292,813	Feb. 5	44	12	26	451
Sewing-machine ruffling and shirring attachment	W. Dudley	295,489	Mar. 18	1454	400	26	1105
Sewing-machine ruffling and shirring attachment	C. Grotz	291,051	Jan. 1	44	13	26	11
Sewing-machine ruffling and shirring attachment	C. Grotz	291,052	Jan. 1	45	13	26	11
Sewing-machine ruffling attachment	C. Grotz	291,050	Jan. 1	42	13	26	11
Sewing-machine ruffling attachment	J. S. Sackett	293,090	Feb. 5	383	104 / 105	26	512
Sewing-machine ruffling attachment	J. S. Sackett	293,091	Feb. 5	385	105	26	512
Sewing-machine ruffling attachment	J. S. Sackett	293,521	Feb. 12	956	260	26	617
Sewing-machine ruffling attachment	C. C. Seebold	292,867	Feb. 5	107	29	26	463
Sewing-machine ruffling attachment	G. H. Spring	295,301	Mar. 18	1217	339	26	1061
Sewing machine. Straw-braid	M. Marelli	292,194	Jan. 15	1381	387	26	265
Sewing-machine take-up mechanism	G. F. Foss	291,708	Jan. 8	884	248	26	164
Sewing-machine tension device	J. Thomson	292,964	Feb. 5	229	63	26	484
Sewing-machine thread-guide	J. H. H. Bennett	293,402	Feb. 12	828	223	26	594
Sewing-machine thread-guide	T. La Tour	292,496	Jan. 29	1873	523	26	367
Sewing-machine treadle	G. A. Lockwood and D. Orrill	295,027	Mar. 11	855	235	26	983
Sewing-machine trimmer	W. F. Beardslee	294,432	Mar. 4	120	32	26	850
Sewing-machine trimmers. Presser-foot and guide for use with	J. H. Griffin	292,747	Jan. 29	2230	617	26	426
Sewing-machine tuck-marker	J. S. Sackett	293,092	Feb. 5	387	105	26	512
Sewing-machine whipping-guide	G. Simpson	291,100	Jan. 1	107	29	26	22
Sewing-machines. Automatic tension for	D. P. Fitzgerald and W. Lyon	291,706	Jan. 8	881	247	26	164
Sewing machines. Channel-opener for sole	E. O. Jaquith	292,016	Jan. 15	1259	359	26	242
Sewing-machines, lathes, &c. Operating mechanism for	P. F. Jonte	292,436	Jan. 22	1798	501	26	346
Sewing-machines. Lighting	O. Healy	294,128	Feb. 26	1752	482	26	771
Sewing machines. Signature-presenting mechanism for book-	E. S. Boynton	294,061	Mar. 11	754	210 / 211	26	966
Sewing-needle. Device for driving a helical	E. Hunt	294,627	Mar. 4	351	98	26	889
Shade-bar	H. L. Judd	291,741	Jan. 8	919	257	26	170
Shade-pull	C. W. Clark	293,311	Feb. 12	703	188	26	569
Shade-roller	D. R. Stedman	294,414	Mar. 4	97	25	26	846
Shade-roller. Spring	M. E. Graves and P. C. Gates	294,316	Feb. 26	1992	544	26	813
Shade-roller. Spring	S. Hartshorn	293,457	Feb. 12	886	240	26	604
Shade-roller. Spring	S. Hartshorn	293,871	Feb. 19	1409	389	26	703
Shade-roller. Spring	D. E. Kempster	295,875	Mar. 25	1955	541	26	1201
Shade-roller. Spring	A. Morgan	294,494	Mar. 4	197	55	26	863
Shaft and its bearings. Machine	G. S. Gates	294,989	Mar. 11	798	221	26	974
Shaft-coupling	J. Brann	292,978	Feb. 5	250	68	26	498
Shaft-coupling. Friction	J. K. Proctor and I. W. Huckins	294,672	Mar. 4	406	112	26	898
Shaft friction-coupling	F. Brann	291,673	Jan. 8	842	235	26	157
Shaft-hanger	J. Walker	292,879	Feb. 5	123	34	26	466
Shaft or roll coupling	C. P. Carlson	292,095	Jan. 15	1346	373	26	259
Shafts. Breeching attachment for carriage	E. B. Repp	294,189	Feb. 26	1838	501	26	784
Shafting-box and oil-reservoir. Combined	C. B. Moulton	292,841	Feb. 5	78	21	26	457
Shafting-coupling	P. Brotherhood	293,141	Feb. 5	467	124	26	523
Shafting-hanger	J. E. Hoppen	295,553	Mar. 25	1542	427	26	1127
Shaving-mug	G. Schoenan	295,436	Mar. 18	1377	382	26	1092
Shearing-machine	H. B. Chess	294,066	Mar. 11	760	212	26	968
Shearing table. Sheep	J. L. Addison	293,839	Feb. 19	1370	379	26	696
Sheathing-planks. Device for guiding tongued and grooved	T. B. Brown	293,223	Feb. 12	587	154	26	549
Sheep-enumerator	H. A. Shipp	292,373	Jan. 22	1712	477 / 478	26	330
Sheep-house. Portable	L. Robbins	291,625	Jan. 8	780	219	26	146
Sheet folding and delivery apparatus	S. D. Tucker	293,122	Feb. 5	443	118 / 119	26	520
Sheet-metal pans. Machine for wiring	C. F. Beaman	291,834	Jan. 8	1023	285 / 286	26	198
Sheet-metal ware. Manufacture of enameled	C. Renach	292,051	Jan. 15	1299	363	26	250
Shelf. Wall-bracket extension	A. Loomis	293,894	Feb. 19	1437	397	26	708
Shell for blasting. Safety	G. Freund	292,642	Jan. 29	2072	576	26	399
Shell ornament	J. M. Reynolds	291,401	Jan. 1	477	135	26	86
Sheller: *See* Corn-sheller.							
Shelving. Adjustable	H. J. Hoffman	291,513	Jan. 8	629	178	26	120
Shepherd's crook	S. D. Felt	291,177	Jan. 1	202	56	26	37
Shingle-band	W. S. Newson	292,443	Jan. 22	1805	503	26	348
Shingle-machine	E. B. Hewett and G. F. James	295,006	Mar. 11	802	228	26	978
Shingle. Metallic	L. H. Montrose and J. C. West	294,256	Feb. 26	1913	525	26	799
Shingle. Metallic roofing	E. B. Repp	292,585	Jan. 29	2001	557	26	387
Shingle. Metallic roofing	E. B. Repp	295,283	Mar. 18	1194	331	26	1056
Shingle-sawing machine	S. L. Bitting	295,722	Mar. 25	1757	488	26	1165
Shingle-sawing machine	W. F. Dake and J. H. Seek	292,107	Jan. 15	1359	382	26	262
Shingle-sawing machine	P. O'Conner	292,347	Jan. 22	1674	466 / 467	26	322
Shingle shaving and rifting machine	A. Gould	295,541	Mar. 25	1524	421	26	1123
Shingling-bracket	S. Woodard	292,458	Jan. 22	1921	508	26	351
Shipping-can. Jacketed	G. J. Record	291,937	Jan. 15	1164	325	26	225

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Shipping-case	A. M. Platt	293,513	Feb. 12	947	258	26	615
Ship's fender	J. H. Grell, Sr	293,321	Feb. 12	716	191 / 192	26	572
Ships. Shaft for steam	S. B. Jerome	294,878	Mar. 11	658	183	26	949
Ships' sides, &c. Apparatus for cleaning	J. L. Cooper	295,357	Mar. 18	1289	357	26	1074
Ship's spars. Reversible scraper for	G. Wall	293,992	Feb. 19	1561	430	26	731
Shirt	E. S. Moore	294,741	Mar. 4	490	134	26	913
Shirt	J. Simon	294,921	Mar. 11	706	197	26	958
Shoe	W. S. Freeman	295,024	Mar. 25	1633	453	26	1143
Shoe	P. Packard	293,064	Feb. 5	350	96	26	506
Shoe	W. Rogers	293,982	Feb. 19	1548	426	26	729
Shoe	A. W. Rogers	292,692	Jan. 29	2123	590	26	408
Shoe-form	W. and L. Rossheim	295,053	Mar. 11	891	244	26	988
Shoe-heel	H. F. Rooney	292,363	Jan. 22	1703	474 / 475	26	328
Shoe-heel-filing machine	M. S. Fox	295,241	Mar. 18	1141	314	26	1045
Shoe or glove fastening	D. Wilkey	295,511	Mar. 18	1483	409	26	1110
Shoe. Rubber	C. K. Bradford	292,466	Jan. 29	1835	512	26	360
Shoe-soles. Brush-holder and tube for cementing	J. M. Berry	292,464	Jan. 29	1834	511	26	360
Shoe-upper	J. H. Eagan, Jr	295,239	Mar. 18	1139	314	26	1045
Shoe-upper	G. W. Sleeper	295,826	Mar. 25	1886	523	26	1189
Shoes. Manufacture of	A. J. Tewksbury	291,810	Jan. 8	995	279	26	184
Shoes. Manufacture of turned	J. S. Kuen	292,754	Jan. 29	2231	619	26	428
Shoe-maker's jack	A. G. Sinclair	292,065	Jan. 15	1312	366	26	253
Shot. Canister	Q. A. Ellis	293,437	Feb. 12	865	234	26	600
Shot-case	I. Keller	294,323	Feb. 26	2000	548	26	814
Shoulder-brace. Scholar's	H. J. Welch	294,419	Mar. 4	106	28	26	847
Shovel	L. H. Sholder	291,234	Jan. 1	272	76	26	49
Shovel and scoop	J. J. Holland	291,732	Jan. 8	905	254	26	168
Shovel and shield. Combined	J. G. White	291,450	Jan. 1	536	152	26	97
Show-box cover	E. Todd	292,875	Feb. 5	118	33	26	465
Show box and tray	D. E. Ladd and E. J. B. Whitaker	293,582	Feb. 12	1024	292	26	628
Show-case	D. C. Loewenstine and J. E. Fox	291,612	Jan. 8	763	214 / 215	26	144
Shutter	M. Cottle	292,101	Jan. 15	1354	380	26	261
Shutter-bolt	G. M. Bechtel	291,023	Jan. 1	11	8	26	5
Shutter bower and fastener	W. P. Marshall	294,894	Mar. 11	681	190	26	953
Shutter. Flexible	J. P. Recker	292,047	Jan. 15	1294	362	26	249
Shutter-worker	W. Hawn	292,225	Jan. 22	1523	426	26	295
Shutter-worker	R. F. Pratt	292,354	Jan. 22	1684	469	26	324
Shutter-worker	A. C. Sisson	291,101	Jan. 1	108	30	26	22
Shutter worker and fastener	F. O. Schmidt	295,291	Mar. 18	1208	336	26	1059
Shuttle and mechanism for operating the same	L. Wallace	294,099	Feb. 26	1710	470	26	764
Sickle bar and knife	G. W. Crawford	294,855	Mar. 11	631	175	26	944
Siding and ceiling for buildings	A. J. and M. I. Flowers	295,376	Mar. 18	1310	363	26	1078
Siding-bracket	H. Clayton	291,576	Jan. 8	708	199	26	133
Sifter	W. T. Adams	292,598	Jan. 29	1922	538	26	374
Sifter. Ash	H. W. Booth	291,671	Jan. 8	839	235	26	156
Sifter. Cinder	J. Weikert	294,553	Mar. 4	271	73	26	874
Sifter. Rotary coal	W. E. Banning	293,702	Feb. 19	1177	328	26	664
Sign	T. H. Bowles	293,555	Feb. 12	993	272	26	623
Sign for cars. Traveling	E. C. Miller	295,037	Mar. 11	868	238	26	984
Sign. Watchmaker's							
Signal: *See* Car-signal. Railway-signal. Distress-signal. Railway block signal. Pneumatic signal.							
Signals. Compensating device for	D. S. Gardinier	292,553	Jan. 29	1960	546	26	380
Signaling apparatus. Fluid-pressure	F. S. Gnerber	292,748	Jan. 29	2221	617	26	426
Silk-cleaning machine	J. N. Leonard	292,830	Feb. 5	66	18	26	455
Sirup and sugar from sorghum-cane. Making	A. J. Adamson	291,565	Jan. 8	693	.....	26	130
Sirup-cooler. Cold-air-blast centrifugal	A. B. Smith	294,922	Mar. 11	709	198	26	958
Sirups. Concentration and evaporation of	A. P. Boon	295,342	Mar. 18	1270	.....	26	1070
Sizing composition. Yarn	J. W. Wattles	292,260	Jan. 22	1583	.....	26	305
Sizing machines. Apparatus for pressing or leveling yarn on weavers' beams in warp	A. Hitchon	294,235	Feb. 26	1889	517	26	794
Skate	W. A. Sutton	293,373	Feb. 12	786	210	26	586
Skate and skate-fastening. Roller	E. H. Barney	293,298	Feb. 12	689	184	26	567
Skate-fastening	E. H. Barney	294,182	Feb. 26	1832	499	26	783
Skate. Roller	S. W. Alward	294,426	Mar. 4	112	30	26	848
Skate. Roller	E. H. Barney	293,299	Feb. 12	691	184	26	567
Skate. Roller	E. C. Phillips	292,850	Feb. 5	86	24	26	459
Skate. Roller	J. V. Rowlett	292,862	Feb. 5	101	28	26	462
Skate. Roller	L. L. Ryerson	294,082	Feb. 26	1685	464	26	760
Skate. Roller	A. F. Friend	292,643	Jan. 29	2074	576	26	399
Skewer-puller	R. McKeen	295,767	Mar. 25	1843	512	26	1181
Skins. Machine for putting out or stretching	L. Dryfoos	294,596	Mar. 4	315	88	26	882
Skirt	G. M. Barry	292,402	Jan. 22	1748	487	26	337
Skirt-supporter	A. Drummond	293,429	Feb. 12	856	232	26	598
Skylight	J. Ehrhardt	292,738	Jan. 29	2200	613	26	422
Skylight	G. Hayes	292,486	Jan. 29	1859	519 / 520	26	365
Skylight	G. Hayes	295,166	Mar. 18	1038	287	26	1028
Skylight	G. Hayes	295,167	Mar. 18	1040	287	26	1028
Skylight	O. C. Hubbell	291,057	Jan. 1	50	15	26	12
Skylight	G. Hayes	295,168	Mar. 18	1042	288	26	1028
Skylight. Ventilating	G. Hayes	291,342	Jan. 1	402	114	26	73
Skylights and glazed roofs. Cross-clip for metallic	A. M. Murray	292,569	Jan. 29	1979	.....	26	384
Slate. Artificial	J. Burling	291,145	Jan. 1	166	48	26	32
Slate-cleaner	C. Pilgrim	292,678	Jan. 29	2120	589	26	407
Slate. Folding	J. Ridge	294,154	Feb. 26	1790	490	26	777
Slate muffler. School	W. R. Kilborn	295,409	Mar. 18	1349	375	26	1086
Sled	J. H. Kirk	294,883	Mar. 11	668	186	26	951
Sled. Bob	P. and H. Koepfer	291,744	Jan. 8	921	258	26	170
Sled. Bob	J. G. Precour	295,195	Mar. 18	1081	297	26	1035
Sled-brake							

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Sled-propeller	C. Bernhard	295,719	Mar. 25	1753	487	26	1164
Sleeve-board. Reversible	N. Scholl	291,629	Jan. 8	784	230	26	147
Sleigh	W. H. Winne	292,972	Feb. 5	245	67	26	487
Sleigh. Bob-	H. Detamble	293,152	Feb. 5	478	128	26	525
Sleigh-dasher screen	S. R. Bailey	292,275	Jan. 22	1590	444	26	306
Sleigh-runner	F. J. Larkin	294,136	Feb. 26	1765	485	26	773
Sleigh shifting seat	W. H. Steinbrecher	291,635	Jan. 8	792	222	26	149
Smoke and gas consuming furnace	H. M. Brady	294,007	Feb. 26	1577	436, 437	26	743
Smoke. Apparatus for and process of consuming	W. Vogel	295,842	Mar. 25	1910	528	26	1193
Smoke-consumer	T. J. McLaughlin	293,765	Feb. 19	1267	350, 351	26	679
Snap. Harness-	J. A. Park	294,145	Feb. 26	1776	487	26	775
Snap-hook	R. B. Craighead	292,103	Jan. 15	1357	381	26	261
Snap-hook	J. Gibbons	292,164	Jan. 22	1434	402	26	282
Snap-hook	G. Havell	295,390	Mar. 18	1327	370	26	1082
Snap-hook	J. E. Pumphrey	291,226	Jan. 1	264	74	26	48
Snap-hook	J. H. Shaw	295,663	Mar. 25	1708	472	26	1157
Snow-clearer for tracks, &c	L. Schulze	294,084	Feb. 26	1687	464	26	760
Snow-plow	P. Brunet	291,675	Jan. 8	843	236	26	157
Snow-plow	I. S. Filbert	293,569	Feb. 12	1011	278	26	626
Snow-plow	D. B. Garton	291,182	Jan. 1	213	59	26	38
Snow-plow	G. A. Gunther and H. W. Hubbard	294,382	Mar. 4	56	14	26	839
Snow-scraper	G. A. Birch	293,630	Feb. 19	1071	296	26	644
Soap	C. F. Broadbent	292,980	Feb. 5	252	.....	26	488
Soap. Mannfacture of	W. E. Gibbs and C. G. Otis	291,329	Jan. 1	391	109	26	71
Soap. Washing-	R. H. Wiltbington	291,827	Jan. 8	1013	.....	26	187
Sock. Lumberman's	W. N. Eisendrath	294,020	Feb. 26	1592	442	26	746
Soda used in manufacture of paper-pulp. Apparatus for recovering	J. W. Dixon	291,993	Jan. 15	1232	343	26	237
Sofa and bath-tub. Combined	G. E. Ga Nun	294,460	Mar. 4	153	42	26	856
Solar camera	C. F. Adams	295,608	Mar. 25	1615	447	26	1140
Solar heaters. Controlling the temperature of	W. Calver	291,147	Jan. 1	167	48	26	32
Solar rays. Condensing	W. Calver	294,117	Feb. 26	1738	478	26	769
Solder. Machine for making wire or other	E. L. Young and L. Dyer	291,828	Jan. 8	1014	283, 284	26	187
Soldering-iron	W. B. Choate	294,364	Mar. 4	30	8	26	834
Soldering-iron	C. F. Schwarz	294,407	Mar. 4	88	23	26	844
Soldering machine. Can-	R. C. Anderson and F. Winterhalter	294,428	Mar. 4	114	30	26	848
Soldering machine. Can-	D. M. Monroe	293,346	Feb. 12	745	198, 199	26	578
Soldering machine. Can-	D. M. Monroe	295,662	Mar. 25	1679	465	26	1152
Soldering machine. Can-	J. A. Tillery	295,210	Mar. 18	1100	304	26	1039
Soldering-tool	G. A. Marsh	294,648	Mar. 4	382	106	26	894
Soldering-tool	W. M. Ryan	295,888	Mar. 25	1978	547	26	1204
Sole and heel burnishing machine	A. L. P. and J. R. Mitchell	292,033	Jan. 15	1276	357	26	246
Sole and heel plate	S. Levy	291,611	Jan. 8	762	214	26	143
Sower. Broadcast seed-	J. C. Waddell	291,433	Jan. 1	518	146	26	93
Sower. Fertilizer-	E. M. Kissell	292,320	Jan. 22	1639	459	26	316
Sowers. Feed-roller for grass-	J. F. Keller	293,968	Feb. 19	1533	422	26	726
Spading-machine	D. F. Spangler	293,104	Feb. 5	402	110	26	515
Spark-arrester	J. C. Albrecht	295,322	Mar. 18	1242	344	26	1065
Spark-arrester	A. O. Frick	293,445	Feb. 12	872	236	26	601
Spark-arrester	G. D. Hunter	293,965	Feb. 19	1531	421	26	726
Spark-arrester	P. Murray	292,760	Jan. 29	2242	622	26	430
Spark-arrester and flue-supporter. Combined	J. C. Ridley	293,357	Feb. 12	762	203	26	581
Speaking-tube mouth-piece	W. Thomas	292,387	Jan. 22	1728	482	26	333
Spectacle-lenses. Machine for grinding	J. J. Bausch	291,130	Jan. 1	148	43	26	29
Spectacles	F. K. Roberts	291,778	Jan. 8	959	269	26	177
Specnlum	G. W. Pagett	295,798	Mar. 25	1854	515	26	1183
Speed-indicator	T. W. Harding	292,808	Feb. 5	39	11	26	450
Speed of driven shafts. Regulating	J. W. Cheney	294,760	Mar. 11	509	142	26	922
Spike-extractor	J. Ebbert	293,431	Feb. 12	858	233	26	599
Spindle: *See* Vehicle-spindle.							
Spinning and twisting machine	C. A. Coggeshall	295,738	Mar. 25	1777	494	26	1169
Spittoon	J. J. Deal	292,286	Jan. 22	1601	447	26	309
Split ring	W. M. Fisher	295,158	Mar. 18	1029	284	26	1026
Splitting-gage	H. S. Ginther	295,620	Mar. 25	1638	455	26	1144
Spoke-extractor	R. N. Canghell	293,307	Feb. 12	699	186	26	569
Spoke-setting machine	J. H. Hulburt	293,174	Feb. 5	511	136	26	531
Spoke. Wire	W. S. Kelley	292,502	Jan. 29	1971	550	26	382
Spokes. Machine for milling off the hub ends of wheel-	J. Barnet	293,934	Feb. 19	1491	410	26	718
Spokeshave	A. E. Chapman	294,197	Feb. 26	1846	504	26	786
Spokeshave	A. D. Goodell	293,651	Feb. 19	1107	307	26	651
Spooling-machine stop-motion device	J. H. Northrop	295,503	Mar. 18	1467	405	26	1108
Spooling-machine thread-guide	E. B. Williams	294,712	Mar. 4	449	125	26	906
Spoon	W. Praddex	294,910	Mar. 11	697	194	26	956
Spoon. Mustache-	I. W. Parmenter	291,394	Jan. 1	470	132	26	84
Spoon. Veterinary medicine	J. R. Stettheimer and T. Leis	291,950	Jan. 15	1180	328	26	227
Spring: *See* Bicycle-saddle spring. Car-spring. Carriage-spring. Door-spring. Truck-spring. Vehicle-spring. Vehicle-seat spring. Vehicle side spring. Wagon-bolster spring. Watch-case spring. Watch hair-spring.							
Spring-motor	J. B. Powell	293,193	Feb. 5	538	143	26	535
Spring-motor	J. B. Pugh	295,505	Mar. 18	1471	405	26	1109
Spring-motor	H. B. Whittaker and G. F. Godley	292,970	Feb. 5	239	65, 66	26	486
Spring-motor	J. A. Wright	291,970	Jan. 15	1201	336	26	232
Sprinkler and atomizer	M. Goldman	293,730	Feb. 19	1215	336	26	671
Square. Carpenter's	W. R. and S. E. Jones	292,017	Jan. 15	1260	352	26	242

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Squeeze-roll	F. G. and A. C. Sargent	292,257	Jan. 22	1568	438	26	303
Squib. Miner's	G. Hayes	291,343	Jan. 1	402	114	26	73
Staining and coloring. Apparatus for	G. H. Smith	292,221	Jan. 22	1517	425, 426	26	294
Stake for guy-ropes	J. J. Moore	292,129	Jan. 15	1386	349	26	266
Stake. Vine and flower	F. Börner	291,569	Jan. 8	697	196	26	131
Stalk-chopper	W. H. Mercer	293,055	Feb. 5	338	93	26	504
Stamp-canceler	A. M. and S. M. A. Fortier	293,443	Feb. 12	871	236	26	601
Stamp. Canceling-	E. B. Brown	295,729	Mar. 25	1764	490	26	1166
Stamp. Canceling-	P. Pfeifer	293,510	Feb. 12	944	257	26	615
Stand: *See* Map-stand.							
Staple and die. Combined	J. F. Thayer	293,540	Feb. 12	976	267	26	620
Staple-extractor	B. Hubbell	295,494	Mar. 18	1459	402	26	1106
Staple or fastener	F. A. Smith, Jr.	292,516	Jan. 29	1907	534	26	372
Staple-puller	J. C. Irvin	291,739	Jan. 8	916	256	26	169
Staples. Machine for making	J. Adt	291,659	Jan. 8	825	231	26	154
Staples. Tool for driving	F. W. Nevins	292,842	Feb. 5	78	21	26	457
Starch. Manufacturing	W. W. Underhill	294,530	Mar. 4	236	.....	26	870
Starch. Manufacturing	W. W. Underhill	294,531	Mar. 4	237	.....	26	870
Station-indicator	S. Ballin	295,326	Mar. 18	1247	346	26	1066
Station-indicator	C. H. Jenne	295,405	Mar. 18	1344	374	26	1085
Station-indicator	C. W. Musgrove	291,073	Jan. 1	70	20	26	16
Stave and shingle sawing machine	W. J. Henderson	292,309	Jan. 22	1626	455	26	313
Steam and water heater	A. Holt	291,347	Jan. 1	406	116	26	74
Steam-boiler	W. D. Adams	293,697	Feb. 19	1170	326	26	663
Steam-boiler	J. Alves	292,613	Jan. 29	2039	567	26	393
Steam-boiler	G. B. Brayton	292,154	Jan. 22	1417	397	26	279
Steam-boiler	A. De Dion, G. T. Bonton, and C. Trépardoux.	291,580	Jan. 8	713	200	26	134
Steam-boiler	L. Schutte	291,092	Jan. 1	91	26	26	20
Steam-boiler	J. Stevens	294,927	Mar. 11	714	199	26	959
Steam boiler and furnace	W. U. Fairbairn	291,041	Jan. 1	31	9	26	8
Steam-boiler cleaner	J. H. Foster	293,444	Feb. 12	872	236	26	601
Steam-boiler cleaner	R. Stewart	295,070	Mar. 11	917	251	26	993
Steam-boiler covering	H. F. Allen	294,951	Mar. 11	743	207	26	964
Steam-boiler fire-box	R. L. Walker	293,544	Feb. 12	980	268	26	621
Steam-boiler. Sectional	H. A. Barnard	295,328	Mar. 18	1250	346, 347	26	1066
Steam-boiler superheating attachment	J. A. Stout	292,146	Jan. 15	1407	394	26	270
Steam-boilers, &c. Covering for	G. C. Hicks	294,780	Mar. 11	530	147	26	926
Steam-boilers. High-pressure alarm for	C. W. Johnston and P. Brown	295,406	Mar. 18	1345	375	26	1085
Steam-boilers. Preventing incrustation in	E. J. Hoffman	293,172	Feb. 5	509	135	26	530
Steam-boilers. Producing circulation in	W. Craig	294,118	Feb. 26	1739	478	26	769
Steam-boilers. Water-purifier for	E. W. Vandusen	292,076	Jan. 15	1325	370	26	255
Steam-cylinder lubricator	W. L. Parker	294,068	Feb. 26	1666	460	26	757
Steam-cylinders. Preventing condensation in	C. W. Crawford	292,104	Jan. 15	1357	381	26	261
Steam-engine	J. E. Guenther	294,296	Feb. 26	1880	514	26	792
Steam-engine	G. F. Selser	295,681	Mar. 25	1703	472	26	1156
Steam-engine	F. E. Sickels	294,066	Feb. 26	1692	465, 466, 440, 441	26	762
Steam-engine	G. Smith, Jr	292,264	Jan. 22	1576	153, 154	26	304
Steam-engine	J. B. Smith	291,784	Jan. 8	973	273	26	180
Steam-engine. Compound	C. W. Jenkins	295,403	Mar. 18	1342	374	26	1085
Steam-engine lubricator	W. H. Craig	291,686	Jan. 8	869	243	26	161
Steam-engine. Portable	R. M. Bigger	291,279	Jan. 1	329	93	26	60
Steam gage and alarm	A. Portillo	291,769	Jan. 8	943	265	26	175
Steam-gages. Electric alarm for	H. Carley and T. McKenna	294,195	Feb. 26	1845	503	26	785
Steam-generating apparatus	J. H. Dale	294,119	Feb. 26	1741	478, 479	26	769
Steam-generator	G. F. Brott	293,222	Feb. 12	584	153, 154	26	549
Steam-generator	E. F. Gordon and H. Hobbs	291,185	Jan. 1	217	60	26	39
Steam-generator	D. M. Graham	295,542	Mar. 25	1525	421	26	1124
Steam-generator	T. C. Joy	292,822	Feb. 5	55	14	26	453
Steam-generator	F. Livet	295,775	Mar. 25	1821	506, 507	26	1177
Steam-generator	T. E. Thompson	291,959	Jan. 15	1190	331	26	229
Steam-generator	J. W. Upson	294,291	Feb. 26	1956	536	26	806
Steam. Method of and apparatus for generating	G. Dieckmann	292,546	Jan. 29	1951	544, 545	26	379
Steam-nozzle. Noiseless	C. W. Nason	291,762	Jan. 8	937	263	26	173
Steam-pipe condnit	L. F. Beckwith	294,354	Mar. 4	16	4, 5	26	832
Steam-trap	J. H. Blessing	295,224	Mar. 18	1119	309	26	1042
Steam-trap	J. C. Hendry	292,914	Feb. 5	167	46	26	474
Steam-trap	G. B. McCracken	295,573	Mar. 25	1572	435	26	1133
Steam-trap	W. and W. D. Pfaffer	295,280	Mar. 18	1191	330	26	1055
Steel ingots. Apparatus for treating	G. J. Snelus	294,263	Feb. 26	1943	533	26	804
Steering apparatus	R. M. G. Brown	295,106	Mar. 11	961	262	26	1000
Steering-gear for vessels	W. Adair	292,611	Jan. 29	2035	566	26	393
Stereotype-backing powder or filling	E. and A. H. Cowles	294,588	Mar. 4	308	.....	26	881
Stereotype-plate	F. K. Tracy	295,596	Mar. 25	1597	443	26	1138
Still	P. N. Bardo	291,833	Jan. 8	1022	285	26	188
Stirrup machine. Wooden-	W. F. Cowles and J. Woolworth	294,203	Feb. 26	1853	505	26	787
Stirrup. Saddle-	S. A. Nolen	295,129	Mar. 11	986	271	26	1006
Stirrup. Saddle-	C. C. Philbrook	295,423	Mar. 18	1366	379	26	1089
Stocking and knitting the same	W. Estv	291,173	Jan. 1	198	56	26	37
Stocking and manufacturing the same	E. Schilling	293,363	Feb. 12	769	205	26	582
Stocking-supporter	G. N. Buck	292,406	Jan. 22	1751	488	26	338
Stocking-supporter	G. Campbell	295,146	Mar. 18	1015	280	26	1024
Stocking-supporter and sleeve adjuster	C. C. Shelby	291,233	Jan. 1	271	76	26	49
Stone. Artificial	W. Howell	291,734	Jan. 8	907	.....	26	168

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Stone-channeling machines. Device for securing tools in	A. H. Rapp	291,227	Jan. 1	985	74	26	48
Stone-dressing machine	E. N. Gilfillan and S. P. McKelvey.	294,866	Mar. 11	648	180	26	947
Stone-dressing machine	F. Meisel	294,401	Mar. 4	80	20, 21	26	843
Stone-dressing machine	W. Perkins	291,078	Jan. 1	76	21, 22	26	17
Stone-dressing machine	H. A. Rife	292,361	Jan. 22	1697	{473 {474	26	327
Stone-dressing machine	H. D. Wallace	292,880	Feb. 5	125	34	26	466
Stone-drills. Pin-and-box joint for	D. Cameron	295,347	Mar. 18	1276	353	26	1071
Stone. Manufacture of artificial	R. C. Wittmann	293,207	Feb. 5	557	.....	26	539
Stone-saw rack	J. P. Brounscombe	293,942	Feb. 19	1501	{413 {414	26	790
Stool. Piano	M. Piatti	291,031	Jan. 15	1159	323	26	224
Stool-seat	J. S. Dunlap	292,211	Jan. 22	1504	422	26	292
Stop-box and fresh-air conduit. Combined	L. O. Howell, Jr	292,027	Feb. 5	309	85	26	498
Stopper: *See* Bottle-stopper. Bottle and jar stopper.							
Storage-battery	E. R. Knowles	291,850	Jan. 8	1048	293	26	193
Store-service apparatus	I. Birgé	291,280	Jan. 1	330	93	26	60
Store-service apparatus	H. H. Hayden	295,248	Mar. 18	1151	318	26	1047
Store-service apparatus	H. H. Hayden and E. L. Giles	292,812	Feb. 5	42	12	26	450
Store-service apparatus	W. S. Lamson	292,923	Feb. 5	180	49	26	476
Store-service apparatus	W. Miller	293,587	Feb. 12	1029	283	26	629
Store-service apparatus	H. W. Sharpless	295,442	Mar. 18	1383	384	26	1093
Store-service apparatus	H. W. Sharpless	295,443	Mar. 18	1384	384	26	1093
Store-service system	M. Clark	293,949	Feb. 19	1510	{416 {417	26	792
Stove	J. Eckert	292,475	Jan. 29	1846	514	26	362
Stove	C. A. Hamlin	292,805	Feb. 5	35	10	26	449
Stove	C. Mattice	293,973	Feb. 19	1538	{423 {424	26	728
Stove	J. A. Miller	293,057	Feb. 5	340	93	26	504
Stove and heater. Open-fire	A. R. Morgan	292,937	Feb. 5	303	56	26	479
Stove. Cooking or heating	J. A. Miller	293,056	Feb. 5	339	93	26	504
Stove. Gas	J. Aldersley	293,698	Feb. 19	1170	{326 {327	26	663
Stove. Gasoline	C. H. Huntly	291,348	Jan. 1	408	116	26	74
Stove-grate	E. W. Anthony	293,286	Feb. 12	686	183	26	566
Stove. Hot-blast	F. W. Gordon	291,186	Jan. 1	218	61	26	39
Stove. Hot-blast	D. N. Jones	291,518	Jan. 8	635	180	26	121
Stove-pipe	J. Z. Lindley and J. V. Elder	293,993	Feb. 19	1436	397	26	708
Stove-pipe thimble	L. Russell	294,811	Mar. 11	577	160	26	935
Stove-pipes. Cover for openings in	G. Raagorshek	291,771	Jan. 8	947	266	26	175
Stove. Railway-car	A. P. Winslow	293,695	Feb. 19	1165	{324 {325	26	662
Stove. Regenerative hot-blast	P. L. Weimer	292,188	Jan. 22	1461	{410 {411	26	286
Stove. Self-adjusting	W. G. Showers	292,064	Jan. 15	1312	366	26	253
Stove. Vapor	E. C. Hopkins	292,315	Jan. 22	1633	457	26	314
Stove. Vapor	F. A. Lyman	293,259	Feb. 12	629	167	26	557
Stoves. Heating and ventilating drum for	J. F. Davis	294,771	Mar. 11	521	145	26	925
Stoves. Portable reservoir for	H. L. Fisher and A. J. Hassell	294,215	Feb. 26	1868	510	26	790
Strap-clamp	E. R. Menzel	292,934	Feb. 5	200	55	26	479
Strap-rounding machine	A. C. Sims	291,790	Jan. 8	969	272	26	179
Strap. Sealed binding	F. W. Blacker	291,025	Jan. 1	14	4	26	5
Straw-cutter	D. M. Cummings	293,150	Feb. 5	476	127	26	525
Straw-cutter	J. N. Slaughenhaup	292,263	Jan. 22	1575	440	26	304
Straw-stacker	L. Bowers	292,279	Jan. 22	1593	445	26	307
Straw-stacker	E. F. Brown and S. M. Miller	291,674	Jan. 8	843	236	26	157
Straw-stacker	W. Decker and J. A. Marshall	292,628	Jan. 29	2054	571	26	396
Straw-stacker	T. Major	291,755	Jan. 8	930	261	26	172
Straw-stacker	F. W. Robinson	291,088	Jan. 1	87	25	26	19
Straw-stacker carriage	J. W. Imler and D. W. Snowden	291,350	Jan. 1	410	117	26	75
Straw stacking machine	C. E. Merrifield	292,500	Jan. 29	1876	524	26	368
Street pounder or rammer	F. A. Voigt	295,213	Mar. 18	1103	305	26	1039
Street-sweeper	J. P. Herron	293,909	Feb. 5	559	149	26	539
Street-sweeper	O. D. Orvis and N. B. Adams	293,908	Feb. 19	1452	402	26	711
Street-washer hose attachment	C. Gumlich, Jr	295,164	Mar. 18	1036	286	26	1023
Stud and cravat-holder. Combined collar	E. S. Strait	292,517	Jan. 29	1906	534	26	372
Stud. Shirt	B. Roede	292,058	Jan. 15	1305	365	26	259
Stump-machine	A. A. Howe	292,014	Jan. 15	1257	352	26	242
Stump-puller	P. Zubee	291,262	Jan. 1	309	87	26	56
Submarine boat	J. Jopling	292,916	Feb. 5	170	46	26	474
Sugar from bagasse. Process of and apparatus for extracting crystallized	T. B. Yale	293,938	Feb. 19	1369	379	26	694
Sugar from molasses, sirups, and the juices of plants. Extracting	C. Steffen	294,159	Feb. 26	1796	.....	26	778
Sugar liquor from the scum and mechanical impurities contained therein. Process of and apparatus for separating raw	S. M. Lillie	294,798	Mar. 11	555	154	26	931
Sugar. Manufacture of	K. Trobach	295,841	Mar. 25	1906	527	26	1193
Sugar. Process of and apparatus for mixing and cooling	M. C. Cogswell	292,100	Jan. 15	1353	380	26	260
Sun. Utilizing the rays of the	W. Calver	291,491	Jan. 8	600	169	26	115
Superheater	H. W. Ellicott	292,292	Jan. 22	1607	449	26	310
Supporter: *See* Abdominal supporter. Skirt-supporter. Stocking-supporter.							
Surgical splint	H. McNaughton	291,617	Jan. 8	773	217	26	145
Suspenders	M. Marcus	294,396	Mar. 4	75	19	26	842
Suspenders	S. Price and H. Aniss	294,074	Feb. 26	1675	462	26	759
Swing	I. N. Forrester	294,983	Mar. 11	793	219	26	973

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Swings and hammocks. Stand or frame for suspension of	W. A. C. Oaks	295,275	Mar. 18	1185	328	26	1054
Switch-board	F. Blake	295,223	Mar. 18	1118	309	26	1042
Switch-boards. Condenser and test-circuit for multiple	C. E. Scribner	292,865	Feb. 5	106	29	26	462
Switch-boards. Testing apparatus for multiple	C. E. Scribner	292,866	Feb. 5	106	29	26	462
Switch-stand	P. Coleman	292,897	Feb. 5	146	39	26	470
Switch-stand	F. C. Weir	294,100	Feb. 26	1710	470	26	764
Swivel for watch-chains	P. Nerney	295,577	Mar. 25	1576	436	26	1134
Swivels. Device for finishing chain	J. E. Walcott	295,843	Mar. 25	1911	528	26	1193
Syringe	J. H. Clarke	291,690	Jan. 8	863	241	26	160
Syringe	P. B. Laskey	291,364	Jan. 1	428	121	26	78
Syringe	G. A. Stiles	292,381	Jan. 22	1721	480	26	332
Syringe	J. A. Hawley	295,755	Mar. 25	1796	499	26	1172
Syringe. Vaginal	H. G. Brown	294,757	Mar. 11	506	141	26	922
T-plates. Manufacture of							
Table: *See* Folding table. Recording-table. Leaf-table. Writing-table. Leather-scouring-machine table.							
Table	E. R. Hinman	295,007	Mar. 11	833	228	26	979
Table	C. N. Witt	292,084	Jan. 15	1335	374	26	257
Table	W. O'Shea	294,803	Mar. 11	567	156	26	932
Tablet. Perforated paper	R. C. Wittmann	295,137	Mar. 11	1001	276	26	1008
Tablet. Writing	M. W. and J. D. Kase	295,557	Mar. 25	1549	429	26	1128
Tag	J. C. Russell	292,954	Feb. 5	221	61	26	483
Tag. Key	E. W. Thompson	291,813	Jan. 8	996	280	26	184
Tag	L. D. Bond	292,093	Jan. 15	1345	377	26	259
Tag-attaching device	A. Sichel	294,691	Mar. 4	425	118	26	901
Tag for plug-tobacco, &c	E. H. Tannehill	294,931	Mar. 11	790	201	26	960
Tag-holder	H. L. Ayer	292,196	Jan. 22	1474	414	26	288
Tag-holder for cotton bales	W. P. Patton	295,799	Mar. 25	1855	516	26	1183
Tag or label	A. Hanvey	295,752	Mar. 25	1794	498	26	1178
Tag or label holder	G. W. Dwenger	292,639	Jan. 29	2057	572	26	396
Tag. Mail-sack	C. Edlund	293,857	Feb. 19	1393	385	26	700
Tailor's nae. Combined implement for	H. Lissagaray and H. Leplay	295,184	Mar. 18	1064	.....	26	1032
Tallow at a low temperature. Extracting and melting							
Tank: *See* Lard and oil tank. Measuring-tank.							
Tanning apparatus	W. S. Wells	294,490	Mar. 4	107	28	26	847
Tanning hides	L. Schnadel	293,364	Feb. 12	771	206	26	582
Tap and reamer wrench	H. E. Woods	294,104	Feb. 26	1714	471	26	765
Tape and making the same. Bias	C. H. Farmer	293,440	Feb. 12	868	235	26	600
Target. Flying	J. S. Briggs	291,287	Jan. 1	336	95	26	61
Target. Flying	J. Jopling	292,118	Jan. 15	1377	385	26	264
Target. Flying	J. G. Mole	295,271	Mar. 18	1181	327	26	1053
Target. Flying	H. Yarwig and A. E. Spangler	295,312	Mar. 18	1202	342	26	1063
Target. Flying	D. Heer	292,009	Jan. 15	1252	350	26	241
Tassel-blanks, &c. Machine for making	D. Heer	292,010	Jan. 15	1253	351	26	241
Tassel-blanks. Machine for making	A. Schilling	295,220	Mar. 18	1207	335	26	1059
Tea-curing and coffee-roasting apparatus	G. W. Rich	292,254	Jan. 22	1565	437	26	302
Teeter	M. H. Wilson	292,607	Jan. 29	2030	564	26	392
Telegraph. Autographic	T. F. Taylor	293,110	Feb. 5	411	111	26	516
Telegraph. Automatic	J. Abterdam	295,219	Mar. 18	1109	{307 {308	26	1041
Telegraph. Automatic and fac-simile	W. R. Patterson	293,775	Feb. 19	1580	354	26	681
Telegraph-cable	W. R. Patterson	294,500	Mar. 4	202	57	26	863
Telegraph-cables into pipes. Apparatus for drawing	P. H. Vander Weyde	292,770	Jan. 29	2256	.....	26	432
Telegraph-cables. Manufacturing a rot-proof covering for underground	W. R. Patterson	292,848	Feb. 5	84	23	26	458
Telegraph-cables. Terminal-box for	S. D. Field	291,318	Jan. 1	381	106	26	69
Telegraph. Duplex	C. Plumb	293,979	Feb. 19	1545	426	26	728
Telegraph-key	S. J. Spurgeon	293,105	Feb. 5	404	110	26	515
Telegraph-keys. Circuit-closer for	H. Van Hoevenbergh	293,927	Feb. 19	1480	{407 {408	26	716
Telegraph. Page-printing	C. H. Wagner	291,435	Jan. 1	520	146	26	93
Telegraph-poles. Device for attaching cross-bars to	A. F. Johnson	295,644	Mar. 25	1656	{459 {460	26	1148
Telegraph. Printing	H. Van Hoevenbergh	292,966	Feb. 5	231	64	26	485
Telegraph. Printing	H. Van Hoevenbergh	293,922	Feb. 19	1470	406	26	714
Telegraph. Printing	H. Van Hoevenbergh	293,926	Feb. 19	1477	407	26	715
Telegraph. Quadruplex	B. E. J. Ells	293,956	Feb. 19	1518	{418 {419	26	724
Telegraph. Quadruplex	G. Smith	291,236	Jan. 1	274	77	26	50
Telegraph system. Automatic	T. F. Taylor	293,111	Feb. 5	414	111	26	517
Telegraph system. Underground	S. D. Field	291,317	Jan. 1	380	106	26	68
Telegraph-wire joint	C. McIntire	291,211	Jan. 1	247	69	26	44
Telegraph-wire protector. Sectional compound	J. W. Horner	291,478	Jan. 1	577	162	26	103
Telegraph-wire supporter	R. C. Stone	295,073	Mar. 11	919	252	26	993
Telegraph-wires. Box for laying lines of	T. J. Mayall	291,371	Jan. 1	437	124	26	79
Telegraphs. Escapement and unison mechanism for printing	S. D. Field	291,705	Jan. 8	879	247	26	163
Telegraphs. Marking-stylus for automatic	T. F. Taylor	293,112	Feb. 5	418	112	26	517
Telegraphs. Printing from either of two type-wheels in printing	H. Van Hoevenbergh	293,928	Feb. 19	1482	408	26	717
Telegraphs. Static neutralizer for	C. Selden	291,096	Jan. 1	98	28	26	21
Telegraphs. Static neutralizer for	C. Selden	291,097	Jan. 1	100	28	26	21
Telegraphs. Unison mechanism for printing	S. D. Field	293,959	Feb. 19	1521	419	26	724
Telegraphic instruments. Circuit-closer for	J. Neifing	294,259	Feb. 26	1916	525	26	799
Telegraphic system	C. G. Burke	295,855	Mar. 25	1925	532	26	1196
Telegraphic transmitter	R. C. Stone	295,074	Mar. 11	920	252	26	993
Telegraphic transmitter	R. C. Stone	295,075	Mar. 11	922	253	26	994
Telephone	J. H. Cheever	291,684	Jan. 8	856	239	26	159
Telephone	D. Drawbaugh	293,154	Feb. 5	479	128	26	526

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Telephone. Acoustic	H. E. Huston	294,238	Feb. 26	1893	518	26	795
Telephone apparatus	E. T. Gilliland	293,161	Feb. 5	488	131	26	527
Telephone apparatus	E. T. Gilliland	293,162	Feb. 5	491	131	26	528
Telephone-box	A. G. Davis	295,365	Mar. 18	1298	359	26	1076
Telephone-cable terminal	W. R. Patterson	292 849	Feb. 5	85	24	26	458
Telephone-call-bell switch	L. Townsend	293,118	Feb. 5	430	113	26	518
Telephone call-box	J. M. Oram, H. M. Sutton, and H. Garrett.	292,570	Jan. 29	1979	552	26	384
Telephone-case	P. Benjamin	293,136	Feb. 5	462	123	26	523
Telephone central-office apparatus	F. M. Lytle and J. A. McCoy	294,482	Mar. 4	178	49, 50	26	859
Telephone-circuit	C. E. Scribner	294,336	Feb. 26	2015	553	26	817
Telephone circuit and apparatus	T. D. Lockwood	291,915	Jan. 15	1139	318	26	220
Telephone circuit-changer	C. D. Haskins	293,171	Feb. 5	508	134, 135	26	530
Telephone cut-out	A. Williams and J. M. Gannon	291,825	Jan. 8	1011	283	26	186
Telephone-exchange system	F. B. Herzog	292,115	Jan. 15	1372	384, 385	26	264
Telephone-exchanges. Looping-in mechanism and operator's apparatus for	E. M. Wilson	293,206	Feb. 5	554	148	26	539
Telephone-exchanges. Night-signal circuit for	C. E. Scribner	293,196	Feb. 5	541	143	26	536
Telephone-exchanges. Time-signal for toll-lines of	A. S. Hibbard	293,736	Feb. 19	1224	338, 339	26	672
Telephone. Magneto-electric	T. D. Lockwood and T. W. Lane	292,335	Jan. 22	1659	463	26	319
Telephone. Mechanical	C. Selden	291,994	Jan. 1	94	27	26	20
Telephone. Pipe-	J. H. Rogers	292,858	Feb. 5	97	27	26	461
Telephone-receiver	H. E. Waite	292,602	Jan. 29	2024	563	26	391
Telephone. Receiving-	L. W. Sutton, Jr	291,802	Jan. 8	987	277	26	182
Telephone sound-muffler	H. Maine	292,022	Jan. 15	1264	354	26	243
Telephone. Speaking-	F. Ware	292,881	Feb. 5	126	35	26	466
Telephone-support	G. W. Fish	295,531	Mar. 25	1510	416, 417	26	1121
Telephone-support	G. A. Wilkins	294,207	Feb. 26	1905	538	26	808
Telephone-switch	C. E. Scribner	293,198	Feb. 5	543	144	26	537
Telephone system. Gas and magnetic	J. H. Rogers	292,857	Feb. 5	96	26, 27	26	460
Telephone-transmitter	E. Berliner	291,866	Jan. 15	1079	301	26	208
Telephone-transmitter	H. C. Buck	293,561	Feb. 12	1092	276	26	695
Telephone-transmitter	J. H. Cheever	292,203	Jan. 22	1488	418	26	290

Telephone-transmitter	D. Drawbaugh	291,312	Jan. 1	374	105	26	67
Telephone-transmitter	D. Drawbaugh	291,472	Jan. 1	570	160	26	102
Telephone-transmitter	D. Drawbaugh	295,741	Mar. 25	1780	495	26	1169
Telephone-transmitter	D. Drawbaugh	295,742	Mar. 25	1782	495	26	1170
Telephone-transmitter	H. E. Waite	292,603	Jan. 29	2025	564	26	391
Telephonic and telegraphic circuits. Signaling apparatus for	L. S. Fairbanks	292,999	Feb. 5	275	75	26	492
Telephonic and telegraphic instruments. Protector for	A. A. Connolly	291,299	Jan. 1	357	101	26	65
Telephonic receiver	C. A. Randall	295,804	Mar. 25	1862	518	26	1184
Telephonic transmission	W. H. Eckert	292,212	Jan. 22	1505	423	26	292
Telephonic transmission. Apparatus for	J. F. Mehren	292,835	Feb. 5	71	20	26	456
Telephonic transmitter	C. A. Randall	295,805	Mar. 25	1864	518	26	1185
Telephonic transmitter	C. A. Randall	295,806	Mar. 25	1866	518	26	1185
Telephonic transmitter	C. A. Randall	295,807	Mar. 25	1868	519	26	1185
Temperature. Device for regulating	J. M. Halsted	295,384	Mar. 18	1321	368	26	1080
Temperatures of distant rooms. Apparatus for indicating	W. R. Comings	294,201	Feb. 26	1851	505	26	786
Tennis-racquet	A. T. Greenough and W. H. Boardman	293,573	Feb. 12	1015	279	26	627
Tenon-boring machine	W. W. Hosler	293,880	Feb. 19	1419	392	26	705
Tenon-extractor	O. Hendrick	295,170	Mar. 18	1045	288	26	1029
Tentering-machine	O. E. Drown	295,155	Mar. 18	1026	283, 284	26	1026
Testing fabrics. Machine for	E. Morrison and J. P. Herron	292,130	Jan. 15	1388	389	26	266
Theater appliance	W. Hanlon	293,324	Feb. 12	719	192	26	572
Theaters. Changeable scenery for	L. W. Seavey	292,689	Jan. 29	2130	593	26	409
Thermometer	H. Guth	294,732	Mar. 4	472	132	26	910
Thermometer. Balanced	P. G. Russell	292,764	Jan. 29	2246	623	26	430
Thermometer. Clinical metallic	W. B. Fowle	294,729	Mar. 4	468	131	26	909
Thermostat	A. K. Rider	294,405	Mar. 4	96	23	26	844
Thickness-gage	E. Morrison and J. P. Herron	292,131	Jan. 15	1391	389	26	267
Thill-coupling	N. R. Baker	294,107	Feb. 26	1718	472	26	766
Thill-coupling	R. Cameron	295,348	Mar. 18	1277	354	26	1072
Thill-coupling	J. M. Fulton	291,588	Jan. 8	729	205	26	137
Thill-coupling	H. E. Gamble	295,160	Mar. 18	1032	285	26	1027
Thill-coupling	E. Hoxie	293,173	Feb. 5	510	135	26	530
Thill-coupling	O. C. Meburin	293,341	Feb. 12	739	197	26	577
Thill-coupling	F. P. Musser	293,906	Feb. 19	1450	402	26	711
Thill-coupling	W. S. Shanahan	295,440	Mar. 18	1382	383	26	1093
Thill-coupling	O. Tower	293,379	Feb. 12	704	913	26	567
Thill-coupling	S. B. Ulm	291,592	Jan. 8	678	192	26	198
Thill-couplings. Anti-rattler for	J. N. Berry	293,218	Feb. 12	580	152	26	542
Thill-holder	J. W. Evans and A. H. Vernay	291,315	Jan. 1	378	106	26	68
Thimble. Sewing-	E. F. McCartney	293,262	Feb. 12	634	169	26	558
Thrasher	A. H. Clark	291,151	Jan. 1	171	49, 50	26	33
Thrasher and cotton-opener. Pea-	C. H. Simmons	293,098	Feb. 5	396	108	26	514
Thrashing and separating grain, peas, &c. Machine for	A. Swingle	295,305	Mar. 18	1222	340	26	1062
Thrashing-machine	W. H. and J. Butterworth, Jr	292,731	Jan. 29	2183	609	26	419
Thrashing-machine	M. J. Foster	293,570	Feb. 12	1012	278	26	627
Thrashing-machine	A. T. Hawley	293,019	Feb. 5	298	82	26	496
Thrashing-machine	A. J. Hoag	293,876	Feb. 19	1415	391	26	704
Thrashing-machine	D. Lippy	293,755	Feb. 19	1232	346, 347	26	676
Thrashing-machine band-cutter and feeder	B. Driller	293,155	Feb. 5	480	129	26	526
Thrashing-machine band-cutter and feeder	J. A. and F. H. Marshall	292,667	Jan. 29	2106	586	26	405

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Thrashing-machine belt-reel	L. P. Barnes	292,530	Jan. 29	1925	539	26	375
Thrashing-machine dust exhauster and conveyer	D. Logan	292,498	Jan. 29	1875	523	26	368
Thrashing-machines. Feed-regulating device for	A. W. Lockhart	295,185	Mar. 18	1064	293, 294	26	1032
Thrashing-machine grain-feeder and band-cutter	O. C. Van Ness	291,430	Jan. 1	515	145	26	92
Thrashing-machine grain-separator	P. L. Nash	295,668	Mar. 25	1699	468	26	1154
Thrashing-machine grain-spout	L. H. Conklin	291,986	Jan. 15	1295	341	26	236
Thrashing-machine straw-carrier	E. Huber and F. Strobel	293,881	Feb. 19	1420	392, 393	26	705
Thread cutter and holder	E. Jerauld, Jr	293,254	Feb. 12	624	166	26	556
Ticket-case	A. R. Burdick	292,789	Feb. 5	15	4	26	445
Tie: *See* Bale-tie. Railway-tie. Necktie.							
Tie for securing bags, bales, &c	W. Gibson	291,184	Jan. 1	216	60	26	39
Tile and brick machines. Cutting-table for	J. C. McKenzie	291,616	Jan. 8	772	216	26	145
Tile. Artificial	G. De Festetics	293,636	Feb. 19	1090	302	26	648
Tile. Illuminating	J. Mark	294,647	Mar. 4	381	106	26	894
Tile-laying machine	J. T. Graves and B. F. Belt	295,119	Mar. 11	975	267	26	1003
Tile-machine	P. H. Kelly	293,473	Feb. 12	903	244	26	607
Tile-machine	J. W. Penfield	292,251	Jan. 22	1558	436	26	301
Tile-machine	J. S. Smith	291,793	Jan. 8	972	272	26	180
Tile-machine	J. S. Smith	293,804	Feb. 19	1320	366	26	688
Tile-machine	W. J. Woolley	294,342	Feb. 26	2026	555	26	819
Tile-machine	J. S. Smith	295,298	Mar. 18	1215	338	26	1060
Tile, &c. Making	J. S. Smith	294,519	Mar. 4	222	62	26	867
Tile-mill table	J. Austin	292,887	Feb. 5	132	36	26	467
Tile or block for finishing inside walls	H. P. Stafford	293,106	Feb. 5	405	110	26	515
Tile-perforating machine and perforated drain-tile. Drain-	R. B. Morrison	292,035	Jan. 15	1278	358	26	246
Tile, pipe, and sewer protector	J. Larmanjat	294,475	Mar. 4	170	47	26	858
Tiles. Manufacture of mosaic and other	J. W. Kenna	294,391	Mar. 4	67	17	26	841
Tilting chair	L. Thrush and L. Wilson	294,936	Mar. 11	723	202	26	961
Timber and lumber stamp	W. H. Dolman	293,721	Feb. 19	1205	334	26	669
Timber. Fire-proof	J. E. Tarbox	293,684	Feb. 19	1149	321	26	659
Time-detector. Watchman's	E. and H. C. Stockwell	293,815	Feb. 19	1336	371	26	690
Time-lock	E. and H. C. Stockwell	293,816	Feb. 19	1337	371	26	690
Time-lock	H. P. Pruiin	292 583	Jan. 22	1997	556	26	387
Time-locks. Unlocking attachment for	G. W. Davis	294,371	Mar. 4	38	5	26	836
Time-recording system. Watchman's electric	P. W. McGuire	292,028	Jan. 15	1271	355	26	244
Tire and felly. Wheel	R. McCloskey and A. E. Torier	294,895	Mar. 11	662	190	26	953
Tire-tightener and jack. Combined	C. J. Clarke	293,630	Feb. 19	1084	300	26	647
Tire. Vehicle-wheel	P. Gendron	294,461	Mar. 4	154	42	26	856
Tire. Wagon-wheel	C. S. Bird	293,404	Feb. 12	890	224	26	594
Tobacco box and cutter. Combined	M. Tobin	292,965	Feb. 5	230	63	26	484
Tobacco-houses. Apparatus for heating and moistening	E. F. Maffrand	295,780	Mar. 25	1833	510	26	1180
Tobacco in licorice. Apparatus for dipping	G. W. Smoot	295,066	Mar. 11	910	249	26	992
Tobacco-pipe	A. J. Wolff	291,561	Jan. 8	689	195	26	130
Tobacco-pipe	A. Siehel	294,690	Mar. 4	424	118	26	901
Tobacco presses. Finisher-plate for plug	C. Lindner	295,567	Mar. 25	1562	433	26	1130
Toilet-bracket	H. O. Berg	295,222	Mar. 18	1117	308	26	1041
Toilet-case	F. Ficke	293,568	Feb. 12	1010	278	26	626
Toilet-case	W. Strong	291,106	Jan. 1	116	32	26	24
Tombstone picture-case	S. Poole	294,147	Feb. 26	1777	488	26	775
Tongs for pickles, fruits, &c	H. S. Pullman	295,885	Mar. 25	1975	547	26	1204
Tongs. Pipe-	J. T. Dongine	295,237	Mar. 18	1137	313	26	1045
Tongue support. Wagon-	A. H. Gleason	291,332	Jan. 1	394	110	26	71
Tongue support. Wagon-	N. Johnson	293,751	Feb. 19	1249	345	26	676
Tongue support. Wagon-	A. E. Lytle	292,168	Jan. 22	1438	403	26	293
Tool. Combination-	W. G. Thompson	292,184	Jan. 22	1458	409	26	295
Tool. Combination-	E. Walker	291,820	Jan. 8	1006	281	26	186
Tool. Combination-	C. L. Bellamy	292,620	Jan. 29	2045	569	26	394
Tool-handle	J. A. King	294,633	Mar. 4	358	99	26	890
Tool-handle	T. A. Sweet	291,956	Jan. 15	1187	330	26	229
Tool-handle fastening	E. D. Moss	292,938	Feb. 5	205	56	26	480
Tool-holder	J. F. Parkes	291,531	Jan. 8	653	185	26	124
Tool-holder	C. E. Billings	292,784	Feb. 5	6	2	26	444
Tool holder. Cutting-off-	F. I. Getty and F. Dickinson	293,647	Feb. 19	1102	306	26	650
Tool. Machinist's	D. H. Murphy	291,851	Jan. 8	1049	293	26	193
Tools to handles. Securing	E. P. Brown	291,978	Jan. 15	1211	338	26	233
Tooth. Artificial	A. Shellman	291,946	Jan. 15	1174	327	26	226
Tooth. Spring-	C. Pilgrim	291,853	Jan. 8	1052	294	26	194
Torpedo	G. W. Metcalfe	292,009	Jan. 15	1272	356	26	244
Torpedo placer. Railway-	J. T. Foster	292,204	Jan. 22	1609	450	26	310
Towel-rack and clothes-bar	J. S. Adams	294,343	Feb. 26	2027	556	26	819
Tower	J. S. Adams	294,344	Feb. 26	2030	556	26	820
Tower. Skeleton iron	C. M. Crandall	294,590	Mar. 4	310	86	26	881
Toy	L. F. Fallon	292,798	Feb. 5	28	7	26	447
Toy	A. Trunk	295,083	Mar. 11	934	255	26	996
Toy	J. A. Ward	295,845	Mar. 25	1913	528, 529	26	1194
Toy	J. W. Worcester	295,138	Mar. 11	1002	276	26	1008
Toy. Advertising-	R. Albrecht	293,394	Feb. 12	818	220	26	592
Toy building-block	C. M. Crandall	294,589	Mar. 4	310	86	26	881
Toy building-block	C. W. Frost	294,607	Mar. 4	328	91	26	884
Toy doll	H. A. Goffe	294,868	Mar. 11	651	181	26	947
Toy electric railway	M. Bacon	295,473	Mar. 18	1427	394, 395	26	1101
Toy. Mechanical	W. S. Reed	294,076	Feb. 26	1677	462	26	759
Toy. Musical	W. A. Gay	292,645	Jan. 29	2075	577	26	399
Toy pistol	A. H. Dean and C. A. Hotchkiss	294,450	Mar. 4	140	37	26	853
Toy target	A. H. Hoffman, W. F. Lloyd, and J. H. Block.	292,652	Jan. 29	2061	580	26	401
Toy whistle	H. C. Swan	291,548	Jan. 8	673	191	26	127

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Toy work-bench	A. Pfaendler	292,350	Jan. 22	1679	468	26	323
Trace-carrier	L. T. Anderson	294,952	Mar. 11	743	208	26	965
Trace-carrier	W. M. Smither	293,807	Feb. 19	1324	368	26	689
Trace-cockeye attachment	G. H. McDole	292,171	Jan. 22	1442	405	26	283
Trace-fastener	N. M. Habberstad	291,896	Jan. 15	1113	310	26	215
Trace-hitch	D. A. Foster	295,378	Mar. 18	1314	365	26	1079
Trace-hook	O. Lampe	292,929	Feb. 5	170	49	26	476
Tracings. Making copies of	P. H. Mandel	294,485	Mar. 4	185	.....	26	860
Track or road-bed	S. Griffin	294,126	Feb. 26	1750	481	26	771
Traction-engine	H. M. Cormack	291,300	Jan. 1	339	102	26	65
Traction-engine	S. E. Jarvis	294,877	Mar. 11	657	183	26	940
Traction-engine	F. F. Landis	294,794	Mar. 11	548	152	26	929
Traction-engine	C. J. Leach and A. Olds	292,924	Feb. 5	180	49, 50	26	476
Traction-engine	W. S. Owings	291,075	Jan. 1	73	21	26	17
Traction-engine	J. F. Palmer	293,065	Feb. 5	351	96, 97	26	506
Traction-engine	J. F. Palmer	293,066	Feb. 5	354	97	26	507
Traction-engine	J. F. Palmer	293,067	Feb. 5	357	97	26	507
Traction-engine	L. C. Taber	294,930	Mar. 11	718	200, 201	26	960
Traction-engine bearing	F. F. Landis	294,793	Mar. 11	547	151, 152	26	929
Traction-motor. Electrical	W. E. Ayrton and J. Perry	292,529	Jan. 29	1923	538, 539	26	375
Transit. Surveyor's and engineer's	T. L. Nixon	293,667	Feb. 19	1124	313, 314	26	654
Transom-lifter	F. A. Cortis	291,695	Jan. 8	868	243	26	161
Transplanter	E. A. Gross	293,652	Feb. 19	1108	308	26	651
Trap: *See* Animal-trap. Steam-trap. Ball-trap. Vermin-trap. Bottle-trap. Water-trap. Rat-trap.							
Trap and overflow for wash-basins, water-closets, &c. Combined	C. L. Riker	292,055	Jan. 15	1302	364	26	251
Traveling-bags. Safety attachment for	F. A. Nickerson	292,940	Feb. 5	206	56	26	480
Tray. Glass water	A. H. Heisey	294,231	Feb. 26	1885	515	26	793
Treadle and crank movements. Device for poising	J. H. Whitney	292,969	Feb. 5	238	65	26	486
Treadle mechanism	J. Pasfield	292,573	Jan. 29	1963	553	26	384
Treadle-motion	J. Kayser	291,200	Jan. 1	236	65	26	42
Treadle-power	G. A. Greene	294,224	Feb. 26	1878	513	26	792
Tree-protector	F. R. Hogeboom	293,463	Feb. 12	893	242	26	605
Trellis-hook	J. Judd	294,240	Feb. 26	1895	518	26	795
Tricycle	A. Brown	294,753	Mar. 11	501	140	26	921
Tricycle	D. E. Dutrow	295,861	Mar. 25	1939	535	26	1198
Tricycle	W. J. Lloyd	295,257	Mar. 18	1164	321, 322	26	1049
Tricycle	N. Merrill	291,376	Jan. 1	440	125	26	80
Trimmer: *See* Heel-trimmer. Sewing-machine trimmer.							
Trimming fabrics. Device for	A. Wright	295,139	Mar. 11	1003	277	26	1008
Trimming show-box	S. G. Bernstein and M. Simonson	293,844	Feb. 19	1377	380	26	697
Trolling-hook	N. A. Dickinson	295,369	Mar. 18	1303	361	26	1077
Trough: *See* Animal-trough.							
Truck	W. C. Mayor	294,142	Feb. 26	1774	486	26	774
Truck. Binder-	J. C. Smith	293,282	Feb. 12	665	178	26	563
Truck. Car-	J. E. Mason	294,140	Feb. 26	1772	486	26	774
Truck. Car-	A. E. McConnell	293,763	Feb. 19	1264	350	26	678
Truck. Car-	W. H. Montz	291,382	Jan. 1	456	128	26	82
Truck. Car-	A. Westlake	292,454	Jan. 22	1617	506, 507	26	350
Truck. Hand-	J. Burleigh and J. G. Abbott	292,790	Feb. 5	16	4	26	445
Truck. Hand-	J. L. Dowing	294,211	Feb. 26	1863	508, 509	26	789
Truck. Hand-	G. H. Rausch	292,680	Jan. 29	2121	590	26	408
Truck. Hand-	C. F. Stremel	294,525	Mar. 4	928	65	26	908
Truck. Hand-	W. C. Wren	292,609	Jan. 29	2033	565	26	393
Truck. Harvester-	H. Clayton	291,578	Jan. 15	1094	305	26	212
Truck. Harvester-	R. Hamilton	292,219	Jan. 22	1513	425	26	294
Truck. Harvester-	A. E. Potter	292,851	Feb. 5	88	24	26	459
Truck spring. Car-	G. B. Milne	295,417	Mar. 18	1358	377	26	1088
Trunk	H. E. Gilson	293,065	Feb. 5	282	78	26	493
Trunk	A. Kroesing	291,607	Jan. 8	755	213	26	142
Trunk	J. O. Niles	294,260	Feb. 26	1917	526	26	799
Trunk	F. H. Ransom	295,808	Mar. 25	1869	519	26	1186
Trunk	J. Wayland	292,967	Feb. 5	233	64	26	485
Trunk-catch	A. V. Romadka	291,230	Jan. 1	267	75	26	49
Trunk-roller and corner-piece	A. Dodd	294,564	Mar. 4	313	87	26	892
Trunk. Salesman's sample-	J. E. Ladd	291,303	Jan. 1	940	66	26	43
Trunk-stay	J. S. Topham	295,464	Mar. 18	1413	391	26	1098
Trunk tray-bolt	O. Jacobi	295,015	Mar. 11	843	.....	26	980
Trunks, portmanteaus, &c. Manufacturing material for making	D. S. Armer	295,472	Mar. 18	1426	394	26	1101
Truss	O. G. Darling and H. A. Schulz	293,230	Feb. 12	595	156	26	551
Truss	O. G. Darling and H. A. Schulz	293,231	Feb. 12	595	157	26	551
Truss	J. Feneratein	295,240	Mar. 18	1140	314	26	1045
Truss	E. Howe	294,321	Feb. 26	1909	547	26	814
Truss	J. F. Noone	291,391	Jan. 1	466	131	26	84
Tub-trussing machine	M. Corcoran	294,764	Mar. 11	513	143	26	923
Tube: *See* Sampling-tube.							
Tube-cutter	N. P. Towne	295,307	Mar. 18	1236	341	26	1062
Tube-expander	J. H. McGraw	292,027	Jan. 15	1069	355	26	244
Tubes. Apparatus for screw threading	H. B. Feldmann	291,842	Jan. 8	1036	289, 290	26	191

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Tubular boiler. Upright	R. Henry and H. B. Taylor	294,875	Mar. 11	656	183	26	949
Tug	G. C. Eastman	293,642	Feb. 19	1097	304	26	649
Tug-boat. Steam-traction	D. W. Cooke	295,231	Mar. 18	1129	311, 312	26	1043
Tug-clip	S. A. Wall	294,704	Mar. 4	440	122	26	904
Tug for harness. Shaft-	P. McFaddin	293,052	Feb. 5	336	92	26	504
Tug. Hame-	E. G. Latta	294,243	Feb. 26	1897	520	26	796
Tug. Harness-	S. H. Haas	294,572	Mar. 11	653	182	26	948
Tug slide. Harness-	J. G. Miller	293,903	Feb. 19	1446	400	26	710
Tuyere	F. W. Gordon	295,540	Mar. 25	1523	421	26	1123
Tuyere	J. F. Harly	295,548	Mar. 25	1533	425	26	1126
Tuyere	E. P. H. Martin	292,668	Jan. 29	2107	586	26	405
Tuyere	F. W. Gordon	294,123	Feb. 26	1746	481	26	770
Tuyere-pipe	P. W. Wiley	292,302	Jan. 22	1733	483	26	334
Type-cases. Supplementary cell for	E. C. Bell	294,355	Mar. 4	19	5	26	833
Type-holder	G. W. N. Yost	295,469	Mar. 18	1420	393	26	1100
Type-writer	W. J. Barron	295,475	Mar. 18	1430	395	26	1101
Type-writing machine	H. B. Richardson	292,854	Feb. 5	91	25, 26	26	459
Type-writing machine	C. G. Tinsley	293,687	Feb. 19	1154	322	26	660
Type-writing machines. Line-indicator for	M. C. Stone	291,104	Jan. 1	113	32	26	23
Umbrella	E. Wright	295,140	Mar. 11	1004	277	26	1008
Umbrella. Carriage-	C. G. Saxe	291,090	Jan. 1	89	26	26	19
Umbrella-catch	C. D. Lathrop	292,325	Jan. 22	1646	460	26	317
Umbrella-frame	M. Nial	295,042	Mar. 11	874	239	26	985
Umbrella-frames. Device for attaching the ribs and braces of	E. G. Charagent	295,351	Mar. 18	1920	354, 355	26	1072
Umbrella-runner	J. B. Wilson	293,549	Feb. 12	985	270	26	622
Umbrella-runner	E. Ross	295,586	Mar. 25	1586	439	26	1135
Umbrellas and canes. Hand-protecting attachment for	S. Rosenthal	294,507	Mar. 4	910	59	26	865
Under-garment	H. Howson	291,849	Jan. 8	1047	293	26	193
Underground conduits. Mode of and mechanism for forming	T. L. Smith	293,533	Feb. 12	966	264	26	619
Underground wire-conduit	J. Potter	293,781	Feb. 19	1286	356, 357	26	692
Universal lubricator	C. H. Peters	294,666	Mar. 4	398	111	26	897
Urn. Coffee-	A. B. Pullman	293,275	Feb. 12	657	176	26	561
Urinal	A. Palmer	295,276	Mar. 18	1186	328	26	1054
Vaginal irrigator	J. M. Goldsmith	291,506	Jan. 8	622	175	26	118
Valve	J. M. Goldsmith	293,240	Feb. 12	607	161	26	553
Valve	C. Jenkins	293,398	Feb. 12	725	194	26	574
Valve	J. R. Maxwell	291,066	Jan. 1	62	18	26	14
Valve and union	A. Wanich	292,604	Jan. 29	2026	564	26	392
Valve. Balance puppet-	W. T. Reasor. (Reissue)	10,449	Feb. 12	1062	294	26	635
Valve. Balance slide-	R. H. Fletcher	294,216	Feb. 26	1868	510	26	790
Valve. Balanced rotary	J. H. Blessing	294,960	Mar. 11	753	210	26	966
Valve. Check-	C. Jenkins	293,398	Feb. 12	725	194	26	573
Valve. Check-	W. Boorman	294,359	Mar. 4	23	6	26	833
Valve. Fluid-actuated	F. A. Gardner	291,476	Jan. 1	574	161, 162	26	102
Valve-gear	J. T. Halsey	294,873	Mar. 11	654	182	26	948
Valve-gear. Reversing	E. D. McLean	295,033	Mar. 11	864	237	26	964
Valve-gear. Steam-engine	W. D. Thomas	293,686	Feb. 19	1152	321, 322	26	660
Valve. Globe-	E. E. McCannon	292,340	Jan. 22	1664	464	26	320
Valve grinder. Globe-	J. E. Doyle	293,723	Feb. 19	1207	334	26	609
Valve. Piston-	H. Whiting	292,778	Jan. 29	2065	627	26	434
Valve. Regulator-	T. J. Kieley	292,232	Jan. 22	1531	429	26	296
Valve. Safety-	H. G. Ashton	291,126	Jan. 1	142	41	26	28
Valve. Safety-	J. O. Cheever	293,948	Feb. 19	1509	416	26	722
Valve. Safety-	R. J. Thomas	293,685	Feb. 19	1150	321	26	660
Valve. Safety-	E. P. Monroe	293,975	Feb. 19	1541	425	26	728
Valve. Slide-	H. F. Shaw	292,261	Jan. 22	1573	439	26	303
Valve. Slide-	R. N. Pratt	291,770	Jan. 8	946	265	26	175
Valve. Steam-	R. N. Pratt	292,353	Jan. 22	1683	468, 469	26	324
Valve. Steam-	D. H. Thorpe	292,185	Jan. 22	1459	410	26	286
Valve. Steam-actuated	W. Craig	292,541	Jan. 29	1943	542, 543	26	377
Valve. Steam-actuated	D. F. Nisbet	295,669	Mar. 25	1691	468	26	1154
Valve. Steam-engine reversing-	H. W. Robie	294,155	Feb. 26	1791	490	26	777
Valve. Stop-	J. H. Blessing	294,357	Mar. 4	20	5	26	833
Valve. Stop-	C. F. Murdock	291,218	Jan. 1	255	72	26	46
Valve. Stop-	A. Rappold	293,355	Feb. 12	759	202	26	580
Valve. Stop-	R. Hughes	291,479	Jan. 1	579	163	26	103
Valve. Straight-way	G. W. Richardson	295,585	Mar. 25	1584	438	26	1135
Valves. Apparatus for testing safety-	E. L. Reese	294,807	Mar. 11	573	159	26	934
Valves of steam-cylinders. Operating	H. F. Hayden	295,392	Mar. 18	1328	370, 371	26	1082
Vapor and gas generating furnace for locomotives, &c.	D. E. Bangs	292,616	Jan. 29	2041	567	26	394
Vapor-burner	J. B. Wallace and G. Myers	295,315	Mar. 18	1236	343	26	1063
Vapor-burner safety attachment	R. S. Kelsey	295,651	Mar. 25	1666	462	26	1149
Vaporizing hydrocarbon oils. Process of and apparatus for	H. F. Hayden	295,550	Mar. 25	1535	426	26	1126
Vat or kettle for reducing or treating animal or vegetable matter.	T. Swanton	295,508	Mar. 18	1477	406	26	1109
Vault. Bank-	J. T. Hough and J. A. Harper	294,626	Mar. 4	349	97	26	888
Vegetable-cutter	E. Barth and O. Spilger	293,300	Feb. 12	692	185	26	568
Vegetable-cutting machine	P. J. Dames	291,305	Jan. 1	366	103	26	66
Vehicle-body	H. P. Colby	294,852	Mar. 11	628	174	26	943
Vehicle-brake	J. T. Dillehay	295,740	Mar. 25	1780	495	26	1169
Vehicle-brake	J. C. Herman	295,123	Mar. 11	980	269	26	1004
Vehicle-runner	W. H. Strayer and W. H. Planck	292,383	Jan. 22	1723	480	26	332

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr'g.	Vol.	Page.
Vehicle running-gear	W. A. Dawson	292,900	Feb. 5	149	40, 41	26	470
Vehicle running-gear	C. M. March	294,742	Mar. 4	481	134	26	912
Vehicle running-gear	J. I. and C. F. Nissen	293,907	Feb. 19	1451	402	26	711
Vehicle running-gear	B. C. Seaton	291,542	Jan. 8	666	189	26	196
Vehicle running-gear	G. B. Haskell	295,754	Mar. 25	1705	499	26	1172
Vehicle-seat	A. M. Plimpton	292,945	Feb. 5	211	58	26	481
Vehicle-seat	F. J. Newacheck	291,389	Jan. 1	465	131	26	83
Vehicle-seat spring	W. R. D. Allen	292,151	Jan. 29	1415	397	26	279
Vehicle shifting-rail	J. Knapp	294,788	Mar. 11	540	150	26	928
Vehicle side spring	H. W. Pell	295,277	Mar. 18	1157	329	26	1054
Vehicle side spring	W. Shinnick	291,789	Jan. 8	968	271	26	179
Vehicle-spindle	C. E. Murray	294,258	Feb. 26	1915	525	26	799
Vehicle-spring	G. L. Artz	291,664	Jan. 8	831	233	26	155
Vehicle-spring	C. W. Barenfanger	291,852	Jan. 8	1021	285	26	188
Vehicle-spring	G. E. Blaine	293,219	Feb. 12	581	153	26	549
Vehicle-spring	C. C. Bradley	294,190	Feb. 26	1838	502	26	784
Vehicle-spring	J. P. Callan	295,228	Mar. 18	1124	310	26	1042
Vehicle-spring	W. H. Doyle	294,374	Mar. 4	45	12	26	838
Vehicle-spring	S. Hnnt	291,738	Jan. 8	916	256	26	169
Vehicle-spring	R. S. Hnnzeker	295,176	Mar. 18	1052	291	26	1030
Vehicle-spring	R. S. Hnnzeker	295,177	Mar. 18	1053	291	26	1030
Vehicle-spring	S. D. Lance	294,342	Feb. 26	1897	519	26	796
Vehicle-spring	D. P. Sharp	291,412	Jan. 1	1195	138	26	88
Vehicle-spring	E. S. Smith	293,801	Feb. 19	1316	366	26	688
Vehicle-spring	C. L. Thomas	292,147	Jan. 15	1408	394	26	270
Vehicle-spring	I. A. Timmis	291,814	Jan. 8	997	280	26	184
Vehicle-spring	W. Van Anden	293,824	Feb. 19	1347	374	26	692
Vehicle-spring	J. W. Wetmore	291,908	Jan. 15	1199	335	26	231
Vehicle. Spring	P. Englehart	292,740	Jan. 29	2201	{613 {614	26	422
Vehicle. Spring	H. A. Moyer	292,036	Jan. 15	1279	358	26	246
Vehicle. Three-wheeled	W. S. Dllatnsh and J. R. Drake	295,154	Mar. 18	1025	283	26	1026
Vehicle top-prop	E. N. Pelzer	294,903	Mar. 11	689	192	26	955
Vehicle. Two-wheeled	L. F. Castor	294,009	Feb. 26	1522	438	26	744
Vehicle. Two-wheeled	F. Coleman	292,896	Feb. 5	145	38, 39	26	470
Vehicle. Two-wheeled	J. S. Creighton and J. Taylor	295,361	Mar. 18	1293	358	26	1075
Vehicle. Two-wheeled	F. Doherty and E. L. Sies	293,730	Feb. 19	1264	353	26	669
Vehicle. Two-wheeled	H. P. Garland	292,480	Jan. 29	1849	516	26	363
Vehicle. Two-wheeled	H. Greenfield	293,572	Feb. 12	1014	279	26	627
Vehicle. Two-wheeled	G. E. Gnerne	293,323	Feb. 12	718	192	26	572
Vehicle. Two-wheeled	W. M. Hamilton	291,725	Jan. 8	900	252	26	167
Vehicle. Two-wheeled	W. F. Heath	294,617	Mar. 4	338	94	26	886
Vehicle. Two-wheeled	H. H. Heeb and J. F. Schonert	292,913	Feb. 5	167	45	26	474
Vehicle. Two-wheeled	G. W. Kerr	293,474	Feb. 12	904	245	26	607
Vehicle. Two-wheeled	C. W. Saladee	294,679	Mar. 4	412	{114 {115	26	899
Vehicle. Two-wheeled	A. F. Sargent and R. D. Farrell	293,094	Feb. 5	389	106	26	512
Vehicle. Two-wheeled	F. Schelp, Jr	291,942	Jan. 15	1169	326	26	225
Vehicle. Two-wheeled	N. Starkey and G. W. Crowther	294,926	Mar. 11	713	199	26	959
Vehicle. Two-wheeled	S. Toomey	294,528	Mar. 4	234	66	26	869
Vehicle-wheel	W. C. Barr	292,617	Jan. 29	2042	568	26	394
Vehicle-wheel	G. M. Dillard	291,165	Jan. 1	189	54	26	35
Vehicle-wheel	F. L. P. Fish	294,025	Feb. 26	1600	444	26	747
Vehicle-wheel	P. H. Stein	292,143	Jan. 15	1404	393	26	269
Vehicle-wheel	A. B. Woodard	291,457	Jan. 1	554	156	26	99
Vehicle-wheel sand-band	J. W. Hitchcock	294,792	Mar. 11	532	148	26	927
Vehicle-wheel sand-band	M. Raphael	291,936	Jan. 15	1164	325	26	225
Vehicle-wheel sand-band	B. S. Moore	293,347	Feb. 12	746	199	26	578
Vehicles. Propelling	A. M. Allen	294,178	Feb. 26	1823	{497 {498	26	792
Velocipede	L. Beaupain	295,333	Mar. 18	1256	348	26	1068

Velocipede-pedal	A. J. Philbrick	292,351	Jan. 22	1680	468	26	323
Veneer	A. Dickman and M. Heintz	291,164	Jan. 1	188	.....	26	35
Ventilating apparatus	W. Lord	295,499	Mar. 18	1463	403	26	1107
Ventilating bow-windows	C. S. Foos	291,322	Jan. 1	385	107	26	69
Ventilating buildings	F. A. Pilling	292,444	Jan. 22	1806	503	26	348
Ventilating mining shafts and tunnels	W. Phillips	294,805	Mar. 11	570	158	26	933
Ventilation	M. B. Stafford	294,920	Mar. 11	557	163	26	936
Ventilator: *See* Car-ventilator. Waste-pipe ventilator. Feed-bag ventilator.							
Ventilator	J. M. Ayer	291,606	Jan. 8	834	{233 {234	26	155
Ventilator	J. G. Slater	295,061	Mar. 11	904	248	26	991
Ventilator and chimney. Combined	W. F. Matthews	291,919	Jan. 15	1146	319	26	221
Vermin-trap	H. T. Windt	293,609	Feb. 12	1055	292	26	634
Vessel having divided hull	J. David	295,153	Mar. 19	1024	283	26	1025
Vessel. Marine	A. M. G. Sébillot	293,793	Feb. 19	1306	362	26	686
Vessel or reservoir for liquids or other materials	M. J. Walsh	291,655	Jan. 8	821	229	26	153

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr'g.	Vol.	Page.
Vessel. Tilting	W. Zimmer	295,849	Mar. 25	1917	530	26	1195
Vessels. Air-port for	J. F. Folmer	292,640	Jan. 29	2065	575	26	398
Vinegar. Manufacturing	V. Michaëlis	292,125	Jan. 15	1383	388	26	266
Vise	W. H. Cloud	295,354	Mar. 18	1283	355	26	1073
Vise	H. A. Hyle	294,736	Mar. 4	475	133	26	910
Vise and lathe. Combined	J. R. McMillan	292,342	Jan. 22	1667	465	26	390
Vise. Bench-	M. G. Lewis	294,137	Feb. 26	1765	485	26	773
Vise. Bench-	J. Thomson	292,874	Feb. 5	116	32	26	464
Vise. Bench-	W. H. Northall	292,135	Jan. 15	1396	391	26	268
Vise. Sliding-jaw	C. L. Mitchell	291,071	Jan. 1	68	19	26	16
Vocal culture. Device for aid in	F. L. Pope	293,272	Feb. 12	651	175	26	560
Voltaic batteries. Automatic feeding apparatus for	G. P. Rishel. (Reissue)	10,442	Jan. 29	2271	628	26	435
Vulcanizing and celluloid apparatus	N. Faught	292,424	Jan. 22	1785	497	26	344
Wagon-bolster	L. J. Brandow	295,225	Mar. 18	1121	309	26	1042
Wagon bolster-plate	B. G. Meinikheim	294,249	Feb. 26	1907	522	26	797
Wagon-bolster spring	F. Lanz	292,019	Jan. 15	1261	353	26	242
Wagon-box	J. Hocking	295,008	Mar. 11	834	228	26	979
Wagon-brake	S. W. Lee	291,747	Jan. 8	923	259	26	170
Wagon-brake	J. D. Rnssell	292,139	Jan. 15	1400	392	26	268
Wagon-brake	E. J. Miles	295,190	Mar. 18	1074	295	26	1034
Wagon-brake lever	W. Lockwood	294,891	Mar. 11	678	189	26	953
Wagon. Buckboard-	J. Massey	293,340	Feb. 12	739	197	26	576
Wagon circle-iron	J. H. Buening and H. Klug	291,573	Jan. 8	705	198	26	132
Wagon draft attachment	W. and J. H. Leonhardt	295,879	Mar. 25	1968	545	26	1203
Wagon. Dumping-	T. S. Stewart	295,071	Mar. 11	918	252	26	993
Wagon. Dumping-	A. Bartholomew	295,331	Mar. 18	1254	348	26	1067
Wagon for moving heavy objects	T. Bueno, Jr.	295,107	Mar. 11	963	263	26	1001
Wagon for transporting sugar-cane	G. La Rock	295,022	Mar. 11	851	239	26	981
Wagon-jack	T. Maxon	292,441	Jan. 22	1804	503	26	348
Wagon-jack	W. K. Mottram and J. A. Mundy	294,060	Mar. 4	393	110	26	896
Wagon-jack	N. Smith	293,866	Feb. 19	1323	367	26	689
Wagon jack	H. C. Torrey	295,509	Mar. 18	1477	406	26	1109
Wagon-jack	G. R. Peare	292,175	Jan. 22	1446	406	26	283
Wagon-lock	M. G. Hubbard	295,011	Mar. 11	837	229	26	979
Wagon. Road-	A. J. Beach	291,132	Jan. 1	150	44	26	29
Wagon running-gear	A. J. Beach	291,133	Jan. 1	151	44	26	29
Wagon running-gear	R. C. Blackwell	291,468	Jan. 1	565	159	26	101
Wagon running-gear	A. H. Todt	292,600	Jan. 29	2022	563	26	391
Wagon running-gear	S. Moore	291,383	Jan. 1	457	129	26	89
Wagon-seat	J. I. Plummer	291,767	Jan. 8	942	264	26	174
Wagon shoveling-board	J. C. F. Harris	295,635	Mar. 25	1644	456	26	1145
Wagon. Spring-board	A. J. Beach	294,060	Feb. 26	1570	433	26	741
Wagon-thimble skein	F. H. Shepherd	291,099	Jan. 1	105	29	26	22
Wall-paper exhibitor	D. C. Millett	292,247	Jan. 22	1554	435	26	301
Wall-protector	J. S. Heizer	291,510	Jan. 8	627	177	26	119
Warming the upper rooms of buildings. Apparatus for	G. S. Follansbee	295,745	Mar. 25	1767	496	26	1170
Warping-machine	H. Bremer	293,847	Feb. 19	1381	381	26	698
Wash-bench	A. White	294,102	Feb. 26	1712	471	26	765
Wash-board	L. Christiansen	292,734	Jan. 29	2189	610	26	420
Washing-machine	C. Hoffman	291,512	Jan. 8	628	{177 {178	26	119
Washing-machine	J. Hollingsworth	292,314	Jan. 22	1632	457	26	314
Washing-machine	A. Jackson	295,401	Mar. 18	1340	373	26	1084
Washing-machine	W. C. Krieg and J. T. Albin	293,890	Feb. 19	1430	395	26	707
Washing-machine	R. Smith	295,065	Mar. 11	900	249	26	999
Washing-machine	W. H. Thurmond	295,402	Mar. 18	1410	390	26	1097
Washing-machine. Boiler	F. T. Roots	295,199	Mar. 18	1085	298	26	1036
Washing-machine. Pounder	J. Persson	294,503	Mar. 4	207	58	26	864
Waste-pipe ventilator	C. D. Leger	293,042	Feb. 5	323	89	26	501
Watch	D. Perret	293,779	Feb. 19	1284	356	26	682
Watch	G. E. Hart	293,169	Feb. 5	507	134	26	530
Watch-balance. Compensation	C. K. Giles	293,860	Feb. 19	1396	386	26	701
Watch-case	C. W. Harman and H. G. Skidmore.	293,869	Feb. 19	1407	389	26	703
Watch-case centers. Making	J. C. Dueber	295,156	Mar. 18	1027	284	26	1026
Watch-case lining	C. K. Giles	293,861	Feb. 19	1398	387	26	701
Watch-case spring	E. H. Jenkins	294,390	Mar. 4	60	17	26	841
Watch-crystal cabinet	C. H. Daugherty	291,308	Jan. 1	369	104	26	66
Watch-dial	G. E. Hart	293,170	Feb. 5	508	134	26	530
Watch hair-spring	C. A. Wilms	294,833	Mar. 11	605	167	26	939
Watch-mainspring	D. H. Church	295,485	Mar. 18	1450	399	26	1105
Watch mainspring-barrel	D. A. A. Buck	293,142	Feb. 5	468	125	26	524
Watch-movement	D. A. A. Buck	293,143	Feb. 5	468	125	26	524
Watch-movement box	E. A. Locke	293,046	Feb. 5	326	90	26	502
Watch-plate	G. E. Hart	293,018	Feb. 5	297	82	26	496
Watch-regulator	A. C. Clausen	293,420	Feb. 12	846	229	26	596
Watch-regulator	E. J. Roux and L. U. Fatio	291,780	Jan. 8	960	270	26	178
Watch. Self-winding	H. Von der Heydt	293,691	Feb. 19	1159	323	26	661
Watch. Stem-winding	G. E. Hart	293,168	Feb. 5	506	134	26	530
Watch. Stem winding and setting	D. H. Church	295,484	Mar. 18	1449	399	26	1105
Watch-winding device	C. W. Harman and H. G. Skidmore.	294,446	Mar. 4	158	43	26	856
Watch-winding mechanism	R. F. Mitchell	292,838	Feb. 5	74	20	26	456
Watches. Device for holding the stem in the pendant of stem-winding	A. W. Miller	293,267	Feb. 12	647	173	26	559
Watches. Jewel-support for the balance-staffs of	W. Ware	294,168	Feb. 26	1809	494	26	780
Water-closet	N. Barry, Jr.	293,935	Feb. 19	1492	411	26	719
Water-closet	E. Bande	294,185	Feb. 26	1834	500	26	784
Water-closet	C. Harrison	293,734	Feb. 19	1221	337	26	672
Water-closet	S. M. Howard	295,010	Mar. 11	836	229	26	979
Water-closet	J. Kelly	292,918	Feb. 5	173	47	26	475

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Water-closet and other bowls and pipe-connections therefor	J. E. Boyle	291,140	Jan. 1	150	46, 47	26	31
Water-closet attachment	L. H. Burnett	293,305	Feb. 12	697	186	26	568
Water-closet cistern	J. Demarest	292,160	Jan. 22	1429	401	26	281
Water-closet cistern	J. Demarest	292,901	Feb. 5	150	41	26	471
Water-closet flushing apparatus	J. E. Boyle	291,139	Jan. 1	156	46	26	30
Water-closet funnel of railway-cars	I. H. Congdon	292,472	Jan. 29	1842	513	26	361
Water-closet valve	J. Demarest	292,159	Jan. 22	1428	400	26	281
Water-closet valve	H. A. Tobey	295,691	Mar. 25	1717	474	26	1159
Water-cooler	W. A. Hawthorn	291,595	Jan. 8	737	207	26	139
Water-cooler	J. E. Welling	291,857	Jan. 8	1056	295	26	195
Water-elevator	J. F. McCalmont	291,759	Jan. 8	934	262	26	173
Water-gate	F. Ogden	293,503	Feb. 12	935	254	26	613
Water-meter	C. W. Van Alstine	291,647	Jan. 8	808	226	26	151
Water-meter. Piston	W. R. Park	293,506	Feb. 12	940	256	26	614
Water-motor	A. C. Harvey	291,340	Jan. 1	400	113	26	73
Water. Purifying	C. B. Dudley	291,167	Jan. 1	102	.....	26	36
Water. Purifying	I. S. Hyatt	293,740	Feb. 19	1228	340	26	673
Water. Purifying	W. Tweeddale	295,890	Mar. 25	1980	548	26	1205
Water-raising apparatus	T. Arthur	293,997	Feb. 26	1568	433	26	741
Water-supply for cities	D. C. Cregier	291,158	Jan. 1	180	52	26	34
Water-supply for cities and towns	D. C. Cregier	291,159	Jan. 1	182	53	26	34
Water-trap	W. J. English	293,438	Feb. 12	866	234	26	600
Water-wheel	T. M. Flenniken and T. W. Graham	293,238	Feb. 12	604	159, 160	26	552
Water-wheel	R. Hewson	292,431	Jan. 22	1792	500	26	345
Water-wheel governor	J. Morton	292,673	Jan. 29	2114	588	26	406
Water-wheel. Jet	A. J. Gould	291,894	Jan. 15	1110	310	26	215
Water-wheel. Turbine	W. M. Mills	293,964	Feb. 19	1446	400, 401	26	710
Water-wheel. Turbine	I. Sherck	295,590	Mar. 25	1589	440	26	1136
Water-wheel. Turbine	E. W. Stubbs	294,929	Mar. 11	717	200	26	960
Water-proof. Substance for rendering fabrics	L. P. Converse	295,113	Mar. 11	969	.....	26	1002
Waterproofing and preserving buildings. Compound for	B. De Nise	295,525	Mar. 25	1502	.....	26	1119
Waterproofing composition	A. Mink	295,881	Mar. 25	1971	.....	26	1203
Wave-power	T. Mayes	291,758	Jan. 8	933	262	26	172
Weaner. Calf-	M. J. Ahlgrim	291,660	Jan. 8	827	231	26	154
Weather-strip	G. Burkhardt	293,413	Feb. 12	838	227	26	595
Weather-strip	J. R. Fogg	294,776	Mar. 11	526	146	26	926
Weather-strip	E. E. Gillett	295,537	Mar. 25	1519	419	26	1122
Weather-strip	J. H. Hummel	293,738	Feb. 19	1227	339	26	673
Weather-strip	W. R. Kizer	292,120	Jan. 15	1378	386	26	265
Weather-strip	I. Paddock	292,040	Jan. 15	1284	359	26	247
Weather-strip	D. C. Potter and J. Stone	294,267	Feb. 26	1925	528	26	801
Weather-strip	D. Warnock	293,385	Feb. 12	805	216	26	589
Weigher and register. Grain	G. D. Baird	295,095	Mar. 11	950	259	26	998
Weigher. Automatic grain-	T. L. Easley	295,373	Mar. 18	1307	362	26	1078
Weighing-machine	E. Wölner	294,713	Mar. 4	450	125, 126	26	906
Weights and measures. Manufacture and proportioning of	C. A. L. Totten	293,117	Feb. 5	494	.....	26	518
Welding boilers, &c. Device for	S. Alley	294,179	Feb. 26	1827	498	26	783
Well-boring and drilling machine	F. Dearmin	295,621	Mar. 25	1630	451	26	1143
Well-boring apparatus	J. W. Hammett	292,485	Jan. 29	1856	518, 519	26	364
Well-boring machine	W. W. Curtis	293,735	Jan. 29	2190	611	26	420
Well-digger	R. Anderson	292,614	Jan. 29	2039	567	26	393
Well-drill	F. D. Parker	295,045	Mar. 11	877	240	26	986
Well-drilling machine	W. E. Brown	291,537	Jan. 8	1028	287	26	169
Well-drilling rig	J. G. Martin	295,413	Mar. 18	1359	376	26	1087
Wells. Pipe-lifter for oil-	S. K. and J. B. Duff	292,630	Jan. 29	2056	572	26	396
Wheat, &c. Machine for trimming or smutting	W. Lauhoff. (Reissue)	10,451	Feb. 26	2033	557	26	821
Wheel: *See* Buffing-wheel. Car-wheel. Carriage-wheel. Escapement-wheel. Fifth-wheel. Fly-wheel. Iron wheel. Paddle-wheel. Vehicle-wheel. Water-wheel.							
Wheel	R. T. Bishop	293,619	Feb. 19	1070	296	26	644
Wheel	G. W. Howell	293,251	Feb. 12	620	165	26	555
Wheel	J. B. Neff	293,408	Feb. 12	731	202	26	612
Wheel	D. Tice	292,672	Jan. 15	1320	369	26	254
Wheel-locking device	W. L. McDougall	293,051	Feb. 5	335	92	26	503
Wheel or pulley	H. H. Fulton	294,730	Mar. 4	470	131	26	910
Wheel-rack	H. W. Ransom	293,783	Feb. 19	1290	357, 358	26	683
Wheelbarrow. Folding	L. H. Goodwin	293,007	Feb. 5	283	79	26	494
Whiffletree	H. H. E. Bery	294,356	Mar. 4	19	5	26	833
Whiffletree	J. Graves	295,866	Mar. 25	1947	537	26	1199
Whiffletree	H. Rorebeck	295,811	Mar. 25	1872	520	26	1186
Whiffletree	W. T. Hine	292,012	Jan. 15	1254	351	26	241
Whiffletree-coupling	O. Vanorman	295,601	Mar. 25	1604	444	26	1139
Whiffletree coupling-plate	D. H. Liddy	294,644	Mar. 4	377	105	26	893
Whiffletree-hook	W. H. Best	294,958	Mar. 11	751	209	26	966
Whip-holder	S. J. Boswell	293,303	Feb. 12	695	185	26	568
Whip mount or button	W. O. Daniels	293,954	Feb. 19	1516	418	26	724
Whip-socket	F. A. Bradley	292,977	Feb. 5	250	68	26	488
Whip-socket	A. Searls	292,661	Jan. 15	1308	365	26	252
Whip-socket	J. L. Thomson	294,924	Mar. 11	593	164	26	937
Whip-socket	J. Weathers	291,856	Jan. 8	1055	295	26	195
Wind-engine	C. H. Cramer	294,369	Mar. 4	36	10	26	836
Wind-wheel	R. N. Rockwell	292,057	Jan. 15	1304	364	26	252

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Windlass	W. Smith	292,376	Jan. 22	1716	478	26	331
Windmill	H. Bensmann	293,704	Feb. 19	1178	329	26	664
Windmill	E. J. Schrock	291,783	Jan. 8	963	270	26	178
Windmill	H. M. Underwood	295,084	Mar. 11	895	255	26	990
Windmill	C. W. White	294,943	Mar. 11	733	204	26	963
Windmill	O. E. Winger	293,834	Feb. 19	1362	377	26	694
Windmill	O. E. Winger	293,835	Feb. 19	1364	378	26	695
Windmill	O. E. Winger	293,836	Feb. 19	1365	378	26	695
Windmill	G. W. Miller	292,030	Jan. 15	1273	356	26	245
Windmill attachment	L. M. Hoskins	294,624	Mar. 4	346	96	26	888
Windmill shifting apparatus	E. R. Crofut and C. L. Gribbie	295,362	Mar. 18	1294	358	26	1075
Window	A. Arens	292,152	Jan. 22	1415	397	26	279

Window. Store-	S. E. Hyndman	293,028	Feb. 5	310	85	26	498
Window. Ventilated show-	H. Kerr	291,358	Jan. 1	420	.....	26	77
Wire. Annealing	A. J. Upham	294,827	Mar. 11	599	165	26	938
Wire. Barbed	G. C. Baker	295,513	Mar. 25	1487	411	26	1117
Wire-barbing machine	C. B. Brainard	292,467	Jan. 29	1836	512	26	360
Wire-barbing machine	J. H. Coon	292,206	Jan. 22	1491	419, 420	26	290
Wire-barbing machine	D. C. Stover	295,208	Mar. 18	1096	303, 304	26	1038
Wire-barbing machines. Take-up for	G. Case	292,733	Jan. 29	2188	610	26	420
Wire-carrier	G. W. Belford	294,843	Mar. 11	616	170	26	941
Wire-cleaning machine	T. H. Burridge	294,847	Mar. 11	622	172	26	942
Wire-coiling machine	E. W. Durkee	291,500	Jan. 8	613	173	26	117
Wire cordage. Machine for making	G. L. Brownell	291,979	Jan. 15	1211	338	26	233
Wire cutter and shaper	B. E. Ball	293,134	Feb. 5	460	122, 123	26	522
Wire. Ingot for gold-plated	L. L. Burdon	294,722	Mar. 4	462	130	26	908
Wire machine. Barb-	G. H. Lasar	294,885	Mar. 11	670	187	26	951
Wire. Machine for coloring covered	W. H. Sawyer	293,095	Feb. 5	300	106, 107	26	513
Wire. Machine for making barb-	J. S. Stephen	295,068	Mar. 11	912	249, 250, 251	26	992
Wire. Machine for making barbed	L. E. Sunderland	293,538	Feb. 12	972	266	26	620
Wire. Making	C. S. Hall and E. J. Watson	293,011	Feb. 5	287	80	26	494
Wire-netting	A. G. Hulbert	295,251	Mar. 18	1157	319	26	1048
Wire preparatory to drawing. Coating for	W. E. Rice	291,938	Jan. 15	1166	.....	26	225
Wire-reel	H. C. Pratt	294,670	Mar. 4	404	112	26	898
Wire-reel spool	J. M. Young	292,610	Jan. 29	2034	565	26	393
Wire rods. Apparatus for making	F. H. Daniels	292,794	Feb. 5	21	6	26	446
Wire rods. Apparatus for rolling	W. Morris	291,923	Jan. 15	1150	321	26	222
Wire. Spooled market-	A. B. Malin	294,740	Mar. 4	480	134	26	911
Wire-spooling machine	T. S. Bayles	293,842	Feb. 19	1374	380	26	697
Wire springs. Machine for forming conical	G. W. Fishering	292,799	Feb. 5	29	8	26	448
Wire-straightening machine	C. Ångström	293,212	Feb. 12	570	151	26	547
Wire-straightening machine	C. Ångström	293,213	Feb. 12	572	151	26	547
Wire-stretcher	W. D. Amis	294,716	Mar. 4	456	127	26	907
Wire-stretcher	W. H. and J. W. Bliss	293,406	Feb. 12	932	225	26	594
Wire-stretcher	W. G. Garth	291,710	Jan. 8	885	248	26	165
Wire-stretcher	L. E. Sunderland	291,955	Jan. 15	1185	329, 330	26	228
Wire-twisting machine	J. Ayres and A. C. Decker	294,748	Mar. 4	489	137	26	913
Wire-twisting machine	M. A. Penney	291,765	Jan. 8	940	264	26	174
Wood-bundling machine	D. A. Greene	294,125	Feb. 26	1748	481	26	771
Wood corners. Manufacture of solid	I. G. S. Cleland	291,032	Jan. 1	22	6	26	7
Wood fiber. Machine for making	P. H. Holmes	291,848	Jan. 8	1043	291, 292	26	192
Wood. Method of and machine for ornamenting	C. Wagner	291,436	Jan. 1	520	147	26	94
Wood. Preserving	W. W. Robinson	294,676	Mar. 4	410	.....	26	899
Wood-preserving compound	H. C. Dorr	293,955	Feb. 19	1517	.....	26	724
Wood-splitting machine	A. Fuchs	292,644	Jan. 29	2074	576	26	399
Wood-worker's dog	J. Forbes	294,777	Mar. 11	527	147	26	926
Wooden plug	R. I. Fancher	293,726	Feb. 19	1211	335	26	670
Wooden tubing. Smoothing the inner surface of	M. F. Wilcox	295,703	Mar. 25	1733	482	26	1161
Wool-cleaning machine	A. Frayssé	292,295	Jan. 22	1610	450, 451	26	310
Wool-cleaning machine	F. G. and A. C. Sargent	293,788	Feb. 19	1299	360	26	684
Wool-press	D. F. Brooks	293,941	Feb. 19	1500	413	26	720
Wool-washing machine	F. G. and A. C. Sargent	291,089	Jan. 1	88	25, 26	26	19
Wool-washing machine	F. G. and A. C. Sargent	293,789	Feb. 19	1300	360	26	685
Wool washing, scouring, and burring machine	J. E. Sinclair	292,869	Feb. 5	110	30	26	463
Work-bench	M. Creighton	291,881	Jan. 15	1098	306	26	212
Wrapper-folding machine	W. B. Howe	294,470	Mar. 4	102	44, 45	26	857

The Official Gazette.

The OFFICIAL GAZETTE is published every Tuesday, simultaneously with the weekly issue of patents. From January 1, 1872, (the commencement of its publication,) to June 30, 1883, it was published and bound in semi-annual volumes; since July 1, 1883, in quarterly volumes. All subscriptions must commence with the beginning of a volume; none taken for less than three months. Terms: To all subscribers within the United States and Canada, $5 per annum; to foreign subscribers, $7; single copies, 10 cents; bound semi-annual volumes, (prior to June 30, 1883,) full sheep, $4 per volume; bound quarterly volumes, (subsequent to July 1, 1883,) full sheep, $2.75 per volume. No club rates. *Payment in advance.* All orders should be addressed to "The Commissioner of Patents, Washington, D. C."

Issue of April 1, 1884.

4,038.—Title: "GARWOOD'S STANDARD PERFUMES."—*James R. Weaver and Harry Schandein*, Philadelphia, Pa. Application filed February 23, 1884.

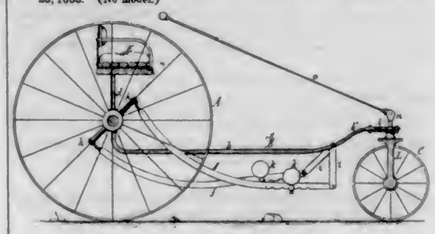
PATENTS

GRANTED APR. 1, 1884.

295,893. HAY AND OTHER ELEVATORS. CHARLES S. ANSBURSTER, Yorktown, N. J., assignor of one-half to Jeremiah S. Watson, same place. Filed Dec. 20, 1883. (No model.)

Claim.—1. A pivoted piece, H, provided with a hook, H', and attached to the carrier of an elevator for hay or other material, in combination with a pivoted coupling-piece, J, and an immovable vertically-slotted fork, K, said coupling-piece being adapted to engage with said piece H, and being locked by said fork for the purpose of holding the traveler stationary until the pieces H and J are thrown into proper position for disengagement by the contact of the eye G with the hook H', substantially as set forth.

2. The pivoted piece H, provided with hook H', in combination with devices for holding and releasing the same, the eye G, which engages with said hook, and affords a means of suspension for a hay-fork or other device, and the spring Q, which bears at the back of piece H at either the top or bottom thereof, according to the position of the latter.

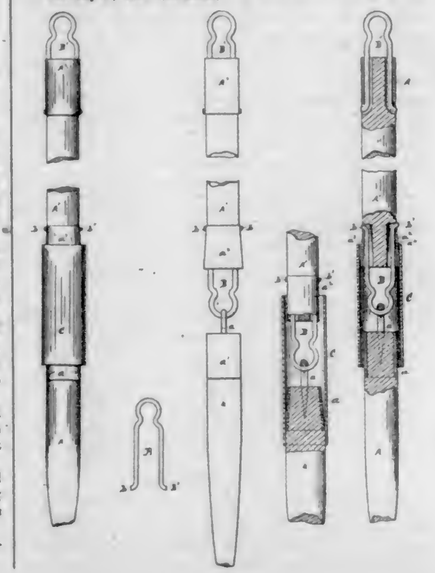


3. The fixed arm L and its roller, in combination with the pivoted and coupled pieces H and J, mounted in a traveler, and the fixed fork K, adapted to engage piece J and lock said traveler, said piece J being provided with a projection, *b*, which is engaged by said arm or its roller, so as to force the said piece J into engagement with said fork.

4. In an elevator, a traveler having a pivoted hook and a pivoted coupling-piece, in combination with a spring adapted to hold the hook in raised and lowered positions, substantially as and for the purpose set forth.

5. In an elevator, a hanger for the rail or beam of the traveler, formed with a slot, in combination with a T-headed pin, and means for securing the latter to the place of suspension, substantially as and for the purpose set forth.

6. The hanger R R', pin S, eye T, and hooks V, combined and operating substantially as and for the purpose set forth.



295,894. TRICYCLE. FISHER C. ATHERTON, Buffalo, N. Y. Filed Apr. 23, 1883. (No model.)

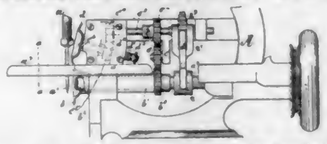
Claim.—1. The combination, with the driving-wheels A, crank-shaft *c*, and steering-wheel C, of an open frame, B, hangers *i*, pivoted to the side portions of the frame, near the front thereof, connecting-rods *f f*, arranged between the side pieces of the open frame and extending from said hangers to the crank-shaft, and pedals *k*, attached to the connecting-rods, substantially as set forth.

2. The combination, with the steering-wheel C and a frame, B, having side pieces *b'* and a connecting front piece *b²*, of a fork, L, and a bearing, *l*, constructed with laterally-extending arms *m*, secured to said side pieces and a forwardly-extending arm, *m'*, secured to said front piece of the frame, whereby the bearing is secured at three points and firmly held in place, substantially as set forth.

295,895. CLOTHES-LINE POLE. MARY BARTLETT, Detroit, Mich. Filed May 31, 1883. (No model.)

Claim.—1. The combination, in a clothes-line pole, of the two sections A A', flexibly connected together at their adjoining ends, whereby the upper section can sway with a device for limiting the swaying motion of the upper section, substantially as described.

2. The combination, in a clothes-line pole composed of two sections, A A', of a staple, *a*, secured in the end of one of the sections, a spring-staple, B, engaging the staple *a*, and connected with the end of the other section to flexibly join the two sections and permit the upper section to sway, and a device for limiting the swaying motion of the upper section, said spring-staple being constructed substantially as described, whereby it may be detached from the section with which it is connected, as set forth.



3. A clothes-line pole constructed with two sections flexibly and detachably connected at their adjoining ends, and one of said sections provided with a tapering ferrule, combined with a movable ferrule capable of being adjusted over the flexible and detachable connection of the two sections, substantially as described.

4. The combination, in a clothes-line pole, of two sections flexibly and detachably connected together at their adjoining ends, with a sliding ferrule capable of sliding over the said flexible and detachable connection, and having one end of a larger diameter than one of the sections, to permit a limited swaying movement of the upper section, substantially as described.

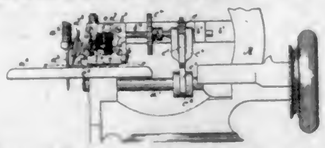
5. A clothes-line pole consisting of two sections, A A', flexibly and detachably connected, and the upper section having a detachable line-securing spring, B', at its upper end, and a sliding ferrule, C, capable of being adjusted over the flexible and detachable connection, and having one end of a larger diameter than one of the sections, to permit a limited swaying motion of the upper section, substantially as described.

295,896. TRIMMING ATTACHMENT FOR SEWING-MACHINES.

WM. F. BEARDSLEE, Boston, Mass. Filed Sept. 17, 1883. (No model.)

Claim.—1. In a sewing-machine, the upper rotating cutting-disk, *d*, combined with the cutting-disk *b*, having its axis of rotation coincident with that of the shaft a^3 and turning on the said shaft, to operate substantially as described.

2. The rotating cutting-disk *d* and the disk *b*, having its axis of rotation coincident with that of the shaft a^3, the said disks having their cutting-edges placed close to and substantially opposite the needle to trim the material substantially at the stitching-point, and means to connect and rotate the said disks in unison, combined with a suitable spring to hold the overlapping edges of the said disks together at their cutting-point, to effect the sharpening of the said disks, substantially as described.

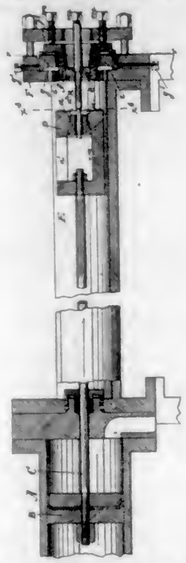


3. The rotating hook-shaft a^3, provided with an eccentric or cam, the shaft c^3, a pawl and ratchet to actuate the said shaft intermittingly, and the upper rotating disk, *d*, moved intermittingly by the said shaft, substantially as described, but at a different speed, combined with the disk *b*, its carrying-sleeve having its axis of rotation coincident with that of, and serving as a bearing for, the hook-shaft, and with means to actuate the said sleeve from the said shaft, to operate all as set forth.

4. The needle and needle-bar of a sewing-machine combined with a trimming mechanism having a disk, *d*, the face of which is concaved and set at an inclination to the line of reciprocation of the needle-bar and needle, substantially as described.

5. In a sewing-machine, the hook-shaft combined with the sleeve *b'* thereon, and its attached cutter *b*, having its outer face concaved for the reception of part of the hook, substantially as described.

295,897. TRIMMING ATTACHMENT FOR SEWING-MACHINES.



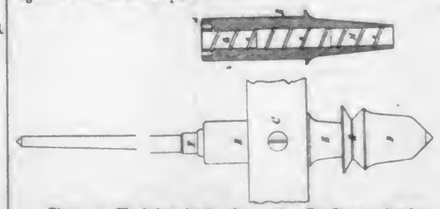
WM. F. BEARDSLEE, Boston, Mass. Filed Sept. 17, 1883. (No model.)

Claim.—The improved trimming attachment for sewing-machines, the same comprising a frame for connection with the frame of the machine, a substantially circular blunt or non-cutting trimming-disk, a shaft therefor driven from the sewing-machine, a fabric-support beneath said disk, and gearing connecting the shaft of the said disk and the fabric-support, to impart rotary motion to the same, substantially as shown and described.

295,898. MACHINE FOR COLD-DRAWING RODS, &c.

CHARLES C. BILLINGS, Boston, Mass. Filed Sept. 3, 1883. (No model.)

Claim.—1. In a machine for cold-drawing rods, &c., a clutch to hold the rod or article to be drawn, a die, a movable or tipping die-seat to receive and hold the said die, and bearing-points to support the die-seat externally, and permit it with its inclosed die to be adjusted to tip or turn the die-seat and place the center of the die in proper relation to the line of draft of the clutch, combined with means, substantially as described, to act upon the die-seat at that side of it opposite the side acted upon by the said bearing-points, to thereby adjust the said die-seat, and with its inclosed die, to operate as and for the purposes set forth.



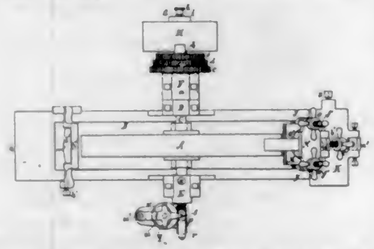
2. The movable clutch, the die *a*, die-seat, and holder, and center screws and bearings or points, *h i*, combined with means, substantially as described, to adjust the die-seat and die-holder with relation to the frame of the machine and the draft of the clutch, substantially as described.

3. The piston and its piston-rod, combined with the herein-described clutch consisting of the hollow head open at *a'* and a^3, the walls surrounding the opening *a'*, converging from within outward and affording beveled or inclined seats, and jaws having inclined backs to fit in said seats, substantially as and for the purpose set forth.

295,899. SPINNING-FRAME SPINDLE AND BOLSTER.

JOHN BIRKENHEAD, Mansfield, Mass. Filed May 15, 1883. (No model.)

Brief.—The spindle has no step, but is provided with a flange or collar that rests and revolves upon a bearing-sleeve arranged in the upper part of the bolster, and a combined whirl and oil-cup is attached to the lower end of the spindle. The lower end of the bolster extends down the spindle within the whirl and oil-cup, and the bore of the bolster and the spindle-bearing is spirally grooved, to admit of the free passage of oil to lubricate the parts.



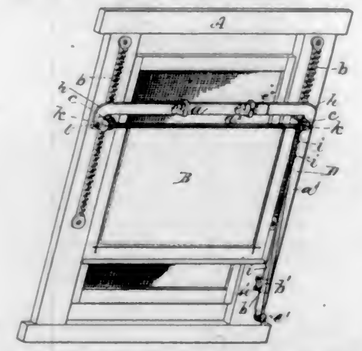
Claim.—1. The bolster having the spindle collar flange or bearing and the surrounding oil-intercepting chamber in its upper part, as set forth, in combination with the spindle extended down through the bolster, and provided not only with the flange or collar to rest on and encompass the aforesaid bearing, but with a combined whirl and oil-cup adapted to the said spindle at its lower part, having a mouth or passage opening into the said cup, and arranged with the bolster, as represented, the bore of the bolster having a spiral groove, as and for the purpose explained.

2. The bolster provided with the separate bearing-sleeves arranged in it as represented, in combination with the spindle extending through and above such sleeves, and having not only the flange or collar to rest and revolve on the top of the upper of such sleeves, but the combined whirl and oil-cup adapted to it, the said spindle having a mouth or passage opening into the said cup, and arranged with the bolster, all being substantially as set forth.

3. The bolster provided with the separate bearing-sleeves and with their yielding packings or surrounding sleeves, in combination with the spindle extending through and above the said bearing-sleeves, and having not only the flange or collar to rest and revolve on the top of the upper of such bearing-sleeves, but the combined whirl and oil-cup adapted to it the said spindle, and arranged with the bolster, all being substantially as represented.

295,900. MACHINERY FOR GRINDING CHISELS OR TOOLS OF VARIOUS KINDS.

JOHN BIRKENHEAD, Mansfield, Mass. Filed Sept. 19, 1883. (No model.)



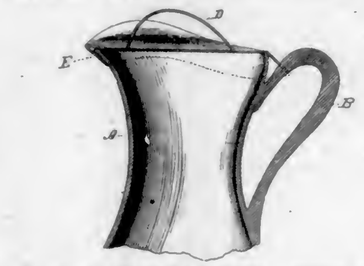
Claim.—1. The combination, substantially as described, for effecting reciprocating lateral movements of the grindstone, such combination consisting of the screw-threaded shaft C, worm-gear *q*, arms *r* and *t*, and the heart-cam *u*, arranged and adapted essentially as set forth.

2. The combination of the sleeve *b* with the grindstone and its shaft, the two sets of gears, each set consisting of several wheels of different diameters, as set forth, the driving-shaft, the locking devices *i l*, and the mechanism, substantially as described, for effecting reciprocating lateral movements of the grindstone, such mechanism consisting of the screw-thread of the shaft C, the worm-gear *q*, arms *r* and *t*, and the heart-cam *u*, all being arranged and adapted essentially as represented.

3. The adjustable tool-supporter, substantially as described, consisting of the plate M, provided with the concavity *d'*, and the screws *f' f'*, and the adjustable convex seat *s'*, and the clamp N, and hand-nuts O O, all being arranged and adapted essentially as explained, and such plate M being supported and having means of moving it, as specified, relatively to the grindstone.

295,901. DEVICE FOR OPERATING WINDOW-SHADES.

VALENTINE BRANK and THOMAS J. ANTHONY, Springfield, Ohio. Filed Jan. 14, 1884. (No model.)

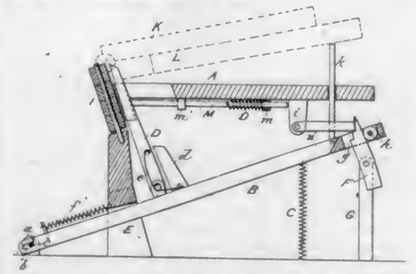


Claim.—1. A device for operating window-shades, consisting of an (inverted) L-shaped bar, extending across the window and down one side of the same, and having the shade-roller pivoted thereto, said roller being provided with a toothed pinion loosely pivoted upon its journals at either end, which engage with vertical toothed racks on the window-frame as the shade is raised and lowered by said bar, said pinions being held in engagement by means of brackets, through which said racks extend, said brackets being adapted to slide over the rack-bars when the shade is raised and lowered by said bar, substantially as set forth.

2. In a device for operating window-shades, the L-shaped bar D, having the horizontal arm *a*, extending across the window, and means for adjusting the length of said arm, and the vertical limb a^2, provided with notches *i i* therein, the shade-roller a^2, pivoted in bearings in said bar D upon either side of the window, and having the loose pinions *c* upon its journals, the brackets or keepers *k*, through which the journals of said roller extend, the vertical toothed racks *b*, said brackets inclosing said pinions and racks, and adapted to slide freely over the latter, (when the shade is operated,) and the guideway *b'*, provided with the dog *e*, and means for operating the same, whereby it is engaged with the notches *i i i* in bar D when the shade is raised or lowered by means of the latter, substantially as set forth.

3. In a device for operating window-shades, a shade-roller provided with pinions loosely pivoted upon its journals, toothed racks with which said pinions engage on either side of the window-frame, brackets through which the journals of said roller extend inclosing the racks, and adapted to slide over the same and to hold the pinions of the roller in engagement therewith, and a carrier-bar, of L shape, extending across the window and down one side of the same, said roller being pivoted to said carrier-bar upon either side of the window, and a guideway through which the vertical limb of the carrier-bar extends, having a spring-dog adapted to engage with notches in the vertical limb of the carrier-bar in raising and lowering the shade by means of the latter, as set forth.

295,902. PITCHER-COVER.



ISAAC BLUMENTHAL, Chicago, Ill. Filed Sept. 25, 1883. (No model.)

Claim.—As a new article of manufacture, a removable pitcher-cover provided with a downwardly-projecting flange extending to either side of the handle, whereby an opening is provided for the reception of the same, as described and shown.

295,903. MACHINE FOR MAKING HOES.

RICHARD E. BREED, Pittsburg, Pa. Filed June 13, 1883. (No model.)

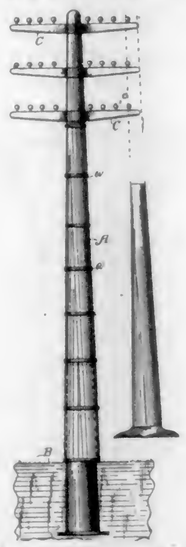
Claim.—1. The combination, with the slotted bar B, pivoted by means of an elongated slot, *b*, engaging pin *c*, of the tumbler F, latch H, and spring *f*, whereby a vibratory and sliding movement may be imparted to said bar, substantially as described.

2. The combination, with the bar B, pivoted by means of an elongated slot, *b*, and having a slotted end, *g*, carrying a roller, *h*, of the pivoted tumbler F, latch H, and spring *f*, whereby said bar is capable of a vibratory and sliding movement, substantially as described.

3. The combination, with the folde G, of a mandrel, D, pivoted to a bar, B, having a vibratory and sliding movement, substantially as described.

4. The combination of the vibratory and sliding bar B, the mandrel D, pivoted thereto, the folder I, and the guide-frame M, having grooved heads N N, substantially as described.

5. The combination, with the folder I and mandrel D, of the spring-actuated guide-frame M, having grooved heads N N, provided with guide-plates *n n*, substantially as described.



295,904. TAP-WRENCH. MERRITT S. BROOKS, Chester, Conn. Filed Jan. 30, 1884. (No model.)

Claim.—1. As an improved article of manufacture, a tap-wrench consisting of a wrench-stock having an angular socket, and bearing clamp-screws, whose clamping-faces are of different widths, within the socket, all substantially as described.

2. The combination of a wrench-stock, *a*, having socket *b*, and bearing the clamp-screws *d* and *e*, whose clamping-faces are of different widths, all substantially as described.

295,905. TELEGRAPH OR OTHER POLES. GEORGE F. BROTT, Washington, D. C. Filed Aug. 24, 1883. (No model.)

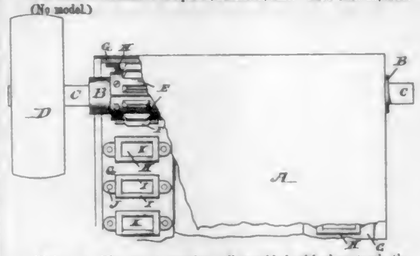
Claim.—1. A telegraph or other pole or post made of an admixture of tarred paper or paper made of straw pulp with tar, residuum of petroleum, asphaltum, or other resinous substances, substantially as described.

2. A telegraph or other pole composed of the composition herein described, and made hollow and slightly conical, and with circumferential flanges or rims thereon at suitable distances apart, also provided each with a flange at its base, substantially as described.

3. A telegraph or other pole made of the composition herein described, and made hollow and slightly conical, in combination with a hollow base-shell for supporting the same, and made of the same material, said shell formed with base *b*, and said pole being adapted to be erected and held thereon when the same is placed in the ground, substantially as described.

4. In telegraph or other poles, the base-shell B, in combination with the pole A, both shell and pole being hollow and slightly conical, and made from an admixture of tar-paper or straw pulp with tar or resinous substances, which are placed into molds or in cylinders and subjected to pressure, substantially as described.

5. In telegraph or other poles made of the composition herein described, a conical pole made of two or more sections of length, the lower section made solid, the upper hollow, and designed to be slipped partly over another when constructed and erected substantially as described.

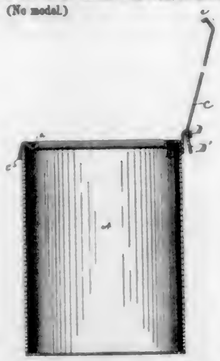


6. A telegraph or other pole made of an admixture of tarred paper or paper made of straw pulp with resinous substances, and coated with silicate of potash or red lead or equivalent, substantially as described.

7. A telegraph or other pole made of an admixture of tar-paper or paper made of straw pulp with resinous substances into tapering sections designed to fit one upon the other, as described.

8. A telegraph or other pole made of tarred paper or paper made of straw pulp with resinous substances and kaolin or black peaty substances, substantially as described.

9. The composition herein described, consisting, essentially, of straw, reed-grass, or their equivalents, the straw or grass being first relieved of its silica and softened to a pliable condition, then adding tar, residuum of petroleum, kaolin, shellac, pasty peat, either in suitable quantities, then compressing the mass into suitable shapes for poles, railroad-ties, &c., then covering or painting the article with heat and water protecting material, whereby it is preserved, substantially as described.

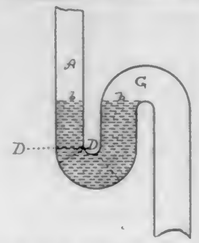


295,906. APRON-GEARING. GEORGE N. CLAPP, Seven Mile, assignor of one-half to Pleasant R. Shepherd, Hamilton, Ohio. Filed June 13, 1883. (No model.)

Claim.—1. The apron-carrying roll provided with short teeth, the canvas apron, and the metallic teeth formed in independent pairs and secured to the interior of the apron, all combined substantially as specified.

2. The combination of the apron-carrying roll provided with short teeth, the apron, the re-enforcing draft-straps, and the metallic teeth arranged in sections and secured independently to the strap, substantially as and for the purpose set forth.

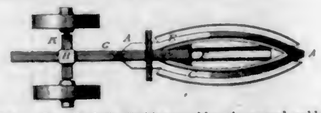
295,907. FRUIT-CAN. ELLIOT COGSWELL, Mourerville, N. J. Filed Oct. 10, 1883. (No model.)



Claim.—1. The combination, with a can provided with a hooked lug, D, and stud c^3, and having its top edge bent inwardly, and creased to form a groove, of a cover, B, having a downwardly-extending flange to fit said groove, and having a convex recessed center portion, b', and a lever, C, having a slot, c^3, and hook *a*, substantially as set forth.

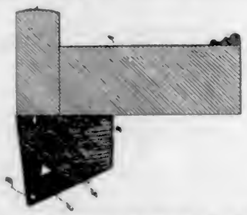
2. The combination, with a can provided with a hooked lug, D, and stud c^3, and having its top edge bent inwardly, and creased to form a groove, of a cover, B, having a downwardly-extending flange to fit said groove, and having a convex recessed center portion, b', and a lever, C, having a slot, c^3, extension D', and hook *a*, substantially as set forth.

295,908. PLUMBER'S TRAP. THOMAS DARE, Buffalo, N. Y. Filed Apr. 11, 1883. (No model.)



Claim.—A stench-trap for water-closets, sewer-sinks, &c., formed of two sizes of pipes, each having the same thickness of wall, a smaller size adapted to extend from the closet or other part to be drained to a point,

295,908.

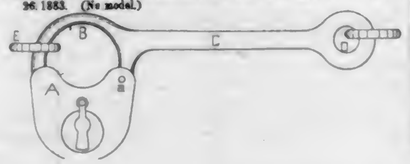


D, and a larger size adapted to extend from that point to the outlet at the sewer or larger pipe, as set forth.

295,909. TILE-DRAIN DITCHING-MACHINE. WILLIAM P. B. DECKER, Franklin Grove, Ill. Filed Sept. 6, 1882. (Model.)

Claim.—In a tile-drain ditching-machine, the curved mold-board A, having the central longitudinal slit or opening to receive the delivery-spout, in combination with guards B O D E, curved backward and outward from the front to the longitudinal center of the mold-board, thence backward and inward to the rear or meeting point, whereby the soil raised by said mold-board will be conducted to the rear of the machine and deposited in the ditch in rear of the delivery-spout, as set forth.

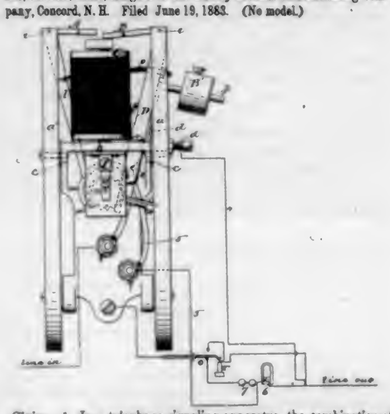
295,910. BILLIARD-CUSHION. MATTHEW DELANEY, New York, N. Y. Filed Aug. 14, 1883. (No model.)



Claim.—In combination with the cushion of a billiard-table, an elastic resisting-coil extending longitudinally along the operative edge of the cushion, and a wire stretched through the central opening of said coil, thereby adding to the resistance of the cushion and at the said time protecting the cushion against the cutting effect of the wire, substantially as described.

295,911. NUT-LOCK. GEORGE C. DITTLER, Union, Ind. Filed Feb. 11, 1884. (No model.)

Claim.—A nut-lock consisting of the parts A and B, the former provided with the orifice *a* and the slotted end *a'*, and the latter provided with the tongue *b*, offset in the manner shown, and adapted to engage the orifice *a*, and the two parts applied and operated as described.



295,912. HASP-LOCK. THERON S. K. DIXON, Chicago, Ill. Filed Nov. 26, 1883. (No model.)

Claim.—1. As an improved article of manufacture, a lock the shackle or link of which is provided with a projecting arm for the purpose of a hasp, substantially as described.

2. As an improved article of manufacture, a lock the shackle or link of which is provided with an arm for the purpose of a hasp, and also a projection or offset upon its rear side, substantially as described.

295,913. TELEPHONE SIGNALING APPARATUS. WALTER J. DUDLEY, Everett, Mass., assignor to the Dudley Electric Manufacturing Company, Concord, N. H. Filed June 19, 1883. (No model.)

Claim.—1. In a telephone signaling apparatus, the combination of an electro-magnet, two polarized armatures, A B, provided with operating-levers and adapted to be simultaneously attracted and repelled, the armature A being provided with a retractile spring and the other being poised lightly, an arbor adapted to be rotated step by step by the lever of armature A, and switching devices, substantially as described, operated by the lever of armature B, whereby, when the instruments are at unison and repellent currents are sent to line, the bell of the station or office where the instrument is located is thrown out of circuit, as set forth.

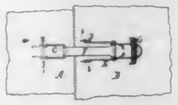
2. The combination of an electro-magnet, the polarized armatures A B and their operating-levers, the arbor adapted to be rotated step by step, as described, means whereby the armature B is prevented from making contact with the electro-magnet when the central office is being called, and switching devices operated by the lever of armature B, whereby the entire telephonic resistance at the calling station is cut out and the full strength of the current is applied to rotating the arbor to the office-number, as set forth.

3. The combination of an electro-magnet, the polarized armatures A B and their operating-levers, an insulated contact-point and a spring therefor on the lever of armature B, normally short-circuiting the bell at the station where the apparatus is located, the arbor adapted to be rotated step by step, as described, and provided with a stop or pin adapted to separate said spring from its contact-point, and thereby circuit the bell and permit the latter to be rung by a magneto-current, as set forth.

4. The combination of an electro-magnet, the polarized armatures A B and their operating-levers *l* and D, the latter having a projection, *f*, the arbor adapted to be rotated step by step, and provided with a pin, *f'*, adapted to co-operate with the projection *f* and arrest the arbor near the zero-point, as set forth.

5. The combination of an electro-magnet, the polarized armatures A B and their operating-levers, the arbor adapted to be rotated step by step, and means whereby the movement of the armature B and its lever is arrested when the arbor is rotated to the office-number, as set forth.

6. The combination of the arbor rotated step by step, as described, and provided with the pin *r* and notched disk *h*, and the weighted armature-lever D, provided with the springs *e* and *i*, adapted to act, respectively, on the pin *r* and the periphery of the disk *h*, whereby the influence of the weight of the armature-lever is partially counteracted and the armature is enabled to respond to weak currents, as set forth.



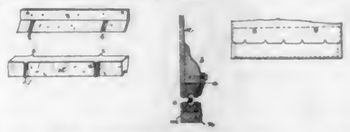
7. The combination, with the step-by-step rotated arbor *j*, having a shoulder, *v'*, of the spring *v*, bearing against the end of said arbor, and pressing the shoulder thereof against a bearing-surface, as set forth.

8. The combination, with the arbor *j* and its adjusting-spring *v*, of means for varying the pressure of said spring, as set forth.

295,914. FASTENER FOR GLOVES, SHOES, &c. WILLIAM LAWRENCE ENDERS, Franklin, Mass. Filed Feb. 4, 1884. (No model.)

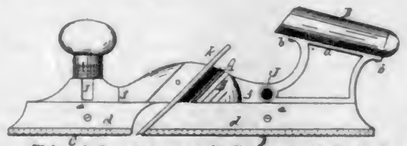
Claim.—1. The fastener substantially as described, composed of the eye C, hook F, bow-shaped lever E, and its fulcrum support-piece D, arranged and applied in manner and to operate essentially as set forth.

295,914.



2. The lever-fulcrum support-piece D, provided with one or more spurs, *c*, and the pivotal ears *b b*, in combination with the bow-shaped lever E, fulcrumed to such ears, and with the hook F, pivoted to such lever, and to operate with an eye, C, all being substantially and for use as set forth.

3. The combination of the elastic loop G with the part B and the fastener-lever E, its support-piece D, and hook F, and with the eye C, adapted to the part A and to engage with the said hook, all being substantially as set forth.



295,915. GRIPPING DEVICE FOR CABLE-WAYS. RICHARD K. EVANS, Washington, D. C., assignor to the Cable Railway Company, San Francisco, Cal. Filed Aug. 13, 1883. (No model.)

Brief.—The grip shoe or block is secured in its holder in such manner that when a predetermined strain is passed it is stripped therefrom, and injury to the cable thereby prevented.

Claim.—The combination of a grip for cable-ways, a removable shoe or shoes, and intermediate fastening devices adapted to rupture at a predetermined strain, substantially as described.

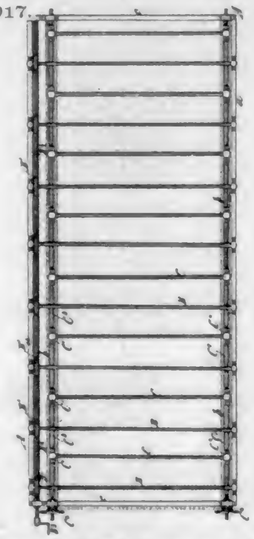
295,916. VARIABLE BENCH-PLANE. AMOS FALES, Denver, Colo. Filed Mar. 31, 1883. (Model.)

Claim.—1. In a bench-plane, a handle, B, made of cylindrical form, flattened on one side, in combination with an inclined plane-faced flange, *a*, on the plane-stock, substantially as and for the purpose herein specified.

2. The combination of the main stock A, having the lower edge of its body *f* and cutter-bracket E in one straight line, and its flange *e* provided with a dado-spur, *g*, and the form-plates C D, having vertical attaching-flanges *d d* bearing against the straight lower edge of the said stock-body and bracket, and adapted to have their lower surfaces flush with the lower edge of the said stock-flange, substantially as and for the purpose herein specified.

3. The reversible fence H, in combination with the stock G, the points of attachment being to one side of the middle longitudinal line of the fence, whereby two positions are given thereto fulfilling two purposes, substantially as herein specified.

4. The combination of the main stock A, having a downwardly-extended flange, *e*, on its lower edge, and a cutter extending laterally beyond the stock, and the auxiliary stock G, cut away at the top to allow the main-stock cutter to project over it, and having a flange, *h*, bent laterally, substantially as and for the purpose herein specified.

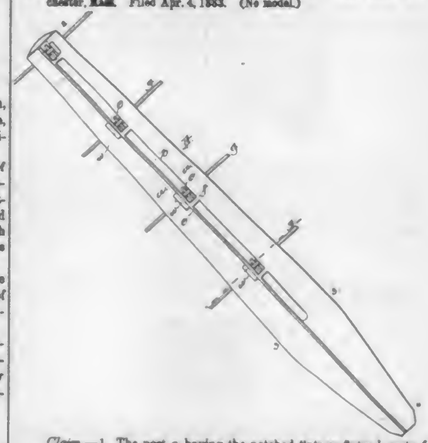


295,917. EMBROIDERING-MACHINE. ROBERT FREITAG, Jersey City, N. J. Filed Sept. 29, 1883. (No model.)

Claim.—1. The combination, with a frame for an embroidery-machine, of a number of pairs of rollers journaled therein, and means for connecting the rollers of the several pairs so that they may be rotated simultaneously to unwind the fabric from one roller of each pair and wind it upon the other roller of each pair, substantially as described.

2. The combination, with a frame for an embroidery-machine, of a number of pairs of rollers, means whereby corresponding rollers of the several pairs may be simultaneously rotated to wind the fabric upon them, and means whereby the other rollers of the several pairs may be moved bodily to put tension on the fabric, substantially as described.

3. The combination, with the frame A, of the several pairs of rollers B C, the rollers B being provided with worm-wheels B', and the worm



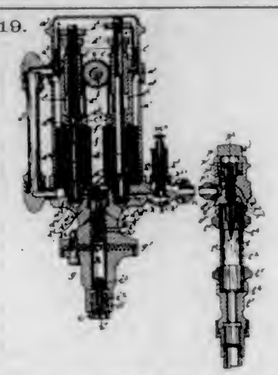
295,917.

or screw B², engaging with all said worm-wheels, substantially as described.

4. The combination, with the frame A, of the several pairs of rollers B C, the bearings C' C² for the rollers C, the longitudinal bars *b*, the rods C³ C⁴, connecting said bearings, and the nuts C⁵, substantially as described.

295,918. METAL POST FOR WIRE FENCES. LOUIS GODDU, Winchester, Mass. Filed Apr. 4, 1883. (No model.)

Claim.—1. The post *a*, having the notched flute or flutes *b*, rests *f*, and rib *c*, in combination with the wires *g* and pins *e*, for retaining the wires in the notched post, substantially as shown and described.



2. A post composed of the part *a a*, the notched wire-receiving flute, and the backwardly-extended rib *c*, substantially as described.

295,919. LUBRICATOR. CUSHING C. HARLOW, Brockton, Mass. Filed Nov. 30, 1883. (No model.)

Claim.—1. In a lubricator, the reservoir having two or more outlet-passages, combined with a series of independent forcing devices actuated in common, by means of which different quantities of the lubricant may be forced from each outlet as desired, substantially as described.

2. In a lubricator, the reservoir and forcing-rod therein, combined with the actuating rock-shaft and pinion thereon, and rack meshing with

295,919.

the said pinion and connected with the said forcing-rod, substantially as described.

3. The reservoir for the lubricant and the actuating rock-shaft, pinion, and rack, combined with the forcing-rod *d*, adjustable longitudinally in the said rack, substantially as and for the purpose described.

4. The reservoir and internal threaded actuating-rack, combined with the threaded forcing-rod connected with the said rack, and the gaging upright co-operating with the said rod to indicate its effective movement, substantially as described.

5. The oil-reservoir and forcing device, consisting of a longitudinally-movable nipple and independent actuating-rod adapted to seat on the end of the said nipple, close the passage through it, and then move the said nipple longitudinally, substantially as and for the purpose described.

6. The oil-reservoir having a chambered base provided with a bushing, combined with the spring-pressed forcing-nipple, longitudinally movable in the said bushing, and provided with a stop limiting its movement caused by the spring, and the actuating-rod seating on the end of the said nipple and moving it therewith, substantially as described.

7. In a lubricator, the reservoir provided with a foot adapted to be attached to a steam chest or cylinder, combined with non-conducting material interposed between the main portion of the reservoir and its foot, whereby the said reservoir and its contents are protected from the heat of the steam chest or cylinder, substantially as described.

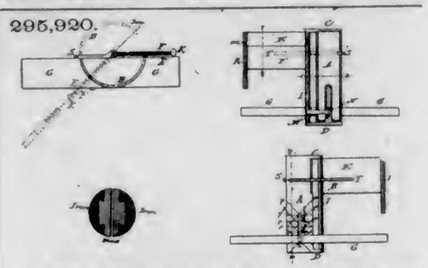
8. The forcing-rod having a spring-held portion adapted to yield when the flow of the forced liquid is obstructed, as and for the purpose described.

9. In a lubricator, the reservoir and forcing device thereon, combined with the strainer, consisting of a gauze cylinder, *f*, provided at its ends with rings *f'*, the said strainer surrounding the said forcing device, substantially as described.

10. The reservoir having a chambered base provided with an outlet-passage, combined with a forcing device for expelling the liquid from the chamber of the base, and a valve controlling the flow through the outlet-passage, provided with a tubular stem and spring within the said stem, which is provided with inlet-openings admitting the lubricant to the interior thereof, substantially as described.

11. The reservoir having its base provided with a chamber, d^3, and outlet-passage *h*, combined with the tube h^2 and valve *k* therein, and the screw h^1, closing the upper end of the passage *h*, which communicates with the chamber *d*, substantially as described.

12. The lubricator having a forcing device, combined with the sight-feed device having a chamber connected with the outlet-passage from the forcing device, a drop-forming nozzle, and a retarding device between the said chamber and nozzle, whereby the lubricant entering the chamber intermittingly is delivered uniformly to the nozzle, substantially as described.



13. The lubricator having a forcing device, and the sight-feed device having a receiving-chamber at its upper end, an outlet-passage therefrom terminating in a drop-forming nozzle, combined with fibrous material interposed between said receiving-chamber and nozzle, substantially as described.

14. The combination of the valve-seat k^2, valve k^{20}, and device for rotating the said valve with relation to its seat, substantially as described.

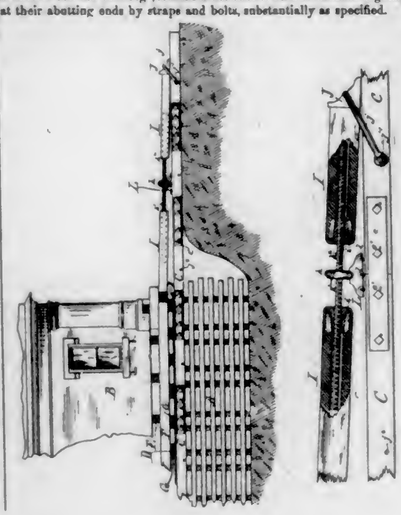
295,920. MITER-GAGE. EXPERIDION HIPOLITO, San Jose, assignor of one-half to James D. Campbell, Los Angeles, Cal. Filed June 6, 1883. (Model.)

Claim.—1. The miter-gage consisting of a base, a vertical adjustable standard, a slotted rotating post, a guiding-wing having two leaves with a passage-way between them, and a curved graduated arm, all in combination substantially as and for the purpose set forth.

295,920.

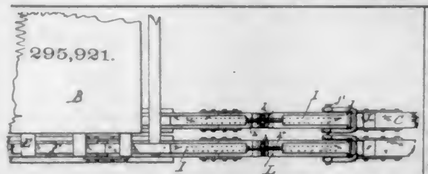
2. In a miter-gage, a broad upright saw-guide-supporting standard, adjustably mounted, substantially as shown, upon a base having a straight, flat upper surface, said standard being flat and plain upon the face or side next to the base, and having linear markings crossing said face at various angles, and corresponding with the surface of the base at the line of contact as the standard is adjusted at different angles of inclination, all being substantially as shown and described, whereby the saw-guiding apparatus may be accurately adjusted to guide the saw at various angles with the base.

3. In a miter-gage, two longitudinally-slotted saw-guiding posts or rods connected by plates attached to the respective halves of the rods, substantially as shown, so that the inner faces of the plates form a passage for the saw continuous with the slots in the rods, each rod having its separate halves connected by a set-screw, substantially as shown, whereby the width of the passage through the slots in the rods and between the plates may be regulated.



4. In a miter-gage, slotted saw-guiding posts or rods having a separate lining of wood, substantially as set forth, whereby the lining may be replaced when worn out, and the saw will not be dulled by contact with the rod.

5. In a miter-gage, a saw-guide-supporting standard having a longitudinal slot therein, and being in combination with the base, bolt, and spanner, substantially as shown, whereby the guiding apparatus may be elevated and lowered, and may be given any vertical angle desired.

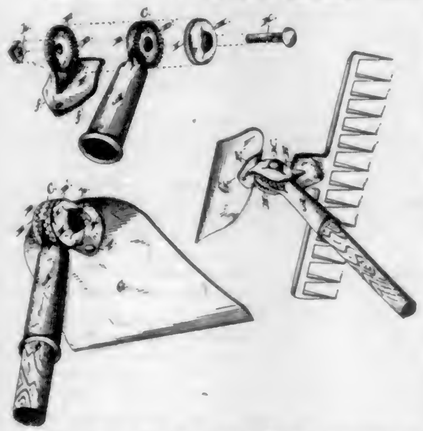


295,921. APPARATUS FOR MOVING HOUSES. JAMES HOLLINGSWORTH, Chicago, Ill., assignor to Hollingsworth & Coughlin, same place. Filed Oct. 1, 1883. (No model.)

Brief.—Continuous ways composed of lengths of timber, fastenings for securing them detachably together end to end, and anchoring devices secured directly to the timbers forming the ways. Motive force is applied to the sill-timbers by screws. The screws have a center boss fitting in a movable rest, which supports the screw against the deflecting force of the actuating-lever.

Claim.—1. In combination with the power-supplying screws and their anchorage devices, the continuous ways herein described, on which to slide or roll the buildings, formed of sections of timbers secured together at their abutting ends by straps and bolts, substantially as specified.

295,921.



2. The continuous ways herein described, composed of lengths of timber and fastenings for securing them detachably together end to end, substantially as specified.

3. The ways upon which to move buildings, in combination with the screws and their anchoring devices, the latter being secured directly to the timbers forming the ways, substantially as specified.

4. The combination, with the way and the power-supplying screws, of the anchor device consisting of the block, the strap, and the holding-pin, substantially as specified.

5. The combination, with the screw, of the supporting-rest L, substantially as specified.

295,922. HANDLE-ATTACHING DEVICE FOR TOOLS. JOSEPH R. HOOD, Philadelphia, Pa. Filed Apr. 2, 1883. (No model.)

Claim.—The combination, with the handle-socket A, provided with the disk C, having a series of teeth on its opposite sides, of toothed disks E, attached to a hoe or other implement, whereby two implements may be adjustably secured to the single disk C, and a toothed disk, H, for protecting the series of teeth on one side of the disk C when only one implement is secured thereto, substantially as set forth.

295,923. PENCIL. THOMAS M. KENNEY, Cambridge, Mass., assignor to Francis Edgar Mason, same place. Filed Mar. 12, 1883. (No model.)

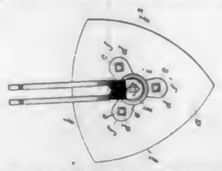
Claim.—1. In a pencil, the combination, with the pencil-body, of a lead-feeding device longitudinally movable in the said body, having a series of projections or shoulders to successively operate upon the lead, and the holding device, resisting without positively preventing the longitudinal movement in either direction of the said feeding device and lead under moderate pressure, substantially as described.

2. The pencil-body having a lead-holding tip, combined with the longitudinally-movable lead-feeding device, having a series of yielding projections or shoulders to successively operate upon the lead, and a frictional clamp to resist and stops to positively limit the longitudinal movement in either direction of the propelling device relative to the pencil-body, substantially as described.

3. The pencil-body consisting of an outer tube, a split lead-holding tip, and inner lead-receiving tube slotted longitudinally, all fixed with relation to one another, combined with the longitudinally-movable and frictionally-held feeding device, having a knob outside the end of the said outer tube, and a series of yielding lead-feeding projections or shoulders normally pressed into the said slot, substantially as described.

4. The combination of the pencil-body with a longitudinally-movable lead-feeding device having a series of projections or shoulders, and its removable cap or knob provided with a plunger, substantially as described.

5. The body consisting of the tubes *a* and *d* and tip *b*, combined with the feeding device having a series of projections, *f*, and a clamp or friction device, *m*, substantially as described.



295,924. HAME. JACOB F. KNORR, Orange, N. J. Filed Aug. 18, 1883. (No model.)

Claim.—1. A hame consisting of a trough-shaped body, A, the draft-plate D, sunken into the edges of the body and rivited to such edges, and the strap-loop F, having its ends inserted between the body and draft-plate and secured thereto, substantially as described.

2. The combination of the trough-shaped hame-body A, having offsets B at its edges, with the draft-plate D sunken into the hame-body, and rivets attaching the edges of the draft-plate to the offsets, substantially as described.

295,925. PLOW ATTACHMENT. JOHN LAWRIE, Brookston, Ind., assignor of one-half to John W. Heltzman, same place. Filed Aug. 18, 1883. (No model.)

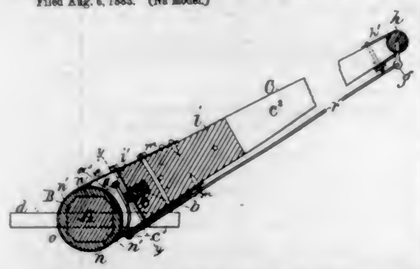
Claim.—1. The standard-sheth or auxiliary standard *k*, provided in its front face, at its lower extremity, with the hexagonal matrix *l*, and the central perforation, *m*, from front to rear, in combination with the tri-arm bracket *o*, having the arms *f f* and *f''*, the hexagonal boss *n* on the rear face of its central portion, and the central perforation, *h*, and the pivot-bolt and nut *i*, substantially as specified.

2. A plow-standard having a hexagonal matrix in its front face near its lower end, in combination with a tri-arm bracket having a central hexagonal boss to fit the matrix, and a bolt and nut for connecting the two together, substantially as specified.

295,926. FILTER. JAMES M. LEARNED, Boston, assignor to Dexter F. Bennett, Somerville, Mass. Filed June 26, 1883. (No model.)

Claim.—In a filter, the combination, with the shell or casing A, having a chamber, *b*, of the perforated discharge-tube B, closed at its inner end, and extending up centrally within the casing in line with the inlet-aperture thereof, and surrounded by a piece of wire-gauze, *f*, secured in place by a perforated cap or sleeve, C, fitting thereover, all constructed and arranged to operate substantially in the manner and for the purpose described.

295,927. COMPRESSIBLE GAGE. CHAS. A. LIEB, New York, N. Y. Filed Aug. 7, 1883. (No model.)



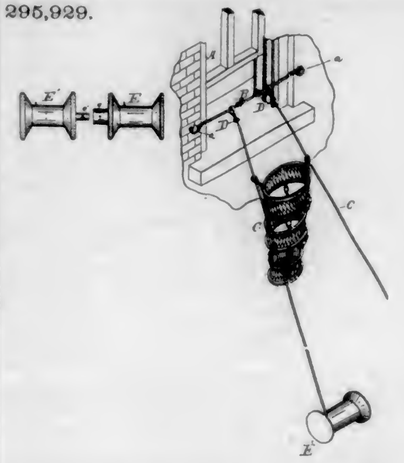
Claim.—1. A compressible gage formed by combining a single series of links, which are united at their ends, and form an unbroken surface against which the paper or other material to be cut can be placed, as set forth.

2. The links A, united at their ends by the rods B, in combination with the springs C around such rods, and bearing on the links, as set forth.

3. The combination of a series of inclined links, A, journals B, helical springs C, and the rubber cushion D, constructed and operating substantially as and for the purposes specified.

295,928. HORSE HAY-RAKE. DAVID W. LONG, Springfield, Ohio. Filed Aug. 6, 1883. (No model.)

Claim.—In combination with the rake-head, the bearing-collar cast in a single piece, and having a central band provided with notches, the side bars, c^2, pivoted on said collar, the block *i*, interposed between said side bars, and having a cavity, *b*, in the forward end, the spiral spring located in said cavity, the pawl *a*, pivoted in the space a^2, and having the stud a', extending within said spring, the broad flat spring *e*, extending over said space a^2, and the operating devices connected with said pawl *a*, substantially as set forth.

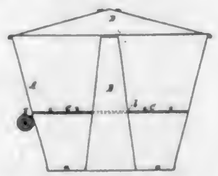


295,929. FIRE-ESCAPE. THOS. MACDONOUGH, Benton, Mich. Filed Dec. 8, 1883. (No model.)

Brief.—The lowering-ropes are wound on a double reel, which may be easily separated when to be used, or secured together when to be stored. An escape basket or cage made of telescoping sections secured together by light chains is provided.

Claim.—1. A collapsible basket, F, made in sections, as described, the sections being secured together by light chains, in combination with two lift wires or cables, C C, adapted to pass through the handles of the basket, and suitable mechanism to retain said cables in position for a fire-escape, substantially as described.

2. A fire-escape consisting of two spools or reels connected together substantially as described, so as to be readily separated, a lift-cable wound



295,929.

on each reel, a basket or cage, through the handle of which the cables pass, and mechanism, substantially as described, for securing the cables to a window, the whole constructed and adapted to operate in combination substantially as set forth.

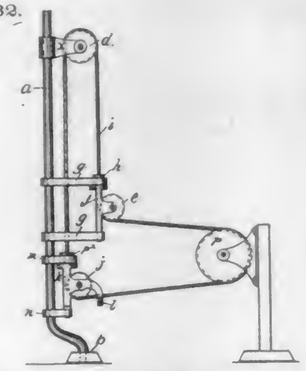
3. The combination of the cable B, supported on its hooks, as described, the cables C C, secured to said cable B by hooks D, the basket F, having handles through which the cables C C pass, and the spools E E', secured to the cables, and having mechanism, substantially as described, whereby said spools may be readily attached together or taken apart, all constructed and operating substantially as and for the purpose set forth.

295,930. VEGETABLE-STEAMER. LLEWELLYN MASTERS MARR, Boston, Mass. Filed Sept. 29, 1883. (No model.)

Claim.—A vegetable-steamer consisting of the body A, increasing in diameter from the bottom up, and having the central open tapering tube, B, increasing in diameter from the top down, the perforated disk C, having the central hole, *b*, and the conical cover D, whereby the bodies of several steamers can be packed together, and also their covers with the disks, as set forth.

295,931. MANUFACTURE OF ARTIFICIAL STONE. MONROE MCNAMARA, Mexico, Mo. Filed Dec. 26, 1883. (No specimens.)

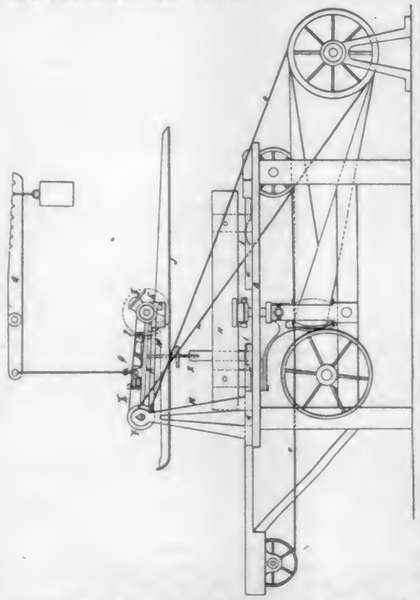
Claim.—The herein-described composition of matter, consisting of Portland cement, sand, ground or pulverized or comminuted glass, plaster-of-paris, pitch, paper-pulp, sal-soda, litharge, and alum, in or about in the proportions set forth.



295,932. BELT-GUIDE. JONATHAN J. MOORE and JAMES A. BALL, Thorntown, Ind. Filed Jan. 19, 1884. (No model.)

Claim.—1. The combination, with a shaft in a fixed position, a pulley on said shaft, a shaft mounted on a turning support, a pulley on said shaft, and a round belt passing over said pulleys, of a pair of pivoted frames, each carrying a sheave-pulley, and secured to said turning support, and arranged substantially as and for the purpose specified.

2. In a belt-guide, frame *f*, carrying pulley *e*, and having a hollow pivot, *h*, all substantially as specified.



3. In a belt-guide, frame *k*, having hollow pivot p^3 and guard *l*, and carrying a sheave-pulley, *j*, all substantially as specified.

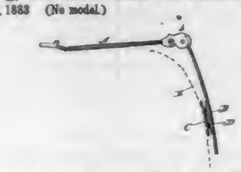
295,932.

295,933. PACKING-BOX-TRIMMING MACHINE. FREDK. MYERS, New York, N. Y. Filed Dec. 9, 1881. Renewed July 18, 1883. (No model.) Patented in England Jan. 28, 1882, No. 432.

Brief.—The box is passed between the usual side cutter-heads, and is leveled by springs bearing on the bottom. A gage-bar rests on the upper ends of the box, and counter-weighted cutter-heads controlled by the gage trim the upper edges of the sides.

Claim.—1. The combination, in a box-trimming machine, of the table, endless carrier, guideways, and a guide-shoe and top-edge planers, said guide-shoe and top-edge planers overhanging said table, carrier, and guideways for the box to pass under them, the shoe being located between the planers to ride on the ends of the box, and the planers being suitably located to dress the edges of the sides of the box even with the ends of the box, substantially as described.

2. The combination, with the suspended and partially-balanced overhanging top-edge cutters and guide-shoe, of the adjustable rest R, the arrangement being such that the cutters and guide-shoe drop and rest thereon when not resting on the boxes, substantially as described.



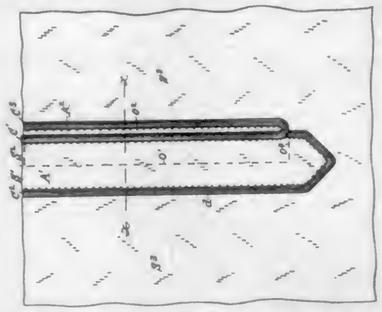
3. The combination, with the guideways and carrier, of the gaging-shoe, top-edge planers, counter-balance, and the supporting-standard R substantially as described.

4. The combination, in a box-trimming machine, of the vertically-adjustable gaging-shoe and the vertically-adjustable top-edge planers with the guideways and carrier, the said shoe being located between the planers to ride on the ends of the box, and the cutters arranged to dress the side edges of the box even with the box ends, said planers and shoe being adjustable together on pivot L relatively to the boxes, and the said shoe being adjustable on pivot O relatively to the planers, substantially as described.

5. The rest S, in combination with the gaging-shoe J and the top-edge planers I, said shoe being adjustable upon the planer-supports and relatively to said planers by arm N and pivot O, substantially as described.

6. The combination, in a machine for dressing the top edges of boxes, and with the planers, guide, and carrier therefor, of a springway, *i*, along one side of the carrier, substantially as described.

295,934. SPECTACLE-FRAME. JOB H. NICHOLS, Peoria, Ill. Filed Mar. 17, 1883. (No model.)

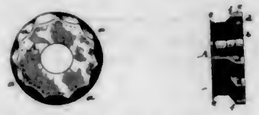


Claim.—1. In a frame for eyeglasses, an elastic plate attached to each of the rear-extending arms of the frame, as and for the purpose intended, substantially as described.

2. In a frame for eyeglasses, an elastic plate attached to each of the inner sides of its rear-extending arms at or near the parts where the arms pass the temples, as and for the purpose intended, substantially as described.

3. In a frame for eyeglasses, the combination of the elastic plates C, the metal strap D, and arms B, as and for the purpose intended, substantially as described.

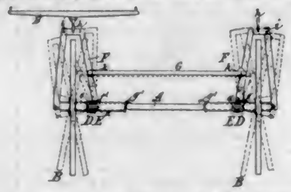
295,935. STAYING-PIECE FOR GARMENTS. GEORGE E. NORRIS, Troy, assignor of one-half to James K. P. Pine, Lansingburg, N. Y. Filed June 20, 1883. (No model.)



Claim.—1. In an overlapping fly for a garment-slit opening, the combination of a strip having a uniform width for attachment to the slit, and which strip is sewed on one of its edges to one edge of the slit reversely placed, is then turned over and down frontwardly, and longitudinally folded to produce a fly-edge subtending the slit, with the other edge of the strip sewed to the shirt-body exteriorly, so as to cover and subtend the inner union of the strip and slit, and a corded edge upon the subtending vertical edge of the fly, as shown and described.

2. In an overlapping fly for a garment-slit opening, the combination of a strip having a uniform width for attachment to the slit, and which strip is sewed on one of its edges to one edge of the slit reversely placed, is then turned over and down frontwardly, and longitudinally folded to produce a fly-edge that subtends the slit, with the other edge of the strip sewed to the shirt-body exteriorly, so as to cover and subtend the inner union of the strip and slit, a corded edge upon the fly, and a corded edge upon the exterior of the strip where attached to the shirt-body, as shown and described.

3. In an underlap for a garment-slit opening, the combination of a strip of uniform width reversely placed with reference to the edge of the slit beneath the fly, and sewed thereto, turned over and down outwardly and frontwardly, and on its outer edge attached to the shirt-body and corded, as shown and described.



4. In combination with a garment-slit opening, an overlap or fly made from a strip of material that is on one of its edges, as shown, attached to one edge of the garment-slit, and on its other edge exteriorly attached to the shirt-body, to subtend the inner union of the strip and slit, and where folded longitudinally to oppositely subtend the slit and produce the fly, a corded edge on fly and strip, an underlap made of a strip that on one edge is sewed to the edge of the slit, as shown, and folded over and down exteriorly, and on its outer edge attached to the shirt-body, with its lower end transversely sewed to the overlap, and the outer edge of the piece forming the underlap corded, as herein described.

295,936. ROTARY SOLE-EDGE CUTTER. WILLIAM D. ORCUTT, Boston, Mass., assignor of one-half to James H. Bunell, same place. Filed Apr. 7, 1882. (No model.)

Claim.—The improved cutter for trimming sole-edges above described, having a series of teeth, each of which has not only a flat front face, *c*, and is molded on its outer end the counterpart of the sole-edge, so that its heel acts as a guard, but each also has the radii of a polygon, whereby both the desired clearance and rankness can be obtained, as set forth.

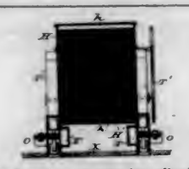
295,937. CULTIVATOR. WM. S. PATES, Alton, Ill., assignor to the Hapgood Plow Company, same place. Filed Jan. 11, 1884. (No model.)

Claim.—1. In a tongueless cultivator, the frame consisting of the arched axle provided with horizontal arms, the spindles provided with the perforated head and the lug, the swivel E, the draft-bar, constructed U-shaped, one leg thereof attached to the outer end of the spindle, and the other leg attached to the said lug, and the axle-bar G, in combination, all substantially as and for the purpose set forth.

2. The spindle D, provided with the perforated head and the lug, in combination with the arched axle provided with horizontal arms, the said spindle connected to the said axle by a swivel, permitting the said spindle to swing, as shown, and with the draft-bar, the said lug attached to the said draft-bar with a bolt, all substantially as and for the purpose set forth.

3. The swivel E, constructed with the open-mouthed eye or collar, with perforated lips adapted to be drawn together by means of a bolt and nut, the shoulder and the rounded extension screw-threaded, as shown, in combination with the arched axle provided with horizontal arms, and spindles provided with the perforated head, substantially as and for the purpose set forth.

4. The draft-bar, constructed U-shaped, its legs straddling the wheel, in combination with the spindle provided with the perforated head and the lug, one leg of the said draft-bar attached to the outer end of the said spindle, the other leg attached to the said lug, as shown, and for the purpose specified.



5. The stop-lock I, constructed with an eye, *m*, and provided with the arm *g'*, in combination with the sleeve J and the axle A, the said eye clasped to the sleeve with the bolt *g*, and the said arm adapted to stop and abut against the said axle, as specified, and for the purpose set forth.

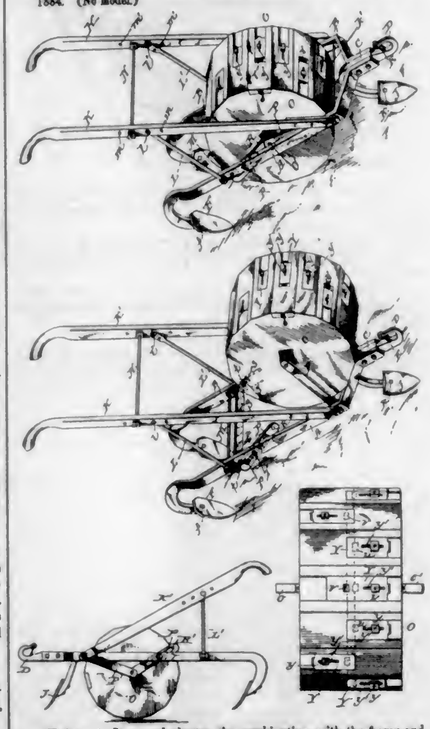
6. In a tongueless cultivator, the combination of the axle A, wheels B, spindle D, swivel E, draft-bar F, axle-bar G, sleeve J, stop-lock I, and plow C, substantially as and for the purpose set forth.

295,938. MACHINE FOR OPENING, CLEANING, AND CONDENSING TEXTILE FIBERS. HAVEN C. PERRAN and ALFRED CLARKE, Lowell, Mass. Filed June 18, 1883. (No model.)

Brief.—Two exhaust-fans—one on each side of the machine and operated independently of each other—exhaust the air from the lap-cages, with which they communicate by suitable pipes. Said cages are divided through their center by sheet-metal plates placed at right angles to the shafts.

Claim.—1. The combination of one or more lap-collecting cages, and independent means at each end of such cage or cages for exhausting air from the ends thereof, as and for the purpose specified.

2. The combination of one or more lap-collecting cages, and separate exhaust-pipes—one at each end of said cages—and separate air-exhausting means for each of said pipes, as and for the purpose specified.

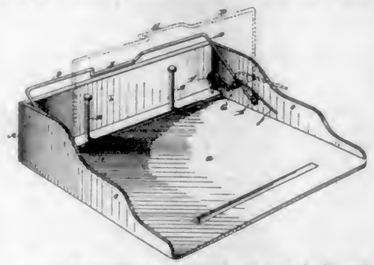


3. The combination of one or more lap-collecting cages, and separate exhaust-pipes—one at each end of said cages—and separate exhaust-fans for each of said pipes, as and for the purpose specified.

4. The combination of one or more lap-collecting cages, each provided with a central vertical partition, and independent means at each end of such cage or cages for exhausting air from the ends thereof, as and for the purpose specified.

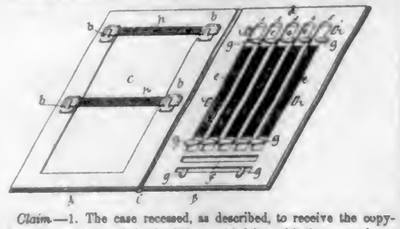
5. The combination of one or more lap-collecting cages, each provided with a vertical central partition, separate exhaust-pipes—one at each end of said cages—and separate air-exhausting means for each of said pipes, as and for the purpose specified.

6. The combination of one or more lap-collecting cages, each provided with a central vertical partition, and separate exhaust-pipes—one at each end of said cages—and separate exhaust-fans for each of said pipes, as and for the purpose specified.



295,939. COMBINED SEED-PLANTER AND FERTILIZER-DISTRIBUTER. WILLIAM CHESLEY PICKLE, Nechesville, Tex. Filed Jan. 16, 1884. (No model.)

Claim.—1. In a seed-planter, the combination, with the frame and shovel-points and seed-drum, of the hinged arms P P', and the arms R R', provided with slots *p*, whereby said frame and shovels may be raised or lowered, as and for the purposes set forth.

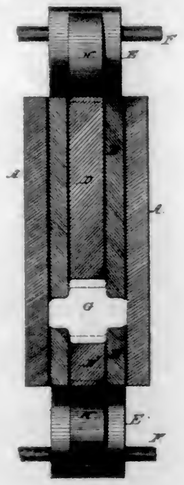


2. The combination, with the frame and the seed-drum, of the arms P P', hinged to the rod *k'*, and the arms R R', having slots *p*, whereby said drum may be allowed a free vertical motion or be rigidly set at a given height, substantially as shown and described.

295,940. LETTER AND BILL FILE. GEORGE W. PLUMMER, Brooklyn, N. Y., assignor to Andrew Jacobs. Filed Jan. 24, 1883. (Model.)

Claim.—The combination, substantially as described, of a cradle or box, A, having end boards, *c*, a swinging bail, D, having bent ends pivoted to the said end boards, and provided with studs or knobs G between its pivot and its horizontal or cross-bar portion, and a spring, F, secured to the cradle or box independently of the swinging bail, and having a forwardly-projecting arm, *f*, bearing upon the upper side of the stud or knob G, substantially as described.

295,941. COPY-BOOK, COPY-CASE, AND MOVABLE COPY-PLATE. DANIEL A. RADLEY, Lawrenceburg, Mo. Filed Apr. 3, 1883. (Model.)

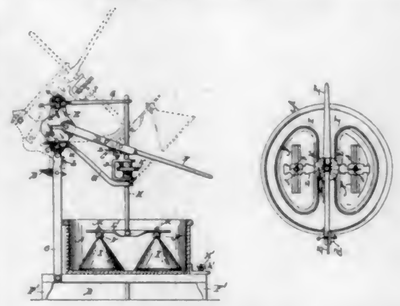


Claim.—1. The case recessed, as described, to receive the copy-book, and provided with hooks *b*, in combination with the copy-plates, by which the paper is held down smoothly.

2. The case consisting of the flexibly-connected leaves A B, provided with recesses *c e f i*, hooks *b*, and buttons *g*, all substantially as described.

3. The copy-plate consisting of a rigid supporting-plate having secured to it, as described, the copy-slips, which leave exposed the ends of said plates, as and for the purpose described.

295,942. CASTER-WHEEL AND DIE FOR MAKING THE SAME. WALTER S. RAVENSCROFT, Parkersburg, W. Va. Filed June 7, 1883. (No model.)

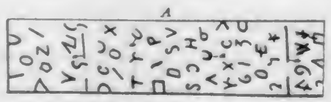


Claim.—1. The combination of the mold A, having a suitable bottom or dies at one end, the die B, formed in one piece, having a cylindrical bore of uniform diameter, and the die D, fitting said bore and free to move in the same from one end to the other, substantially as specified.

2. The combination of the mold or cylinder A, the dies B B′, made free to move toward and from each other, and the dies D D′, adapted to move toward and from each other in the dies B B′ and independently of the latter, substantially as shown and described.

3. The caster-wheel formed of woody fiber or any pulp, having its central portion additionally compressed, substantially as and for the purpose specified.

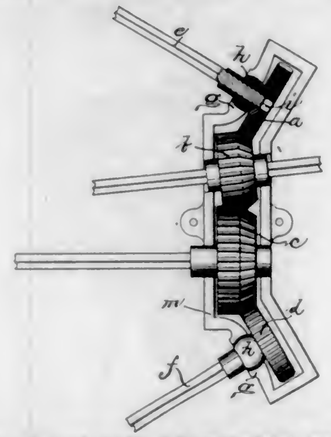
295,943. WASHING-MACHINE. JAMES WILLIAM REOADE, Churubusco, Ind. Filed Aug. 10, 1883. (No model.)



Claim.—1. In a washing-machine, the combination of a plunger and its shaft and lever for operating the shaft, longitudinally-adjustable guide-rods for the shaft to move in, a supporting-arm recessed for the reception of the guide-rods, and provided at its lower end with a flange to engage with its supporting-standard, clips and nuts thereto for securing the guide-rods to said arm, a standard to which said arm is hinged, and a gravitating pawl to engage with the end of the hinged arm, substantially as and for the purpose set forth.

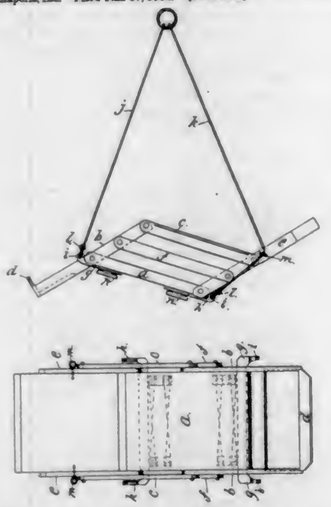
2. In a washing-machine, the combination of a plunger and its shaft, a hinged arm having its lower end tapering, substantially as shown, guide-rods connecting the hinged arm and plunger-shaft, a standard to which said arm is hinged, and a gravitating pawl pivoted to said standard and having a notch, substantially as described, whereby the tapering end of the hinged arm will strike against the head of the pawl and depress the latter and engage the notch of the pawl for holding the arm against movement in one direction, and means, substantially as described, for holding the arm against movement in the other direction, for the purposes set forth.

3. In a washing-machine, the combination of a two-part plunger, a cross-bar for connecting the two parts having slotted ends and serrated edges, pins or lugs connected with the plunger to engage with the serrations of the cross-bar, a nut and bolt for clamping the cross-bar to the plunger, and an operating-shaft connected to the cross-bar, substantially as set forth.



4. In a washing-machine, the combination of a two-part plunger, a cross-bar connecting the two parts having slotted ends and serrated edges, flanged plates fitting to the apices of the two-part plunger, and provided with cross-flanges or shoulders to form a seat for the cross-bar, and with pins or lugs to engage with the serrations of the bar, a nut and bolt for clamping the cross-bar, plunger, and flanged plate together, and an operating-shaft connected with the cross-bar, substantially as set forth.

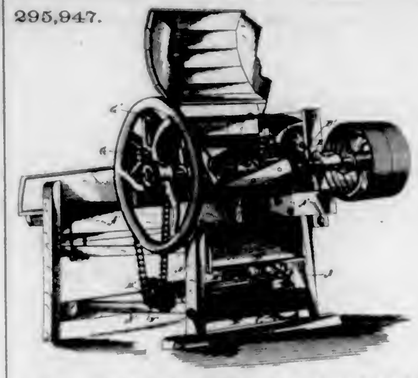
295,944. BEER-CHIP. BERNARD REE, Brooklyn, N. Y. Filed Aug. 6, 1883. (No model.)



Claim.—As an improved article of manufacture, a beer-chip having lines, grooves, recesses, or figures of any desired design burned or branded in it, substantially as and for the purpose set forth.

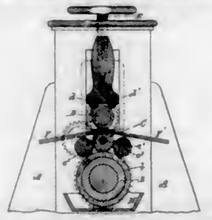
295,945. SEEDING-MACHINE. JOHN L. RITER, Brownsville, assignor to Norris & Brother, Rushville, Ind. Filed Jan. 30, 1883. (No model.)

Claim.—In a seeding-machine of the class specified, the combination, with the other gears of the driving-train, of the outside gears, each having a journal in the form of a spherical zone, and a bearing fitting the same and adapted to permit oscillation of the gears, but to prevent improper displacement of the same.



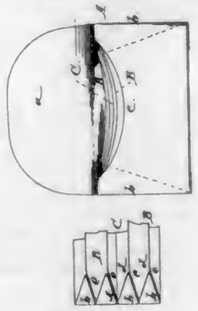
295,946. COMBINED SWING AND CHAIR. FRANCIS ROBINSON, Indianapolis, Ind. Filed Jan. 17, 1884. (No model.)

Claim.—1. The combination, with a folding reclining-chair having a hinged back and cords for suspending the same, of two eyebolts secured to opposite edges of said back, and two of the said suspending-cords passing through said eyes, arranged to slide therein, and attached to a fixed support on the seat of the chair, all substantially as and for the purpose specified.



2. In a folding reclining-chair, the combination, with seat *a*, uprights *b* and *c*, pivoted thereto, as described, and arm *e*, pivoted to said uprights, of bar *f*, also pivoted to said uprights, substantially as and for the purpose specified.

295,947. STRAW-CUTTER. ELMORE W. ROSS, Fulton, N. Y. Filed Mar. 1, 1883. (No model.)

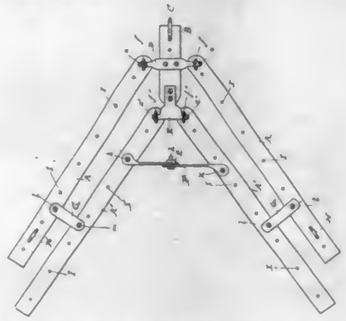


Claim.—The combination, with the driving and feed-roller shafts, of the interposed parallel shafts connected by the spur-gears E and E′, and the sprocket-wheels and chains connecting the driving-shaft with the feed-roller shaft through said parallel shafts, arranged and operating substantially as described.

295,948. LEATHER DRYING AND PRESSING MACHINE. WM. ARTHUR SAWYER, Derbyport, Mass. Filed Mar. 23, 1883. (No model.)

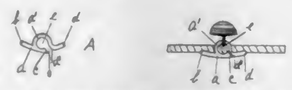
Claim.—In a leather drying and pressing machine, the combination, with a pressing-roller and an elastic roller, of a roller consisting of a number of rings or disks, each adapted to operate independently of the others, and mounted between the pressure-roller and the elastic roller, and provided with retaining-rolls, substantially as and for the purposes set forth.

295,949. PAPER WALLET. ALFRED L. SEWELL, Evanston, Ill. Filed Jan. 12, 1884. (No model.)



Claim.—1. The blank A of a paper wallet, having the flap *a* and the crimped ends *b*, substantially as specified.

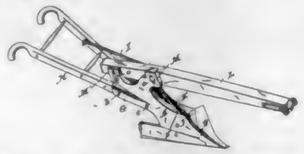
2. The blank A, having the folded flap *a* and crimped ends *b*, in combination with one or more independent division-sections, constructed and inserted substantially as described.



3. In a paper wallet, one or more pocket-divisions having its ends inserted within the wallet and attached to the crimped portions *b*, and the edges successively cut away at lower lines, so as to expose each of the separate pocket-divisions, substantially as set forth.

295,950. HARROW. HUGH M. SHERWOOD, Linton, Ind. Filed Oct. 11, 1883. (No model.)

Claim.—In a harrow, the draft-beam B, provided with the plate D, having curved hooks *e*, and the plate E, approximately of T shape, having hooks *e'*, in combination with eyebolts *f f'*, and beams A A', connected to each other by the pivoted plates G and the adjustable and pivoted plates F, having perforations *g* and bolt *h*, adapted to swing on a line with the axis of said beams, substantially as described, and for the purposes set forth.



295,951. BUTTON-FASTENER. FRANKLIN A. SMITH, Jr., Providence, R. I. Filed Jan. 23, 1884. (No model.)

Claim.—1. The herein-described button-fastener A, consisting of the curved arm *a*, and double-curved tongue *a'*, arranged and adapted for use substantially as described.

2. The herein-described button-fastener A, consisting of the curved arm *a*, rounded at one end and angled at the other, from the cut edge of which extends the double-curved tongue *a'*, cut to a uniform width its entire length, and adapted for use substantially as shown and described.

295,952. PLOW. EDWIN D. STARKE, Richmond, Va. Filed Dec. 31, 1883. (No model.)

Claim.—1. In a plow, the combination of the standard, slotted for the passage of a bolt and provided with transverse ratchets at both the front and rear portions of its upper end, and the vertically-adjustable ratchet-plates adapted to engage with the front and rear ratchets of the standard, substantially as and for the purpose set forth.

2. In a plow, the combination of the standard, having at both the front and rear portions of its upper and grooved ways slotted for the passage of a bolt and provided with transverse ratchet-teeth, the flanged ratchet-plates fitting in said grooved ways and vertically adjustable therein, the flange of one plate fitting above and the flange of the other beneath the beam, and bolts for securing the parts together, substantially as and for the purpose set forth.

295,953. CORN-PLANTER. GEORGE WALTER TARBELL, Sheffield, Vt. Filed Dec. 6, 1883. (No model.)

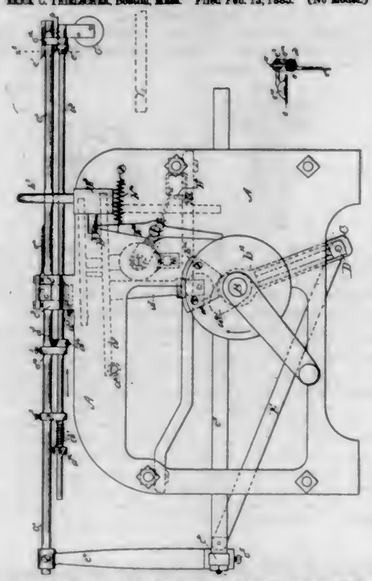
Claim.—1. In a corn or seed planter, the combination, with a supporting-frame, of an axle mounted in bearings of said frame, wheels loosely mounted on the ends of said axle, and having gear-teeth arranged on their inner faces, adapted to mesh with gear-wheels secured upon the axle, substantially as set forth.

2. In a corn or other planter, the combination, with a supporting-frame, of an axle mounted in bearings of said frame, wheels loosely mounted on the ends of said axle, and having gear-teeth arranged on their inner faces, adapted to mesh with gear-wheels mounted upon said axle, the seed-box having suitable feed-spouts, slides, or cut-offs arranged between said box and spouts, plates connecting said slides with the axle, which is recessed to form an eccentric portion, whereby the corn or seed is dropped intermittingly, substantially as set forth.

295,954. IMPLEMENT FOR ATTACHING BUTTONS. JAMES F. THAYER, Providence, R. I. Filed Jan. 23, 1884. (No model.)

Brief.—The button and fastener are automatically released when the jaws are closed and before the prong of the fastener is clinched by the die.

Claim.—1. In an implement for attaching buttons to fabric, the member A, provided with a button-holding device and curved bent pin *m'*, in combination with the member B, provided with the spring-lever *m*, arranged and adapted for use substantially as described.



2. In an implement for attaching buttons to fabric, the member B, provided with a tack-holding device and cam-lever *z*, in combination with the member A, provided with the plate *d* and die *b*, arranged and adapted for use substantially as described.

3. In an implement for attaching buttons to fabric, the herein-described button-holding device D, consisting of the plate *d*, having slot *a'*, pin *c'*, and forked spring *c*, in combination with the slotted cam-lever *z*, arranged and adapted for use substantially as described.

4. In an implement for attaching buttons to fabric, the herein-described tack-holding device, consisting of the spring-lever *m*, having recesses *p* and *o*, in combination with the curved and bent pin *m'*, arranged and adapted for use substantially as described.

5. The herein-described button-attaching implement, consisting of member A, having die *b*, button-holding device D, and bent pin *m'*, and the member B, provided with tack-holding device *m*, indentation *v*, and cam-lever *z*, the whole combined and arranged substantially as shown, and for the purpose set forth.

295,955. APPARATUS FOR FEEDING SHEETS OF PAPER. FREDERICK C. THIELSCHER, Boston, Mass. Filed Feb. 13, 1883. (No model.)

Claim.—1. In a paper-feeding machine, the bed *a*, to support sheets of paper in a pile, the plate a^2, by which it is carried, and means, substantially as described, to lift the said plate and bed, combined with the suction-tubes to pick up and hold the sheets, one by one, from the pile, the two pairs of nippers arranged at opposite sides of the bed, means, as specified, to actuate said nippers to engage the side edges of the lifted sheet held by the suction-tube, and means, as set forth, to reciprocate said nippers and their actuating devices to convey such sheet to the place of deposit and return for another sheet, substantially as shown and described.

2. The nipper member *c* and the slide-rod and its attached hangers, combined with the rocking rod and its connected nipper member *c'*, substantially as described.

3. The nipper member *c*, its slide-rod, the attached hangers, the rod *d*, supported in said hangers, and the nipper member *c'* on said rocking rod, combined with the pin or projection d^4 and a stationary incline with which in the reciprocation of the slide-rod the projection comes in contact to rock the rod *d* to open the nippers, substantially as described.

4. The nipper member *c*, its slide-rod, the attached hangers, the rod *d*, supported in said hangers, and the nipper member *c'* on said rocking rod, combined with the pin or projection d^4, a stationary incline with which in the reciprocation of the slide-rod the projection comes in contact to rock the rod *d* to open the nippers, and the spring *d'*, connecting the rod *d* and one of the hangers, to automatically and normally close the nippers, substantially as described.

5. The combination, substantially as shown and described, of the rod c^3, rocking rod *d*, and nipper members *c c'*, with the notched collar *e* and latch *e'*.

6. The combination, substantially as shown and described, of the sliding rod c^3, the connected rocking rod *d*, and the nipper members *c c'*, with the notched collar *e*, latch *e'*, and latch-opener e^3, as and for the purpose described.

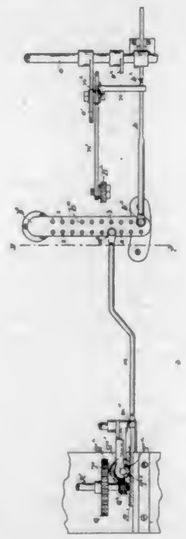
7. Two pairs of rods, c^3 and *d*, and connected nipper members *c c'*, combined with adjustable guides in which the said rods are reciprocated, to permit the nippers to be adjusted to adapt them to sheets of paper of different widths, substantially as described.

8. The slide-rods c^3 and *d* and nippers *c c'*, combined with a reciprocating carriage for moving the said rods, and with means, substantially as described, for rocking the rod *d* to open and close the said nippers, as set forth.

9. The bed *a*, the plate a^2, by which it is carried, and means, substantially as described, to lift the said plate and bed, combined with the suction-tubes and two pairs of nippers, *c c'*, to operate as set forth.

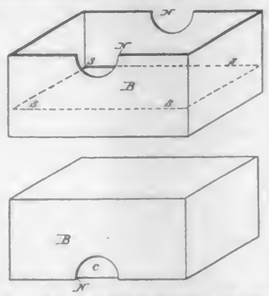
295,956. CAR-COUPLING. ISAAC H. TRABUE, Louisville, Ky. Filed July 3, 1883. (No model.)

295,956.



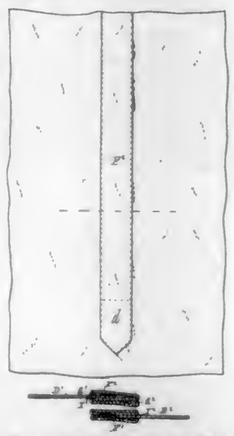
Claim.—1. In a car-coupler, the combination of a head having pin-holes and a bolt-hole, a pin, and a catch suspended from said draw-head by a bolt passing through the bolt-hole in the draw-head.

2. In a car-coupler, the combination of a head having pin-holes and a bolt-hole provided with a recess, *c*, a pin, and a catch suspended from said draw-head by a bolt passing through the bolt-hole in the draw-head, substantially as described.



295,957. SELF-OPERATING JACK OR MULE. WILLIAM F. TURNBULL, North Andover, Mass., assignor to the Davis & Furbur Machine Company, same place. Filed Mar. 30, 1883. (No model.)

Brief.—The rod by which the carriage is first run in to allow for the twist on the yarn is divided near the middle, and the severed ends adjustably secured to a radius-bar pivoted to the floor, whereby the speed (as well as the distance) at which said initial run is effected is regulated to suit different numbers of yarn.



Claim.—The radius-bar and the part *b*, adapted to engage a stud made movable with the carriage, combined with the part *a*, connected with the said radius-bar, and with suitable means to draw the said part *a* toward the head-stock, the point of connection of the radius-bar with one or both of the said parts being adjustable, whereby the speed of the inward movement of the carriage while twisting the yarn may be regulated according to the size of the yarn, substantially as described.

295,958. CUFF-BOX. ISAAC P. TURNER, Troy, assignor to James K. P. Pine, Lansingburg, N. Y. Filed Aug. 26, 1881. (No model.)

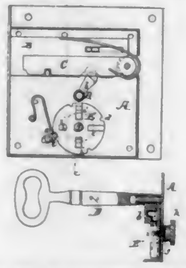
Claim.—As a new article of manufacture, a cuff-box composed of the cover B, having the side recesses, N, and stop S at a distance from its open bottom equal to the depth of the tray, and the tray C, of less vertical depth than the cover, the tray being adapted to be inserted in the cover inverted for displaying the cuffs placed therein above the edge of the tray, as shown and described.

295,959. STAYING-PIECE FOR GARMENT SLIT-OPENINGS. ISAAC P. TURNER, Troy, N. Y., assignor to George W. Pine, same place. Filed Nov. 23, 1883. (No model.)

Claim.—1. In a staying-piece for garment slit-openings, the combination of the rectilinear plackets or pieces F' and F², each made with two equidistantly-arranged longitudinal fold-lines and with oppositely turned-in side edges, the vertically-separated stay-flaps *i*, cut in each of said plackets or pieces, the transverse seam S', centrally uniting said stay-flaps when laid one over the other and folded transversely, a crotch-fold made in said united stay-flaps on the line of their transverse union, and the stitching S' and S², separately uniting oppositely at one side the coincident edges of each of said plackets or pieces after each has on its longitudinal fold-lines been folded back on itself to include the edges of the transversely-united stay-flaps, as shown and described.

2. The combination, with a garment slit-opening, of the rectilinear plackets or pieces F' F², each cut to have the blank-form stay-flaps *i*, the transverse seam S', centrally uniting said flaps when laid one over the other, folded over and down to be doubled transversely, a crotch-fold made in said united stay-flaps transversely and in the line of their sewed union, and the said plackets or pieces folded longitudinally to include and cover the edges of said united stay-flaps, and each attach to one of the sides of the garment slit-opening, as herein shown and described.

295,960. NUT AND BOLT LOCK. CHAS. VAN DUREN, New Albany, Ind., assignor of one-half to William L. Breyfogle, Louisville, Ky. Filed Nov. 26, 1883. (No model.)



Claim.—1. A nut or bolt lock consisting of a piece, plate, or ring of metal having a plurality of lever members partly severed and turned from its body at an angle or incline to its plane, and edged or toothed and adapted by a blow or force to be driven into the substance of the bolt or rod, substantially as and for the purpose described.

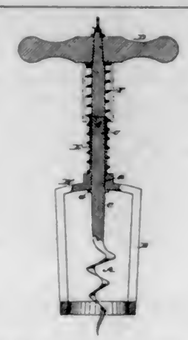
2. In a nut or bolt lock, a plate or ring of metal adapted to be placed around a bolt or rod, and having a plurality of toothed lever members, partly severed from its substance, projecting into its opening for the bolt or rod, and turned out from the body of the plate or ring at an angle or incline to its plane, and adapted to be forced home into the substance of the rod or bolt, substantially as and for the purpose described.

3. The combination of the ring, plate, or piece of metal having the bolt or rod opening, the plurality of toothed lever members partly severed therefrom, and turned out from and at an angle or incline to its body to engage a bolt or rod, and the partly-severed edge pieces, arranged to be turned down upon the sides of a nut to lock said nut after it has been run down from the plate in tightening up a loosened fastening or joint, substantially as shown and described.

295,961. LOCK. MAX VOIGT, New York, N. Y., assignor of one-half to Robert G. Schmidt, same place. Filed Feb. 2, 1884. (Model.)

Brief.—A movable plate having a series of ward projections for guiding the bit of the key to the tumblers is attached to the interior of a lock-case, the set of projections for one key being different from the set for other keys with which the same lock may be opened. The said plate has notches or apertures at or near its edge, into one of which notches enters a spring-bolt, of which the handle extends through the lock-case. The axle or pin of said plate also extends through the lock-case and has a button or handle at its outer end.

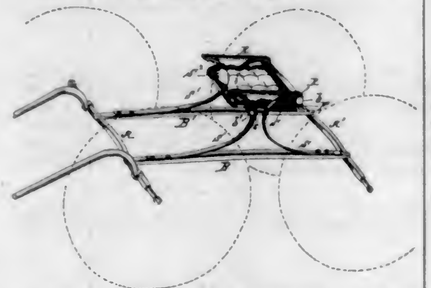
Claim.—1. In a lock, the combination of its case, tumblers, and bolt with the movable plate E, having series of projections *i i*, by which the lock, upon moving said plate, can be fitted for different keys, substantially as specified.



2. The combination of the lock-case A with the movable plate E, having series of projections *i* for different keys, and having notches or apertures *d*, with the holding-bolt *e*, and means for moving the same, substantially as specified.

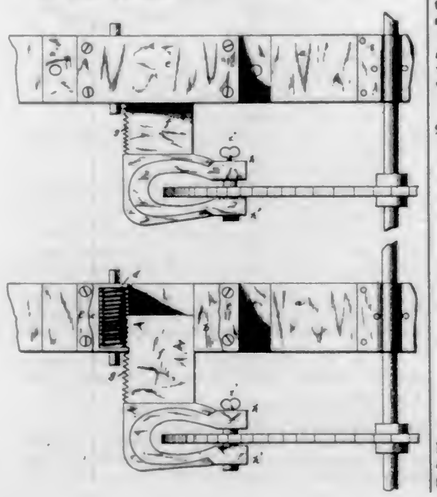
295,962. CORKSCREW. ALOM J. WALTER, Philadelphia, Pa. Filed Dec. 20, 1883. (No model.)

Claim.—1. A cork-extractor having a screw, a handle and a yoke or frame, and a spring bearing against said frame and handle, whereby, as the screw is driven into the cork, said spring is compressed and exerts its resultant increased pressure to cause the automatic withdrawal of the cork, as stated.



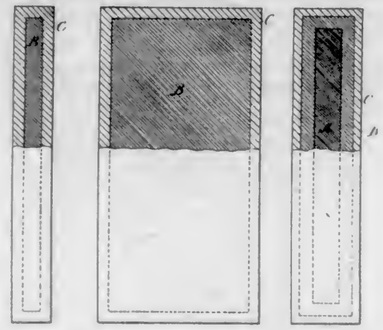
2. A frame, screw, spring, and handle, combined and operating as described, forming an improvement in cork-extractors for automatically withdrawing corks, substantially in the manner and for the purpose set forth.

295,962.



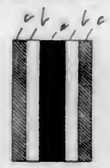
3. The screw, handle, and spring, in combination with the yoke or frame having an upwardly-projecting tube, E, substantially as and for the purpose described.

295,963. SPRING-SEAT FOR VEHICLES. LEWIS WARREN, McGrawville, N. Y. Filed Dec. 15, 1883. (No model.)



Claim.—The combination, with the side bars of a vehicle and the side bars of a seat thereof, of the curved wooden springs S S', their lower ends being secured to the side bars, arranged in reverse directions in the line of travel, and their upper ends being secured to the side bars, *b* and *b'*, of seat S², as and for the purposes specified.

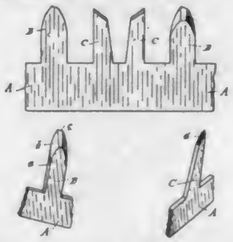
295,964. SAW-GUIDE. WARREN WILLIAMS, Lumberton, N. C. Filed Feb. 7, 1884. (No model.)



Claim.—In a saw-guide, the combination, with the main plate formed with suitable bearings, the screw *d*, journaled in the bearings, the reversible rack-stem *f*, working between shoulders of the main plate, and carrying the guide-jaws, said screw engaging with the teeth of the rack-stem, for the purpose set forth.

295,965. COMBINING OF STEELS. JOHN J. WILLIAMSON, Boston, Mass. Filed July 22, 1882. (No model.)

Claim.—As a process for the manufacture of steel shapes, the two following manipulations: first manipulation, the formation of the ingot by casting from converters or hearths of two or more different qualities of steel in a manner that shall leave the steel of high and hard quality enveloped in the steel of low or soft quality; second manipulation, forging, rolling, or working this composite ingot at the welding-heat of the mild steel, substantially as and for the purposes described.

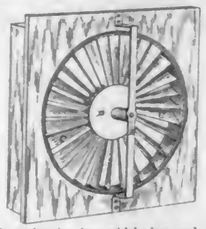


295,966. MANUFACTURE OF COMPOUND-ELECTRIC WIRE. JOHN J. WILLIAMSON, Boston, Mass. Filed July 23, 1883. (No model.)

Claim.—1. The improved electrical conductor herein described, consisting of a combined iron and steel core, of which steel is the central thread, with a copper envelope, substantially as and for the purposes described.

2. The improved electrical conductor herein described, consisting of a combined iron and steel core, of which steel is the center thread, plated with zinc, tin, or other proper material, and provided with a copper envelope, substantially as and for the purposes described.

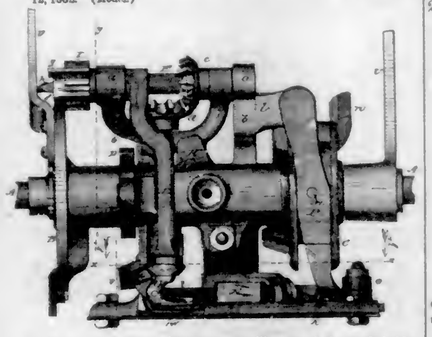
295,967. SAW. JOHN D. ABBOTT, Reading, Mich., assignor of one-third to Andrew M. R. Fitzsimmons and J. Wellington Chapman, both of same place. Filed Feb. 2, 1884. (No model.)



Claim.—In a crescent-saw, the teeth formed with parallel sides leading to curved cutting-edges on either side, and approaching each other toward the point, which latter is a chisel-point formed at an obtuse angle to the parallel edges of said teeth, substantially as described.

295,968. COFFEE SUBSTITUTE AND PROCESS OF PREPARING THE SAME. CLARK ALVORD, Syracuse, N. Y. Filed July 26, 1883. (Specimens.)

Claim.—1. The dry roasted mixture composed of the extract of willow-bark or tulip-tree bark with corn, barley, wheat, rye, peas, or other amylaceous substance, as above set forth.



2. The process used for effecting such combination—viz., producing the extract by boiling the bark in water, and then saturating the corn, barley, wheat, rye, peas, or other amylaceous substance by boiling them in such extract until they are well cooked, then removing and drying the same and roasting it in a coffee-roaster until it is brown as roasted coffee, as above set forth.

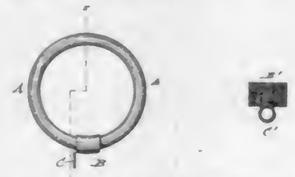
295,969. AIR AND DUST SEPARATOR. JOHN P. ANDERSON, San Francisco, Cal., assignor of one-half to Spivalo & Forman, same place. Filed Jan. 7, 1884. (No model.)

Claim.—A dust-chamber into which dust and air are forced by a blast apparatus, and a chimney, B, closed at the top, and having a circular opening in one side, in combination with a fan having inclined vanes, and constructed to rotate in the said opening, substantially as herein described.

295,970. GRAIN-BINDER. JOHN F. APPLEBY, Minneapolis, Minn., assignor, by direct and mesne assignments, to the Minneapolis Harvester Works, of Minnesota, and James F. Gordon, Rochester, N. Y. Filed Aug. 12, 1882. (Model.)

Claim.—A knotter which moves bodily toward the cord-holder during its revolution, (and the tying operation,) substantially as set forth.

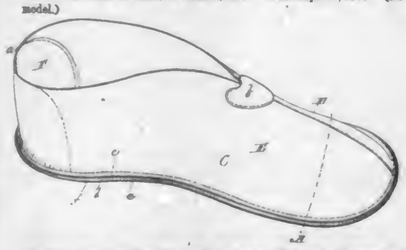
295,971. CAMP-CHAIR AND COT. WILLIAM H. BAKEWELL, Allegheny City, Pa. Filed Aug. 27, 1883. (No model.)



Claim.—1. The combination, in a combined convertible chair and cot, of the rear frame composed of the side bars a' a^2 and cross-bars a^3, the side bars being provided with eyes g g' and hooks h h' at the ends and crossing points of the frame, the front frame composed of the side bars b' b^2 and cross-bars b^3, the side bars being provided with the pins i' i and i^2 i^3, to engage with the hooks and eyes of the rear frame, and an extensible sacking which connects the front and rear frames, substantially as and for the purposes specified.

2. In a combined convertible chair and cot, the combination of two cross-frames adjustable on each other, an extensible sacking which connects the two cross-frames, and a cross-bar whose length exceeds the distance between the side bars of the rear cross-frame, said cross-bar secured to the sacking at or near the front third thereof, whereby the cross-bar may be made to engage with the rear cross-frame, or may be disengaged therefrom, substantially as and for the purposes specified.

3. In combination with a folding chair, an arm pivoted or hinged at one end to the frame of the chair, a support pivoted or hinged to the arm, a sliding ring to which the arm-support is pivoted or hinged, and a locking device for holding the sliding ring, substantially as and for the purposes specified.



295,972. CURTAIN-POLE RING. JULIUS BERBECKER, New York, N. Y. Filed Feb. 13, 1884. (No model.)

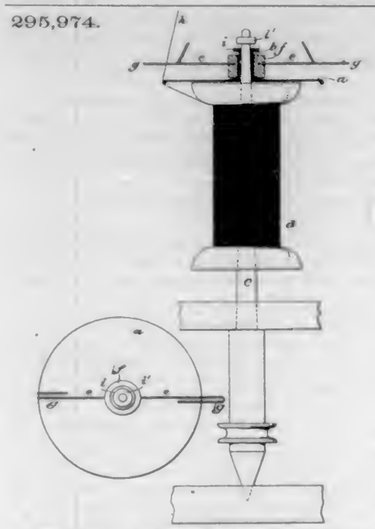
Claim.—1. A curtain-pole ring consisting of a ring-shaped tube and of a clamping-sleeve applied to the abutting ends of the tube, said clamping-sleeve being provided with an eye extending at right angles therefrom, and being made integral therewith, substantially as set forth.

2. A clamping-sleeve for curtain-pole rings made from a blank, having an eye made integral therewith, and bent outwardly at right angles to the sleeve, substantially as described.

295,973. BUCK SLIPPER. JOHN C. BECKFORD, Berlin, assignor to himself, and Edward M. Bliss, Worcester, Mass. Filed Sept. 17, 1883. (No model.)

Claim.—The combination, with the upper of a buck slipper, of a cork sole, *f*, sheep-skin bottom *e*, and an inner cloth covering, *d*, substantially as shown and described, and for the purpose set forth.

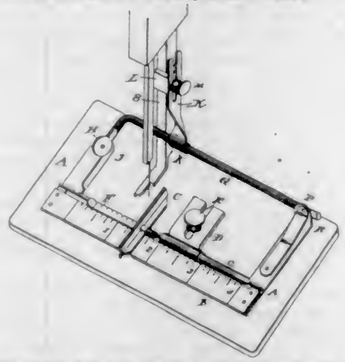
295,974. FLIER FOR SPINNING-MACHINES. LEDDRAN BIDGE, Paterson, N. J., assignor of one-half to William T. Ryle, same place. Filed Apr. 17, 1883. (No model.)



Brief.—The arms of the flier are provided with elongated loops or eyes, formed by bending the ends of the wires composing the arms backward upon themselves, and then upward at an angle. The hub to which the flier is attached rotates upon a sleeve adapted to be slipped upon the upper end of a spindle, and to the lower end of which is secured an eccentric plate. The thread passes from the bobbin upward around the edge of the plate and through the loop or eye of one of the flier-arms, being caused by the eccentric plate, as it passes around the same in unwinding from the bobbin, to travel over different portions of the loop or eye. By this means the loop is prevented from becoming notched or worn in one spot.

Claim.—1. The combination, with a flier, of an eccentric plate for causing the thread to have a traversing movement, substantially as and for the purposes set forth.

2. The eccentric plate *a*, in combination with the loose button *f*, provided with the flier-arms *e*, substantially as set forth.

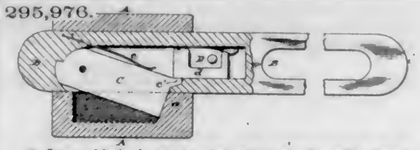


3. The flier-arms *e*, having the elongated loops *g*, in combination with means, substantially as described, for changing the point of contact of the thread with the flier, substantially as and for the purposes set forth.

295,974.

4. The eccentric plate *a*, having the hollow sleeve *b*, in combination with the flier-button *f*, held loosely upon the sleeve, substantially as and for the purposes set forth.

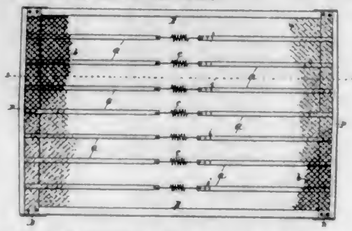
295,975. TUCK-CREASER FOR SEWING-MACHINES. EDWARD BOSTOCK, New York, N. Y. Filed July 14, 1883. (Model.)



Claim.—1. The main plate A, having two lateral arms, one of which bears the creasing-blade J, and the creasing-arm G, pivoted at its rear end to the other arm of plate A, and bearing at its front end the creasing-roller H, in combination with the clamp D, provided with the slot, as shown, adapted to clamp the plate A to the bed-plate of a sewing-machine in such a manner that the said plate can be adjusted longitudinally beneath the clamp, and means for connecting the creaser-arm to the presser-bar, substantially as shown and described.

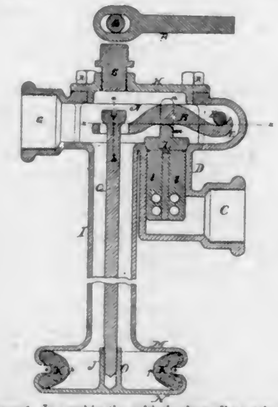
2. The main plate A, having two lateral arms, one of which bears the creasing-blade J, and the creasing-arm G, pivoted at its rear end to the other arm of plate A and bearing at its front end the creasing-roller H, in combination with the clamp D, slotted as shown, adapted to clamp the plate A to the bed-plate of a sewing-machine in such a manner that said plate can be longitudinally adjusted beneath the clamp, and the slotted bar K and set-screw M, substantially as set forth.

295,976. SEAL-LOCK. JOHN W. BURD, Jr., St. Louis, Mo. Filed July 30, 1883. (No model.)



Claim.—1. In a seal-lock, the combination, with the latching mechanism A *a* B *b* C, of spring-plate E, having opening *d'*, seal-card F, and front plate, A', all constructed and arranged substantially as herein described, and for the purpose set forth.

295,976.

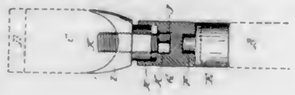


2. In a seal-lock, the combination, with a suitable sealing device, of the casing A, abutment-shoulder *a*, pivoted spring-latch C, stop-lug *c'*, and lock-bar B, recessed out to receive the spring-latch C, as described, and for the purpose set forth.

295,977. MATTRESS-SUPPORT. THEODORE BURDICK, Kalamazoo, Mich. Filed Sept. 4, 1883. (No model.)

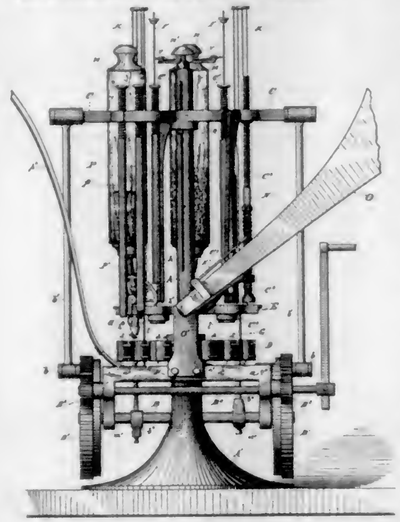
Claim.—The combination, with the supporting-frame and a wire mattress, of the attachable supports, consisting of the metal straps, and the springs and tension means interposed between the inner ends of said straps, substantially as described, for the objects set forth.

295,978. PRESSURE-REGULATOR. WILLIAM BURNETT, New York, assignor of one-half to James Reilly, Brooklyn, N. Y. Filed July 12, 1883. (No model.)



Claim.—1. In combination with the depending casing D, the pressure-reducing valve I, having a vertical movement in the casing, the lever B in chamber A, the depending connecting-pipe I, with pressure-chamber J, and the screw-rod Q, as and for the purpose described.

2. The pressure-chamber J, having top and bottom plates of metal and a circumferential wall of elastic material, the latter serving the double purpose of a packing and a spring.



3. In combination with the top and bottom plates of the pressure-chamber, the V-shaped annular wall of rubber K, substantially as and for the purpose described.

295,979. TIRE-TIGHTENER. WILLIAM CANFIELD, Detroit, Mich. Filed Aug. 27, 1883. (No model.)

Claim.—The combination of the cap E, intermediate cap, G, clip I, and screw K, the parts being constructed and operating substantially as and for the purposes described.

295,980. CARTRIDGE-LOADING MACHINE. FRANKLIN L. CHAMBERLIN, Cleveland, Ohio. Filed Apr. 17, 1883. (No model.)

Claim.—1. In a machine for filling cartridges, the combination, with a shell-feeder and an intermittently-rotating device carrying shell-holders, of a powder-container, a wad-feeder, and a shot-feeder, and means for automatically actuating the same, whereby the shells are fed and filled, substantially as set forth.

2. In a machine for filling cartridges, the combination, with the main structure thereof, and a cross-head arranged to reciprocate upon said structure, of a rotary crimper-rod carried upon said cross-head, and provided at its lower end with devices for automatically embracing the sides of the shell, substantially as and for the purposes set forth.

3. In a machine for filling cartridges, the combination, with the main structure thereof, of a reciprocating cross-head and a yielding marker adapted to be actuated thereby, and means for holding the shell during the operation of marking, substantially as shown and described.

4. In a machine for filling cartridges, the combination of the main structure thereof with the reciprocating cross-head, a punch adapted to be actuated thereby, and a support for the shell, the said punch being adapted to enter the shell and force the prime therefrom, substantially as shown and described.

5. In a machine for filling cartridges, the combination, with the main structure thereof, an actuating cross-head or equivalent device, and means for operating the same, of the shell-feeder, the punch adapted to enter the shell and remove the prime, the prime-set adapted to enter the shell, the automatic prime-feed tube, the yielding seat to receive the shell, whereby the prime is fixed thereto, the automatically-discharging powder-container, the wad-feeder, the automatically-discharging shot-container, the crimper mechanism adapted to act upon the periphery of the shell to crimp the same, the wad-marking device, and devices for discharging the completed cartridge, the said several devices here named being arranged and adapted to be automatically operated in proper order, substantially as shown and described.

6. In a machine for filling cartridges, the combination, with the main structure, a reciprocating cross-head or equivalent device mounted thereon, and the connections for actuating the same, of a rammer, adjustably connected to said cross-head, and arranged to adjust the pressure and maintain the uniformity of the same, substantially as set forth.

7. In a machine for filling cartridges, the combination, with the main structure thereof and a reciprocating cross-head or equivalent device, of the adjustable rammer, provided with the slip-joint and springs, whereby any excess of pressure upon the parts may be relieved, substantially as and for the purpose set forth.

8. In a cartridge-filling machine, wad-holders the cases of which are provided with elastic parts adapted to expand or open sufficiently to receive wads, singly or in quantities, thrust in at the sides of the holder, substantially as and for the purpose shown and described.

9. In a cartridge-filling machine, wad-holders adapted to receive wads in quantities through the sides by means of the elasticity of the parts, and so constructed and arranged that the wads in the holder are always exposed to the view of the operator, substantially as described, and for the purpose specified.

10. In a cartridge-loading machine provided with wad-holders, adjustable passage-ways through which wads may be pushed from the holders in desired quantities, substantially as and for the purpose set forth.

11. In wad-holders for a cartridge-loading machine, provided with adjustable passage-ways, through which wads are pushed from the wad-holder, movable collars, gates, or equivalent devices adapted to adjust the said passage-way to a desired size, substantially as described, and for the purpose set forth.

12. In a cartridge-filling machine, the combination, with the wad-holders and the wad-rammers, of the yielding fingers for holding the wads in position to be operated upon by the rammers, and the wad-pushing slide provided with an extension for operating beneath the wad-holders, substantially as described.

13. In a cartridge-filling machine, the combination, with the yielding wad-starting tube, of the wad-rammer, whereby the wad is accurately conveyed to and forced into the shell, substantially as described.

14. In a cartridge-filling machine, the combination of the wad-holder with the slide provided with an extension constituting a wad-pusher, and mechanism for operating the same, substantially as set forth.

15. In a cartridge-filling machine, the combination, with the wad-pushers, of the slotted levers connected therewith, the spindles to which said levers are attached, and the levers mounted upon said spindles and arranged to be engaged by the passing cartridge-shells contained in the holders, whereby the slotted levers are actuated to move the slides or pushers when the shells are in the holders contiguous to the respective levers, substantially as described, and for the purpose specified.

16. In a cartridge-filling machine provided with gates or valves for measuring and discharging powder and shot, the secondary chamber provided with elastic filling, substantially as shown and described.

17. In a machine for filling cartridges, the combination, with the shot or powder container and the means for automatically opening and closing the same, of the lever secured to the said container and adapted to be actuated by the shell to be filled, whereby the devices which open the cut-off valve in the container are made to engage each other and the valve opened, substantially as described.

18. In a machine for filling cartridges, the combination, with the main structure thereof, of the intermittently-rotating disk mounted upon a suitable column, and adapted to support the holders and to receive the said motion through the action of a rotating shaft provided with arms or levers which engage recesses or holes in the under side of the said disk, substantially as described.

19. In a machine for filling cartridges, the combination, with the intermittently-rotating disk provided with holes or notches on the under side thereof, of the rotating shaft provided with radial levers or arms, and the cam for actuating and stopping the said disk, substantially as shown and described.

20. In a machine for filling cartridges, the combination, with the main structure thereof, of the spider mounted upon the central column of the main structure, and provided with radial arms or levers arranged to support the powder and shot discharging devices, and the wad-pushers, substantially as shown and described.

21. In a machine for filling cartridges, the combination, with the main structure thereof, the hollow shaft, the bolt therein, and the nut connecting the two together, of the spider and the device for connecting the same with the bolt, substantially as shown and described.

22. In a machine for filling cartridges, the combination, with the cartridge-carrier provided with a cut-off arranged to receive, retain, and discharge the cartridges one at a time, of a cartridge-guiding tube arranged to receive the cartridges from the carrier and to deliver them to the cartridge-holders, substantially as shown and described.

23. In a machine for filling cartridges, the combination, with the cartridge-carrier provided with a cut-off and means for actuating the cut-off, of a cartridge-guiding tube adapted to receive them from the carrier and to deliver them to the holders, substantially as shown and described.

24. In a machine for filling cartridges, the combination of the inclined cartridge-carrier with the transverse rock-shaft, having arms extending therefrom and the cut-off device secured thereto, and means for automatically actuating the same, substantially as described.

25. In a machine for filling cartridges, the combination of the slotted actuating-rod, the rock-shaft, its extending arms, and the cut-off device secured thereto, with the two-part guiding-tube adapted to engage one of said arms, and the intermittently-rotating disk provided with shell-holders, the said devices being constructed and arranged so as to co-operate and properly conduct, discharge, and receive the shells, substantially as shown and described.

26. In a cartridge-filling machine, the combination, with the main structure and a reciprocating cross-head mounted thereon, of the crimper-rod provided with the spiral bead, the thimble E^2, situated above the bead, and a coiled spring depending from the thimble and arranged to engage said bead, substantially as set forth.

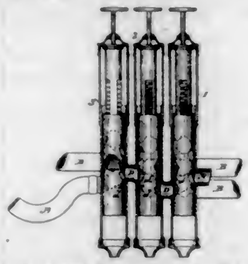
27. In a cartridge-filling machine, the combination, with the main structure and a reciprocating cross-head mounted thereon, of the crimper-spindle provided with a slip-joint, a spiral spring attached thereto, and jam-nuts arranged to bear upon said spring so as to adjust its tension, substantially as described.

28. In a cartridge-filling machine, the combination, with the main structure and a reciprocating cross-head mounted thereon, of a crimping device provided at one end with a recess of the proper configuration to crimp the cartridge-shell, and at its opposite ends with quick threads, which latter engage with similar threads in the cross-head, substantially as set forth.

29. In a cartridge-filling machine, the combination of the main supporting structure, a crimping device having a quick thread upon its spindle, a thimble, E^2, a worm-bead upon said spindle below the thimble, a spiral spring depending from the thimble and engaging said bead, and a reciprocating cross-head or equivalent device provided with quick threads adapted to register with the quick threads in the crimper-spindle, substantially as set forth.

30. In a cartridge-filling machine, the combination, with the table provided with the orifice a^4 and the incline a', of the disk D, provided with the holders d, substantially as shown and described.

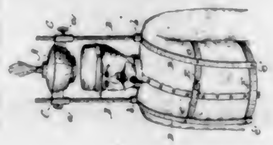
31. In a cartridge-filling machine, the combination, with the intermittently-rotating disk, the cartridge-holders, and the crimping device, of the pivoted toothed lever and the fixed dog, whereby the shell is prevented from revolving during the operation of crimping, substantially as shown and described.



32. In a cartridge-filling machine, the combination, with the intermittently-rotating disk, devices for operating the same, and cartridge-holders attached to said disk, of the pivoted toothed lever and the fixed dog, said lever and dog being arranged to receive the cartridge-shell between them and to prevent said shell from revolving during the operation of crimping, substantially as shown and described.

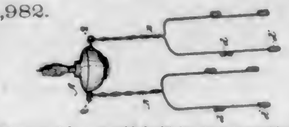
33. In a cartridge-filling machine, the combination, with the main structure, of a rotating disk mounted upon said structure and provided with a series of recesses, a pivoted spring-actuated lever arranged to engage by its free end with said recesses, and devices for throwing said lever out of engagement with said recesses, for the purpose set forth.

34. In a machine for filling cartridges, the combination, with the main structure and a table mounted thereon and provided with an aperture, of a reciprocating cross-head and a punch attached thereto, arranged to enter the cartridge-shell and to force the priming therefrom through the aperture in the table, substantially as shown and described.



35. In a cartridge-filling machine, the table provided with a recess, an anvil located in said recess, a feeding device for conducting the primings to the anvil, and a yielding bearing for said feeder, in combination with the reciprocating primer-setting punch, arranged to enter the cartridge-shells and affix the primings thereto, substantially as shown and described.

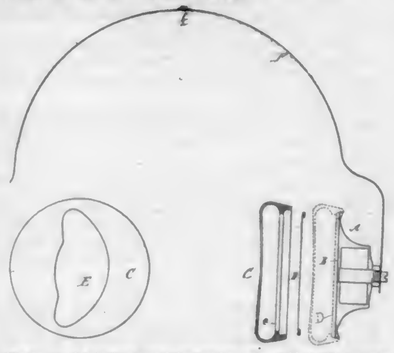
295,981. CORNET. CHARLES G. CONN, Elkhart, Ind. Filed July 14 1883. (No model.)



Claim.—In a cornet, the connecting-pipes D between the valves, curved or bent in the plane of the valves, as and for the purposes set forth.

295,982. BAND LAMP AND TORCH SUPPORT. JAS. S. CONWELL, Evanston, Ill. Filed Nov. 28, 1883. (No model.)

295,982.



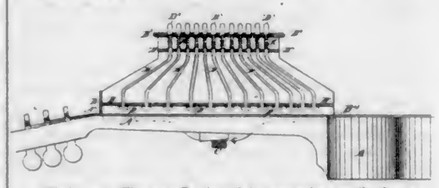
Claim.—1. A lamp provided with brackets, in combination with supporting-rods, shoulder-straps, and means for securing the latter in position, substantially as specified.

2. A band lamp or torch support comprising shoulder-straps and lamp-supporting rods formed of a single piece of material, substantially as specified.

3. The supporting-rods B and shoulder-straps D, having loops d, formed of a single piece of material, substantially as specified.

4. The combination of the lamp A, reflector B', rods B, shoulder-straps D, and retaining strap or straps E and F, substantially as shown and described.

295,983. TELEPHONE. FRANK B. COOK and FRANK F. GRAVES, Toledo, Ohio. Filed July 14, 1883. (No model.)



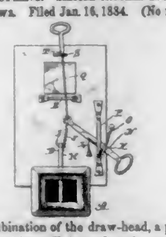
Claim.—1. A telephone receiving implement provided with a cover in front of the diaphragm, adapted to receive and embrace the ear of the operator, substantially as described.

2. In combination with a telephone receiving implement provided with a cover adapted to receive and embrace the ear of the operator, a supplemental diaphragm adapted to prevent said ear from coming in contact with the acting diaphragm, substantially as described.

3. In combination with a telephone receiving implement, a cap adapted to be detachably secured to such implement, and provided in its outer end with an opening adapted to embrace the ear of the operator, substantially as and for the purposes set forth.

4. In combination with a telephone receiving device provided with a supplemental diaphragm, and the cap having an opening to receive and embrace the ear, as herein described, a spring secured to such receiver, adapted to support the same upon the head, substantially as set forth.

295,984. GUITAR. JAMES C. COOKE, Orange, N. J. Filed Apr. 17, 1883. (No model.)



Claim.—1. The case B, adapted for convenient application to a guitar or analogous stringed instrument, knobs or keys D^2, arranged near each other, the depressors D, arranged along the case in the required positions to act on the several strings of the instrument, and divergent connecting means D', in combination with each other and with means, C G, for engaging firmly with the instrument, all substantially as herein specified.

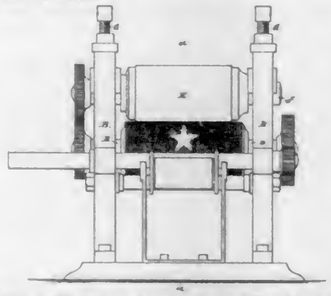
2. The keys D^2, arranged close together, extensions D', and string-depressors D, arranged wide apart, in combination with each other and with the springs E, plates or guiding means B' B^2 B^3, and with a stringed

musical instrument, A A', as herein specified.

3. The detachable case B, having a lower plate or guide, B', and second plate or guide, B^2, for the depressor-connections D', and a top plate, B^3, keys D^2, and springs E, in combination with each other and with the cross-bar or fastening means C, pivot c, and knob c', adapted to serve on a guitar or analogous stringed instrument, as herein specified.

295,985. CAR-COUPLING. SAMUEL CROCKER and STEPHEN CROCKER, Columbus Junction, Iowa. Filed Jan. 16, 1884. (No model.)

Claim.—1. The combination of the draw-head, a pivoted coupling-pin, the spring J, the slotted lever K, lever Q, and a means of supporting the lever in position, substantially as shown.

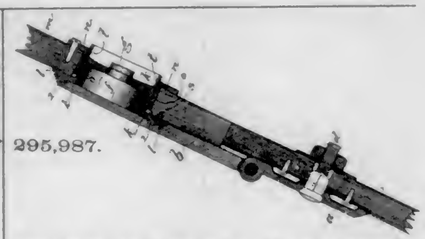


2. In a car-coupling, the combination of the draw-head, the pivoted coupling-pin, the spring, the frame P, the ratchet-bar O, which is pivoted upon the frame, and the lever K, which engages with the ratchet-bar, substantially as described.

3. The combination of the draw-head, the coupling-pin, a means of connection, the lever Q, provided with a shoulder, and a support for the shoulder to catch over, and thus hold the pin in a raised position, substantially as set forth.

4. The combination of the lever Q, a suitable means of connection at its lower end, and the pivoted coupling-pin, with a spiral support at its upper end for its shoulder T to catch upon, substantially as specified.

5. In a car-coupling, the combination of the frame P and the ratchet-bar O, which is pivoted thereon, the bar O being adapted to drop down out of the way when not needed to hold the lever K in position, substantially as shown and described.

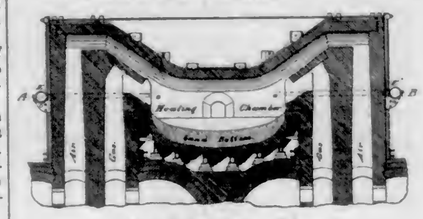


295,986. MANUFACTURE OF ORNAMENTAL METALLIC FOIL. HENRY SUYDAM CROOKE and LEWIS CROOKE, New York, N. Y. Filed July 15, 1880. (No model.)

Claim.—1. The method of ornamenting metallic foil by passing it between two rollers, one of which has all of its surface, except what corresponds with or is the counterpart of that to be produced burnished or bright on the surface of the foil, or the reverse, striated, grained, matted, or stippled, while those portions the counterpart of that to be produced burnished or bright on the surface of the foil are smooth, and the other of which is a counter-roller to press the foil in contact therewith, substantially as described.

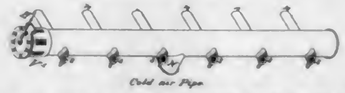
2. The combination of a main roller having its surface the counterpart of that to appear burnished or bright on the tin-foil smooth, while that portion that is to appear dead or white on the tin-foil is grained, striated, matted, or stippled, with a counter-roller, substantially as described.

295,987. HASP-LOCK. GEORGE CROUCH, New York, N. Y. Filed Nov. 5, 1883. (No model.)



295,987.

Claim.—1. The combination, with the lock *f* and hasp *b*, having an annular recess around the lock, of the lock-cup *k*, flange *l*, and annular rib for entering the said annular recess, substantially as and for the purpose set forth.

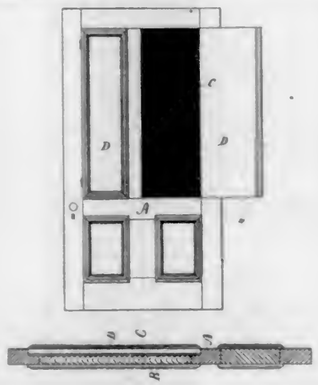


2. The combination, with the lock *f* and hasp *b*, having beveled edges, and an annular recess around the lock, of the lock-cup *k* and flange *l*, having a beveled edge, and the rib 2 upon the surface of the said flange to enter the recess in the hasp, substantially as set forth.

3. In combination with a hasp and circular lock-case, a lock-cap having an opening in the bottom for the locking-bolt to pass through, and a cylindrical extension behind such bottom for the reception of such bolt, and for preventing the contact of the same with the lining or contents of the trunk, substantially as specified.

295,988. METALLURGICAL GAS-FURNACE. WILLIAM F. DURFEE, Bridgeport, Conn., and THOMAS EGLESTON, New York, N. Y. Filed June 27 1882. Renewed Mar. 6, 1884. (No model.)

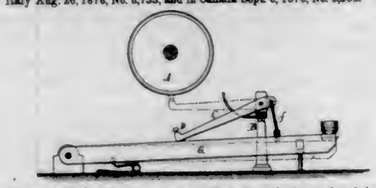
Vertical section on line C D.



Claim.—1. In a metallurgical furnace having gas and air ducts communicating with the heating-chamber, the pipes E E', provided with nozzles N n n, for the purpose of introducing air, steam, or other vapor or gas to said furnace, substantially as described.

2. In a metallurgical furnace, the pipes E E', having valves V V', nozzles N n n, and spy-holes s s, substantially as and for the purpose described.

295,989. VENTILATING-DOOR. HENRY W. EASTMAN, Baltimore, Md. Filed Sept. 10, 1883. (No model.)



Brief.—A door having a slatted opening covered with a screen, and imperforate doors to close said opening.

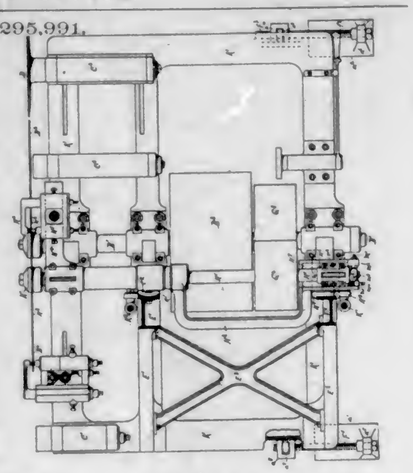
Claim.—1. A ventilating-door having a slatted opening, and one or more imperforate doors adapted to close the said opening, substantially as specified.

2. A ventilating-door having a slatted opening covered with a screen, and one or more imperforate doors adapted to close the said opening, all combined substantially as specified.

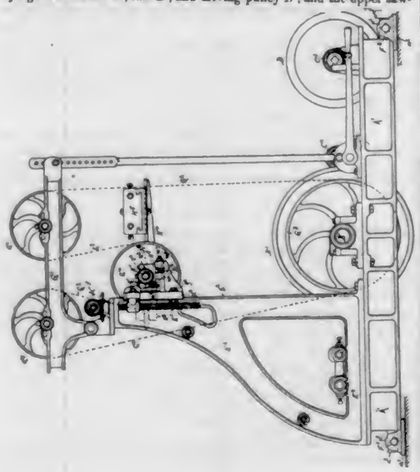
295,990. TYPE-WRITER. THOMAS A. EDISON, Menlo Park, N. J. Filed Dec. 9, 1878. Renewed May 25, 1883. (Model.) Patented in England Oct. 29, 1878, No. 3,762; in France May 6, 1878, No. 112,719; in Belgium May 8, 1878, No. 39,502; in Austria Aug. 23, 1878, No. 26,935; in Italy Aug. 26, 1878, No. 8,733, and in Canada Sept. 6, 1878, No. 6,508.

Claim.—The method herein specified of producing printed impressions in duplicate, consisting in impressing upon paper types in succession, each of which has a surface of points, so as to perforate the paper, and then forcing ink through the perforations upon the sheet to be printed, substantially as set forth.

295,991. CIRCULAR-SAW MILL. CHAS. ESPLIN, Minneapolis, Minn. Filed Dec. 10, 1883. (No model.)



Claim.—1. In a circular-saw mill, the combination of the laterally-adjustable husk-frame A', supporting the saw or saws B^2 H^2, stationary bed-plates a' a', on which the said husk-frame is supported, and by which it is held in position, and means for laterally adjusting the said frame upon the said bed-plates, substantially as and for the purpose herein specified.



2. The combination of the laterally-adjustable husk-frame A', having the mandrel B', saw B^2, lumber-supporting rollers C' C^2 C^3, and wedge-plate D, mounted thereon, stationary bed-plates a' a', on which the said husk-frame is supported and by which it is held in position, and means for laterally adjusting the said frame upon the said bed-plates, substantially as and for the purpose herein specified.

3. The combination of the laterally-movable husk-frame A', having the mandrel B', saw B^2, lumber-supporting rollers C' C^2 C^3, wedge-plate D, and upper saw-supporting frame, E' E^2 E^3, mounted thereon, stationary bed-plates a' a', on which the said husk-frame is supported and by which it is held in position, adjusting-screws F' F^2, nuts a^3 a^3, and sockets a^2 a^{10}, substantially as and for the purpose herein specified.

4. In a circular-saw mill, the combination of the husk-frame A', carrying the lower saw, B^2, the upper saw-supporting frame, E' E^2 E^3, mounted on the husk-frame, fixed bed-plates a' a^2, and frame-adjusting screws F' F^2, substantially as herein specified.

5. In a circular-saw mill, the combination of the husk-frame A', carrying the mandrel B', saw B^2, and driving-pulley B^3, and the upper saw-supporting frame, E' E^2 E^3, attached to the said husk-frame, located entirely at one side of the said mandrel B', substantially as and for the purpose herein specified.

6. In a circular-saw mill, the combination of the husk-frame A', carrying the lower mandrel, B', saw B^2, and saw-driving pulley B^3, the upper saw-supporting frame, E' E^2 E^3, the yoke-frame H^2, carrying the upper saw-mandrel, H', and adapted to swing laterally and vertically around the center of one mandrel-bearing, and means, substantially as described, for adjusting it at the other mandrel-bearing both horizontally and vertically, for the purpose herein specified.

7. In a circular-saw mill, the husk-frame A', carrying the lower saw, upper saw-frame having concave face e', yoke-frame H^2, carrying the upper saw-mandrel and saw, and having convex face e^2, and means for adjusting said yoke-frame, substantially as shown.

8. The combination of the frame E' E^2 E^3, having concave face e', yoke-frame H^2, carrying the upper saw-mandrel, H', and having convex face e^2, journal-box H^6, bracket H^5, and means for adjusting said yoke and mandrel, substantially as specified.

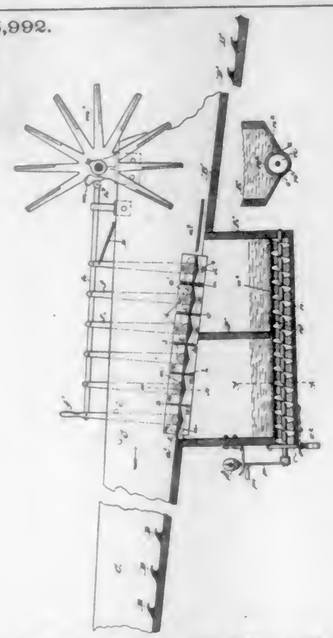
9. The combination of the frame E' E^2 E^3, having the concave face e', yoke-frame H^2, having convex face e^2, guide-arm H^4, guide H^3, mandrel H', saw H^1, journal-box H^6, bracket H^5, and means for adjusting said yoke-frame, substantially as described.

10. The combination of the frame E' E^2 E^3, having the concave face e', yoke-frame H^2, having convex face e^2, and carrying the mandrel H' and saw H^1, journal-box H^6, bracket H^5, and screws K' K^2, substantially as and for the purpose specified.

295,992. ORE-SEPARATOR. HADLEY P. FAIRFIELD, West Medford, Mass., and LOUIS A. SHEAD, Alameda, Cal., assignors to Gordon McKay, Trustee. Filed May 10, 1883. (No model.)

Claim.—1. In a sluice for separating materials of different specific gravity, movable bottom plates, the edges of which form the sides of narrow transverse slits of different widths through the sluice-bottom, substantially as described.

2. In a sluice for separating ore, movable bottom plates arranged to form narrow transverse slits of different widths, each of said bottom pieces being pivoted to turn on an axis in the plane of its edges, whereby the slits may be cleared of intruding particles, substantially as set forth.



3. A sluice having a portion of its bottom provided with narrow transverse slits, and made of varied inclination or steepness, whereby a varied speed is imparted to the stream flowing over it, substantially as described.

4. A sluice having a portion of its bottom of varied inclination or steepness, and provided with slits of different widths, substantially as and for the purpose described.

5. A sluice having a portion of its bottom composed of plates having narrow transverse slits of different widths between them, the said plates being bodily adjustable with relation to one another for regulating the width of the slits, substantially as described.

6. In a sluice for separating materials of different specific gravity, pivotal adjustable bottom plates, the edges of which form the sides of narrow transverse slits of different widths through the sluice-bottom, combined with mechanism, substantially as described, to rock said plates to dislodge particles from the slits to keep said slits in operative condition, as set forth.

295,992.

7. In a sluice for separating materials of different specific gravity, pivotal bottom plates, the edges of which form the sides of narrow transverse slits of different widths through the sluice-bottom, combined with mechanism, substantially as described, to rock said plates to dislodge particles from the slits to keep said slits in operative condition, as set forth.

8. A sluice having openings through its bottom and a receptacle, E, arranged below it, combined with an ejecting-worm, s, and lock therefor, to prevent the same from being operated, substantially as described.

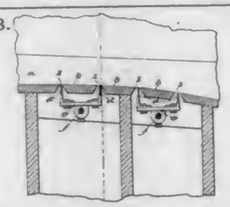
9. The sluice having a series of openings through its bottom, and a receptacle below it, having a discharge-passage provided with a suitable opening, 6, combined with an ejecting device consisting of a worm adapted to rotate in the said passage, substantially as described.

10. The sluice having a series of openings through its bottom, and a receptacle below it, having a discharge-passage provided with a suitable opening, 6, combined with an ejector to clear the said passage from material deposited therein through the said opening 6, substantially as described.

11. The sluice provided with movable bottom pieces arranged therein to form slits of different widths, and arms connected with said plates, combined with means to actuate the said arms, substantially as described.

12. The sluice and receptacle below it, having a discharge-passage provided with openings 6, the bottom of said receptacle being inclined toward said passage, to facilitate the entrance of the concentrate into the said passage, combined with an ejector to clear the said passage of concentrate, substantially as described.

13. The sluice and the receptacle E, and the fixed plate a^3, located a short distance above the bottom of the sluice, and with its upper edge located above the said receptacle, combined and in line with a movable bottom plate, the edge of which co-operates with the edge of the said fixed plate to form a slit, substantially as described.

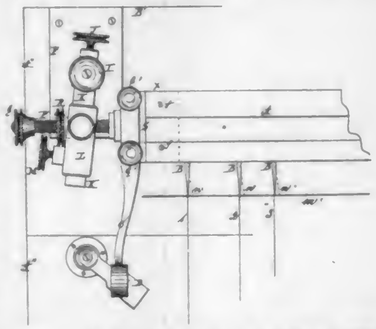


14. The sluice and movable bottom pieces and their bearing-blocks, combined with packing to close the spaces between the adjacent ends of the said bearing-blocks, substantially as described.

15. The sluice, the receptacle having a discharge-passage, and an ejector operating in the said passage, combined with a door or cover, e, for the said passage, and a lock for the said door, substantially as described.

295,993. ORE-SEPARATOR. HADLEY P. FAIRFIELD, West Medford Mass., and LOUIS A. SHEAD, Alameda, Cal., assignors to Gordon McKay, Trustee. Filed Dec. 17, 1883. (No model.)

Claim.—1. In an ore-separating apparatus, a sluice having a portion of its bottom provided with narrow transverse slits of different widths, whereby particles of heavy material of various sizes may be separated from particles of lighter materials of various sizes, substantially as described.



295,993.

2. A sluice having a transverse slit through its bottom, combined with a clearing device below the said slit, and supporting and operating mechanism for the said clearing device, outside of and removed from the action of the stream passing through the sluice, the said clearing device acting on substantially the whole length of the slit, substantially as described.

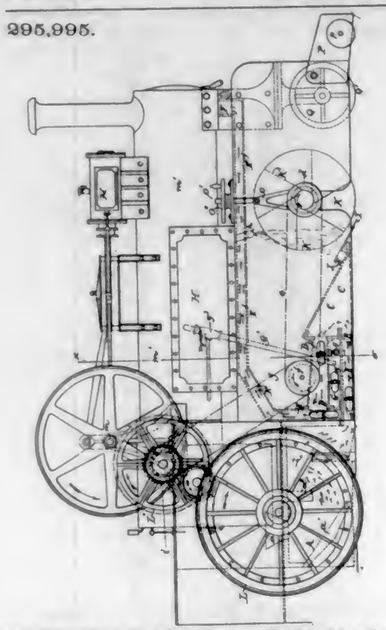
3. The combination of the sluice having a transverse slit through its bottom with a clearing device, and means to move the said clearing device longitudinally in the said slit, the said clearing device having inclined edges, whereby the particles are lifted out of the said slits, substantially as and for the purpose described.

295,994. PAPER-RULING MACHINE. JONATHAN C. FORMAN, Cleveland, Ohio. Filed Aug. 10, 1883. (No model.)

Claim.—1. In paper-ruling machines, the standard A', consisting of a post provided with an annular and vertically-adjustable sleeve, having projecting therefrom an arm fitted with a movable sleeve bearing an annular movable head carrying the adjusting-screw of the pen-beam, said arm being adaptable to an oblique or angular relation to the pen-beam, for adjusting the pens to the head-line drawn on the paper being ruled and to the points or places on said head-line from which the column-lines are to be drawn, substantially as herein set forth, and for the purposes specified.

2. In paper-ruling machines, an annular movable arm provided with an adjustable sleeve supporting a socket in which is fitted an annular movable head in which is inserted the adjusting-screw of the pen-beam, and susceptible of being arranged at various angles in respect to the pen-beam, for adjusting the pens of the beam to the head-line on the paper being ruled, substantially as herein described.

3. The combination of the adjusting-screw P, provided with a collar, c', bushing, washer, and set-screw, plate angle-iron S, having a socket, T, and set-screw m, for securing the said bushing to the socket of the plate angle-iron, substantially as set forth, and for the purpose specified.



295,995. SNOW-CLEARER. JOHN FORSTER, St. Helen's, County of Lancaster, England. Filed Dec. 31, 1883. (No model.)

Brief.—The snow is thrown by the rotary drum upon a yielding scraper back upon the upper inclined surface of the lower heated chamber into a tank heated by a peculiar arrangement of flues, from which it is raised into an upper reservoir. A perforated pipe connected to the upper reservoir sprays the snow, as it is being carried up said heated inclined surface, with water.

Claim.—1. In a snow-plow, a chamber located near the surface of the road, and having its upper surface inclined in a forward and downward direction, a rotary drum whereby the snow is delivered directly from the road over said surface, and means, substantially as described, for heating said chamber internally.

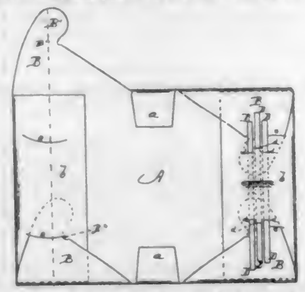
2. In combination with a wheeled frame, a furnace, a forward chamber, through which the heated products of combustion are conducted from

295,995.

the furnace, and a rotary drum, whereby snow is delivered from the road directly to the top of said chamber.

3. A wheeled frame, in combination with the furnace A, the chamber C, communicating with said furnace by the passage B, the returning-flue D, and the flue E, extending forward above the snow-passage.

4. In a snow-plow, a heated under flue or chamber, a heated upper flue, and means, substantially as described, for delivering the snow backward between said flues.

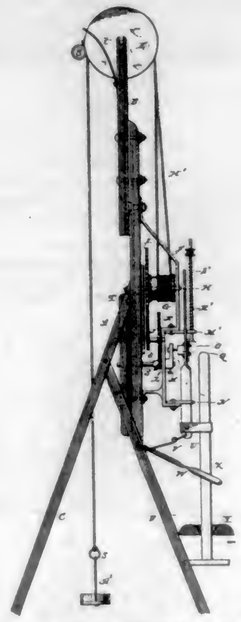


5. In combination with the wheeled frame, its furnace, the passage B, chamber C, flues D, water-receptacle G, elevated reservoir H, and means, substantially as described, for elevating the water thereto.

6. In combination with the heating-chamber C, having the inclined top, the yielding scraper in advance thereof, and the rotary drum.

7. In combination with the wheeled frame, provided with means, substantially as described, for melting the snow, the forward plows, P, pivoted to the arm, and provided with the sustaining-wheels p, as described.

8. In a track-clearer, the combination of the artificial means, substantially as described, for heating and melting the snow, with means for spraying the snow with water.

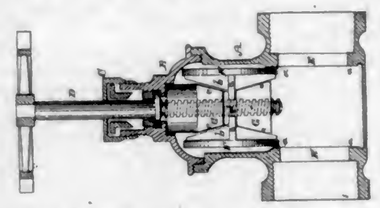


295,996. BOOK-COVER. ELLEN S. GITCHELL, Boston, Mass., assignor to Anna M. Coudrey, same place. Filed July 9, 1883. (Model.)

Claim.—1. The herein-described improved book-cover, consisting, essentially, of the main portion A, side flaps, b, provided with the slits c, and hooked flaps B B' B'', the hooks B' on said flaps being all cut and arranged, as shown, to project inwardly toward the center of the book-cover, all constructed substantially as and for the purpose set forth.

2. The combination, in a book-cover, of the main portion A, provided with the side flap, b, said side flap having the slits d and slot e, and the numbered stripe D, constructed and arranged substantially as and for the purpose described.

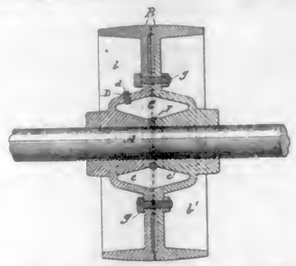
295,997. MOTOR FOR LIGHT MACHINERY. JAMES WILLIAM GILBERT, Hoboken, Ala. Filed Dec. 27, 1882. Renewed Dec. 19, 1883. (No model.)



Claim.—1. In a motor, the combination of the pulley, the cords passing over it, and a perforated spring-holder, t, which catches over the pulley and prevents displacement of the cord, substantially as shown.

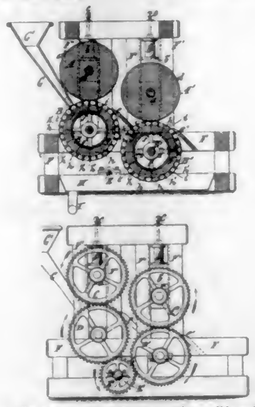
2. The combination of the reciprocating rod O, to which the churn-dasher is connected, with the slotted plate Q, the guide N, the rod R', and spring S', substantially as set forth.

3. The combination, in a motor for churns and other light machines, of a fly-wheel provided with a weight upon one of its arms, the slotted plate, the rod O, the rod R', spring S', and guides N M, the parts being combined and arranged to operate as shown and described.



4. The combination of the vertically-moving rod O and a suitable guide with the fan W and its connections U V and the dasher-rod, substantially as specified.

295,998. GATE OR VALVE. PHILIP GIOVANNINI, San Francisco, Cal. Filed Apr. 30, 1883. (No model.)



Claim.—The combination, with the stem D, mounted in the casing A B C, and carrying upon it screw-threaded lower portion the block G, formed with the reversely-inclined faces e e, and grooves d, of the disks F, provided at their inner sides with the reversely-inclined faces b, for engaging with the said inclined faces e, and with the lugs c, for entering the said grooves d, substantially as and for the purposes set forth.

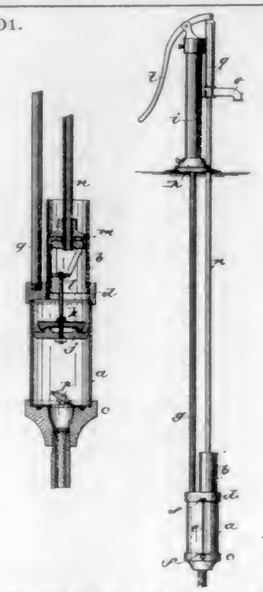
295,999. SELF-LUBRICATING LOOSE PULLEY. EDWD. F. GORDON, Concord, N. H., assignor of one-half to Horatio Hobbs, same place. Filed Oct. 8, 1883. (No model.)

Claim.—In a self-lubricating loose pulley, B, the central porous washer, F, clamped between the sections *b b'*, for the purpose of conducting oil from the chamber C to the shaft, substantially as and in the manner described and set forth.

296,000. APPARATUS FOR SEPARATING SOLID AND LIQUID PORTIONS OF STARCH REFUSE, &c. PAUL H. GRIMM, Glen Cove, N. Y., assignor to the Glen Cove Manufacturing Company, same place. Filed Dec. 31, 1883. (No model.)

Claim.—1. In an apparatus for separating solid and liquid substances, the combination of a lower roll, having in its periphery gutters or channels extending lengthwise of the roll, and also having a reticulated or perforated covering, an upper roll for operating in conjunction with said lower roll, and means for delivering the wet substance upon said lower roll near its point of contact with said upper roll, substantially as herein described.

2. In an apparatus for separating solid and liquid substances, the combination of a lower roll, having in its periphery gutters or channels which are oblique to the axis of the roll, and also having a reticulated or perforated covering, an upper roll for operating in conjunction with said lower roll, and means for delivering the wet substance upon the said lower roll near its point of contact with said upper roll, substantially as herein described.

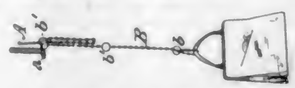


3. The combination of the lower roll, B, having gutters or channels *h*, which extend obliquely in opposite directions toward its ends, and also having a covering, *i*, of reticulated or perforated material, the upper roll, A, and the feeding-chute G, substantially as herein described.

4. The combination of the lower rolls, B B', each having gutters or channels *h* in its periphery, and each having a covering, *i*, of reticulated or perforated material, the upper rolls, A A', the scraper *e*, for delivering material from the roll B to the roll B', the scraper *e'*, for delivering material from the roll B', and the feeding-chute G, all arranged and adapted for operation substantially as herein described.

296,001. PUMP. ORLIN W. HAMMOND, Belmont, N. Y. Filed Sept. 1, 1883. (No model.)

Claim.—1. In a lift and force pump having a hollow piston-rod for the delivery of the water, and a cylinder consisting of two sections which are offset, as described, for the connection of the supporting-rod, the piston *j*, suspended from the piston *m* by a hanger, *l*, having the point of

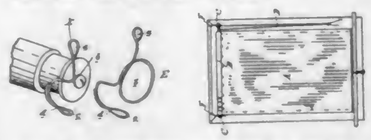


296,001.

connection offset from the center of said piston *m*, as specified.

2. In a lift and force pump, the cylinder constructed of a larger and a smaller section, which are connected by a cap, said cap having the smaller section, and offset from the center of the larger section, to allow for the connection to said cap of a suspending or supporting rod, substantially as and for the purpose set forth.

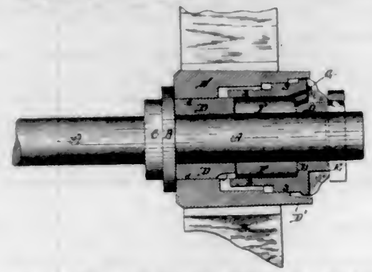
296,002. SAFETY ATTACHMENT. ELIZABETH G. HARLEY, Philadelphia, Pa. Filed Jan. 18, 1884. (No model.)



Claim.—1. A suspending-hook for safety attachments, having two U-shaped bends turned in opposite directions, and a cross-piece or retainer at the end of one of said bends, in combination with a cord or chain provided with means for attachment to said hook and to the article to be carried, substantially as set forth.

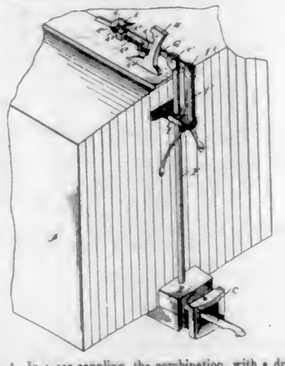
2. The combination of a suspending-hook such as described, and a cord or chain connected at one end to said hook, and having a connecting piece, ring, or slide at the other, substantially as set forth.

3. The combination of a suspending-hook such as described, a cord or chain attached thereto, a connecting-piece attached to the opposite end of said cord or chain, and one or more adjusting-pieces attached to the cord or chain between the hook and the connecting-piece, substantially as set forth.



296,003. CURTAIN-ROLLER FIXTURE. JONATHAN HARRIS, Grand Ledge, Mich. Filed Dec. 19, 1883. (No model.)

Claim.—1. In combination with a curtain roller and cord, a wire support forming a bearing which carries the end of said roller, supports the same from a fixed point, and furnishes a spring locking loop and slot, substantially as and for the purposes described.

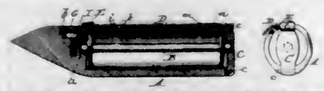


2. In combination with a curtain cord and roller, the locking-support E, bent from one piece of wire, forming the loops *b c* and the slot *d*, substantially as and for the purposes described.

296,004. CAR-WHEEL HUB. JOHN V. HAWKEY, Irwin's Station, Pa. Filed Nov. 22, 1883. (No model.)

Claim.—The protector D, having shoulders 1 and 3, intermediate shoulder, 2, chamber F, opening G, and channel J, in combination with the axle A and hub D', substantially as shown and described.

296,005. CAR-COUPLING. FRANK JOHN HETZNER, Rochester, Ind. Filed Jan. 15, 1884. (No model.)



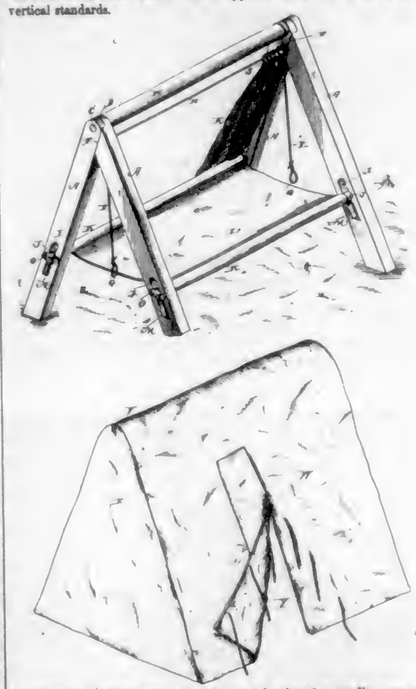
Claim.—1. In a car-coupling, the combination, with a draw-head, of a coupling-latch provided at its front end with a hooked portion, and a spring-pressed rod extending upwardly from the under side of the car and passing through the rear end of said latch, substantially as set forth.

2. The combination, with the draw-head having a coupling-latch secured therein, of a rod mounted in a bracket secured to the outer side of the car, a standard secured to said bracket having arms, between which is pivoted one end of a lever, said lever being also connected to the coupling-rod, a standard, H, having teeth A, a bell-crank lever, I, pivoted near the rear end of the lever G, a rod, h^3, connected with said bell-crank lever, and a block, h^3, secured to the end of the rod h^3, said rod being provided with a coil-spring, which bears against the block h^3 at one end and against the block h^3 at the other end, substantially as set forth.

296,006. SEWING-MACHINE SHUTTLE. JOHN HOEFLER, Ilion, N. Y. Filed July 24, 1883. (No model.)

Brief.—Improvement upon shuttle embraced in applicant's patent of April 25, 1882, No 256,896. A volute spring surrounds the screw and presses against the under side of the plate to which the tension-spring is pivoted.

Claim.—1. In combination with the tubular shuttle, the non-rotating plate E, the adjusting-screw G, and the external tension-spring, D, pivoted to said plate and arranged to swing in a plane parallel with the side of the body.



2. In combination with the tubular shuttle-body, the spring I, the plate E, seated in a recess in the body and fixed against rotation, the adjusting-screw G, and the external tension-spring, D, pivoted to the plate and arranged to swing in the direction described and shown.

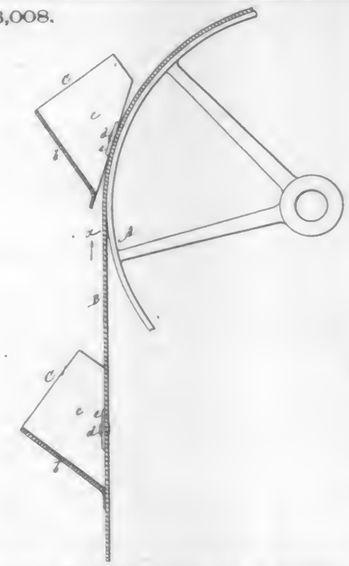
3. In combination with the tubular shuttle-body, the heel-plate C, hinged at one end to the said body and having its free end provided with the transverse open-ended groove, and the external tension-spring, D, pivotally connected at one end with said body to swing in a plane parallel to its side, and provided at the opposite end with a hook, *e*, adapted to be slid longitudinally into the groove of the heel-plate by the swinging movement of the spring, as described, whereby the spring is caused to retain the heel-plate in a closed position and the heel-plate caused to maintain the spring under tension.

4. In combination with a shuttle-body having the hole or depression *k*, and the groove extending laterally therefrom, and having also the depression or cavity *n*, the hinged and grooved heel-plate, and the external spring pivoted at one end, adapted to engage at the opposite end with the heel-plate, and provided at an intermediate point in its length with a stud or projection.

296,007. SPRING-BOTTOM CAMP-BED. WILLIAM GREEN HOLDEN, Corpus Christi, Tex., assignor of one-half to Lee F. Cowan, same place. Filed Sept. 25, 1883. (No model.)

Brief.—A folding camp-bed is provided with a fabric bottom mounted on side rails, which rails are supported by springs in slots in the vertical standards.

Claim.—1. The combination of the end pairs of upwardly-convergent supports provided with longitudinally-disposed slots near their lower ends and with perforations at their top ends, the longitudinal top connecting-bar, the ends of which are received by said perforations, the longitudinal side bars, the ends of which project in the said slots, pivoted retaining-buttons on the ends of these side bars, the coiled springs seated in the slots, and the bed-bottom, substantially as set forth.

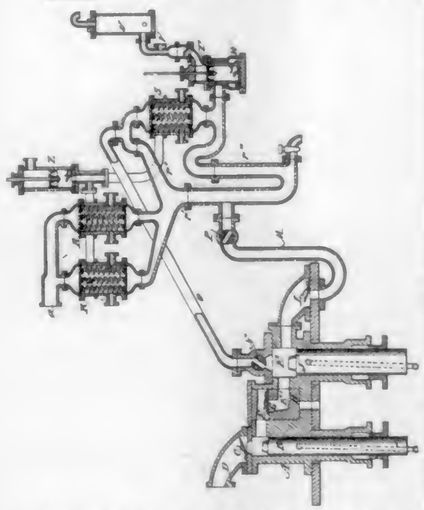


2. The combination, with the frame comprising end supports having longitudinally-disposed slots, of the side bars having their ends projecting in these slots, friction-rollers journaled in said ends, pivoted retaining-buttons on the said ends, the flexible bed-bottom, and the coiled springs seated in the bottom portion of the said slots, substantially as set forth.

3. A camp-bed embodying the frame comprising end supports, the pendent looped cords Q at each end of the frame, the side pieces removably connected to end supports, and the flexible bed-bottom, substantially as and for the purpose set forth.

296,008. ELEVATOR-BUCKET. JOSEPH A. HOLMES, Greenland, N. H. Filed Feb. 27, 1884. (No model.)

Claim.—1. In buckets of endless belt or band elevators, having open bottoms and raised sides and back, the bucket constructed or provided with means for attaching it in front of its back, at or near the cen-

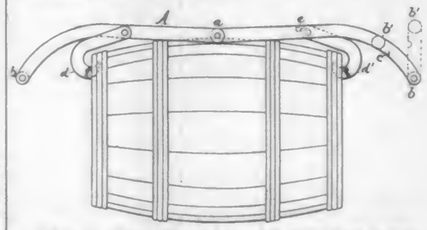


296,008.

ter of the length of its sides, to the exterior of the band, substantially as and for the purpose herein set forth.

2. In endless belt and bucket elevators, the combination, with the endless belt B, of the buckets C, constructed with a back, *b*, and sides *a c*, but left open at their tops, bottoms, and mouths or delivery ends, and attached at or near the center of the length of their sides, in front of their backs, to the outside of the belt or band, substantially as shown and described.

296,009. COMBINED FEED-PUMP AND CONDENSING APPARATUS FOR ENGINES. JOHN HOUPT, Springtown, Pa. Filed Jan. 10, 1884. (No model.)



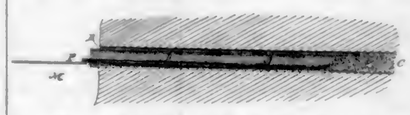
Claim.—1. In condensing and boiler-feeding apparatus for steam-engines, in which a primary and a secondary condenser are used, the combination, with the primary condenser or moderator for direct application to or connection with the engine-cylinder, and arranged intermediately of said cylinder and the secondary condenser, and with a feed or force pump in controllable connection with the duct which passes off the hot water of condensation from the primary condenser, of a pipe or duct in controllable connection with said force or feed pump and with the secondary condenser, for drawing off accumulated hot pure vapor from the pump, substantially as specified.

2. The combination of a compound condensing apparatus in which a primary condenser or moderator and a secondary condenser are used, and a compound plunger, force, or feed pump adapted to supply to the boiler or boilers of an engine hot fresh water of condensation from the primary condenser, essentially as and for the purposes herein set forth.

3. The combination, with the pipes M O and valves L N P, with the pump barrel or chamber F, of a compound-plunger pump, the primary condenser or moderator R R, pipes *r' r'' r'''*, the secondary condenser or save-all S, the air-pump T, and hot-well W below, substantially as shown and described.

4. In a combined condensing and boiler-feeding apparatus, the combination, with the cylinder A of the pump, the elongated plunger B, and the outlet and check valves C G, of the auxiliary pump-cylinder F, elongated plunger J, and valve L, the plungers B and J being adapted both to work from the same side of the pump, and to make their strokes simultaneously in opposite directions, essentially as specified.

296,010. BARREL LIFTER AND CARRIER. WM. HENRY IDELLE, New Britain, Conn., assignor of one-half to Robert J. Vance, same place. Filed Feb. 4, 1884. (No model.)



Claim.—1. A barrel-lifter consisting of the frame having grapples or hooks at or near the respective ends thereof, substantially as described, and for the purpose specified.

2. A barrel-lifter consisting of the frame having hooks or grapples at or near the respective ends thereof, and the folding secondary handle, substantially as described, and for the purpose specified.

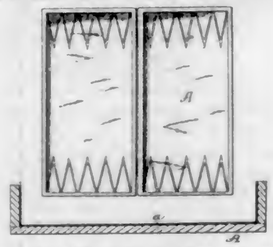
3. In a barrel-lifter, the jointed folding frame having the curved ends, handles, and grapples, substantially as described, and for the purpose specified.

4. The combination of the jointed and folding frame having handles *b b'* and the stop *c*, substantially as described, and for the purpose specified.

296,011. MINER'S SQUIB. GEORGE A. INGRAM, Plymouth, Pa. Filed Dec. 31, 1883. (No model.)

Claim.—1. In a mining-squib, the shells filled with powder or other explosive agent and having heads or stoppers at each end, said heads being formed of a mixture of suitable ingredients to make a paste which will stick or adhere to the shells, and yet be readily combustible, as set forth.

2. A mining-squib having the shell saturated or coated with a composition to make it combustible, preparatory to filling the same, an explosive filling, and combustible heads or stoppers at the ends of the shell, said heads being composed of a composition of ingredients to make a paste which will adhere to the shells, and yet be readily combustible, as set forth.

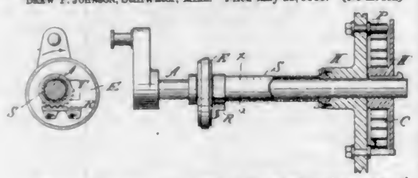


3. As an improved article of manufacture, the herein-described mining-squib, comprising the shells saturated or coated with a composition to make them combustible, preparatory to filling the same, a filling for the shells, composed of some explosive agent, heads or stoppers at the ends of the shell, made of ingredients to form a paste which will adhere to the shells, and yet be readily combustible, and the combustible match, as set forth.

4. As an improved article of manufacture, the herein-described mining-squib, comprising the shells saturated or coated with a mixture to make them combustible, preparatory to filling the same, a filling for the shells, composed of some explosive agent, heads or stoppers at the ends, made of ingredients to form a paste which will adhere to the shells, and yet be readily combustible, and the match independent of the shell and formed of a flat piece of material coated with a combustible composition, as and for the purpose set forth.

5. As an improvement in mining-squibs, the shells saturated or immersed in a composition to make them combustible, and having an explosive filling, combustible heads or stoppers at the ends of the shell to retain the filling, and the combustible match independent of the shell, as set forth.

6. As an improvement in mining-squibs, the shells saturated or immersed in a composition to render them combustible, and having an explosive filling, combustible heads or stoppers at the ends of the shell to retain the filling, and the match formed of a flat piece of suitable material independent of the shell and coated with a composition to make it combustible, as set forth.



296,012. GAME-BOARD, DICE-BOX, &c. ARRIE AMELIA JACKSON, New York, N. Y. Filed Jan. 22, 1884. (No model.)

Claim.—1. A muffled game-board and dice-box, substantially as herein described.

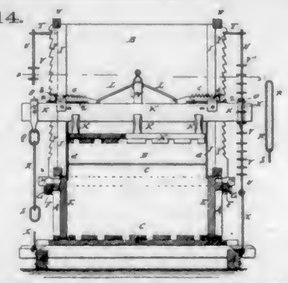
2. In devices for recreative amusement, the combination, with the shell, frame, or body of the box or board, of soft or non-resonant lining or interior covering, substantially as specified.

296,013. REVERSING AND CUT-OFF GEAR FOR ENGINES. ANDREW F. JOHNSON, Stillwater, Minn. Filed May 23, 1883. (No model.)

Claim.—1. The combination, with a crank-shaft having a squared portion, an eccentric having a rectangular slot and mounted on said squared portion, and a rack adjustably secured to said eccentric, of a sleeve mounted on said crank-shaft and provided with gear engaging with the rack, and means, substantially as shown and described, for operating the sleeve, whereby a positive transverse movement is imparted to the eccentric and its throw varied, as set forth.

2. In reversing and cut-off mechanism, the combination, with the crank-shaft A, the slotted eccentric E, and the sleeve S, fitted for moving the eccentric, of the pinion K, the rack J, and the sleeve L², substantially as described, for adjustment of the eccentric, as specified.

3. In reversing and cut-off mechanism, the combination, with the eccentric E and the sleeve S, connected to the eccentric, of the mechanism, substantially as described, for operation by hand to move the sleeve S for adjustment of the eccentric to vary the cut-off, as specified.

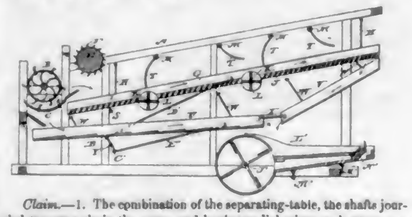


296,014. BALING-PRESS. ANDREW JOHNSON, Greensborough, Ala. Filed Dec. 13, 1883. (No model.)

Claim.—1. A baling-press constructed substantially as herein shown and described, and consisting of the press-box having slotted ends and provided with ratchet-bars Y and fulcrum-bars U, the follower K, having truss L M and provided with spring-held catch-bars Z, and bands N, having ribs O and rings Q, and the levers P, having slotted and recessed forward ends, as set forth.

2. In a baling-press, the combination, with the press-frame A and the center bar of the follower K, of the fulcrum-bars U, the bands N, having ribs O and rings Q, and the levers P, substantially as herein shown and described, whereby the said levers can be applied below and above the said ends successively, as set forth.

3. In a baling-press, the combination, with the press-frame A, the center bar of the follower K, the fulcrum-bars U, the bands N, having



296,014.

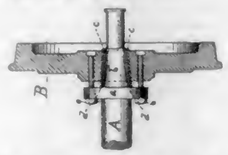
ribs O and rings Q, and the levers P, of the separable links and rings R S, substantially as herein shown and described, whereby the levers can be applied at a distance below the said center bar of the follower when beginning the pressing operation, as set forth.

4. In a baling-press, the combination, with the slotted ends of the press and the center bar of the follower, of the ratchet-bars Y, on both sides of the slots, and the T-shaped catch-bars Z, sliding in bearings on the ends of the center bar of the follower K, and springs *c*, secured to the follower and slides, substantially as herein shown and described, whereby the follower will be held in place while adjusting the levers for another stroke, as set forth.

296,015. THRASHING-MACHINE. JOHN M. C. JONES, London, Ohio. Filed Aug. 4, 1883. (No model.)

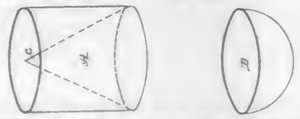
Claim.—1. The combination of the separating-table, the shafts journaled transversely in the same, and having radial wings or beaters, one end of said shafts extending through the frame or casing of the machine, pulleys upon the said projecting ends, a belt or band connecting the said pulleys, and mechanism for conveying motion to one of the said shafts from the fan-shaft, substantially as set forth.

2. In a thrashing-machine and separator, the combination of the separating-table having the bottom formed of inclined slats and provided with the revolving beaters, the revolving picker-cylinder and the vibrating pickers, all co-operating to loosen and separate the straw in its passage through the machine, substantially as set forth.



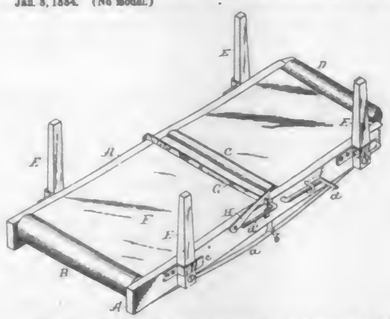
3. In a thrashing-machine and separator, the combination of the shoe mounted upon crank-shafts, as described, a crank upon one of the said shafts extending beyond the side of the casing, an eccentric secured upon the fan-shaft, a collar working upon the said eccentric and having an arm, a bell-crank lever pivoted to the side of the casing, and a link working upon the extending crank and connecting pivotally one arm of the bell-crank lever with the arm of the eccentric-collar, whereby the stroke or movement of the shoe may be regulated, substantially as set forth.

296,016. LAST. VALERIAN K. JONES, Lynn, Mass. Filed Oct. 29, 1883. (No model.)



Claim.—A last for boots and shoes, having a recess or recesses formed in the surface thereof upon the side, substantially as described, and for the purpose set forth.

296,017. CAR WHEEL AND AXLE. MICHAEL JORDAN, Scranton, Pa., assignor of one-fourth to Otto Schreifer and John F. Connolly, both of same place. Filed July 27, 1883. (No model.)



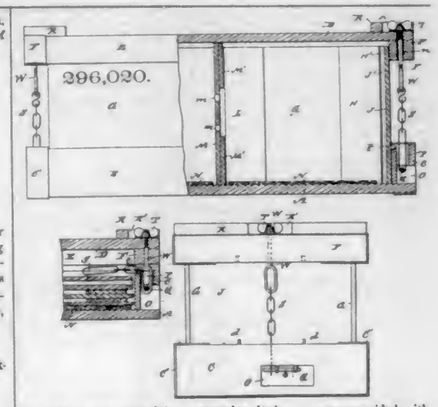
Claim.—The combination, with a car-axle having recesses or grooves in its wheel-bearings, and wheels having tongues corresponding in number and position to the grooves in the axle, and co-operating together, so as to interlock the wheel upon the axle, of fixed abutments on the axle, and bolts or analogous devices extending between the latter and the wheels for drawing and securing the wheels upon the axle, substantially as and for the purpose specified.

296,018. EDUCATIONAL APPLIANCE. ALBERT H. KENNEDY, Rockport, Ind. Filed Oct. 29, 1883. (No model.)

Claim.—An illustrative apparatus for showing the volume of symmetrical solids, consisting of a hollow cylinder and cone of the same diameter and height, the cone being secured inside of the cylinder, and a hollow hemisphere of the same diameter as the other parts, all adapted to be used together, for the purpose described.

296,019. LUMBER-WAGON. OWEN KINSLEY, Clinton, Iowa. Filed Jan. 8, 1884. (No model.)

Claim.—1. The combination, in a wagon-bed or lumber-wagon rack, with the end rollers, B D, of the middle roller, C, the upper surface of which middle roller is slightly above the plane of the upper surfaces of the end rollers, the crank *d*, attached to the end of the middle roller, and the adjustable locking-staple *f*, substantially as and for the purposes described.



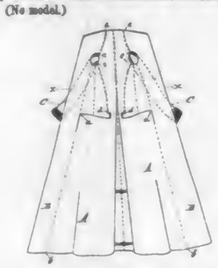
2. The combination, in a lumber-wagon rack, of the rollers B C D, the crank *d*, the adjustable locking-staple *f*, and the pivoted standards E, adapted to fold down automatically, substantially as and for the purposes described.

3. The combination, in a lumber-wagon rack, of the rollers B C D, the crank *d*, the adjustable staple *f*, the pivoted standards E, the angular lock-bar G, and the dog H, substantially as and for the purposes described.

296,020. FOLDING BOX. HENRY KROG, Sr., Washington, Mo. Filed Jan. 4, 1884. (No model.)

Claim.—1. In a folding box, the combination, with the bottom section and cover, of removable sides and ends, a chain, screw-bolt, and nut for pressing the bottom and cover against the bottom and top edges of the said sides and ends, and a fastening device in the end pieces of the bottom section, for the purpose of holding the lower end of the chain, substantially as herein shown and described.

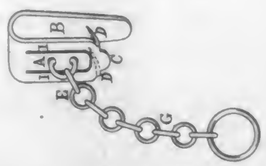
2. In a folding box, the combination, with removable sides and ends, of a bottom having end pieces, each provided with a vertical aperture,



296,020.

and with a recess containing a fastening device, a cover provided with end pieces having vertical apertures, the chain S, the screw-bolt W, provided with a loop or eye at its lower end, and of the nut T, screwed on the end of the bolt, substantially as herein shown and described.

3. In a folding box, the combination, with removable sides and ends, of the bottom A, having end pieces, C, provided with recesses O, sliding bolts Q in said recesses, apertures P, and notches *t*, and the cover D, provided with end pieces, F, the chain S, the screw-bolt W, and the nut T, substantially as herein shown and described.



296,021. CLOAK. JACOB LANDESMANN, Cleveland, Ohio. Filed Aug. 11, 1883. (No model.)

Claim.—1. In a garment known as the "Russian circular," the parts A and B, nearly equal in length, the part B being secured to the part A, so as to loosely fit the wearer from the lower edge thereof to the waist, and then joining the outer part, A, at the back seams, forming a tight-fitting garment from the waist up, leaving the outer part in loose or flowing lines, substantially as set forth.

2. A garment consisting, essentially, of the parts A and B, nearly equal in length, the part B being secured to the part A and forming a tight-fitting garment from the waist up, leaving the outer part, B, in loose and flowing lines, and sleeves situated between the outer and inner parts and connected to the latter.

296,022. GUARD CHAIN AND HOOK. EWALD LANGEFELD, New York, N. Y. Filed Jan. 14, 1884. (No model.)

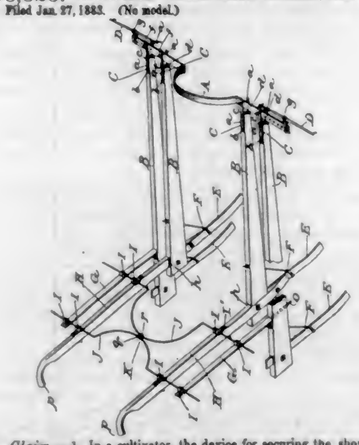
Claim.—1. The combination of the rigid hook and tongue A B and flexible grip I C I with teeth D D, substantially as described.

2. The rigid hook and tongue A B, with guard-chain E G, attached to the middle of the tongue A, for the purpose specified.

296,023. DEVICE FOR KEEPING FISH, MEAT, FRUIT, AND OTHER PRESERVING CANS CLEAN WHILE BEING FILLED. THOMAS LEVI, New Westminster, British Columbia, Canada. Filed Mar. 12, 1883. (No model.)

Claim.—The combination of the case or cylinder B with the preserving-can A, when applied as shown in the Fig. C, substantially as described.

296,024. FEED-REGULATOR. JOHN LUCAS, Hastings, Minn. Filed June 23, 1883. (No model.)



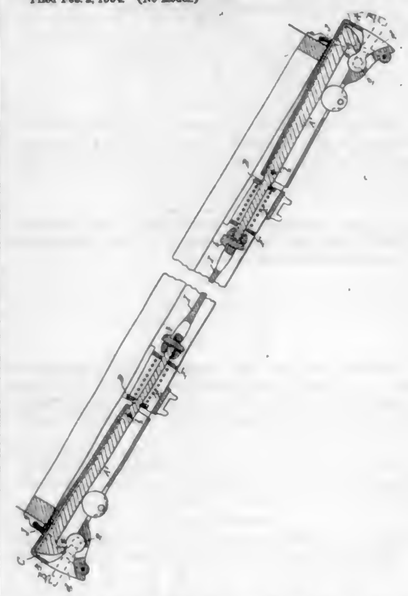
Claim.—1. In a grain-feed for separating-machines, the combination, substantially as hereinbefore set forth, of the hopper having suitable bottom discharge-opening, the rollers arranged in front and rear of said hopper, the apron passed around said rollers and moving flush with the under side of the hopper, the cone-pulley secured on one of said rollers, a suitable drive-shaft arranged parallel with said rollers, a cone-pulley secured on said drive-shaft in line with and arranged opposite to the pulley on the roller, and the drive-belt passed around said cones, all substantially as described and shown, and for the purposes specified.

2. In a grain-feed for separating-machines, the combination of the hopper, the rollers, the feed-apron, the cone-pulleys, the drive-belt, and the shifting mechanism composed of a roller-shifter bearing against the driving-belt, and provided with end flanges projected on opposite sides of said belt, and the boxing supporting said roller-shifter, and means for adjusting the shifting mechanism laterally, substantially as described, whereby the feed is regulated, substantially as set forth.

3. The combination, in a grain-feed for separating-machines, of the hopper *f*, having open bottom and discharge-opening *g*, the rollers *d d'*, arranged the one in advance and the other in rear of the hopper, the apron passed around said rollers and close against the bottom of the hopper, the supporting-board arranged close under the upper section of the apron and directly below or opposite the open bottom of the hopper, the cone-pulley *a*, secured on roller *d*, the drive-shaft, the cone-pulley a^2, secured thereon, the drive-belt *b*, and the shifting device $e\ e'\ e^3\ e^4$, all substantially as described and shown, and for the purposes specified.

296,025. CULTIVATOR. ANDREW JACKSON MAHERRY, Cabot, Ark. Filed Jan. 27, 1883. (No model.)

Claim.—1. In a cultivator, the device for securing the shovel to the shank and holding it in any desired position by means of a yoke, *i*, bent around the shank from the rear, the forward ends provided with wings or flanges to receive the concave side of the shovel, and secured by means of bolts, and arranged for throwing the soil either to the right or left, substantially as herein set forth.



2. The combination, in a cultivator, of the yoke, the adjusting holes and bolts, and the shovel arranged on the shank so as to rock thereon laterally and adjust vertically, as and for the purpose substantially as herein set forth.

3. The combination of the gage-rods J J, bowed centrally to be used as cranks in moving the plows inwardly or outwardly, as desired, with the ring and hook to secure said rods in position, substantially as herein set forth.

4. The combination of the eyebolts provided with stems, as shown, and the plates G H, with the gage-rods having right and left hand screw-threads, substantially as herein set forth.

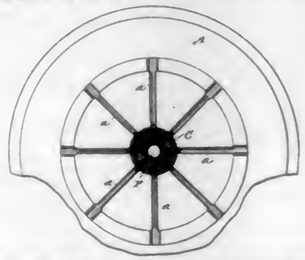
5. The combination, in a cultivator, of a double-tree, A, provided at each end with a series of oblong slots, the central part bowed as described, and the clevis formed of two plates connected by means of bolts to the beam, with the plates G H, the eyebolts I, and the gage-rods J, the whole arranged and combined substantially as herein set forth.

296,026. CAR-COUPLING. CHARLES EDGAR MARK, Flint, Mich. Filed Feb. 2, 1884. (No model.)

Claim.—1. As a means of supporting the fulcra in a continuous draw-bar composed of two end coupling-sections and an intermediate connecting-section, the ends of such outer sections having a vertical radial movement for the purposes of coupling or uncoupling, the boxes G, let into and secured to the coincident faces of the supporting-timbers, and constructed to allow of a horizontal movement of the fulcra and prevent a vertical movement of the same, substantially as described.

2. In combination with a continuous draw-bar consisting of three sections, as described, the followers D F, inclosing between them the buffer-spring E, and the boxes G, secured to the supporting-timbers H, and having their upper and lower sides, *h*, cut away for a portion of their length, whereby the follower F forms a fulcrum, and is prevented from any motion except a horizontal reciprocating one, while the follower D has a vertical movement, substantially as and for the purposes set forth.

3. In a car-coupling, and in combination with the follower-plates thereof, a three-side box, G, having flanges *e*, for securing it to the timbers, and provided with upper and lower sides, *h*, to retain one of the followers, and parts cut away for a portion of their length, to allow a vertical motion of the other follower, substantially as described.



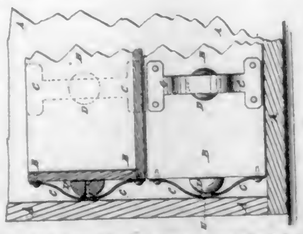
296,027. COUPLING. CHARLES EDGAR MARK, Flint, Mich., assignor of one-half to Josiah W. Bigelo, David S. Fox, and George L. Walker, all of same place. Filed Feb. 2, 1884. (No model.)

296,027.

Claim.—A coupling made of gas-pipe, outwardly cylindrical in form and provided with ears, while its bore is D-shaped in cross-section, substantially as described.

296,028. FLOWER-POT. DANL. OLIVER MARTIN, Marshall, Ill. Filed Aug. 24, 1883. (No model.)

Claim.—The combination of the centrally-apertured bottom B of a flower-pot, the plug D in a recess, C, thereof, the screw *b*, fitting a central hole in the bottom of the plug, and a stand, E, into which the screw works, whereby the pot may be secured to its stand without preventing the escape of surplus water, as described.

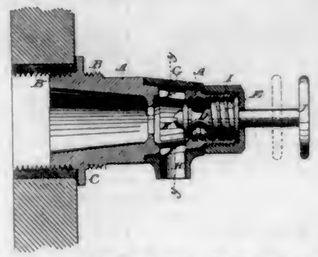


296,029. WASHER FOR VEHICLE-WHEELS. BARTHOLOMEW MARTERSON, Milford, Mass., assignor to himself and John W. Eldredge, same place. Filed Oct. 8, 1883. (No model.)

Claim.—1. A spoke-tenon washer made of two parts hinged together and rabbeted on opposite sides at their adjacent ends, to bring all parts in the same plane, as shown, whereby they may be made of metal or other non-flexible material, and yet may be applied without removing the tire or felly.

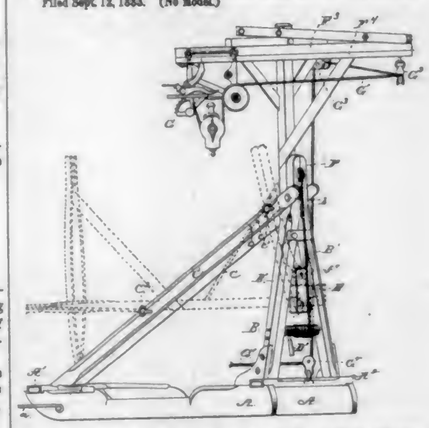
2. A jointed washer formed of the flat half-ring A', provided at its free end with a beveled stud, B, and the flat half-ring A^2, provided at its free end with a slot, C, the half-rings A' A^2 being pivoted to each other, substantially as herein shown and described.

296,030. SAMPLE TRUNK OR CASE. HENRY W. MATTONI, New York, N. Y., assignor to Bawo & Dotter, same place. Filed Feb. 6, 1884. (No model.)



Claim.—1. A sample trunk or case constructed, substantially as herein shown and described, with stop-springs interposed between the ends and sides and the ends and sides of its trays, as set forth.

2. In a sample trunk or case, the combination, with the trunk or case body A and its tray B, of arched metal springs C, substantially as herein shown and described, whereby the said tray is kept in place and protected against sudden jars, as set forth.



3. In a sample trunk or case, the combination, with the trunk or case body A, its tray B, and the arched metal springs C, of the re-enforcing rubber springs D, substantially as herein shown and described, whereby the said metal springs are strengthened against sudden jars, as set forth.

296,031. FAUCET. HUGO MATTULLATH, San Francisco, Cal., assignor to the Security Package Company, same place. Filed Sept. 17, 1883. (No model.)

Claim.—In a screw-faucet, the valve D, moving within it to close or open the outlet, and having screw-threads E, stem and operating-wheel J, and chambered sleeve G, fitting the exterior of the body A, in combination with the screw-cap I, through which the valve-stem passes, all substantially as shown and described.

296,032. HAY-STACKER. WILLIAM GLENN MCCOMAS, Colerain, Ohio. Filed Sept. 12, 1883. (No model.)

Claim.—1. In a hay carrier, derrick, or stacker, a pivoted standard provided on its upper end with a carrier-track and the necessary ropes and pulleys, whereby the carrier is operated, substantially as and for the purposes specified.

2. In a hay-stacker, the combination, substantially as set forth, of the supporting-frame, a standard pivotally supported thereon, and a carrier-track formed on the upper or free end of the standard, together with the necessary operating mechanism, substantially as described.

3. In a hay-stacker, the combination of the supporting-frame, a pivoted standard, means whereby this standard may be secured at any suitable angle in vertical plane with its pivot, and the necessary operating mechanism, substantially as set forth.

4. In a hay-stacker, the combination, with the supporting-frame, of the standard pivoted thereto, means whereby this standard may be adjusted to any desired angle radial to its pivot and laterally thereto, and the necessary operating mechanism, substantially as set forth.

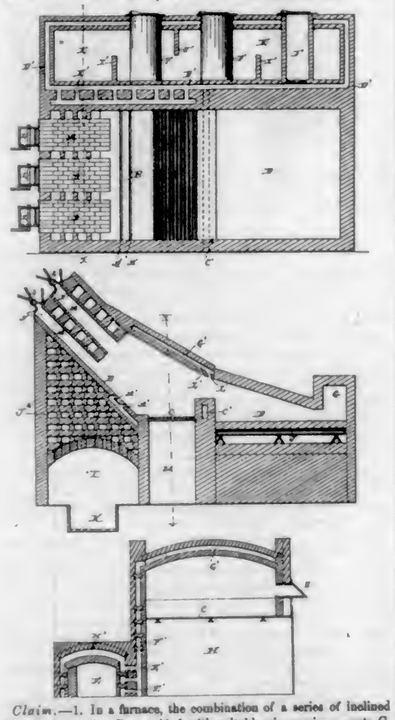
5. In a hay-stacker, the combination, substantially as set forth, of the base or supporting frame, the upright frame mounted at one end thereof, the inclined guides extended from the upright frame to the opposite end of the base-frame and separated, as described, the standard suitably pivoted and movable in a vertical plane between the inclined guides, the rail secured on the upper end of the standard, and the necessary operating mechanism, substantially as set forth.

6. In a hay-stacker, the combination of the supporting-frame, a vertical standard, a pivot or trunnion bar journaled in the supporting-frame, and means connecting the standard and trunnion-bar, whereby the standard may be adjusted laterally, substantially as set forth.

7. In a hay-stacker, the combination, with the necessary framing, of the standard constructed with transverse mortise having its upper and lower walls rounded, as described, the trunnion-bar secured within this mortise and journaled in the framing, and the clamping-plate placed over

the mouth of the mortise and bearing against the trunnion-bar, substantially as set forth.

8. In a hay-stacker, the combination, with the supporting-frame, of the standard mounted thereon and provided with the track, a hay elevating and carrying device, and the necessary operating mechanism, substantially as specified.



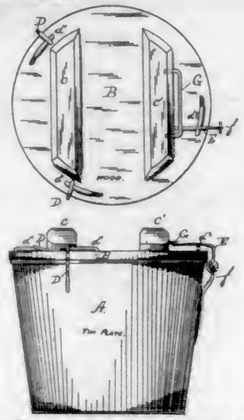
9. The hay-stacker, substantially as described and shown, composed of the movable base-frame, the windlass journaled in the upright frame, the inclined guides, the pivoted standard adjustable in a vertical plane and laterally, as described, ropes connecting the windlass and the standard, the track mounted on the standard, an elevating and carrying device, and the necessary operating mechanism, substantially as set forth.

10. A portable hay-stacker provided with the standard having a track formed thereon and adapted to receive a hay elevating and carrying device, substantially as specified.

11. In a hay-stacker, the combination, substantially as hereinbefore set forth, of the upright frame, the trunnion, the standard, the clamping-plate, the plate f^4, and clip f^7, all arranged and operating substantially as set forth.

12. The combination, in a hay-stacker, of the supporting-frame, a standard, a track supported on and extended in advance of the standard, and the guy-ropes secured to and extended laterally from the forward end of the track, substantially as set forth.

296,033. REVERBERATORY GAS-FURNACE. WILLIAM I. MCNAIR, Golden, Colo. Filed July 25, 1883. (No model.) Patented in Canada Nov 2, 1883, No. 18,015, and in England Nov. 27, 1883, No. 5,551.



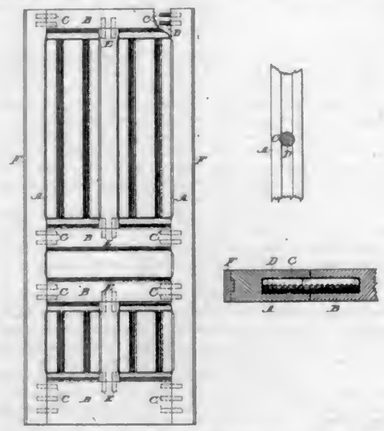
Claim.—1. In a furnace, the combination of a series of inclined muffles, A, the incline B, provided with suitable air-openings, grate C, hearth D, and the heating-chamber E, provided with retorts, substantially as described.

2. In a furnace, the combination of the muffles A, the incline B, provided with openings A', grate C, hearth D, the heating-chamber E, provided with the retorts, flues D' F', valve M^2, hollow bridge-wall C', and a means for regulating the admission of the air thereto, substantially as specified.

3. In a reverberatory furnace, the combination of a series of inclined muffles, A, the plane B, provided with air-openings A', grate C, hollow bridge-wall C', hearth D, flue G, and the heating-chamber E, the bridge-wall being provided with means for regulating the admission of air thereto, substantially as shown.

4. In a reverberatory furnace, the combination of a series of inclined muffles, the incline B, provided with air-openings A', the grate C, hollow bridge-wall provided with means for regulating the admission of air thereto, the hearth D, flue G, heating-chamber E, retorts F, flues D' E' F' G' H', as described, and openings L' above the bridge-wall, and valve M^2, substantially as described.

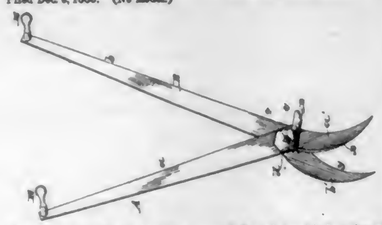
296,034. BUTTER-PAIL. ISAAC MESEROLE, Springville, Pa. Filed Jan. 21, 1884. (No model.)



Claim.—1. The combination, in a butter or other package, of the metallic body and wooden cover, the body provided with hooks and a latch and the cover with the inclined lugs and rack, substantially as and for the purpose described.

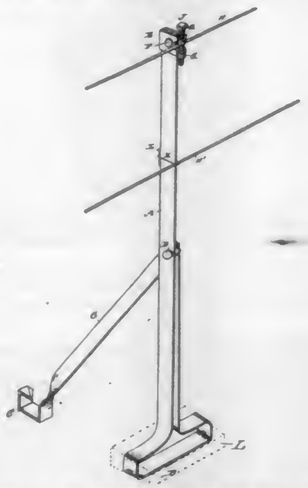
2. The cover of a package provided with a cleat and rack and a bearing, such as d^2, in combination with the body provided with a suitable latch adapted to engage with said rack, substantially as described.

296,035. DOOR AND PANEL WORK. WILLIAM N. MILLER, Oakland, Cal. Filed Dec. 26, 1883. (No model.)



Brief.—A door the rails and stiles of which are united by tongues, grooves, and dowel-pins having longitudinal grooves for the reception of surplus glue made in one side, the exterior edges of the door being faced with strips of harder wood.

Claim.—1. In a door, the rails B, in combination with the stiles united by dowel-pins, said pins having longitudinal grooves or channels made in one side, substantially as herein described.



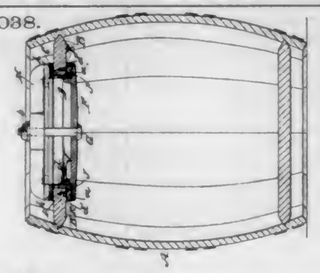
2. A door composed of stiles and rails united by dowel-pins and tongues and grooves, as shown, in combination with exterior edge strips of harder wood, substantially as herein described.

296,036. HAY-SHEARS. WILLIAM MILLSPAUGH, Middletown, N. Y. Filed Dec. 6, 1883. (No model.)

Claim.—Hay-shears consisting, essentially, of two blades pivoted together, hand-levers secured to the blades, and a step depending from the pivotal bolt which secures the blades together, substantially as set forth.

296,037. FENCE-POST. GEORGE MOLL and FREDERICK HOTTES, Macoutah, Ill. Filed Jan. 12, 1884. (Model.)

Claim.—1. The combination, with the fence-post A, of the U-shaped clip E, pivotally secured at the upper end thereof and provided with the loops or eyes G, and of the nail J, whereby the fence-wire may be secured to either side of the post by swinging the clip in the desired direction, substantially as herein shown and described.



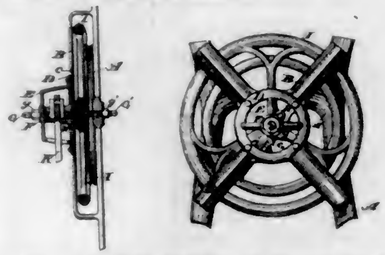
2. The combination, with the fence-post A, of the pivoted brace C, formed with an angular pocket at its lower end, and the U-shaped clip E, loosely secured to the upper end of the fence-post, whereby the clip and brace may be swung to the opposite side of the post without removing the post, substantially as described.

3. In a fence-post, the combination, with a piece of bar or band iron bent to form a loop at the lower end, and then bent upward to about the middle of the post, of a brace pivoted between the upper end of the upwardly-bent part and the post, substantially as herein shown and described.

4. In a fence-post, the combination, with a piece of bar or band iron bent to form a loop at the lower end, then bent upward to about the middle of the post, of a brace pivoted at its upper end between the upper end of the upwardly-bent part and the post, and having a loop formed on its lower end, substantially as herein shown and described.

5. In a fence-post, the combination, with a post made of bar or band iron bent to form a loop at the lower end, of a bar pivoted to the post and bent to form a loop at its lower end, substantially as herein shown and described.

296,038.

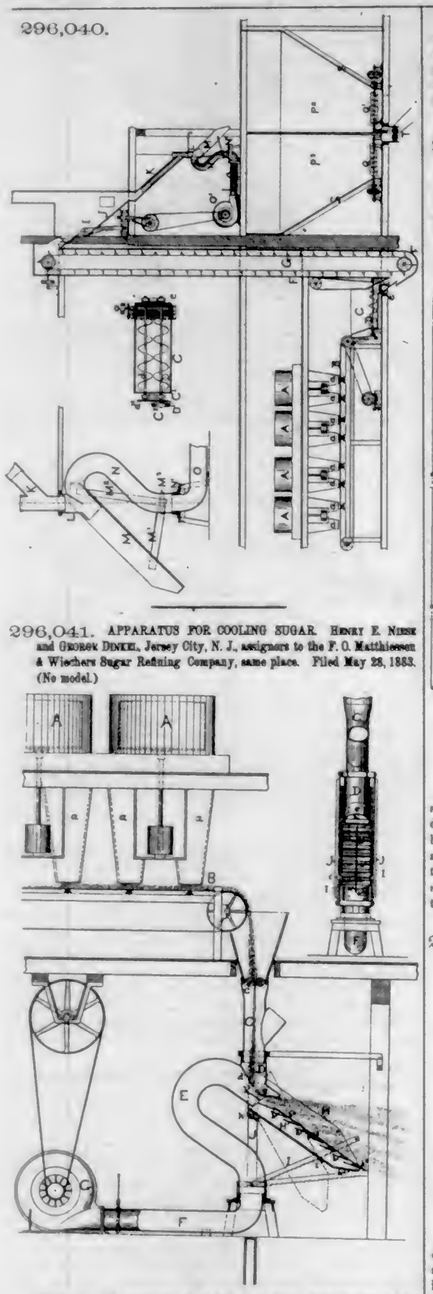


296,088. HEAD FOR BARRELS, CASKS, &c. PATRICK MORAN, New York, N. Y. Filed Jan. 26, 1884. (No model.)

Claim.—1. The head B, formed with the opening C, in combination with the carb D, fitted therein, and the shifting plate F, cross-piece H, and bolt G, all arranged to operate substantially as and for the purposes set forth.

2. The carb D, formed of flanges *d d'*, and held in the opening C of the head B, with the packing E placed between the head and flange *d'*, and the shifting plate F, formed with flange *f*, and provided with packing J and screw-bolt G, in combination with the plate I and cross-piece H, for receiving the bolt G, for holding plate F in place for closing the package, substantially as described.

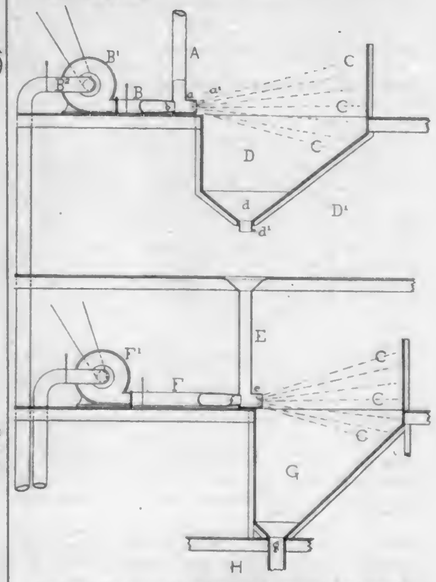
296,039. SEWING-MACHINE TABLE. ISRAEL E. MYERS, Cleveland, Ohio. Filed Feb. 28, 1884. (No model.)



Claim.—1. In a sewing-machine table, the combination, with the frame provided with an adjustable pivotal bearing, of a spider with offset arms joining the frame on different sides and provided with an adjustable pivotal bearing arranged on the same axial line with the pivotal bearing of the frame, and the two bearings adapted to support the crank-shaft of the machine, substantially as set forth.

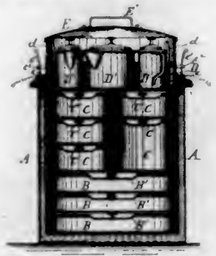
2. In a sewing-machine table, as a support for pivoted bearings for the crank-shaft, the combination, with the frame A, the spider B, provided with offset arms joined by the ring C, and the three parts, preferably integral with each other, of the ring D, detachably secured to the ring C, and provided with the offset arms E and the hub F, substantially as set forth.

296,040. APPARATUS FOR COOLING SUGAR. HENRY E. NIESS and GEORGE DINKEL, Jersey City, N. J., assignors to the F. O. Matthiessen & Wiechers Sugar Refining Company, same place. Filed May 28, 1883. (No model.)



Claim.—1. In apparatus for cooling soft sugar, substantially of the character described, a universal distributing-chute, H, in combination with a pipe or conveyer for conducting sugar into the upper end of the chute, and means for directing a downwardly-inclined blast of air into the upper end of the chute, substantially as and for the purposes set forth.

296,040.



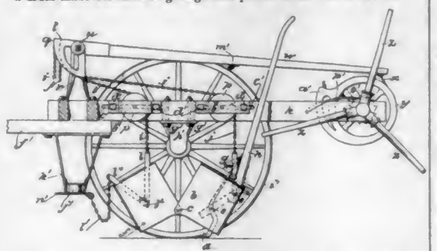
2. The chute H, provided with a perforated false bottom, H^3, in combination with the nozzle of an air-blast pipe, so arranged as to discharge a stream of air in a downward direction from the top both over and under the false bottom of the chute, and a conveyer or pipe for conveying or conducting sugar into the upper end of the chute, as and for the purposes set forth.

296,042. PROCESS OF COOLING AND DRYING SUGAR. HENRY E. NIESS and GEORGE DINKEL, Jersey City, N. J., assignors to the F. O. Matthiessen & Wiechers Sugar Refining Company, same place. Filed Nov. 6, 1883. (No model.)

Claim.—The process of cooling and drying soft sugar herein described, which consists in so guiding a moving mass of such sugar as to direct it into or near the mouth of a nozzle, from which issues a strong blast of suitably cool air, which performs the mechanical function of separating the particles of sugar from each other and scattering them, and thus fully exposing them to direct contact with the cool air, whereby such air carries off their heat and absorbs the moisture from them, and thus cools and dries them.

296,043. DINNER-TRAY. FRANZ NEUWÜLLER and JAMES F. WHEDON, New York, and EMIL M. PERRÉCOS, Brooklyn, N. Y. Filed Aug. 24, 1883. (No model.)

Claim.—1. A dinner-tray consisting of an exterior casing, bottom dishes or platters of a shape and size to fit the interior of the casing, and smaller dishes above the same, the diameter of which is equal to half the length of the longer axis of the bottom dishes, substantially as set forth.



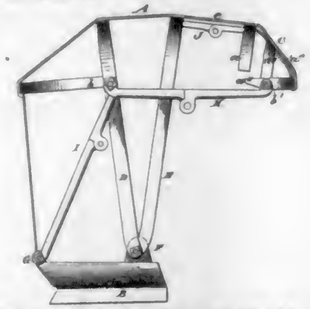
2. A dinner-tray consisting of an exterior jacketed casing, larger bottom dishes fitting the interior of the casing, smaller dishes above the same, having a diameter equal in length to one-half of the longer axis of the bottom dishes, a top tray fitting the interior of the casing, and a detachable cover, substantially as specified.

3. A dinner-tray consisting of an exterior jacketed casing, larger bottom dishes or platters, intermediate smaller dishes, a top tray, a cover, and means for attaching the cover, substantially as set forth.

4. A dinner-tray consisting of an exterior casing, interior dishes or platters having covers with depressed knobs, and means to retain said covers, a top tray, a detachable cover, and means for attaching the cover, substantially as specified.

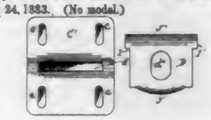
296,044. EARTH-SCRAPER. JOHN F. O'CONNOR and STERLING M. WILLIAMS, Davenport, Iowa. Filed June 30, 1883. (No model.)

Brief.—Two hinged sections of a scraper-box are locked together by side hook-levers, which are unhooked by the scraper-handle striking a cross-rod between them when it is tilted to discharge the load. The scraper-chains run over suitable pulleys to segmental pulleys on a common shaft. The segmental pulleys are eccentrically arranged to tilt the scraper up at front. The shaft is turned by a lever and a chain run to a drum made eccentric to give greater power at the end of the lift.



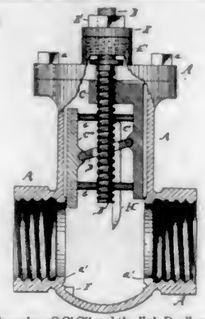
Claim.—1. The combination, with the scraper *a b*, suspended by chains *i j* from the truck, of the guide-pulleys *p*, segmental pulleys *q t* on a shaft, *u*, the segmental pulleys *q*, to which the front end of the scraper is connected, being eccentric to the shaft *u*, and having a longer sweep than the pulleys *t*, and the adjusting-lever *w*, substantially as described.

2. The combination, with the lever *w*, segmental pulleys *q t*, the former being arranged eccentrically to the shaft *u*, and having a longer sweep than the pulleys *t*, and chains *i j*, of the drum *y*, having an eccentric extension, *a'*, cord *x*, levers *z*, and a scraper suspended from a truck, substantially as described.



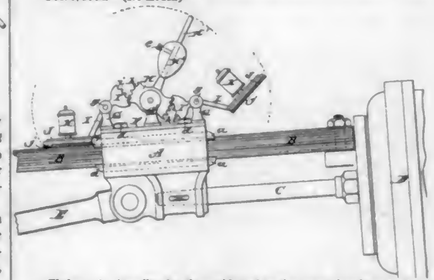
3. The combination, with a truck, of a scraper consisting of two parts, *a* and *b*, jointed together, and provided with fastening-catches *d*, connecting-bar *g*, and lever *h*, and being suspended from the truck by the chains *i j*, substantially as described.

296,045. BUGGY-TOP. JAMES C. OLIVER, Louisville, Ky. Filed Jan. 16, 1884. (No model.)



Claim.—In a buggy-top, the hood provided with the extension-joints J and curved slats *a*, *b'*, and *a''*, substantially as shown, in combination with the pivoted flexible joints H and I, the pivoted bows D and E, and rear extension, *b*, the parts being constructed substantially as shown, for the purpose set forth.

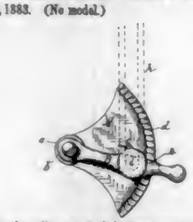
296,046. STRAIGHT-WAY VALVE. PETER B. PAGE, Lorain, Ohio. Filed July 24, 1883. (No model.)



296,046.

Claim.—The valves C C' C'' and the link D, all constructed as shown, in combination with the shell A, having inner ribs, H H, lug F, and spindle B, substantially as specified, and for the purpose set forth.

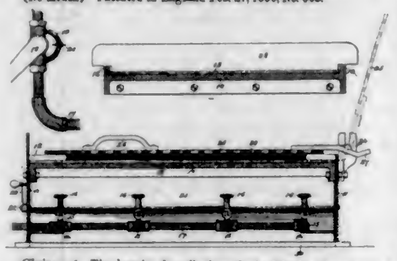
296,047. OILER. JOHN S. PARK, Rockport, Ind., assignor of three-fourths to Taylor C. Basye and Ferdinand Weil, both of same place. Filed Feb. 6, 1884. (No model.)



Claim.—1. An oiler for the guides of engine cross-heads and other reciprocating parts of machinery, constructed with a pair of opposite pivoted oiling-heads carrying or connected with an oil cup or cups, and having a weighted stem adapted to be thrown to either side of a vertical line for bringing the oiling-heads in contact with the guide bar or bars by the inertia and momentum of the parts on reversal of the motion at the limits of the stroke of the cross-head in either direction, substantially as shown and described.

2. In an oiler, the combination, with a weighted stem pivoted to the reciprocating cross-head, of an oiling-head actuated by the swing of the stem to either side, so as to bear the oiling-head on the cross-head guide in advance of the moving cross-head, substantially as shown and described.

3. The combination, in an oiler, and with the reciprocating cross-head A and guide B, of the pivoted head H, carrying a weighted stem, H', and pivoted arms I, swung by the stem and provided with oil cups or reservoirs and absorbent wipers J *j*, receiving the oil and distributing it on the guide, substantially as shown and described.



4. The combination, with the cross-head A^3 and its side guides, *a' a'*, of the pivoted heads G^3, carrying oil cups or reservoirs and weighted stem H^3, the hollow arms I^3, and the oiler-heads J^3 j^3, working between the guides *a' a'*, substantially as shown and described.

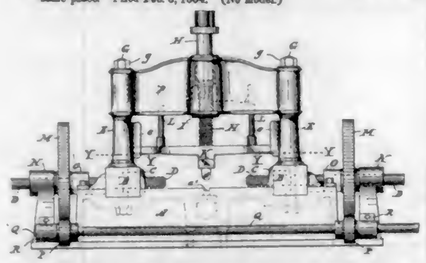
296,048. CURTAIN-FIXTURE. THOMAS J. PARKINSON, Pittsburg, Pa. Filed Dec. 29, 1883. (No model.)

Claim.—The described cord-tightener, consisting of the perforated plate A, having ratchet-rim *d* raised upon its front, rigid lever B, having eye *e*, grooved knob *i*, and undercut knife-edge *k*, and pivot-screw *b*, said lever B adapted to a slight rocking motion on its pivot, substantially as described.

296,049. METHOD OF AND APPARATUS FOR DRYING MATRICES FOR STEREOTYPE-PLATES. GEORGE PEARCE, Riversdale Road, Highbury New Park, Islington, County of Middlesex, and EDWARD HUGHES, Anstey Road, Camberwell, County of Surrey, England, assignors to Stephen Davis Tucker and Robert Hoe, Jr., New York, N.Y. Filed Apr. 10, 1883. (No model.) Patented in England Feb. 27, 1880, No. 863.

Claim.—1. The herein-described method of drying the matrix for a stereotype-plate, which consists in removing said matrix from the face of the form while in a moist condition, and then confining the same between a heated surface and one or more thicknesses of blanket, substantially as described.

2. The herein-described method of drying the matrix for a stereotype-plate, which consists in removing said matrix from the face of the form while in a moist condition, and then confining the same between a layer of heated pulverulent material and one or more thicknesses of blanket, substantially as described.



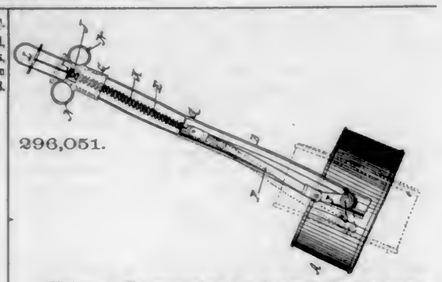
3. In an apparatus for drying matrices, the combination, with the plate 10 and means for heating the same, of the blanket 29 and perforated plate 25, all substantially as described.

4. In an apparatus for drying matrices, the combination, with the plate 10 and means for heating the same, of the blanket 29 and layer of pulverulent material 13, substantially as described.

5. In an apparatus for drying matrices, the combination, with the plate 10 and means for heating the same, of the blanket 29, layer of pulverulent material 13, and perforated plate 25, all substantially as described.

6. In an apparatus for drying matrices, the combination, with the plate 10 and solid plates 11, of the movable plates 21 and the burners 16, substantially as described.

296,050. MACHINE FOR FORMING AND STAMPING LOOPS. CHAR. PELLSTER, Concord, N. H., assignor of one-half to George H. Emery, same place. Filed Feb. 8, 1884. (No model.)



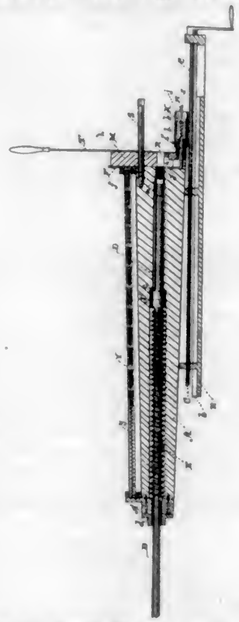
Claim.—1. In a press constructed substantially as described, having a vertical screw-shaft, H, follower K, and bed A, the chamber A', air-vent a^3, and transverse slot *a'*, as and for the purpose specified.

2. In a press constructed substantially as described, having a vertical screw-shaft, H, the horizontal screw-shaft D, rotated simultaneously by means of the gears M M, pinions P P, and shaft Q, operating in the manner and for the purpose set forth.

3. In a press having a vertical screw, H, follower K, and horizontal screw D, the combination of the die-plates T U, and blocks W, with the screws D, all constructed and operating substantially as described, and for the purpose set forth.

4. In a press having a vertical screw, H, follower K, and horizontal screw D, the combination of the dies T U, end blocks, V, and blocks W, having springs X, all constructed and operating substantially in the manner and for the purpose set forth.

296,051. DIPPER. GEORGE T. PETERS, Jersey City, N. J. Filed Feb. 7, 1884. (No model.)



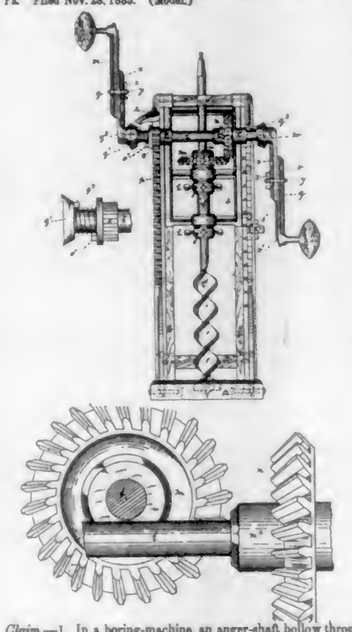
Claim.—1. The combination, in a dipper, of a bowl and handle pivoted together to render the bowl capable of rotating, a means, substantially such as herein described, for rotating the bowl, and a spring operating to sustain the bowl in a normal position.

2. The combination, in a dipper, of a bowl and handle pivoted together by means of a shaft which is fixed to the bowl, a slide-rod arranged on the handle to engage such pivot-shaft for rotating the bowl, and a spring operating to sustain the bowl in a normal position.

3. The combination, in a dipper, of a bowl and handle pivoted together by means of a shaft which is fixed to the bowl, a crank on such pivot-shaft, a slide-rod arranged on the handle, a link connecting the slide-rod to the crank of the pivot-shaft, and a spring coiled on the slide-rod to act thereon with a tendency to sustain the bowl in a normal position.

4. The combination, in a dipper, of a bowl and handle pivoted together by means of a shaft which is fixed to the bowl, a slide-rod arranged on the handle to engage such pivot-shaft for rotating the bowl, a spring operating to sustain the bowl in a normal position, a thumb-piece on the upper end of the slide-rod, and finger-rests projecting from the handle below such thumb-piece.

296,052. ROCK-DRILL. WILLIAM E. PEYTON, San Francisco, Cal., assignor of part to James M. Thompson, same place, and Conrad Shenfield, Albuquerque, N. Mex. Filed Nov. 5, 1883. (No model.)

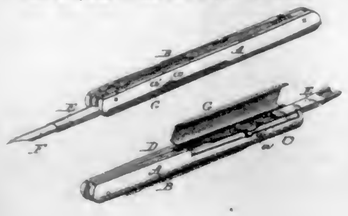


Claim.—1. In a rock-drill, a barrel having a bore with an exhaust, and a breech to receive an explosive cartridge or shell, and a firing mechanism to explode said shell, in combination with a piston or drill holding spindle fitted within the bore, and adapted to be driven forward by the explosion of the shell, and a spring around said spindle within the barrel for returning the spindle, substantially as herein described.

2. In a rock-drill, the barrel A, having a bore, with an exhaust, U, and a cartridge-chamber in its breech, a mechanism for feeding the cartridge to said chamber, exploding it, and ejecting the shell, in combination with the spring piston or drill holding spindle fitted within the bore, and behind which the cartridge explodes, substantially as herein described.

3. In a rock-drill, the barrel A, having a bore, with a shoulder, *c*, a perforated cap, A′, on its forward end, a cartridge-chamber, *e*, in its breech, and an exhaust for its bore, and a mechanism on its breech for feeding a cartridge to its chamber, firing it, and ejecting the shell, in combination with the piston or drill holding spindle D, fitted in the bore of the barrel, and having a shoulder, *d′*, within the bore, and flange *d* on its forward end, and the spring E around the spindle between the cap A′ of the barrel and the shoulder or collar *d′* of the spindle, substantially as herein described.

296,053. BORING-MACHINE. ZACHARIAH C. PHILLIPS, Allegheny, Pa. Filed Nov. 23, 1883. (Model.)

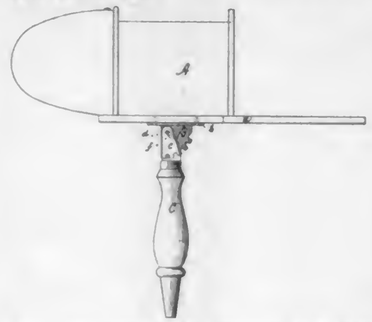


Claim.—1. In a boring-machine, an anger-shaft bollow throughout its length, in combination with a crank-shaft geared to the anger-shaft and situated on a different vertical plane, substantially as and for the purpose specified.

2. In a boring-machine, a crank-shaft capable of receiving a longitudinal as well as an axial movement, and mounted in bearings on a sliding frame, a pinion and rack, a clutch for connecting the shaft with the pinion, and devices for imparting an automatic longitudinal movement to the shaft, substantially as and for the purpose specified.

3. In a boring-machine, the combination of a crank-shaft capable of receiving a longitudinal as well as an axial movement, a pinion and rack, a clutch and stops, one of which is adjustable, having inclined faces arranged to move the shaft longitudinally, so as to connect and disconnect the shaft and pinion, substantially as and for the purpose specified.

296,054. COMBINED KNIFE AND PEN-HOLDER. ISAAC PHILLIPS, Silver City, Idaho. Filed Dec. 17, 1883. (No model.)



Claim.—1. A combined knife and pen-holder, consisting of a handle provided with knife-blades, said handle having a chamber formed in its back, and a pen-holder carrying a pen pivoted in its back, and adapted to lie within said chamber and be opened out therefrom, substantially as herein described.

2. A combined knife and pen-holder, consisting of the handle A, provided with blades, the back springs, D, cut out or narrowed down near one end to form a chamber, C, the walls of which are the sides of the handle, and the pen-holder E, said pen-holder being pivoted to the back of the handle and adapted to lie within the chamber when closed, and to be opened out therefrom, substantially as herein described.

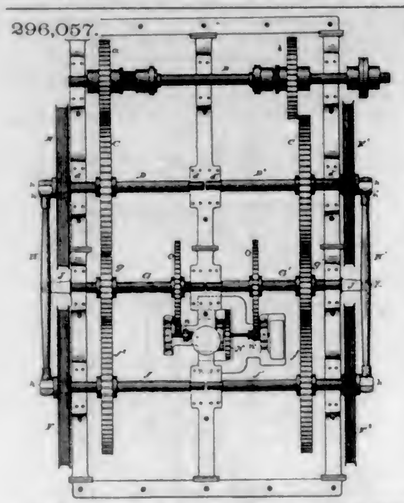
3. A combined knife and pen-holder, consisting of the handle A, fitted with blades B, said handle having a chamber, C, formed in its back near one end, the pen-holder E, adapted to carry pen F, pivoted in the back of the handle and adapted to lie in and to be opened out of said chamber, and the hinged lid or cover G, adapted to cover said holder and pen in said chamber when closed, and to hold it when opened out, substantially as herein described.

296,055. STEREOSCOPE. HOMER E. PIERCE, Brooklyn, N. Y. Filed Jan. 14, 1884. (No model.)

Claim.—The combination, with a stereoscope and its handle or standard C, of the described lock-joint formed of the jaws *c c′*, provided with the slots *f* and stop-pin *e*, and the toothed segment B, pivoted in the said slot between the said jaws, as and for the purpose described.

296,056. PRINTER'S QUOIN. JOHN POLHEMUS, New York, N. Y. Filed Apr. 26, 1883. (No model.)

Claim.—As a new and improved article of manufacture, a printer's quoin having the following characteristics: a wedge-shaped body, with vertical concave ends, and recesses with curved ends on each of its parallel sides, substantially as shown, and for the purpose set forth.



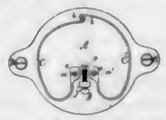
296,057. MACHINE FOR DRIVING ENDLESS ROPES FOR THE PROPULSION OF STREET-CARS. GEORGE POOLE, Baltimore, Md. Filed Jan. 25, 1884. (No model.)

Claim.—1. The combination, substantially as hereinbefore set forth, of a main driving-shaft, two sets of driving-drums, shafts upon which the respective drums are independently mounted, gears upon said shafts, idle-shafts having pinions, each engaging two gears upon the drum-shafts, and adjustable pinions on the driving-shaft for engaging the gears upon the adjacent drum-shafts, for the purpose described.

2. The combination, substantially as hereinbefore set forth, of two sets of driving-drums, each set for actuating an endless rope independently of the other, a main driving-shaft, gearing by which the respective sets of driving-drums may be independently connected with and disconnected from said shaft, a supplementary motor, and connecting mechanism by means of which to independently actuate the respective sets of driving-drums from said motor, for the purpose described.

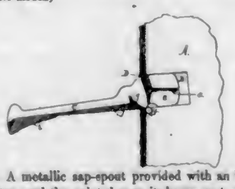
3. The combination of two sets of drums for independently actuating endless ropes, the main driving mechanism by which the two sets of drums may be independently connected with and disconnected from their main motor, the supplementary motor-shaft, and mechanism for independently connecting it with the respective sets of driving-drums, substantially as and for the purpose hereinbefore set forth.

296,057.



4. The combination of the main driving-shaft, adjustable pinions, the two drum-shafts adjacent thereto, and provided with gears for engaging said pinions, the driving-drums on these two drum-shafts, the main idle-shafts, their pinions engaging the gears of said drum-shafts, the additional drum-shafts provided with gears also engaging the pinions on the idle-shafts, the supplementary motor-shaft, the idle-shaft geared therewith, the shifting pinions on this idle-shaft, and the gears on the main idle-shafts for engaging said pinions to independently actuate the respective sets of driving-drums from the supplementary motor, substantially as and for the purpose hereinbefore set forth.

5. The combination of the frame, the drum-shafts, the driving-drums mounted upon the overhanging ends of their shafts, and the struts provided with adjustable boxes for the overhanging ends of the drum-shafts, substantially as and for the purpose hereinbefore set forth.

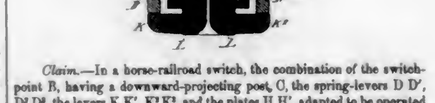


6. The combination of the frame, a set of driving-drums, their shafts overhanging the frame at their outer ends to support the drums outside of the frame, the strut for making bracing connection between said shafts, the adjustable boxes at the ends of the strut, and means for adjustably supporting the strut about midway its length, substantially as and for the purpose hereinbefore set forth.

296,058. THERMOSTAT. MAJOR DANE PORTER, Boston, Mass. Filed Dec. 11, 1883. (No model.)

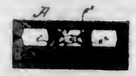
Claim.—In a thermostat, the two springs C C′, having their abutments *b b* near each other, and one spring provided with a tooth, in combination with an adjusting-screw, D, having a groove, *e*, which groove engages the tooth on the spring, as set forth.

296,059. SAP-SPOUT. CHARLES C. POST, Burlington, Vt. Filed Nov. 10, 1883. (No model.)



Claim.—1. A metallic sap-spout provided with an inclined shoulder, D, upon its top, and the point *d* upon its lower part, whereby, when the spout is being driven into the hole B, the inclined shoulder D will force the point *d* downward into the bark, substantially as shown.

2. A sap-spout having its end closed or partially closed, and provided with a trap, *g*, and the opening *f*, substantially as described.



3. In a sap-spout, the combination of the trap *g*, the partially-closed end having the opening *f* through it, and the fins *e*, which project into the hole in the tree, substantially as set forth.

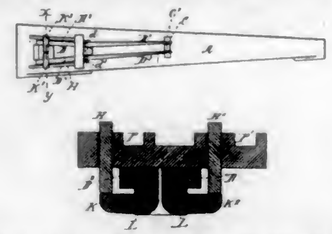
296,060. BARBED METALLIC FENCING. ALBERT POTTS, Philadelphia, Pa. Filed Oct. 16, 1883. (Model.)

Claim.—As an improved article of manufacture, a metallic fencing-strip, notched upon its edges, combined with pointed wire staples, the said staples being secured in place in the notches by twisting their pointed ends together, substantially as shown and described, whereby barbs are formed upon the metallic strip.

296,061. DEVICE FOR LOCKING REMOVABLE STEREOTYPES. EDWIN E. PRATT, Chicago, Ill., assignor to the A. N. Kellogg Newspaper Company, same place. Filed Aug. 9, 1883. (No model.)

Claim.—1. The combination, with the plate and block, of an independent and detached collapsible fastening, substantially such as shown.

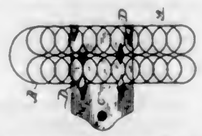
2. The combination, with the plate and block, of an independent and detached collapsible and self-adjusting fastening, substantially as specified.



3. The fastening or locking device herein shown, consisting of the two pairs of wings or arms, hinged together and operating substantially as specified.

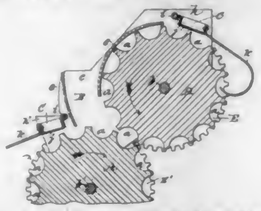
4. The fastening or locking device consisting of the two pairs of wings or arms hinged together, and the spring for automatically spreading the wings, substantially as specified.

5. The collapsible or hinged locking device provided with the eye or handle *f*, substantially as specified.



296,062. HORSE-RAILROAD SWITCH. BELLVILLE L. RANDALL, Boston, Mass. Filed July 13, 1883. (No model.)

Brief.—Spring-levers operated by projecting plates and the flange of the wheel move the downwardly-projecting post secured to the switch-point.



Claim.—In a horse-railroad switch, the combination of the switch-point B, having a downward-projecting post, C, the spring-levers D D′, D^2 D^3, the levers K K′, K^2 K^3, and the plates H H′, adapted to be operated upon by the tread of the passing wheels, substantially as described, and for the purpose set forth.

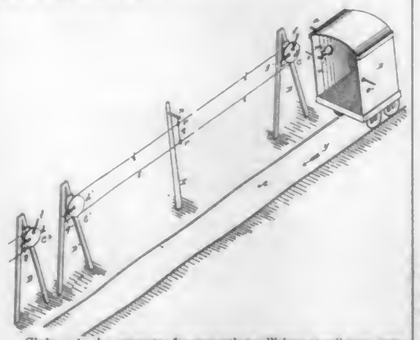
296,063. STAY FOR CORSETS. HENRY REILY, Rixford, Pa. Filed June 11, 1883. (Model.)

Claim.—A double-coiled flattened spring, A, in combination with the plate C, the plate C being provided with points D, which are bent down over the spring to secure the two parts together, substantially as shown and described.

296,064. CHEESE PRESS OR MOLD. LEWIS ANDREW RITER, Chester, N. Y. Filed Aug. 2, 1883. (No model.)

Claim.—1. In a cheese press or mold, the combination, with the recessed compressing-rollers A A, of the hopper B, formed of the side plates *c c* and the curved plates *e e*, substantially as and for the purposes set forth.

2. The salt-trays C C, with perforated bottoms, in combination with the recessed compressing-rollers A A, substantially as described.



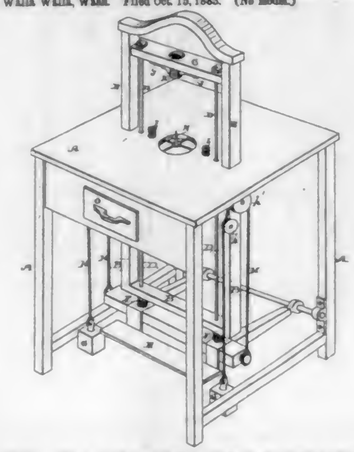
3. The salt-trays C C, formed with the arms *k k*, in combination with the recessed compressing-rollers A A, substantially as described.

4. The cheese-press made substantially as herein shown and described, consisting of the correspondingly-recessed compressing-rollers A A, cog-wheels E E', pivoted salt-trays C C, and hopper B, as set forth.

5. The correspondingly-recessed compressing-rollers A A for compressing the cheese, arranged diagonally to each other in the frame, to facilitate the feeding in of the curd and the dropping out of the compressed rolls, substantially as described.

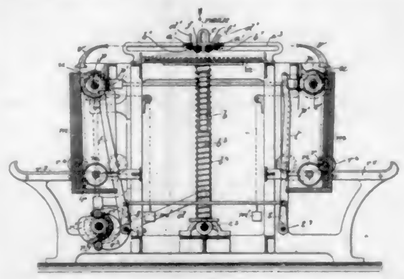
296,065. APPARATUS FOR PREVENTING ACCIDENTS ON RAILWAYS. DAVID ROBERGE and DAVID ROBERGE, Jr., New York, N. Y. Filed Mar 9, 1883. (No model.)

Brief.—A signal-operating device consisting of two drums connected by belt-connection, so as to rotate simultaneously, one drum being situated at one end of a section of railroad and the other drum at the other end, the first-named drum being provided with two arms, and the second drum with one arm, one of the two arms upon the first drum being arranged in the path of a projection on a passing train, so that the arm is moved thereby, whereupon the drums are rotated through a part of a circle, and the other arms are brought into position to operate a bell-ringing device arranged for the purpose on the trains to be signaled when passing the drums. The second drum is provided with a spring-catch, which holds the drums in the position named, and is adapted, as shown, to be tripped by the first-named train as it passes from the section, whereupon both drums are returned to their former position by a spring arranged in one of the drums.



Claim.—1. An apparatus for preventing collisions on railways, composed of the pulleys *d* and *d'*, placed at suitable distances apart along the side of the track and connected by a belt or wire, so as to be moved in unison with each other by contact with the passing trains, as described, the said pulley *d* being provided with the arms *f* and *g* and spring *h*, and said pulley *d'* provided with the arm *g'* and spring *h'* and catch *k l*, and the whole constructed substantially as described, to operate in the manner set forth.

2. The device C', composed of the following parts in combination, namely: the pulley *d'*, fitted to rotate on the pin or arm *d'* and provided with the spring *h'* and arm *g'*, the spring-catch *k l*, and mechanism, substantially as described, for operating the device from a passing train, as and for the purpose set forth.

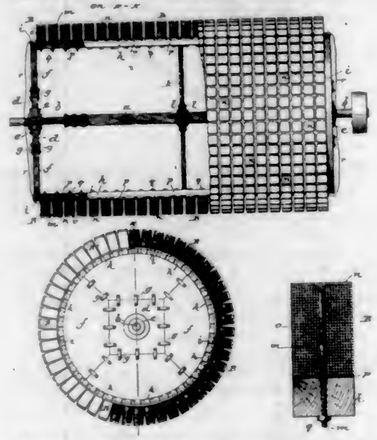


3. In combination with the pulleys *d* and *d'*, connected by a belt or wire, as described, and provided with the arms *f* and *g* and *g'*, respectively, the spring-catch *k l* and the alarm device *m n o*, attached to the engine-cab B, as and for the purpose set forth.

296,066. GREEN-CORN-CUTTING MACHINE. GEORGE W. ROBERTS, Walla Walla, Wash. Filed Oct. 15, 1883. (No model.)

Claim.—In a green-corn-cutting machine, the stand or table A, having spring-cushions I, supplementary frame B, central impaling-pin, N, and underlying drawer O, in combination with the cross-head C, having depending rods D, the pivoted treadle E, and cushion-springs F, the counter-weights G, and the expanding annular cutter or knife K on said cross-head, substantially as herein described.

296,067. MACHINE FOR FOLDING FABRICS AND INSERTING PRESSING-BOARDS BETWEEN THE FOLDS THEREOF. PAUL HEINRICH ERNST RÖMER and MORITZ PAUL MEISSNER, Chemnitz, Saxony, Germany, assignors to (the firm) C. H. Weisbach, same place. Filed Jan. 25, 1883. (No model.)



Claim.—1. The combination, with the table which is adapted to descend by the weight of fabric upon it, of the traveling rollers and pinchers, the movable vertical side boxes containing the pressing-boards, constructed so as to support or carry the pressing-boards in a vertical position, and mechanism for operating said pinchers and for raising said boards automatically and alternately from the vertical boxes, and for changing their position from a vertical to a horizontal one in order to be seized by the pinchers, substantially as set forth.

2. The combination, with the table for the fabric, the traveling carriage and rollers, and means, substantially as described, for moving the same, of the pinchers composed of fixed and moving jaws, the bars *b'*, springs *d'*, bolts *d'*, fingers *h*, cam-shaped arms *i*, rocker-shaft *k*, spring-studs *l l'*, and cams *g g'*, whereby the pinchers are alternately opened and shut and the sheets of pressing-board alternately grasped and deposited, substantially as set forth.

3. The combination, with the boxes *m*, for holding the pressing-boards, the weights for moving the same, and the ways upon which said boxes are supported, of the rollers *n*, disks *o*, bevel-wheels *p p'*, rods *r* the levers *s* and *t*, and means, substantially as described, for operating the same, whereby the sheets of pressing-board are raised and delivered substantially as set forth.

4. The combination, with the vertical boxes for holding the pressing-boards, constructed so as to support or carry the pressing-boards in a vertical position, and means, substantially as described, for raising and delivering said pressing-boards, of the curved guide *e*, through which the boards are transmitted from a perpendicular to a horizontal position, and means, substantially as set forth, for grasping said boards, conveying them forward, and depositing them upon the fabric, as set forth.

296,068. MAGNETIC ORE SEPARATOR. FELIX VICTORIEN ROULEAU, Isle Verte, Quebec, Canada. Filed Oct. 16, 1883. (No model.)

Claim.—1. A cylinder for a magnetic ore separator, having its entire outer surface provided with radially-arranged electro-magnets, having the enlarged polar extremities of rectangular form arranged in close proximity to each other, both longitudinally and circumferentially of the cylinder.

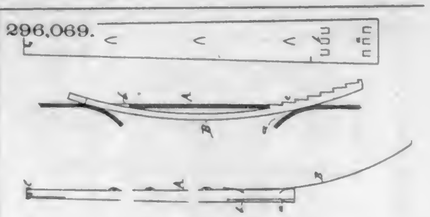
2. The central shaft consisting of the wooden body and the metallic extremities, combined with the circular end plates mounted thereon, the wooden bars mounted upon the end plates, and the series of electro-magnets mounted upon said bars and electrically connected with each other and with the extremities of the shaft, substantially as described and shown.

3. In a cylinder for a magnetic separator, the combination of the shaft consisting of a wooden body and angular metal extremities, the angular metal plates *d*, the circular wooden heads *f*, attached thereto, the longitudinal wooden bars *h*, and the series of magnets mounted upon said bars and electrically connected with each other and with the extremities of the shaft, as described and shown.

4. In combination with the cylinder having the longitudinal wooden bars *h*, the electro-magnets having their cores *n* extended inward through said bars and secured by nuts upon the inner ends.

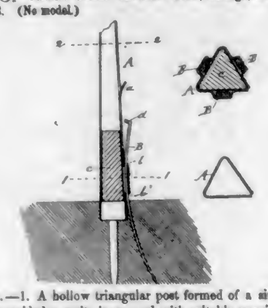
5. In a cylinder for a magnetic separator, the longitudinal wooden bars *h*, in combination with the helix *o*, and the core *m*, having its outer end provided with the polar enlargement *n*, and having its inner end passed directly through the supporting-bar and secured by a nut at the inner end.

296,069. FENCE-POST. EDWARD RITZ, Chicago, Ill. Filed Oct. 9, 1883. (No model.)



Claim.—1. A tubular fence-post provided with two series of openings, in combination with suitable strips adapted each to pass through one opening of each series, as and for the purpose set forth.

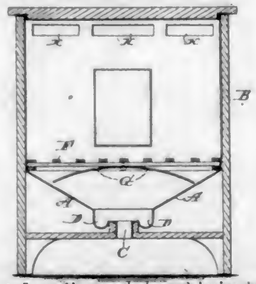
2. A tubular fence-post provided with two series of openings, in combination with strips adapted each to be passed through one opening of each series, and said strips provided on their upper ends each with a suitable head, as and for the purpose set forth.



3. A tubular fence-post provided with two series of openings, in combination with strips notched, as described, and adapted each to be passed through one opening of each series, as described and shown.

4. A tubular fence-post provided with two series of openings, in combination with strips adapted each to be passed through one opening of each series, and said strips provided with heads and notches, as described and shown.

5. A tapering tubular fence-post slotted at its upper end, in combination with a ring provided with inward projections adapted to enter the groove of the post, whereby the top wire or tape is held in position, as described and shown.



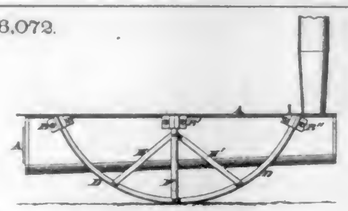
296,070. FENCE-POST. EDWARD RITZ, Chicago, Ill. Filed Nov. 27, 1883. (No model.)

Claim.—1. A hollow triangular post formed of a single sheet of metal, and provided near its lower end with suitable openings, in combination with metal strips passed through said openings, and provided with inwardly-projecting lugs or heads for forcing the edges of the metal sheet together, as set forth.

2. A hollow triangular post formed of a single sheet of metal, and having its lower end filled with suitable material, in combination with metal strips passed through openings in said post, and provided with inwardly-projecting lugs or heads for forcing the edges of the sheet together and holding the filling material in place, as set forth.

296,071. AIR-COOLING REFRIGERATOR. DAVID SANDERSON, Ottawa, Ill. Filed Jan. 24, 1884. (No model.)

Claim.—1. In a refrigerator, the ice-rack having the curved plate or deflector affixed at about its central upper portion to the under side of said rack, in combination with the hopper-shaped ice-bed having a central oblong air-passage in its lower convergent portion, substantially as and for the purpose set forth.



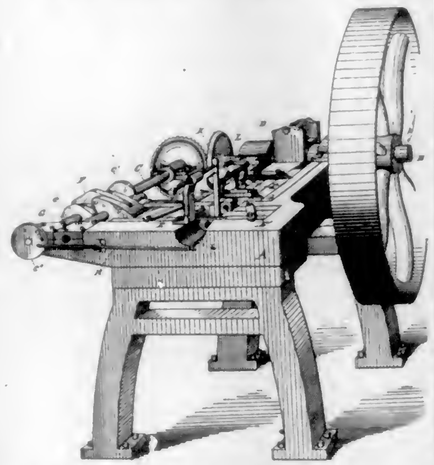
2. In a refrigerator, the ice-rack having the curved plate or deflector affixed at about its central upper portion to the under side of said rack, and the hopper-shaped ice-bed having a central oblong air-passage and a drip-gutter around said passage, in combination with the case or inclosure having air-passages in its upper portion, the tube forming the ice-bed air-passage extending through the bottom of said case or inclosure, substantially as and for the purpose set forth.

296,072. EVAPORATOR-FURNACE. THOMAS SCANTLIN and JAMES M. SCANTLIN, Evansville, Ind. Filed May 24, 1883. (No model.)

Claim.—1. The combination, with an evaporator-furnace, of a pair of rockers readily detachable from each other, and also from the furnace, for the purpose of being stowed within the latter, as herein described.

2. The combination, with an evaporator-furnace, of a pair of rockers readily detachable from each other, and also from sockets fastened to the sides of the furnace, for the purpose of permitting said rockers to

296,072.



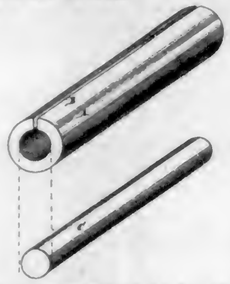
be stowed within said furnace, as herein described.

3. The combination of furnace A, sockets B B′ B″ C C′ C″, rockers D E, and vertical braces F G, said rockers and braces being inserted in said sockets, substantially as herein described.

4. The combination of furnace A, sockets B B′ B″ C C′ C″, rockers D E, vertical braces F G, inclined stays H H′ I I′, and crossed rods J J′, which latter are attached to said braces F G, substantially as herein described.

296,073. BOLT-HEADING MACHINE. CHARLES S. SEATON, Cleveland, Ohio. Filed Mar. 14, 1883. (No model.)

Claim.—1. In a machine for heading bolts or rivets, the combination, with a movable die carrying a cutter, and a fixed bar carrying a cutter and provided with openings of unequal sizes, as described, of a stationary die, a heading-die, a hammer working through the smaller opening in the fixed bar, and connections for actuating the movable and heading dies and the hammer, substantially as and for the purpose set forth.

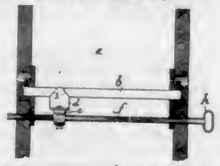


2. In a machine for heading bolts or rivets, the combination, with the gage K, suspended between the heading-die and the grasping-dies, the screw engaging the upper end thereof, and the supporting-arm provided with a downwardly-extending foot, of the heading-die having an inclined surface adapted to engage the foot as it advances toward the blank, and to raise the said arm and gage, substantially as set forth.

3. In a bolt or rivet heading machine, the combination of the arm L and the lever K with the spring i and the set-screw k, causing the lower end of the said lever to recede from the blank as it rises, substantially as described, and for the purpose specified.

4. In a bolt or rivet heading machine, the combination, with the die E and the slide e, of the toggle-joint lever and cam operating the same, and the cam c′ and the arm g, substantially as and for the purpose set forth.

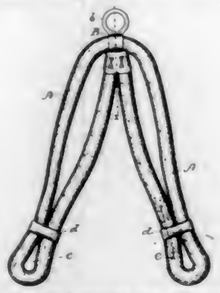
5. In a machine for heading bolts or rivets, the combination, with the dies E and E′, the suspended gage and its supporting-lever, having a foot extending therefrom, a heading-die having an inclined surface, and the bar J, having the cutting-plate secured thereto, and provided with a bolt and hammer-pin openings, of the pivoted lever having a pin extending therefrom, and the rotating flange having an inclined lug, substantially as described, whereby the bolt or rivet is dislodged from the die, substantially as described.



296,074. MANUFACTURE OF ELECTRICAL CONDUCTORS. THOS. SHAW, Newark, N. J., assignor to William H. Ritter, New York, N. Y. Filed Jan. 31, 1883. (No model.)

Claim.—1. The method herein described of forming a compound wire, consisting in forming a slotted cylinder of one metal or alloy, inserting a core or rod of another metal or alloy, and inserting solder between them through the slot, forming a solid ingot or blank for wire-drawing, substantially as set forth.

2. The process of manufacturing a compound wire, consisting in forming a slotted cylinder of one metal or alloy and inserting a core or rod of another metal or alloy, and uniting them with solder inserted through the slot, forming a solid ingot or blank, and then passing the ingot through rolls or dies, producing a finished compound wire.

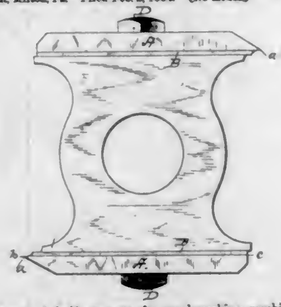


296,075. ORE-SEPARATOR. LOUIS A. SHEAD, Alameda, Cal., and HADLEY P. FAIRFIELD, West Medford, Mass., assignors to Gordon McKay, Trustee. Filed May 23, 1883. (No model.)

Claim.—1. The combination, with a sluice having a transverse slit through its bottom, of the horizontally-movable clearing device and support therefor, arranged wholly below the bottom of the sluice, and means to operate the clearing device in the slit, whereby the regularity of the stream remains undisturbed, substantially as set forth.

2. The combination, with a sluice having a transverse slit through its bottom, of the clearing device having inclined edges movable longitudinally in the said slit, the support for said clearing device, arranged wholly below the bottom of the sluice, and means to operate the said clearing device, whereby intruding particles are lifted out of the slits and the action of the stream left undisturbed.

296,076. SUSPENDER-END. CHRISTOPHER C. SHELBY, New York, N. Y. Filed Jan. 15, 1884. (No model.)



Claim.—1. The clasp B, provided with the depending portions b' and b^2, the latter having the wings b^2 b^2, in combination with the webbing held at its middle between the parts b' b^2, and at its extremities by the parts b' b^2 and wings b^2, substantially as described.

2. The clasp B, consisting of the eye b, the parts b' b^2, wings b^2 b^2, and prongs or points b^4, substantially as described.

3. The combination, with the webbing, of the bands, of concavo-convex form in cross-section, and adapted, when clasped upon the webbing, to receive in their concave inner sides a portion of the webbing, so as to prevent slipping, substantially as described.

296,077. KNIFE FOR WOOD-WORKING MACHINES. SAMUEL J. SHIMER, Milton, Pa. Filed Feb. 2, 1884. (No model.)

Claim.—1. A knife or cutter for wood-working machines, consisting of a steel body having rigidly secured to one of its faces a coating of soft metal, substantially as and for the purpose set forth.

2. A knife or cutter for wood-working machines, consisting of a steel body having soldered or otherwise rigidly secured thereto a thin layer or coating of soft metal, substantially as and for the purpose set forth.

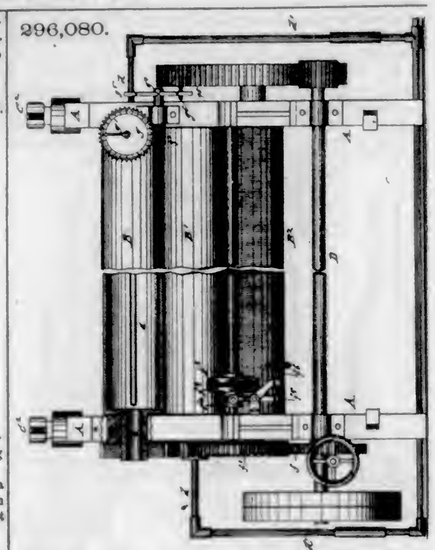
296,078. DENTAL-DRILL HAND-PIECE. JOHN H. SIDDALL, Canton, Ohio. Filed July 22, 1883. (No model.)

Claim.—1. In a hand-piece for chucks or drill-holders for dental engines, the combination, with the revolving drill provided with a pulley or belt-holder, of a belt-guide formed in two parts, each having jaws arranged oppositely to those on the other, the parts carrying the jaws being separable from each other, and means for clamping them together, substantially as set forth.

2. In a drill-holder for dental engines, the combination of the revolving drill-holder, the pulley B, the stationary pulley-support H, having the pulleys G G, and the pulley-support H′, adapted to be withdrawn from and to be forced up against the pulley-holder H, to clamp the belt in place between the pulleys, substantially as set forth.

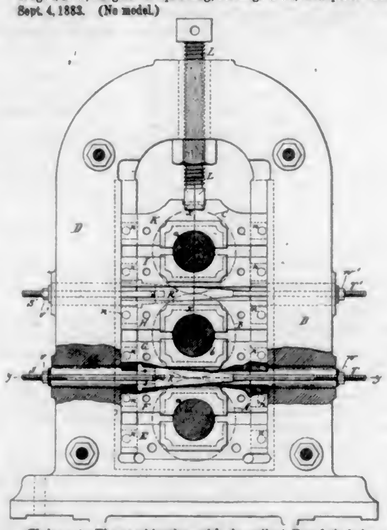
296,079. METALLIC FASTENING. FRANKLIN A. SMITH, Jr., Providence, R. I. Filed Jan. 17, 1884. (No model.)

Claim.—The herein-described metallic tack or fastener A, consisting of the base a, having a rounded lower and substantially straight upper edge, from the center of which projects the prong b, terminating in point c, substantially as shown and described.



296,080. MACHINE FOR CALENDERING PAPER. MOSES SOLINGER, New York, N. Y. Filed Feb. 1, 1884. (No model.)

Claim.—1. In a paper-calendering machine, the combination of a heated pressure-roll, intermediate heated roll, and a lower paper-roll, with means for unwinding and with means for winding up the paper, whereby the paper may be finished at one or both sides, according as the same is passed between the lower and intermediate rolls, or between the upper and intermediate rolls, substantially as and for the purpose set forth.



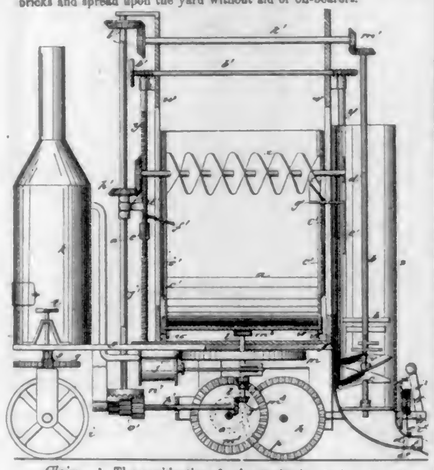
2. In a paper-calendering machine, the combination of an upper heated pressure-roll, an intermediate heated roll, a lower paper-roll, means for unwinding the paper, means for winding up the paper, and friction-brakes applied to the unwinding and winding-up shafts, whereby the paper is moved at a properly-regulated speed through the calendering-rolls, substantially as set forth.

3. The combination, with the calendering-rolls, of a sheet-registering mechanism consisting of a feed-table having revolving feed-rolls, deflecting-plate back of the feed-rolls, tension-roller supported on oscillating and spring-acted levers, and means whereby the oscillations of the levers are transmitted to a registering dial and hand, substantially as set forth.

296,080.

296,081. BEARING FOR ROLLING-MILLS. WALTER STEEL, West Bergen, N. J., assignor to Spaulding, Jennings & Co., same place. Filed Sept. 4, 1883. (No model.)

Claim.—1. The combination, with the rolls A B and their journals or shafts a b, bearing-blocks E G, and cap-blocks F H, of the wedge R, introduced between the cap F and block G, the surfaces being inclined, so that the block G will be raised or lowered by an endwise movement of the wedge R, substantially as and for the purposes set forth.



2. The cap-block F, having an inclined upper surface, with ribs 3 3, in combination with the bearing-block G, with ribs 4 4, and the wedge R, introduced between said blocks, and the rolls and end frames and screws for moving the wedges endwise and holding the same, substantially as set forth.

3. In combination with the rolls A B C and their journals a b c, the end frames, D, the bearing-blocks E G I, and cap-blocks F H K, with the ribs upon the respective edges of the blocks F G H I, the single wedge

R between the blocks F G, and the single wedge R' between the blocks H I, and the screws for moving and holding the wedges, substantially as set forth.

296,082. TRAVELING BRICK-MACHINE. HENRY STELKMANN, Leech Lake, Minn. Filed June 26, 1883. (No model.)

Brief.—The whole machine carrying a tank of clay is propelled forward by steam, the clay mixed, pressed, and issues in a sheet cut into bricks and spread upon the yard without aid of off-bearers.

Claim.—1. The combination of a clay-tank, clay-feeder, clay-mixer, clay-presser, brick-former, clay-cutters, and dischargers, substantially as herein described, with a locomotive-machine, substantially as specified.

2. The combination, in a brick-machine, of a locomotive-truck, a removable clay-tank, and feeding, mixing, pressing, cutting, and discharging apparatus, substantially as described.

3. The clay-tank having slotted sides and removable plates c', in combination with the locomotive-truck having vertically-adjustable feeding-screw x and clay mixing, pressing, cutting, and discharging mechanism, substantially as described.

4. The combination of vertically-adjustable feed-screw x, adjusting-screws y, and cross-heads d' with the clay-tank a, having slotted sides and removable plates c', and being mounted on the truck, together with the mixing, pressing, cutting, and delivering apparatus, substantially as described.

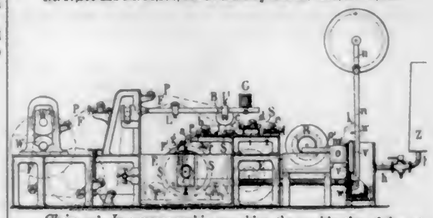
5. The combination of the vertically-adjustable feed-screw x, cross-heads d', and chutes f' g' with the clay-tank a, having slotted sides and removable plates c', substantially as described.

6. The combination of clay-tank a, having rollers u, with the locomotive-truck g, having rails v, uprights w, and feed-screw x, substantially as described.

7. The combination of the vertical clay-mixing hopper z, mixer b, clay-tank a, and feed-screw x with a locomotive-truck, said mixer and feed-screw being geared with the motive apparatus, substantially as described.

8. The combination of the vertical clay-mixing hopper z, mixer b, pressing-screw c, tank a, and feed-screw x, with a locomotive-truck, said presser, mixer, and feed-screw being geared with the motive apparatus, substantially as described.

9. In a brick-machine, the connected series of sliding cutters e, arranged in a cross-head, u', and actuated by suitable mechanism to descend when sufficient clay for a brick has passed them, and to rise when said clay has arrived within an inch or so of the preceding brick, as described.



10. The combination of tappet-wheels c^3, rock-shaft c^2, arms d^3, cross-head u', and cutters e with dischargers f, substantially as described.

11. The combination of a steam-jet pipe, a^4, with the cutters e, having connection with the boiler or other source of steam-supply, and arranged to lubricate the cutters and the clay by steam-jets, substantially as described.

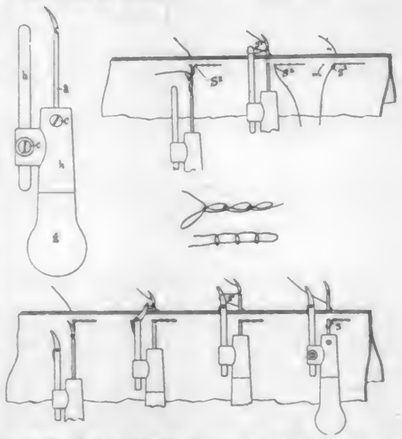
12. The combination of the vertical clay-mixing hopper z, mixer b, pressing-screw c, pressing-chamber d, dischargers f, and cutters e with a locomotive-truck having a clay tank and feeder, and said mixer, presser, cutters, and feeder being geared with the motive apparatus, substantially as described.

13. The combination of abutments v' with the clay-pressing screw, said abutment being movable along the screw, and the screw having a slot or opening, y', substantially as described.

296,088. PAPER-MAKING MACHINE. JOHN VALENTIN STENGER, Frohnleiten, Styria, Austria-Hungary, assignor to the Maschinenbauanstalt Golsern, (vormals Gottschald & Nützli,) Golsern, Germany. Filed Jan. 31, 1884. (No model.) Patented in Austria-Hungary Aug. 30, 1881, No. 17,265 and No. 31,172, and in Germany Jan. 13, 1882, No. 19,193.

Claim.—1. In a paper-making machine, the combination of the cylinder A, a coarse-wire covering, and rubber bands or straps upon the same, and the belt of fine-wire fabric S, substantially as set forth.

2. In a paper-making machine, the combination, with the cylinder A and belt of felt F, of the belt of fine-wire fabric S, the rollers a b f, the rollers d e and their screws, for regulating the tension upon the wire fabric S, and the rollers B C, between which the web of paper-pulp is pressed before passing off upon the felt fabric, substantially as specified.



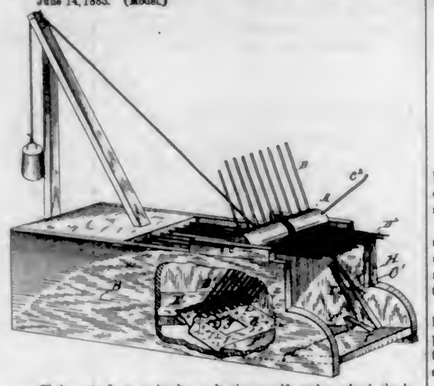
3. The rubber bands or straps upon the cylinder A, in combination with the coarse-wire covering to said cylinder A, and the belt of fine-wire cloth S, whereby the width of the deposited web of paper-pulp is regulated, as set forth.

4. In a machine for making paper, the combination, with the cylinder A, belt of wire fabric S, and rollers around which said belt passes, of the rubber bands upon the cylinder A, and the water-pipes g i, whereby water is discharged downward, the water from pipe g cleansing the coarse-wire covering upon cylinder A and washing away surplus paper-pulp opposite to the rubber bands, and the water from pipe i cleansing the fine-wire belt on its return movement, substantially as specified.

5. The vats for holding paper-pulp and water, and the vat L and pipe K, in combination with the pair of buckets C D, a connecting-rod, n, for lifting said buckets, a pin and slide, V, for tilting the same and discharging the pulp and water, substantially as specified.

6. The buckets C D, constructed with side walls, l, adjustable in height by small removable bars, whereby the quantity of pulp and water to be raised at each upward movement is regulated, substantially as set forth.

296,084. HAND APPARATUS FOR FORMING STITCHES. CONRAD STICKEL, Ditzingen, Würtemberg, assignor to Fr. Schumacher, Aachen, Germany. Filed Dec. 15, 1883. (No model.) Patented in Germany Feb. 6, 1883, No. 24,157; in Belgium Sept. 21, 1883, No. 62,660, and in France Sept. 21, 1883, No. 157,665.

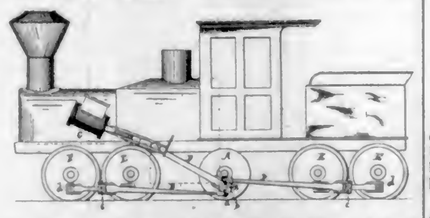


Claim.—1. A hand stitching device consisting of a hooked needle-awl secured to a handle provided with means forming a loop-holder, substantially as described.

2. The combination, substantially as shown and described, of the handle g, socket h, provided with the projecting parts, set-screws c c, cylindrical loop-holder b', and the hooked needle-awl a, the whole forming a complete hand stitching device.

3. The combination consisting of the hooked needle-awl a, socket A, loop-holder b', finger d, fulcrumed on the guide-spring f, and handle g, substantially as shown and described.

296,085. ANIMAL-TRAP. HIRAM B. SWARTS, Wooster, Ohio. Filed June 14, 1883. (Model.)



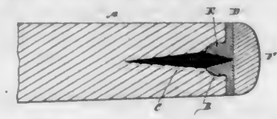
Claim.—1. In an animal-trap having a self-setting wheel, the inclined floor F, connected to the floor F' by means of a pivoted platform having an opening formed therein, so as to provide a bait-receptacle and a bait-hook, the parts being organized and combined substantially as shown.

2. In an animal-trap, a wheel having spoke-arms, the raised floor F, and hinged platform G, provided with a retaining-spring and catches, in combination with a pivoted bait-hook which extends under the floor F, and is adapted to depress the platform G when drawn forward, substantially as shown.

3. In an animal-trap having a rotary spoked wheel, and means for setting and holding the same, the hinged platform G, which is held in a raised position by means of a spring, and provided with an opening through which passes a bait-hook, said platform adapted to be operated either by the weight of the animal or the movement of the bait-hook, the parts being combined and organized substantially as shown, and for the purpose set forth.

4. In a self-setting animal-trap, a rotating axle provided with means for operating the same, said axle having two series of spokes, D D' D^2 and C C' C^2, of different lengths projecting from the axle, as shown, the longer spokes being adapted to engage with a catch located upon the end of a raised platform, which catch is disengaged by the depression of a pivoted platform with a central opening, through which passes a bait-hook, l, the rear end of which bears upon the upper end of the pivoted platform, and the pivoted floor I, provided with an arm, I', with catch i and triangular stop J and spring-latch H, the parts being organized and combined substantially as shown, and for the purpose set forth.

296,086. LOCOMOTIVE. THOMAS S. TEW, Big Rapids, Mich. Filed June 9, 1883. (No model.)

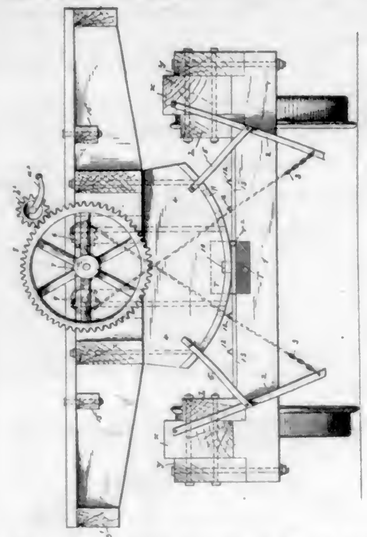


Claim.—1. The combination, with the main driving-wheel and crank-pin of a locomotive, of the double-crank arm a, pivotally connected therewith, and the rods b b, connected with opposite ends of said arm, and having their opposite ends connected to driving-wheels on opposite sides of the main driving-wheel, substantially as described.

2. The combination, with the centrally-located driving-wheels of a locomotive, connected in the usual way to the steam-cylinders, of the double-crank a, upon the end of the wrist-pin B, connecting-rods b, the joint c, the parallel rods d, and the traction-wheels E, the parts being constructed, arranged, and operating substantially as and for the purposes specified.

3. The combination, with the main and secondary driving-wheels of a locomotive, of the connecting-rod b, having one end provided with a joint, c, adapted to yield laterally, and connected at its opposite ends with said main and secondary driving-wheels, substantially as described.

296,087. BILLIARD-CUE TIP. WARREN H. THOMAS and CHARLES B. CORE, Peoria, Ill. Filed Oct. 26, 1883. (No model.)



Claim.—1. The combination, with a cue, of a screw tapered toward both ends and screwed in the end of the cue, a butt-piece held on the end of the cue by the screw, and of a tip glued on the butt-piece, substantially as herein shown and described.

2. The combination, with a cue having a recess in its end, of a screw screwed in the end of the cue and projecting through the cavity, a butt-piece held on the projecting end of the screw, and provided with a neck fitting in the cavity in the end of the cue, and of a tip secured on the butt-piece, substantially as herein shown and described.

3. The combination, with a cue provided in its end with a cavity having a concave bottom, of a screw screwed in the end of the cue and projecting through the cavity, a butt-piece held on the projecting end of the screw, and provided with a neck fitting in the cavity, and of a tip secured on the butt-piece, substantially as herein shown and described.

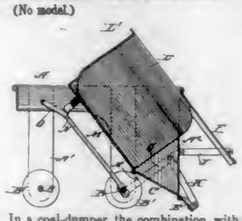
296,088. DUMPING-CAR. MATTHEW VAN WORMER, Melrose, Mass. Filed Aug. 30, 1883. (No model.)

Claim.—1. In combination, the stirrups C, as made with the single cross-bar e, and hung on the sills of the car-bed to swing in directions lengthwise of the car, the tapering catches D, fixed on the car-truck, and having their under sides straight, and the connections f and g and hand-lever A, all substantially as and for the purpose set forth.

2. The combination, substantially as shown and described, of the central draft-timber, r, on the truck, the block s thereon, the draw-bar resting on said block, and the straddle-block o of yoke t, within which the draw-bar works, the draft-timber block and yoke being bolted together.

3. In combination, the draft-timber r on the truck-block s, yoke t, and a platform, u, hinged above said yoke, as and for the purpose set forth.

4. In combination with the blocks x, bolted to the outside sills, y, of the truck, and resting on its end beam, 1, the levers 2, chain 3, link-levers 5, rocker 4, and the system of toothed gears on the car-body, the combination operating to tilt the body by pushing either of the link-levers 5 upward against the rocker.



5. In combination with the rockers of a dump-car, the central draft-

timber, *r*, on the truck-frame, made, as described, with reduced ends, on which the rockers bear, and with a greater height or thickness between the rockers, as and for the purposes set forth.

6. In a four-wheeled side-dumping car, the combination, with a center bolster, a^2, of a central draft-timber, *r*, centrally supported on and bolted at its center to the center of said bolster, said draft-timber being at its ends let into and secured to the rocker-bolsters, and forming a portion of the bed for the rockers.

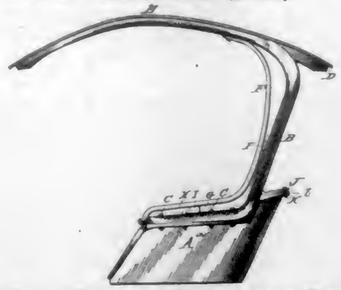
7. In combination, the levers 2, links 5, chain 3, toothed gears 6 and 9 on the car-body, large gear-wheel 8, having the toothed gear 7 on its axis, and driving-gear b^2, these parts being arranged for joint operation substantially as and for the purposes set forth.

296,089. COAL-DUMPER. THOMAS WALLWORK, Litchfield, Ill. Filed Jan. 30, 1884. (No model.)

Claim.—1. In a coal-dumper, the combination, with a frame, of a swinging box hinged in the same, and of gates hinged to the top and bottom of the frame, the said gates being connected to open and close together, substantially as herein shown and described.

2. In a coal-dumper, the combination, with a frame having an inclined bottom at its front, of a box hinged in the frame, and of gates hinged to the top and bottom of the front end of the frame, the said gates being connected to open and close together, substantially as herein shown and described.

3. The combination, with a frame, of a box hinged in the same at one end of the bottom of said box, substantially as herein shown and described.

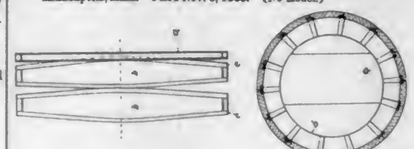


4. The combination, with the frame A, of the box L, hinged in the same at one end of the bottom of the said box, and of the frame M, hinged in the frame A, under the box L, substantially as herein shown and described.

5. The combination, with the frame A, of the box L, hinged in the same at one end of the bottom of the said box L, the frame M, hinged on the frame A, under the box L, and of the spring N on the frame M, substantially as herein shown and described.

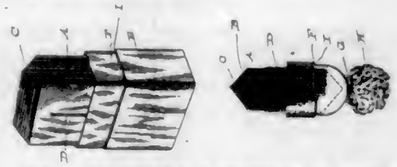
6. The combination, with the frame A, of the hinged box L, the gates F and E, hinged to the top and bottom of the ends of the frame A, the swinging arms G, and the connecting-rods J K, extending from the arms G to the gates F and E, substantially as herein shown and described.

7. The combination, with the frame A, having the sides A^2 at the front, and an inclined bottom, C, between the sides A^2, of the hinged box L, the gates F and E, hinged to the top and bottom of the frame A, the swinging arms G, and the connecting-rods J and K, extending from the arm G to the gates F and E, substantially as herein shown and described.



296,090. VEHICLE-TOP. EDWARD WARREN, Ligonier, Ind. Filed Nov. 13, 1882. Renewed Aug. 24, 1883. (No model.)

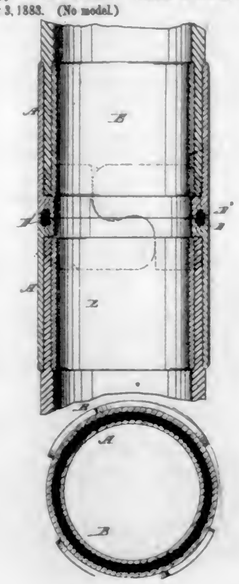
Claim.—1. The removable vehicle-top constructed with uprights B, having forward-bent lower parts, G, adapted to be secured to the side flanges, *a*, of the seat by bolts C, brace-bars F, secured at their lower ends to the front ends of parts G of the uprights, and at the other end to the top-frame in front of uprights B, and bent to form arm-supports H and braces for the top, and connecting-bar J, secured to the back flange, *b*, by means of notted bolts K, as and for the purpose shown and set forth.



2. The combination of the vehicle-seat A, having side flanges, *a*, and back flange, *b*, with the removable top consisting of top D E, uprights B, having forward-bent lower parts, G, braces F H, and connecting-bar J, and adapted to be removably secured upon the seat-flanges *a b* by bolts C and K, as and for the purpose shown and set forth.

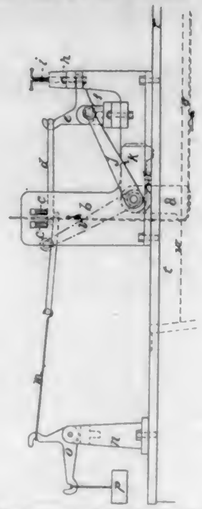
296,091. MANUFACTURE OF BARRELS. CALEB B. WASHBURN, Minneapolis, Minn. Filed Nov. 5, 1883. (No model.)

Claim.—The combination, in a barrel, of staves having their inner edges cut away to form dovetail grooves, with strips of wood beveled suitably to fit into and fill such cavities flush with the inner surface of the staves, while permitting their outer edges to meet.



296,092. SLATE-WASHER. HOWARD L. WEED, Grass Valley, Cal. Filed Jan. 21, 1884. (No model.)

Claim.—1. In a slate-washer, an interchangeable pad beveled at both ends to form a point or wiper, C, made compact and held together by a cord or clamp, substantially in the manner specified.

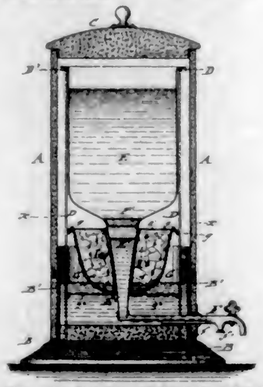


2. In a slate-washer and wiper, the hollow trough or cap to receive and hold the pad or wiper, with its lower end provided with clamp or hooks to receive and hold a sponge or washer, in combination with a box or holder for said washer, constructed and arranged in the manner as herein set forth and described.

296,093. HOSE-COUPLING. THOMAS E. WELLS, Sandy Hill, N. Y. Filed May 3, 1883. (No model.)

Claim.—The combination, with hose-sections, of the collar A, having hook-prongs B, projecting beyond the end, and annular groove C, the metallic rings D E, and the packing-ring D', as and for the purpose specified.

296,094. APPARATUS FOR COATING WIRE WITH METAL. LEWIS WILLIAMS, Johnstown, Pa., assignor to the Cambria Iron Company, of Pennsylvania. Filed Oct. 5, 1883. (No model.)

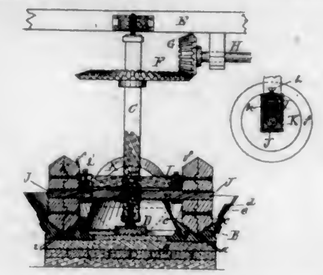


Claim.—1. The combination, in a wire-wiping machine, of the wire-wiping coils *d d* with the bars *c c*, substantially as described.

2. In a wire-wiping machine, the combination of the wire coils *d d* with the levers *o e*, weights *p*, and screws *i*, substantially as described, and for the purpose set forth.

3. In a wire-wiping machine, the combination of the wire-wiping coils *d d*, the bars *c c*, and levers *o a*, with sinker *a*, shaft *u*, and lever *j*, substantially as described, and for the purpose set forth.

296,095. WATER-COOLER. CHARLES F. WELCH, New York, N. Y. Filed Jan. 25, 1884. (No model.)

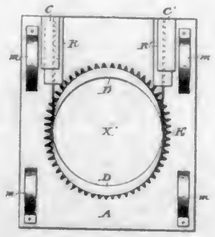


Claim.—1. The combination of an exterior body, an interior water-receptacle having a funnel-shaped end, an interior supporting-frame for the water-receptacle, an ice-receptacle arranged around the funnel of the water-receptacle, and a discharge-faucet connected to the lower end of the funnel, substantially as set forth.

2. The combination of an exterior body, A, an interior water-receptacle, E, having a funnel, E', an interior supporting-frame, D D', for the water-receptacle, an ice receptacle or net, G, arranged around the funnel E', a guard-cone, E^2, arranged around the funnel, and a discharge-faucet, F, connected to the lower end of the funnel, substantially as specified.

3. The combination of the body A, made of an upper detachable and a lower fixed section, a base, B, having a cylinder, B', an interior water-receptacle, E, having a bottom filter, F', and funnel E', a supporting-frame, D D', an ice-supporting net, G, a guard-cone, E^2, around the funnel E', and a discharge-faucet, F, connected to the lower end of the funnel E', substantially as specified.

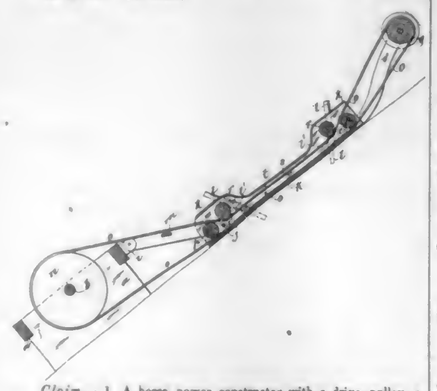
296,096. ORE-CRUSHER. JACOB CHARLES WENWELL, Medford, Mass. Filed Nov. 8, 1883. (No model.)



Claim.—The combination of a series of crushing-rollers having V-shaped peripheries, and horizontal shafts on which said rollers are mounted, with a carriage in which said shafts are journaled at their outer bearing-points, a vertical shaft in which the inner ends of said horizontal shafts are journaled, springs which are interposed between said carriage and said horizontal shafts, and a stationary bed having a circular V-shaped groove in which said rollers travel, substantially as set forth.

296,097. POTTER'S MOLD. AMOS WOEBER, Cincinnati, Ohio, assignor, by direct and mesne assignments, to the Cincinnati Target Ball and Trap Manufacturing Company, same place. Filed Sept. 19, 1882. (No model.)

Claim.—An improved potter's mold consisting of the bed-plate A *a*, flasks B, pistons E, lifting-bar F, elevating devices G G' *g* H H' *h* J, and readily-removable followers N, which latter are connected to a bar, L, and are operated directly by hand, substantially as herein described.

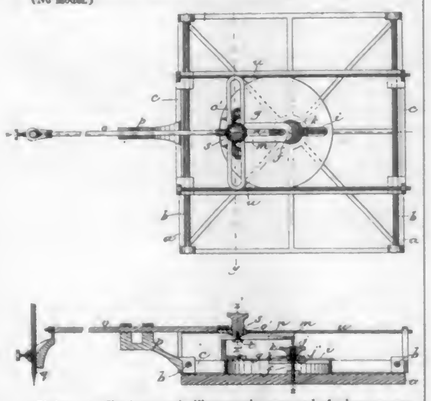


296,098. CAR-AXLE PACKING. WILLIAM H. WRIGHT, Tarrytown, N. Y. Filed Aug. 16, 1883. (No model.)

Claim.—1. A compressible impervious packing, *n*, such as felt or other similar material, applied, attached, or affixed to the face of a supporting metallic plate, A, and articulating sliding clip B, provided with vertical guides or ways, such packing presenting a continuous impermeable surface in contact with the inner wall, K, of a packer-chamber and around a car-axle shaft in such chamber by means of such supporting-plate and clip, tension-spring E, and pressure-springs *m*, operating substantially in the manner and for the purposes described.

2. In a shaft-packing, the metallic supporting-plate A, its articulating sliding clip B, pressure-springs *m*, and projecting crescent-shaped articulating seat with tension-spring E, substantially operating in the manner and for the purposes described.

296,099. HORSE-POWER. AUGUST ZASTROW, La Harpe, Ill. Filed Jan. 26, 1884. (No model.)

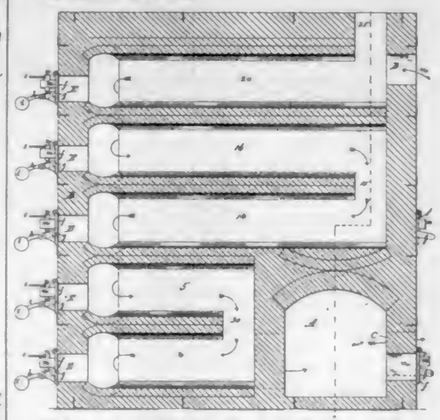


Claim.—1. A horse-power constructed with a drive-pulley, *n*, mounted on the main power-shaft *b*, and a belt-casing, *k*, pivot-jointed by bars *h* to the frame *a*, and said belt-casing being depressed along its central portion, as at *t*, substantially as shown and described.

2. The combination, with the frame *a*, its drive-shaft *b*, having pulley *n*, and the belt *o*, of the casing *k*, hinged to frame *a* by the bars *h*, and anchored in place by stakes *l*, driven into the ground in reverse ways at opposite sides of the casing, substantially as shown and described.

3. The belt-casing *k* of a horse-power, having idlers *p r* journaled therein at opposite ends, depressed centrally at *t*, and having fixed inclined sockets *l'*, through which stakes *l* may be driven reverse ways for anchoring the casing to the ground, substantially as shown and described.

296,100. ELLIPSOGRAPH. LEVI ABBOTT, Cambridgeport, assignor to E. T. Snow and H. P. Stevens, both of Chelsea, Mass. Filed Feb. 4, 1884. (No model.)

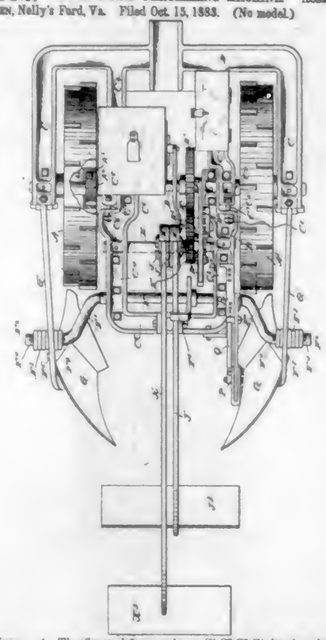


Claim.—1. The improved ellipsograph composed of a base or support, a disk adjustably pivoted thereto, a frame, *c*, adapted to slide on guides on the base and inclosing the disk *g*, a marker-carrying arm adapted to slide in a guide formed on the frame *c* and provided with a transverse slotted head, and an adjustable crank-pin connecting said head with the disk or with an attachment thereof, as set forth.

2. The combination of the base or support *a*, having a fixed pivot-pin, *f*, the threaded socket on said pivot, the slotted disk adjustable on said socket, means for positively securing said disk to the socket in any position to which the disk may be adjusted, the slotted arm secured to said disk, the sliding frame *c*, surrounding said disk, the marker-carrying arm having the slotted transverse head, and the adjustable crank-pin, all arranged and operating substantially as described.

3. The combination of the frame *c*, having the guide-rods *s s*, the marker-carrying arm *o*, adapted to slide in guides formed on said frame, and provided with the slotted transverse head supported and guided by said rods, and means, substantially as described, for reciprocating said frame and arm each in a direction at right angles to the reciprocating movement of the other, as set forth.

296,101. HOT-BLAST STOVE. JOSEPH J. AIREY, Pittsburg, Pa. Filed Sept. 13, 1883. (No model.)

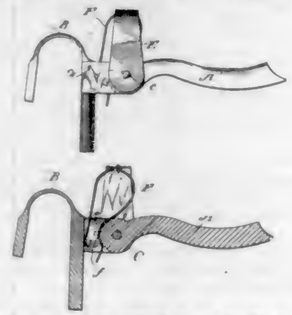


Claim.—1. In a hot-blast stove, the combination of a series of horizontal flues communicating each at its end with the flue next adjacent, the last flue of the series communicating by a vertical flue with a second series of similar flues above, substantially as described.

2. In a hot-blast stove, the combination of a horizontal combustion-chamber with a series of communicating flues arranged side by side and running in a direction at right angles to the direction of said combustion-chamber, substantially as described.

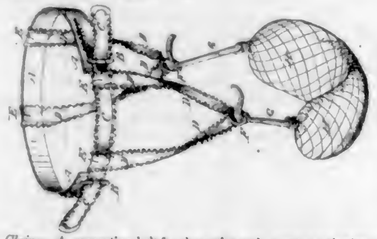
3. In a hot-blast stove, one or more wall-openings communicating with the heating-flues, provided with swinging doors *f*, having tubes *m*, and plugs *n*, having openings *p* and partition *r*, substantially as described.

296,102. HILLING AND FERTILIZING MACHINE. ROBERT W. ALLEN, Nelly's Ford, Va. Filed Oct. 15, 1883. (No model.)



Claim.—1. The flanged frame-pieces $C' C^2 C^3 C^4$, having the lapped hinged ends, as specified, in combination with the bolts C^7 and nuts C^8, whereby the lapped ends of the frame are adjustable, substantially as described, and for the purpose set forth.

2. The lifting-crank arms $F' F^3$, washers F^7, and means whereby the washers may be secured, in combination with the beam G' and right-angled arm F^5, substantially as described, and for the purpose set forth.

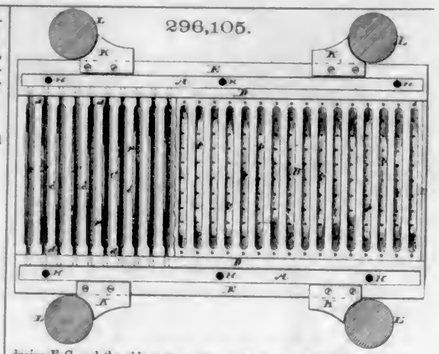


3. The boxes H H', provided with two side parallel toothed racks, said boxes being open on one side and provided on the other with an inner annular flange, in combination with a mutilated pinion, substantially as described, and for the purpose set forth.

296,103. THILL-COUPLING. CYRUS W. AMENT, Anthony, Kans. Filed Jan. 3, 1884. (No model.)

Claim.—A thill-coupling consisting of the headless thill bolt or pin C, with tapered ends *c*, bail or approximately U-shaped spring-metal guard E, having apertures or indentations *e*, to receive the ends of the headless bolt C, and looped spring F, arranged between axle-clip B and thill-iron A, and connected to guard E, substantially as shown, and for the purpose described.

296,104. CATAMENIAL SACK. NANNETTE AMIA, Brooklyn, N. Y. Filed Dec. 3, 1883. (Model.)



Claim.—A supporting-belt for absorptive pads, constructed substantially as herein shown and described, and consisting of the piece of webbing A, having a buckle, B, at each end, the elastic webbing C, buckled into the said buckles, and the elastic hangers D, having end loops, E, to receive the webbings A C and slide thereon, and provided with rings F, free to slide upon the said hangers, to receive the fastening-strings of an absorptive pad to be tied thereto, as set forth.

296,105. DIVISION-PLATE FOR OIL-PRESSES. LOUIS ANDREWS, Arkansas City, Ark. Filed Sept. 17, 1883. (No model.)

Claim.—1. In a press for extracting oil from cotton-seed meal or other substance, the herein-described division-plate C, constructed with the corrugations *c c'*, top side flanges, D D, and top side gutters, A, outside of said flanges, the cross-depressions *c* in the top of the plate opening into shallow-bottom drain-channels F, which, extending across the plate at the bottom of said depressions, open through said side flanges, D, into the side channels, A, and the said side flanges having drains G, opening above said corrugations *c* into said side gutters, whereby the oil is drained from the said division-plate through its side flanges, D D, both from the top and from the bottom of the cake while under compression, substantially as shown and described.

2. In a press for extracting oil from cotton-seed meal and other substances, the division-plate C, constructed with top side flanges, D D, and bottom extension, C', the latter being adapted to fit within the former when the plates are brought together, substantially as shown, and for the purpose described.

3. In a press for extracting oil from cotton-seed meal and other substances, the division-plate C, constructed with top side flanges, D D, and bottom extension, C', the latter being adapted to fit within the former when the plates are brought together, the top and bottom surfaces of said division-plate being formed with cross-corrugations, the drains F G and the side gutters, A, on the upper side of said plate being arranged at different levels, all constructed substantially as shown and described.

296,105.

4. In a press for extracting oil from cotton-seed meal and other substances, the division-plate C, constructed with top cross-corrugations, *c c'*, the top side flanges, D D, the drains F G, and the side gutters, A, in combination with a copper sheet, B, formed with cross-corrugations corresponding with those in the division-plate, and having perforations *b*, arranged in line over the cross drain-channels F, whereby said copper plate forms a permanent corrugated seat for the mat, conforming to the corrugations of the division-plate, substantially as described, for the purpose specified.

5. The combination, in a press for extracting oil from cotton-seed meal and other substances, of the division-plate C, constructed with top and bottom cross-corrugations, the top side flanges, D D, the top drains, A G F, and the bottom extension, C', the latter adapted to fit within the former when the plates are brought together, with a permanent perforated copper sheet, B, conforming to the corrugations in the top and bottom of the division-plates, forming a mat-seat placed within and between the said side flanges, whereby the plates will match with solid surfaces on a level when brought together, as shown and described.

6. The herein-described division-plate, constructed with top side flanges and a bottom extension, the latter adapted to fit between the former when the plates are brought together, the cross-corrugations in the top and bottom surfaces, the top drains, A G F, and the top end cross-rib, I, joining the said side flanges, D D, whereby to form a stop to limit the placing of the sack of meal upon said plates, as shown and described.

296,106. SEWING-MACHINE. GEORGE A. ANNETT, Sutherlands Corners, Ontario, Canada. Filed Mar. 13, 1883. (Model.)

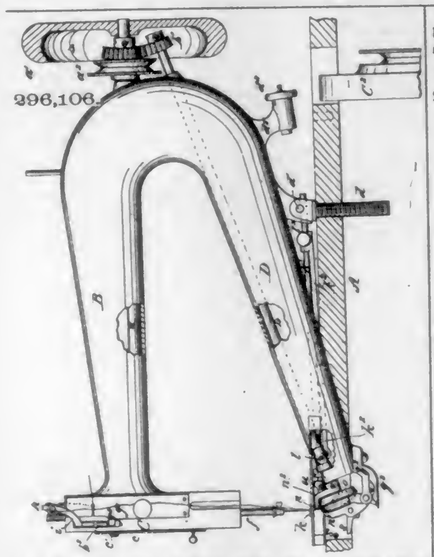
Claim.—1. A sewing-machine hinged to a support which is adjustably attached to the table, substantially as herein shown and described.

2. The combination, with a sewing-machine and its supporting-table, of the screw *d*, hinged to the machine and passing through an aperture in the table, substantially as herein shown and described.

3. In sewing-machines, the combination, with the hollow arm B, the oblique arm D, and driving-shafts, of the looping mechanism with the supporting and adjusting screw *d*, substantially as described, for the purpose of adjusting the arm above the table, as specified.

4. In a sewing-machine, the combination, with the driving-wheel C^2, of the hinged arm D, and the bobbin-winder d^2 on said arm, substantially as herein shown and described.

5. In a sewing-machine, the combination, with the hollow arm B and the oblique hollow arm D, of the drive-shaft *a*, the oblique shaft *b*, the hook *n*, attached directly to the end of the said oblique shaft, and the eccentric gearing *b'*, substantially as herein shown and described.



6. In a sewing-machine feed mechanism, the combination of rod *k'*, roller l', bar k^2, adjustable sleeve l^2, and conical eccentric *l*, substantially as shown and described.

7. In a sewing-machine, the combination, with the arm D, having a projection on its under surface, and the driving-shaft *b*, provided with an eccentric, of the spring-rod *k'*, secured to the projection of the arm D, and feed-bar *k* on the end of said rod, substantially as herein shown and described.

8. In a sewing-machine, the combination, with the arm D, having a projection on its under surface, and the drive-shaft *b*, provided with the conical eccentric *l*, of the spring-rod *k'*, secured to the projection on the arm D and carrying the feed-bar *k*, the roller l', and means for adjusting the same on the spring-rod, substantially as herein shown and described.

9. In a sewing-machine, the combination, with the presser-bar *e*, provided with the arm f^2, and the eccentric *g*, for operating the presser-

296,106.

bar, of the tension-plate g', provided with the arm g^2, projecting over to the eccentric, substantially as herein shown and described, whereby the tension-plate will be operated by direct contact of its arm with the eccentric, as set forth.

10. In a sewing-machine, the combination, with the head C, having an opening in its face, and the presser-bar e, provided with the arm f^2, of the pivoted plate c, and the eccentric g, fitted upon the pivot of said plate, substantially as herein shown and described, whereby the plate serves the double purpose of closing the opening in the head and a means for operating the eccentric, as set forth.

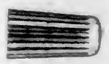
11. In a sewing-machine, the combination, with the head C, having an opening in its face, the presser-bar e, provided with the arm f^2, and the tension-plate g', provided with the arm g^2, of the pivoted plate c and the eccentric g, fitted upon the pivot c' of the said plate, substantially as herein shown and described.

12. In a sewing-machine, the combination, with the head C, provided with the hub a^2 and the presser-bar e, of the nut d', provided with the hub a', and the spring c^2, substantially as herein shown and described.

13. In a sewing-machine, the combination, with the hinged shuttle-bed q, of the non-rotating disk o, secured to the hinged arm s', substantially as herein shown and described.

14. The combination of hinged arm s', disk o, hinged shuttle-bed q, and springs s^4 q^2, substantially as described.

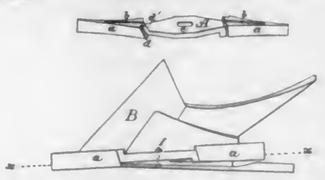
15. The combination of hinged disk o, attached at one side to its supporting-arm s', the shuttle-bed q, and the shuttle m, held by a pin, o^2, at one side of and below the center of the disk o, substantially as described.



16. The shuttle m, formed with bulge m' and aperture m^2, combined with hook n, disk o, and bed q, substantially in the manner described.

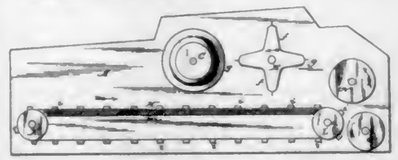
17. In a sewing-machine, the combination, with the oblique arm D, hinged to the table A, provided with the pin s', of the hinged disk o, provided with the tripper s, and the hinged shuttle-bed q, substantially as herein shown and described.

18. In a sewing-machine, the combination, with the head C, provided with the pin i^2, and the presser-bar e, of the tilter-arm i, pivoted to the presser-bar, and having a slot to receive the pin of the head, substantially as herein shown and described.



19. In a sewing-machine, the combination, with the presser-bar e, of the tilter i, pivotally connected to the same, and the take-up A, made in one piece with the connection h', that connects the needle-bar with the eccentric, substantially as herein shown and described.

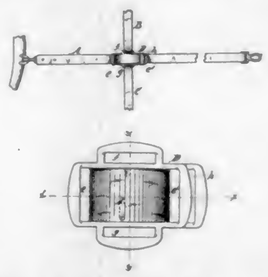
296,107. SHAFT-TIP FOR CARRIAGES. WALTER S. ATWOOD, Waterbury, Conn., assignor to the Plume & Atwood Manufacturing Company same place. Filed Jan. 17, 1884. (No model.)



Claim.—The tip or ferrule for carriages, shafts, or similar articles, having the metal at the closed end thicker than the sides, and the said sides tapering and corrugated, substantially as set forth.

296,108. PLOW. SILAS W. BALL, Canton, Ohio. Filed Jan. 30, 1884. (No model.)

Claim.—The interchangeable point A, provided with the heads a, the grooves b, the shoulders $d\,d'$, and the slot e, in combination with the standard C, provided with the notch or recess E, and the slot F, and the share B, substantially as and for the purpose specified.

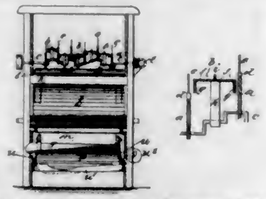


296,109. SELF-FEEDING AND BAND-CUTTING ATTACHMENT FOR THRASHING-MACHINES. SAMUEL SAMUELS BARR, Waukon, Iowa. Filed July 11, 1882. (No model.)

Claim.—1. The belt H and spreader E, having double pulley e' e^2 and belt r, in combination with rollers L N O, the roller L having double pulley l l^2 and gearing l^3, and the gearing n, s, and o, by which the relative speed of the parts and feeding of grain are regulated, all as and for the purpose set forth.

2. The band-cutter shaft C, having cutter-disks d, and spreader E, having ribs f and teeth g, in combination with rotating carrier-apron H, and rollers N L O, double pulleys, bands, and gears, substantially as set forth, whereby the relative speed of the parts and the feeding of grain are regulated, as set forth.

296,110. TRACE-TRIMMING. JAMES M. BASINGER, Buffalo, N. Y., assignor of one-fourth to Pratt & Letchworth, same place. Filed Dec. 14, 1883. (No model.)

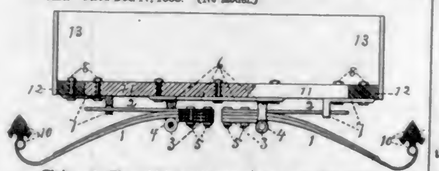


Claim.—1. The trimming D, consisting of a convex bed, d, raised end loops, $e\,e'$, through which the trace can be passed, an upper loop, f, for the attachment of the back-band, and a lower loop, g, for the attachment of the belly-band, substantially as set forth.

2. The combination, with a trace, of a trimming, D, composed of a convex bed, d, and raised loops $e\,e'$, through which the trace is passed, and a lower loop, g, to which the belly-band is attached, substantially as set forth.

3. The combination, with the trace A, back-band B, and belly-band C, of a trimming, D, composed of a convex plate, d, provided with raised end loops, $e\,e'$, through which the trace is passed, an upper loop, f, to which the back-band is attached, and a lower loop, g, to which the belly-band is attached, substantially as set forth.

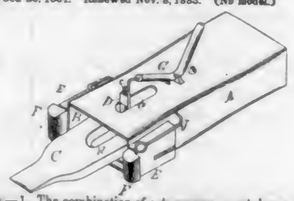
296,111. THRASHING-MACHINE. JOHN A. BEAN, Baden, Ontario, Canada. Filed July 9, 1883. (No model.) Patented in Canada June 2, 1882, No. 14,893.



Claim.—The crank-shafts c and rakes a, having teeth e and notches d, in combination with perforated plates b, having flanges g, said rakes and plates being mounted on the crank-shafts, the rakes having greater throw than the plates, substantially as described.

296,112. POLISHING COMPOUND. HENRY H. BECKER, Chicago, Ill. Filed Sept. 24, 1883. (No specimens.)

Claim.—The polishing compound herein described, consisting of bone, ashes, and slate, compounded in substantially the manner and proportions herein specified.



296,113. VEHICLE-SPRING. CHARLES AUGUSTUS BEHLEN, Cincinnati, Ohio. Filed Dec. 17, 1883. (No model.)

Claim.—1. The vehicle-spring consisting of the combination of the branch 1, having the construction set forth, with the branch 2, the branch 2 being rigidly attached to the end of the branch 1, as set forth, and having its other end free to slide in a suitable bearing in a bracket attached to the spring bar or body, and the connected ends of the said two spring branches being hinged to a bracket projecting from the bottom of the vehicle-body, and being free to oscillate on the hinge-bolt, as set forth.

2. The vehicle-spring consisting of the combination of the branch 1, having the construction set forth, with the branch 2, having the construction set forth, and with the strip 3, having a hinge-eye and secured to the connected ends of the branches 1 and 2, as set forth, and with a bracket attached to the under side of the vehicle-body, and having downward projections, with eyes and a hinge-bolt for hinging the connected ends of the spring branches 1 and 2 to the said bracket, and with a bracket attached to the bottom of the vehicle-body and provided with a slot for guiding the free end of the spring branch 2.

296,114. CAR-COUPLING. JACOB H. BEIDLER, Mount Pulaski, Ill. Filed Oct. 20, 1881. Renewed Nov. 8, 1883. (No model.)

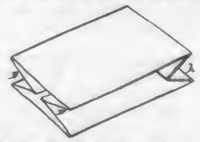
Claim.—1. The combination of a depressing crank-lever, J, a coupling-link and fulcrum-ridges on this link, substantially as described.

2. The combination, in a car-coupling, of a lever, G, of angular form, having a hook on one end, of a coupling-pin hung from said hook, substantially as described.

3. The combination of the sheath E, arranged on the sides of the draw-bar, with the sliding buffers and their springs b, substantially as described.

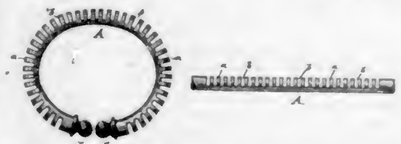
296,115. OVERSHOE OR ARCTIC. JOHN B. BELCHER, Charlotte, Mich. Filed Dec. 21, 1883. (No model.)

Claim.—1. In a rubber, cloth, or arctic overshoe, the U-shaped piece of wire A, having center bar, a, and hooks C, for the reception of the lacing-string, substantially as shown, and for the purpose described.



2. In a rubber, cloth, or arctic overshoe, the lace hook and eyelet consisting of the U-shaped piece of wire B, having center bar, a, eye e, and hook C, substantially as shown, and for the purpose described.

296,116. PROCESS OF ROASTING AND DISINTEGRATING GOLD, SILVER, AND COPPER ORES. DAVID WALTON BIRMINGHAM, Clifton, N. Y. Filed Nov. 6, 1883. (No specimens.)



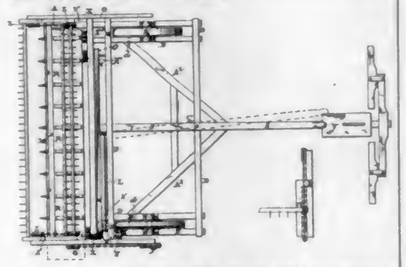
Claim.—The process herein described of preparing refractory ores for amalgamation, consisting in combining therewith lime, carbon, and common salt, or equivalents, roasting the mixture, and then subjecting the same to a suitable bath, substantially as described.

296,117. PAPER BAG. GEO. O. BLOWERS, Canajoharie, N. Y., assignor to William J. Arkell, same place. Filed July 12, 1883. (No model.)

Claim.—A bag having bellows sides, and also a bellows bottom at the middle of the blank, all substantially as shown and described.

296,118. MANUFACTURE OF JEWELRY. HENRY C. BONIFACE, New York, N. Y., assignor to Rice & Brother, same place. Filed Feb. 21, 1884. (No model.)

Claim.—1. The method herein described of making rubber and other jewelry, which consists in cutting a series of transverse recesses into a tube of suitable material, and then bending the continuous foundation portion into the proper shape, substantially as set forth.



2. An article of jewelry formed of a continuous foundation portion, and of a series of narrow ring-shaped strips, separated by intermediate transverse recesses, said strips being arranged along a part or the entire length of the article, substantially as set forth.

296,119. RUBBER BOOT. AUGUSTUS O. BOURN, Bristol, R. I. Filed Jan. 4, 1884. (No model.)

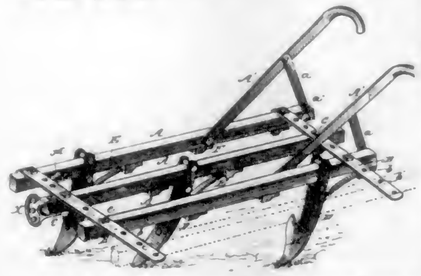
Claim.—A rubber boot or shoe having a longitudinally-ribbed upper, composed of the usual sheet of vulcanizable-gum compound, and a foundation fabric having integral longitudinal ribs on its front or outer surface and a plain or smooth inner surface or back, substantially as described.

296,120. HARVESTER. DAVID WILLIAM BOYER, Richland Centre, Wis. Filed Mar. 31, 1883. (No model.)

Claim.—1. In a reaper, an apron or carrier frame, in combination with means for giving it an endwise movement or adjustment, so that it can be moved toward either side of the main frame, substantially as shown.

2. In a reaper, the combination of a carrier or apron frame having an endwise movement with means for moving it, and a mechanism at each end for reversing the motion of the apron, substantially as described.

3. In a reaper, the combination of the main frame, supported upon wheels at its rear end, with a carrier or apron frame having an endwise movement or adjustment, and a lever which serves both to adjust the apron and to raise the main frame at its front end, substantially as set forth.

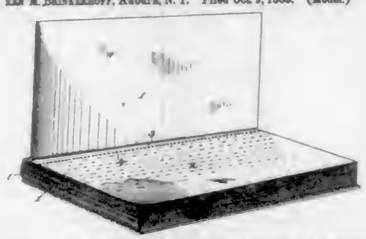


4. The combination of the main frame supported upon suitable driving-wheels, a mechanism connected to one of the wheels for both operating the cutter and driving the endless carrier or apron, and a second mechanism placed upon the opposite side of the frame and made to move in an opposite direction from the one that is connected directly with the driving-wheel, and the carrier-frame having an endwise movement or adjustment and provided with a driving pinion or wheel at each end, substantially as specified.

5. The combination of the frame D, the toothed driving-wheel E, shaft I, provided at its ends with pinions H K and crank J, and the driving-pulley K², with the cross-belt N, pulley O, shaft Q, pinion K', the carrier-frame provided with apron, rollers having the pinions T T', and the lever for moving the carrier-frame, substantially as shown.

6. In a combined rake and reel, the chains A, the rake-heads C', attached thereto, and provided with guide-arms at their ends, in combination with the supporting-frame, the pulleys Z, and the guides B', arranged at the corner of said frame, substantially as set forth.

7. In a combined rake and reel, the combination of the triangular frames, the guides attached to their front and lower sides, the endless chains, and the rake-heads attached thereto, and having the arms adapted to engage said guides, whereby the teeth of the rake-heads are made to enter vertically into the grain, substantially as shown.

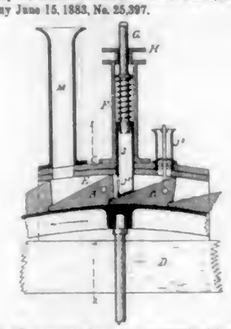


296,121. CULTIVATOR. DANIEL W. BRANCH, Troy, Ala. Filed Jan. 19, 1884. (No model.)

Claim.—1. In combination with the parallel adjustable beams A, having a series of pocket-blocks arranged in transverse and diagonal rows, the plow-standards having interchangeable plows, and the braces E, operating between the pocket blocks and standards, as and for the purposes set forth.

2. In combination with the parallel adjustable beams A, as shown, the standards or feet D, having interchangeable plows H, the braces E, and the blocks F, having pockets f^2 and holding-nibs f, the said blocks being arranged in transverse and diagonal rows, and the whole adapted to serve as and for the purposes set forth

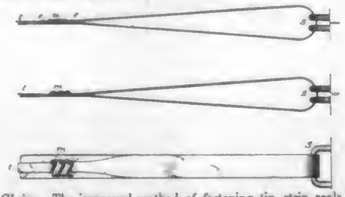
296,122. RECEIPT, CHECK, DRAFT, AND SIMILAR BOOKS. WARREN M. BRINKERHOFF, Auburn, N. Y. Filed Oct. 9, 1883. (Model.)



Claim.—1. A series of superposed leaves secured in substantially the form of a book and having weakened lines of separation, the line of succeeding leaves being in advance of the line of preceding leaves, substantially as described.

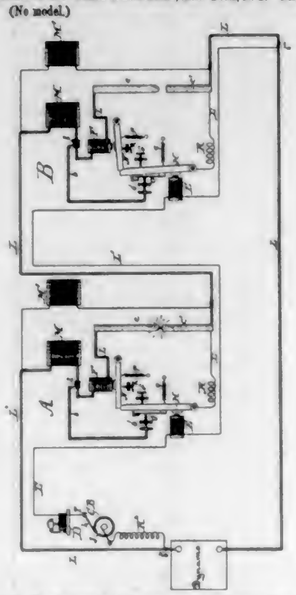
2. A receipt, check, draft, or similar book having its sheets provided with weakened lines of separation, the line of each succeeding sheet being in advance of the preceding one, substantially as described.

3. A series of superposed leaves connected with stubs in book form by weakened lines of separation, each succeeding line being in advance of the preceding one, substantially as described.



296,123. ROTARY ENGINE. SQUIRE BROADBENT and SQUIRE BROADBENT the younger, Tong, near Bradford, County of York, England. Filed June 11, 1883. (No model.) Patented in England Dec. 1, 1882, No. 5,735; in Belgium May 31, 1883, No. 61,556; in France June 1, 1883, No. 155,799, and in Germany June 15, 1883, No. 25,397.

Claim.—1. The combination of a rotary wheel having a series of inclined teeth, B, an inclosing-bracket, and valve-casing, with an inlet-pipe, G, stuffing-box H, hollow sliding valve J, into which the inlet-pipe extends, and a spring interposed between said valve and a collar on the pipe, substantially as set forth.



2. The combination of the rotary toothed wheel with a bracket, C, carrying inlet-pipe, sliding valve, exhaust-pipe, and valve J^2, as and for the purpose set forth.

296,124. FASTENING TIN-STRIP SEALS. EDWARD J. BROOKS, East Orange, N. J., assignor to E. J. Brooks & Co., New York, N. Y. Filed Jan. 31, 1884. (No model.)

Claim.—The improved method of fastening tin-strip seals herein specified, consisting in interthreading their ends by threading one end through slots in the other, bringing the ends together flatwise, one over or upon the other, and then stamping said ends over and across said slots or one of them, with indentations and projections in the shape of distinguishing-marks formed simultaneously in both ends from one and the same side of the seal, said projections on one end being thereby made to fit into and interlock with said indentations in the other end, substantially as shown and described.

296,125. AUTOMATIC CUT-OUT FOR ELECTRIC LAMPS. CHARLES L. BUCKINGHAM and HENRY C. TOWNSEND, New York, N. Y. Filed Nov. 19, 1883. (No model.)

Claim.—1. In an electric lighting system, the combination of a series of electric lamps, each having a shunt or by-path around the arc, and an electro-magnet for closing the same, and a second line-circuit, which embraces the coils of the electro-magnets, for closing said shunts or by-paths.

2. The combination of a main line including the carbons of electric lamps and a normally-open shunt or by-path, an electro-magnet in the arc branch of the lamp, a secondary circuit including an electro-magnet, an armature-lever controlled by the electro-magnet in the secondary circuit, for closing the shunt or by-path, and an armature-lever which is controlled by the electro-magnet in the arc branch, to lock the armature-lever in a position to hold the by-path continually closed.

3. The combination of a main line including the carbons of a series of electric lamps, and a by-path at each lamp, a secondary or main-line circuit which includes the coils of an electro-magnet at each lamp for closing said by-path, and a circuit-closer for said secondary circuit.

4. The combination of main line L, having an arc branch and a by-path at a lamp, electro-magnet F, armature-lever N, secondary circuit L', electro-magnet E, armature-lever H, forming a part of the by-path, and circuit-closer C B.

5. The combination of an arc branch for an electric lamp, a by-path, armature-lever H, forming a part of the by-path, spring O and contact O', and means for locking armature-lever H at or near front contact.

6. The combination of an arc branch and a by-path for an electric lamp, an armature-lever, H, and spring O, forming a part of the by-path, locking armature-lever N, and electro-magnet F in the arc branch.

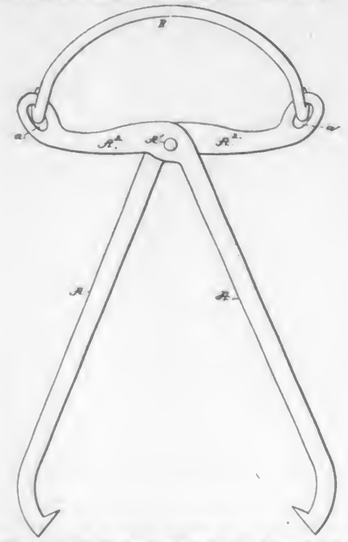
7. The combination of an arc branch and a by-path for an electric lamp, a lever forming a part of the by-path, and a locking-lever controlled by an electro-magnet in the arc branch, for locking the by-path lever to permanently close the by-path.

8. The combination of an arc branch and a by-path for an electric lamp, an armature-lever forming a part of the by-path, and a locking-lever controlled by an electro-magnet in the arc branch for holding the lever forming a part of the by-path in a position to close said by-path.

9. The combination of a normally-open and intermittently-closed main line, L', including an electro-magnet, E, at each lamp, a circuit-closer at the central station, and a main line, L, including an arc branch and a by-path at each electric lamp, controlled by said electro-magnet.

10. A circuit-closing wheel and an electrical circuit to be closed and broken by said wheel, in combination with means for operating the same, as described, consisting of a continuously-rotating shaft or wheel, and means whereby said wheel only intermittently or periodically gears with the circuit-closing wheel, substantially as described.

11. The combination of a motor-pulley, P, a gear-train, a sector gear-wheel, U, circuit-closing wheel C B, pinion V, and an electric circuit which is closed and opened by said circuit-closing wheel.



12. The combination of a periodically-rotating circuit-closing wheel, C B, pinion V, gear-sector U, attached to a constantly-rotating train or motor, and an electric circuit which is opened and closed by said circuit-closing wheel.

13. The combination of a circuit-closing wheel, C B, loaded with a weight, K, conducting-spring I, pinion V, gear-sector U, and a driving-train.

14. In an electric lamp, the combination of an arc branch, a by-path, means for closing the same by a periodic circuit-closer, and auxiliary means independent of the periodic circuit-closer for closing a by-path, substantially as specified.

15. The combination of a line-circuit, a periodic circuit closer or breaker therefor, an electro-magnet in the line-circuit for closing a by-path at each lamp of an electric lighting system, and a top or alarm bell at the central station, placed in said circuit.

296,126. ICE-HOOK. DAVID F. BURGESS, Lockport, N. Y., assignor to Anna Burgess, same place. Filed Nov. 4, 1882. (No model.)

Claim.—1. The ice-tongs, substantially as described and shown, composed of the arms pivoted together and adapted at their lower ends to grasp the ice, and a flexible spring-bail connecting the upper ends of said arms, substantially as set forth.

2. In an ice-tongs, substantially as described and shown, the combination, with the grappling-arms pivoted together, of a spring bail or rod having its opposite ends connected with the upper ends of the grappling-arms, as and for the purposes set forth.

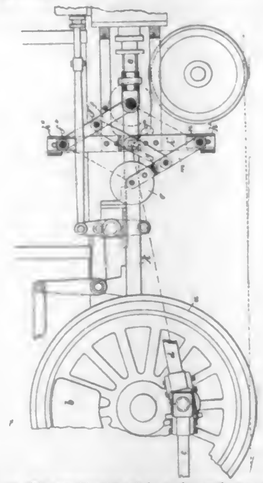
296,127. CURTAIN-LOOP. BENJAMIN F. BURNETT, Brooklyn, assignor to H. L. Judd & Co., New York, N. Y. Filed Dec. 24, 1883. (No model.)

Claim.—1. The curtain or upholstery loop composed of wires braided together to form tubes, and provided with loops or links at the ends, substantially as set forth.

2. The curtain or upholstery loop composed of three or more tubes of braided wires braided together and provided with the end pieces, c, substantially as set forth.

3. The curtain or upholstery loop composed of two or more tubes of wire laid together, each tube being formed of wires braided together, substantially as set forth.

4. The combination, in a curtain-loop or similar article, of two or



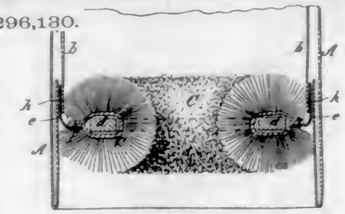
more tubes of braided wires laid together and provided with end pieces, e, substantially as set forth.

296,128. SAW-VISE. GEORGE W. BURTON, Bordentown, N. J. Filed Nov. 13, 1883. (No model.)

Claim.—A saw-vise consisting of jaws A, having recesses *e*, adjustable feet B and B', hinged together, and each having a projecting arm, C', headed thumb-screws C, and clamps D, to clamp the device to a bench and to close the jaws, substantially as shown and described.

296,129. LOCOMOTIVE. EDWARD BUSS, St. Gallen, and RUDOLF KUHN, Rorschach, Switzerland. Filed Oct. 8, 1883. (No model.) Patented in France Jan. 8, 1883.

Claim.—1. The combination of the reciprocating parts of an engine with the counterbalancing-weight and connecting mechanism between the said weight and reciprocating parts, whereby the weight is caused to move in the opposite direction to the said reciprocating parts, and with substantially the same relative velocity in the different parts of the movements, substantially as described.



2. The combination of the piston-rod of a reciprocating engine with a counter-weight and connecting-levers between the said rod and weight, constituting a parallel-motion device, whereby the said rod and weight are guided in straight paths in opposite directions, and with the same relative velocity in the different parts of their movements, substantially as described.

3. The combination of the piston-rod of an engine with levers connected at one end with the said rod, and having their other ends movable in guides at right angles to the said rod, supporting-levers connected with the said levers at an intermediate point, and themselves pivoted at an intermediate point to the frame-work, and a third set of levers connected at an intermediate point with the supporting-levers, and having one end movable in guides and the other end provided with weights, substantially as described.

296,130. SLEEVE FOR COATS. CHARLES FREDRICK BUTTERWORTH, Troy, N. Y. Filed Mar. 16, 1883. (No model.)

Claim.—The combination, with an ordinary coat-sleeve, of the elastic wristlet C, consisting of a hollow annular fur band and a spring, *d*, within it, and the securing-strip *e*, having one edge secured to the wristlet and its other edge interposed between the turned-in portion of the sleeve and its lining, and the whole secured together and to the outer portion of the sleeve, substantially as herein shown and described.

296,130.

296,131. PAVING-BLOCK. ROBERT CAMPBELL, Wheeling, W. Va., assignor to himself and George Baird, same place, and John Porter, New Cumberland, W. Va. Filed Dec. 5, 1883. (No model.)

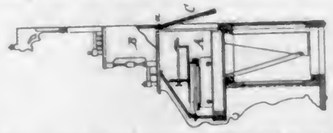
Claim.—A pavement composed of a series of fire-clay blocks and an interposed binder of asphaltum or cement, substantially as and for the purposes specified.

296,132. UMBRELLA-TIE. WILLIAM J. CHAMBERS, Marchantville, N. J. Filed Nov. 6, 1883. (No model.)

Claim.—1. An umbrella or parasol tie consisting of a band having a connected hook and eye on opposite faces, within the ends thereof, substantially as and for the purpose set forth.

2. An umbrella or parasol tie consisting of a band with doubled ends and a connected hook and eye on opposite faces, near the ends thereof, one of its ends overlapping said hook and eye, substantially as and for the purpose set forth.

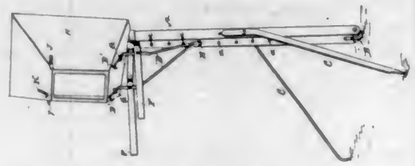
3. An umbrella or parasol tie consisting of a band with concealed fastenings.



296,133. BRACELET. HENRY A. CHURCH, Providence, R. I. Filed Jan. 2, 1884. (No model.)

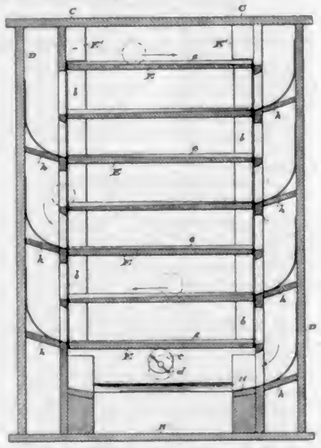
Claim.—1. The box-bracelet A, herein described, consisting of inner and outer plates, *a b*, bent to form upper and lower edges, *h*, adapted to be united at *h'*, and further consisting of the joint or seam covering *c*, or its equivalent, adapted to be secured to said joint, substantially as shown and specified.

2. The box-bracelet herein described, consisting of inner and outer plates, *a b*, provided with edges *h*, said plates being secured together at *h'* and terminating at *a' b'*, in combination with a piece of bent stock or hollow wire adapted to cover said ends and joint, all substantially as shown and set forth.



296,134. REED-ORGAN CASE. MELVILLE CLARK, Chicago, Ill. Filed June 12, 1883. (No model.)

Claim.—A reed-organ case consisting of the lower or body part, A, the top or shelf part, B, and the lid C, such shelf part B and lid C being connected by hinges *a*, and being detachably secured to the body part,



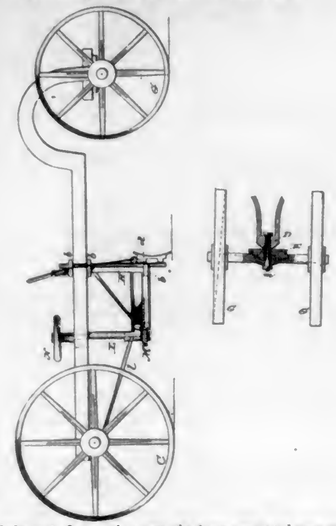
respectively, by screws *b* and *c*, all substantially as and for the purpose set forth.

296,135. BAG-HOLDER. PERCY COLE, Pipestone, Minn. Filed Sept. 11, 1883. (No model.)

Claim.—The combination, with the post A and a hopper having staples G G, of two upwardly-extending rods, D D, having each a bend to form a rest for the hopper end, and an end hook, D', to catch on the staple, whereby the hopper may be turned up, slid back, and caused to rest with its rear end upon the rods and the post, or drawn out to the end of said rods and turned down into a working position, as described.

296,136. POOL-RACK. HUGH W. COLLENDER, New York, N. Y. Filed Feb. 13, 1884. (No model.)

Claim.—In combination with a set or gang of bodily-movable shelves, the ball supporting surfaces of which are inclined toward opposite ends of the successive shelves, side passages or conduits forming communications between the adjacent ends of alternate pairs of shelves only when said shelves are set in a proper position designed to effect the automatic discharge of their contents, substantially as hereinbefore set forth.



296,137. POOL-RACK. HUGH W. COLLENDER, New York, N. Y. Filed Feb. 13, 1884. (No model.)

Claim.—In combination with a rack provided with stationary ball-supporting shelves or their equivalents, a carriage or device adapted to support any suitable ball-receptacle, and provided with suitable means for discharging the balls from the shelves or their equivalents whenever said carriage may be moved upwardly, substantially as hereinbefore set forth.

296,138. ROAD-SCRAPER. MARCUS E. COOK, Wallingford, Conn. Filed Nov. 10, 1883. (No model.)

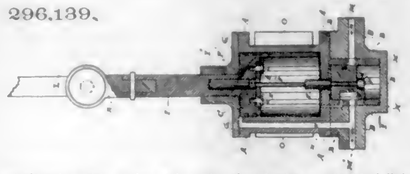
Brief.—An abutment vertically pivoted for horizontal adjustment sustains the back-pressure of a scraper vertically adjustable independently through levers pivoted on the abutment. A toothed segment on the rear of the abutment plays through a segmental support braced from the rear axle, and engages a pinion on a vertical shaft journaled below in such support. The main frame has a "longitudinal rocker" or narrow block, with its bearing-face on the front axle rounded off.

Claim.—1. In a road-scraper, the frame supported upon an axle carrying wheels at the rear, and an axle carrying wheels at the front, a transverse abutment arranged upon said frame on a vertical axis, and made adjustable on said axis to change the angle of the abutment with relation to the direction in which the apparatus is drawn, a scraper in front of and so as to bear against said abutment and partake of its adjustment in a horizontal plane, said scraper adjustable vertically independent of said abutment, substantially as described.

2. In a road-scraper, the combination of the frame supported upon wheels at the front and rear, an abutment hung to the frame between the front and rear wheels upon a vertical axis, a toothed segment in connection with said abutment, a shaft and pinion working into said segment, whereby said segment and abutment may be turned to varying angles, a scraper arranged in front of said abutment and made adjustable thereon, substantially as described.

3. In a road-scraper, the combination of the frame supported upon wheels at the rear and front, an abutment arranged upon a vertical axis in said frame between the front and rear wheels, a toothed segment in connection with said abutment, a shaft and pinion working into the teeth of the segment, a scraper arranged in front of and so as to bear against said abutment, with a lever hung upon said abutment at each side, each lever in connection with its respective end of the scraper, substantially as described.

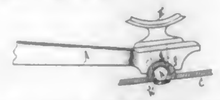
4. In a road-scraper, the combination of a frame supported upon an axle carrying wheels at the rear, and an axle carrying wheels at the front, a transverse abutment hung upon a vertical axis in said frame and made adjustable on said axis to different angles to the direction in which the apparatus is drawn, but held in its bearings to prevent change of elevation with relation to the frame, a fixed segment, *i*, in rear of said abutment, the axis on which the abutment turns being the center of said segment, said segment supported by braces *l l*, substantially as described.



5. In a road-scraper, the combination of a frame arranged upon wheels at the rear and front, and carrying an adjustable scraper between said front and rear wheels, the frame at the front provided with a longitudinal rocker, D, resting in a longitudinal central line upon the fifth-wheel of the forward axle, and the king-bolt through said rocker, fifth-wheel, and axle, said rocker rounded upon its under surface, substantially as and for the purpose described.

296,139. STEAM BELL-RINGER. ALLEN COOKE, Danville, Ill. Filed Jan. 9, 1884. (No model.)

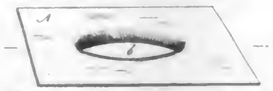
Claim.—1. In a steam bell-ringer, the combination of a cylinder with one head cast solid, having central aperture for valve-stem, of valve-chest secured thereto, of slide-valve therein, of valve-stem, of hollow piston and plate secured thereto, as described, and for the purposes set forth.



2. In a steam bell-ringer, a cylinder having one head cast solid, in

296,139.

combination with a valve and a valve-chest having a cylindrical lining provided with a stud, for the purposes described and set forth.



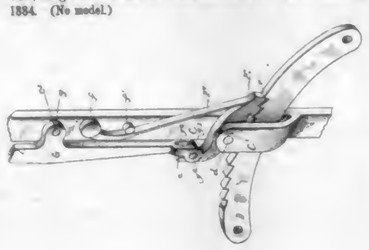
296,140. HARNESS-PAD TREE. EDWARD A. COOPER, Buffalo, N. Y. Filed June 7, 1883. (No model.)

Claim.—1. The combination, with the yoke A, provided on its under side with concave bearings *f*, of the pad-plate C, provided on its upper side with convex supports *g*, engaging in the bearings *f*, and having recesses *h'* on their under side, a nut, H, provided with pivots *h*, engaging in the recesses *h'*, and a pad-screw, *d*, whereby said nut is attached to the yoke, substantially as set forth.

2. The combination, with the plate C, provided with a lip, *k*, of the plate B, having an opening, *k'*, and a stud, *m*, and the fastening-screw *l*, substantially as set forth.

296,141. COVER FOR WATER-CLOSET SEATS. DALE O. COWEN, Batavia, Ohio. Filed June 21, 1883. (No model.)

Claim.—As an improved article of manufacture, a water-closet-seat cover consisting of a sheet of paper, A, provided with a hole, *b*, having a downwardly-projecting flange, *c*, extending around said hole, the said flange being integral with the body of the sheet, as set forth.

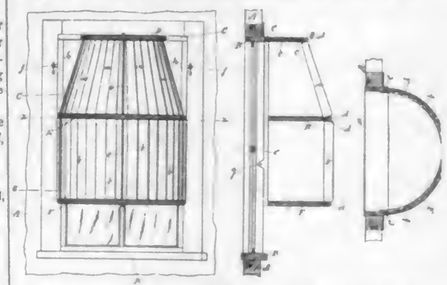


296,142. HORSE-DETACHER. DANIEL D. DANTZLER, Chester, S. C. Filed Nov. 14, 1883. (No model.)

Claim.—1. In a horse-detaching device, the end clip, A, consisting of the thimble B, having secured thereto the spring E, the barrel C, provided at its outer end with a trace-hole and perforation, substantially as described, and the notched bar D, in combination with the casing F, provided with holes *h h'*, pulleys G G', inclosed within said casing, and the cords arranged to operate substantially as shown, and for the purpose set forth.

2. The casing F, provided with the clip-flanges to embrace the single-tree, and having holes *h h'* for the cord, in combination with the inclosed pulleys G and G', mounted upon a common pin passing through the casing, substantially as described, and for the purpose set forth.

296,143. WAGON-BRAKE LEVER. THOMAS J. DAVIES, Newark, Ohio, assignor of one-half to Daniel Thomas, same place. Filed Jan. 21, 1884. (No model.)

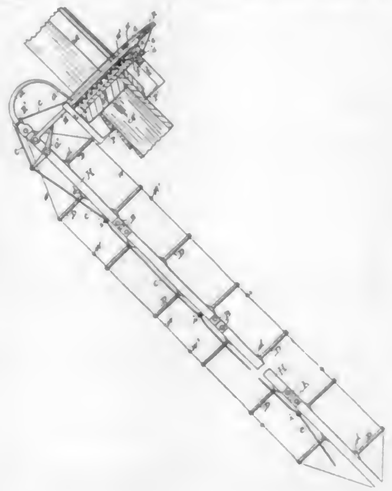


Claim.—1. The combination, in a wagon-brake, of a hand-lever, a toothed sector, a spring-actuated pawl, which is pivoted to the said hand-lever, and an auxiliary lever also pivoted to said hand-lever, and having an anti-friction roller on its lower end adapted to bear against the upturned end of the pawl, all constructed and adapted to operate substantially as described.

2. The V-shaped wagon-body brace having formed on its acute-angular portion a stud, the hand-lever fulcrumed on this stud, as described, the toothed sector serving as a tie between the arms of the brace, the main hand-lever, the spring-actuated pawl, and the independent pawl-tripping lever, substantially as described.

3. In combination with a toothed sector, secured rigidly to a wagon-body, a hand-lever connected to the brakes, the spring-actuated pawl having an upturned extension or tail, and an auxiliary lever having at its lower bifurcated end an anti-friction roll adapted to trip the said pawl and release the brake, substantially as described.

296,144. HOUSE-BLIND. HORACE R. DAVIS, Lexington, Mass. Filed Aug. 23, 1883. (No model.)



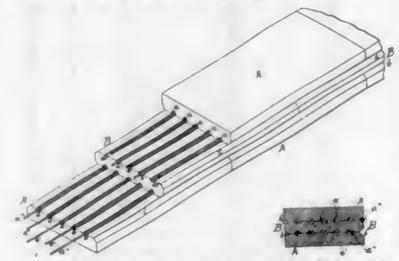
Brief.—A house-blind consisting of a projecting frame with slats arranged vertically and independently movable.

Claim.—An improved house-blind, comprising a projecting front frame provided with vertical shades pivoted so as to be turned in any direction to ward off the rays of the sun, while those not in use for said purpose can be so placed as to let in light and air, all substantially as and for the purpose set forth.

296,145. FIRE-ESCAPE LADDER. SAMUEL E. DAVIS, Joliet, Ill., assignor of one-half to Edward A. Boaz, same place. Filed June 6, 1883. (No model.)

Brief.—A jointed standard having rungs pivoted to two sides, and having a rack-bar and hook at its top. The securing-hooks which slide on the bar are connected by a spiral spring. A pawl on the inner hook engages with the rack, and has a releasing-cord which extends to the ground.

Claim.—1. The combination of the folding bar H, rounds D, wire *w*, and hook *a*, all adapted to operate as and for the purpose set forth.

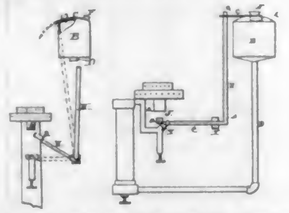


2. The combination of the folding bar H, rounds D, cords *w*, having knots *w²* and loops *w'*, locking-latch B³, and hook *a*, all adapted to operate as and for the purpose set forth.

3. The combination of the bar H, cord *c*, pivoted bar *s*, vertical sliding bars *t* and *t'*, having the prods P and P', and pawl and ratchet P², all adapted to operate as and for the purpose set forth.

4. In the fire-escape ladder described, the cord *c*, adapted to extend the bar *s* and separate the grappling-bars *t t'*, in the manner and for the purpose set forth.

5. The combination of the folding bar H, bar *s*, cord *c*, and grappling-bars *t t'*, having the hooks P and P', all adapted to operate as and for the purpose set forth.

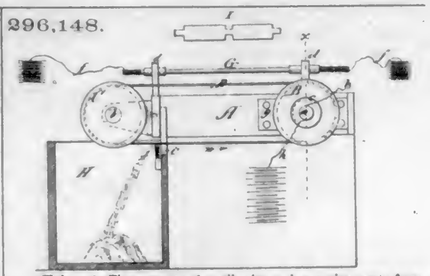


296,146. INSULATOR FOR ELECTRIC CONDUCTORS. WILLIAM HOPE DAVIS, Springfield, Ill. Filed May 5, 1883. (No model.)

Claim.—1. In an insulator of the character described, the impermeable and non-conducting plates A A, grooved upon their meeting surfaces, and each beveled upon one edge of its outer ends to form a V-shaped groove at the junction of the two plates for the reception of cement or other plastic material, by which said plates are secured together independently of other means, substantially as set forth.

2. In an insulator of the character described, the combination, with the grooved and beveled plates A A, of the intermediate plate, B, grooved upon its upper and lower surfaces, and beveled upon both edges of its outer ends to form two V-shaped grooves at the junction of the three plates, for the reception of cement or other plastic material, by which said plates are secured together independently of other means, substantially as set forth.

296,147. VAPOR-BURNER. ZEBULON DAVIS, Canton, Ohio. Filed Dec. 8, 1882. (No model.)



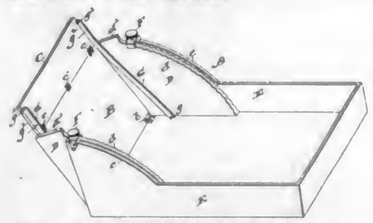
Claim.—1. The combination of the cover of the reservoir of a vapor-burner with an operating rod or lever which is connected at its upper end to the cover and at its lower end to suitable means, whereby the movement of the cover will cause the rod to shut off or turn on the flow of vapor, substantially as shown.

2. The combination of the reservoir of a vapor-burner and cover loosely placed thereon, which cover is provided at one end with an opening or funnel, through which the reservoir is filled, and having an arm or projection extending from it to connect with an operating rod or lever, by means of which a valve is applied for stopping or turning on the flow of vapor when the cover is moved, substantially as set forth.

296,148. APPARATUS FOR COLLECTING AND REMOVING WASTE FROM SPINNING-MACHINES. WILLIAM ALBERT DELMAGE, Lowell, Mass. Filed Dec. 14, 1882. (No model.)

Brief.—The roller-beam is cleared of the waste which usually collects thereon by means of an electrical rod employed in connection with a belt more strongly charged with electricity than said rod. In operation the rod collects all loose fibers, which are in turn transferred to the belt, and from thence brushed into a receptacle underneath.

296,148.



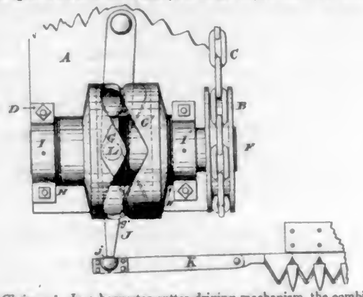
Claim.—1. The apparatus for collecting and removing waste from spinning-machines, consisting of the rod G, belt D, the pulleys B C, the studs *a b*, and insulator *g*, combined with means for electrifying said rod and belt and operating the belt, substantially as shown and described.

2. The combination, with the beam A and the belt D, of the arms *d*, the rod G, supported by said arms over the belt, and means for electrifying said rod and belt and operating the belt, substantially as herein shown and described.

3. The combination of the pulleys B C, means for operating the same, the belt D, rod G, and electrical connections, substantially as described, with the roller-beam A of a mule spinning-frame, for the purpose specified.

4. The combination, with the drawing-roll of a spinning or roving frame, of devices arranged in relation to said drawing-roll, and mechanism for electrifying said devices, whereby the waste is collected and removed, substantially as shown and described.

296,149. CHILD'S CARRIAGE. BRANDT V. B. DIXON, St. Louis, Mo., assignor of one-half to Amos F. Hoffer and John H. Lawrence, both of same place. Filed Dec. 14, 1883. (No model.)

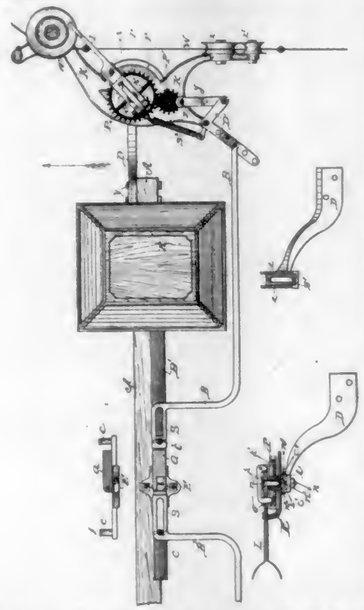


Claim.—1. The combination of the part B, the part C, and the rods G G with the fixed part of the carriage-body A.

2. The combination of the part B, the part C, the side pieces, D D, and the rods G G with the fixed part of the carriage-body A, as described.

3. The combination, in the carriage-body A, of the hinged part C and the rods G G, as described.

4. The combination, in the carriage-body A, of the parts B C, the side pieces, D D, the sides E E, having the parts *e e*, the clamps F F, and the rods G G, as described.



296,150. MECHANISM FOR DRIVING HARVESTER-CUTTERS. ANDREW M. DUNCAN and MILTON LACRONE, Springfield, Ohio; said Duncan assignor to Albert K. Hahn, same place. Filed July 23, 1883. (No model.)

Claim.—1. In a harvester-cutter-driving mechanism, the combination of the splined counter-shaft F, the adjustable serrated or grooved disks G G', the washers H, and the removable caps I I', as set forth.

2. In combination with the shaft F, disks G G', and washers H, the lever J, provided with the roller L, engaging the sinuous space *g'* between said disks, as set forth.

296,151. CHECK-ROW ATTACHMENT FOR SEED-PLANTERS. LLOYD EBERHART and IRVING D. STEVENS, Joliet, Ill. Filed Dec. 6, 1883. (No model.)

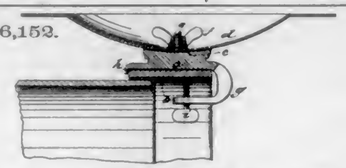
Claim.—1. The combination of the beam A of a planter, the arm D, having the slot S' and flanges *e e'*, head *k*, having the flanges *n'' n''*, sheaves *w'*, *x*, and *x'*, pinion P, having the radial vertical offsets *r'*, pinion P', having the wrist-pin *z*, stud *n*, forked lever L, having the latch *r*, coil-spring S', link *y*, bell-crank D', and connecting-rod B, having the slot S, as and for the purpose set forth.

2. In the check-rower described, the pinion P, having the radial vertical offsets *r'*, in combination with the forked lever L, having the latch *r*, pinion P', having the wrist-pin *z*, coil-spring S', stud *n*, and bell-crank D', as and for the purpose set forth.

3. In the check-rower described, the combination of the beam A, arm D, having the slot S' and flanges *e e*, head *k*, having the flanges *n'' n''* and bolt *n*, and nuts *c'* and *c*, as and for the purpose set forth.

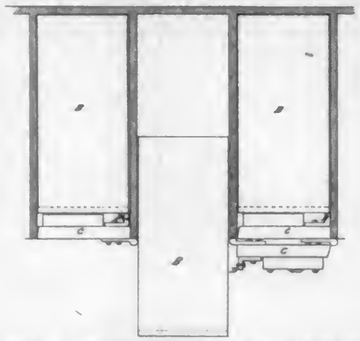
4. In the check-rower described, the head *k*, adapted to have horizontal adjustment forward and backward on the arm D, as and for the purpose set forth.

5. In the check-rower described, the combination of the pinions P and P', link *y*, bell-crank D', and connecting-rod B, the said pinions set in the described relation to each other, so that at each half-revolution of pinion P' its wrist-pin *z* and link *y* will be left in line with the axes of said pinions, to lock the seed-slide B' in either direction, as set forth.



6. In the check-rower described, the combination of the seed-slide B', plate E, having the studs *c c* and centrally-pivoted swinging arm *a*, connecting-rods B and B', having the slots S S, bell-crank D', link *y*, pinions P and P', and oscillating forked lever L, having the latch *r*, all adapted to operate as and for the purpose set forth.

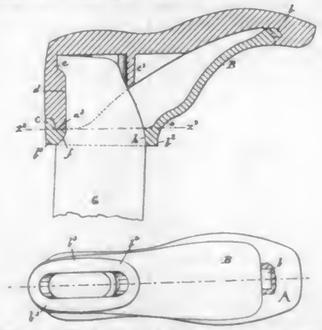
7. In the check-rower described, the bolt or stud *n*, having the lock-nut *c'* and nut *c*, and adapted to secure the forked lever L and pinion P in position on the head *k*, and to secure the head *k* to the arm D, as and for the purpose set forth.



296,152. DRUM AND CYMBAL CLAMP. PERRY WILLIAM FAIR, De Kalb, Ind. Filed Oct. 20, 1883. (No model.)

Claim.—The improved clamp for attaching a cymbal to a drum, consisting of plate *a*, adapted to rest on the hoop *b*, and having seat *c* and stud-screw *e*, for connecting the cymbal to it, and also having the bracket-arm *g* and the flange *k*, all constructed and arranged substantially as described.

296,152.



296,153. SAFE-DEPOSIT BOX. JOHN FARREL, New York, N. Y. Filed Oct. 20, 1882. (Model.)

Claim.—1. The combination, with the door of a safe-deposit box, of a lug fixed to the door near the hinged side, and adapted to strike solidly against the inside of the box or safe, so as to bring the door to a full stop or limit in closing, as set forth.

2. In combination, the safe-deposit box, the removable box B, the stop-piece or lug F, adapted to the inside of the door for bringing the same to a fixed limit in closing, and provided with the stud E, for adjustment, as set forth.

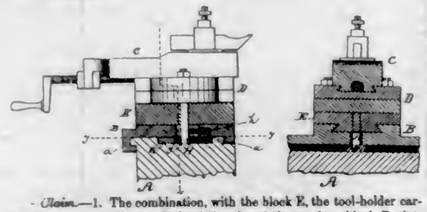
296,154. LAST OR HOLDER FOR LASTING BOOTS OR SHOES. JOHN W. D. FIFIELD, North Brookfield, assignor to Alfred H. Batcheller, Boston, Mass. Filed Dec. 11, 1883. (No model.)

Claim.—1. The body A of the last, combined with a last-block provided with an extension, b^3, as and for the purposes set forth.

2. The body A of the last, combined with a removable last-block provided with a backward extension, b^3, to cover the neck a^3 of the body of the last and prolong the same, substantially as set forth.

3. The body A of the last, combined with the last-block provided with the extension b^3 in loop form, to receive between it a standard, substantially as described.

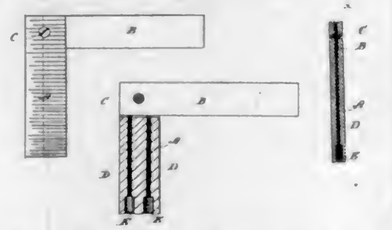
4. The body A of the last, provided at its rear end with a recess, c^3, combined with the last-block provided at its outer end with a lug, *c*, to enter the said recess, substantially as described.



5. The standard G, provided with the hook *e*, combined with the last having a recess to be engaged by the said projection and with a projection, e^3, to bear upon the standard at its side opposite the said hook, to hold the last while the boot or shoe is pulled from it, substantially as described.

296,155. BUTTON-FASTENING. GEORGE W. FISH, Pecatonica, Ill. Filed Sept. 29, 1883. (No model.)

Claim.—The herein-described button-fastening, of spider or star form, having the central opening, and the long and short radiating arms for fixing buttons of various sizes to their respective packages or to sampling-cards, substantially as specified.

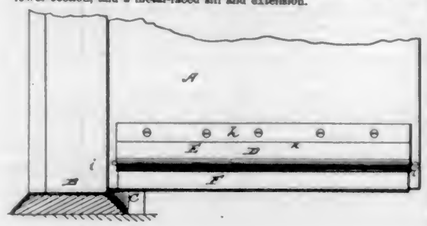


296,156. SLIDE-REST. JACOB FITZ, Hanover, Pa. Filed Nov. 2, 1883. (No model.)

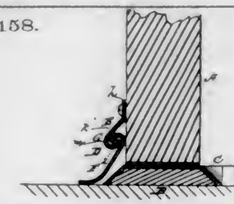
Claim.—1. The combination, with the block E, the tool-holder carried thereby, and the pin H fixed therein, of the carriage-block B, slotted for pin H, the shoe *g* on pin H, the former G, fixed behind shoe *g*, and the latheway A, substantially as shown and described.

2. The combination, with the interposed slide-block, the pin fixed therein, and the fixed former described, of a shoe upon said pin, to slide upon the former, and a spring acting between a laterally-fixed portion of the longitudinally-sliding carriage and said pin, as shown and described, for the purpose specified.

296,157. TRY-SQUARE. WILLIAM A. GABRIEL, Bridgeport, Conn. Filed Aug. 30, 1883. (No model.)



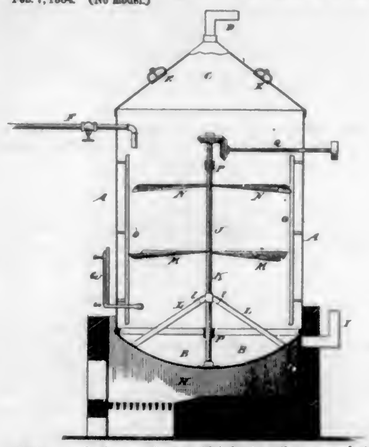
Claim.—1. In a try-square, the blade pivoted within the arm, in combination with the independent wires passed longitudinally through said arm, and set-screws abutting against said wires, substantially as set forth.



2. In a try-square, the combination of the arm A, wires D, set-screws E, and blade B, pivoted within said arm, substantially as shown and described.

296,158. WEATHER-STRIP. DAVID GIBBONS, Jeppa, Ind., assignor of two-thirds to Albert Hagre and Edmund Thompson, both of same place. Filed Dec. 15, 1883. (No model.)

Brief.—A weather-strip consisting of upper and lower sections having interlocking edges, pins to prevent the lateral displacement of the lower section, and a metal-faced sill and extension.



296,158.

Claim.—The combination, with the door-sill having the metal facing, and provided with the extension C on the inner side thereof, near the hinged side of the door, of the door and weather-strip consisting of the upper section having the straight portion *h*, the oblique portion *k*, and the inward hook *z*, and the lower section having the upper outward hook, *m*, and the lower outwardly-concave portion, F, the said lower section being prevented from lateral displacement with the upper hooked section by means of the pins *i i*, which are driven in the door at the respective ends of the strip-hinge, substantially as set forth.

296,159. LUBRICATING-OIL. JOHN E. GILL, Franklin, Pa. Filed Feb. 7, 1884. (No model.)

Claim.—1. In the manufacture of lubricating-oils composed of mineral oil added to a compound of animal or vegetable oil and an oxide or a carbonate of lead, the process of first raising said compound to and holding it at a temperature of about 480° Fahrenheit, and then, by adding a flow of mineral oil, reducing said temperature about 20°, and then raising same to the said high temperature, then holding the mixture at said high temperature for several minutes, for the purpose set forth.

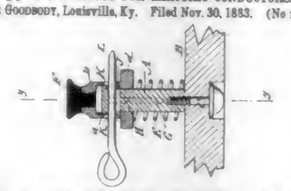
2. A lubricating-oil composed of a compound of mineral or vegetable oil, and either an oxide or a carbonate of lead to which mineral oil is subsequently added, said compound being first raised to a temperature of about 480° to 500° Fahrenheit, then reduced by adding mineral oil about 20°, and then raised again to the first high temperature before the rest of the mineral oil to be added is introduced.

3. In the manufacture of lubricating-oils composed of the elements named, the said compound being subjected to heat which will raise its temperature by regulating the applied heat to 475° to 500° Fahrenheit, and of holding it at that high temperature for fifteen minutes or more, according to the consistency desired, all before the mineral oil is introduced, and as and for the purposes set forth.

4. A lubricating-oil composed of a compound of animal or vegetable oil and an oxide or a carbonate of lead, said compound being forced to a temperature of 475° to 500° Fahrenheit, and held at that high temperature for fifteen minutes or more, according to the consistency desired, and then united with mineral oil, substantially as and for the purpose described.

5. In the manufacture of lubricating-oils from the elements named, the process of treating said compound with a strong inflow of mineral oil of a temperature of 80° to 150° Fahrenheit, substantially as and for the purpose described.

6. In the manufacture of lubricating-oils from the elements named, the process of stopping said inflow of previously-heated mineral oil when the temperature of said compound and added oil shall have been reduced to 340° to 320° Fahrenheit, and maintaining about said temperature

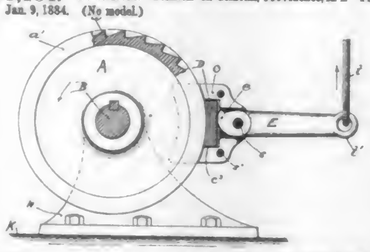


for about ten or fifteen minutes, substantially as and for the purpose set forth.

7. The improvement in the process of preparing lubricating-oils which consists in maintaining the fire during the addition of the cooling oil, whereby the cooling of the mixture is effected gradually.

8. In the manufacture of lubricating-oils from a compound of animal or vegetable oil with an oxide or a carbonate of lead, to which, after treatment, mineral oil is added, the process of first forcing the temperature of said compound to 475° to 500° Fahrenheit, of holding it at that high temperature for fifteen minutes or more, according to the consistency desired, then adding a strong inflow of mineral oil previously heated to 80° to 150° Fahrenheit, until, the fire being maintained and regulated, the temperature shall be reduced to 340° to 320° Fahrenheit, and maintaining said last-mentioned temperature for about ten or fifteen minutes, and then adding mineral oil as desired, all substantially as and for the purpose set forth.

9. A lubricating-oil composed of animal or vegetable oil and an oxide or carbonate of lead and mineral oil, produced by the following processes, substantially as herein described, to wit: making a compound of the animal or vegetable oil with the oxide or carbonate of lead, and, by regulating the applied heat, forcing the temperature thereof to 475° to 500° Fahrenheit, and holding the mixture at that high temperature for fifteen minutes or more, according to the consistency desired in the resulting oil, and then treating said compound, before it is allowed to cool to any considerable extent, with a strong flow of mineral oil at a low temperature, the applied heat being retained until the temperature shall be reduced to 340° to 320° Fahrenheit, and stopping said inflow and maintaining said last-mentioned temperature for about ten or fifteen minutes, and in then introducing the desired quantity of mineral oil, the cooling of the compound and mixture being made gradual, and being regulated substantially as and for the purpose described.

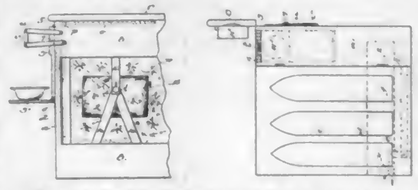


296,160. BINDING-POST FOR ELECTRIC CONDUCTORS. ALBERT GEORGE GOODBODY, Louisville, Ky. Filed Nov. 30, 1883. (No model.)

Claim.—1. The combination, with the binding-post A, provided with the peripheral longitudinal groove G, of the spring-pressed cap D, provided with the perforated flange *d*, and pin H, passing through the perforation in the flange, and having its end resting in the groove G, to prevent the cap from turning, substantially as shown and described.

2. The combination, with the base B, screw C, binding-post A, provided with the peripheral longitudinal groove G, aperture J, and top annular flange, *a*, of the loose cap D, having the perforated bottom flange, *d*, apertures K, insulated button F, pin H, spring E, and pin L, substantially as shown and described.

296,161. WINDLASS. FRANCIS A. GRATER, Providence, R. I. Filed Jan. 9, 1884. (No model.)

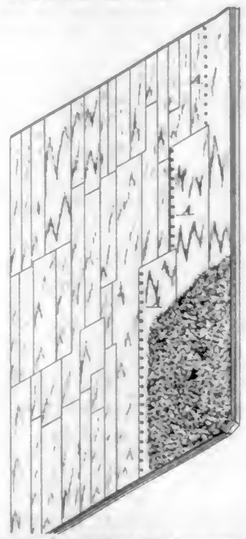


Claim.—1. The combination, in the clamp C, provided with a pocket or recess, C^3, of the friction-block D and lever E, all arranged and adapted to be secured together substantially as shown and set forth.

2. The combination, with a windlass provided with one or more chain-wheels and driving-wheels, of the friction device herein described, adapted to engage with said driving-wheel, and consisting of the recessed or apertured clamp C, lever E, and friction-block D, substantially as shown and set forth.

3. The combination, with a windlass provided with a double-faced wheel, A', of the clamps C, having pocket C^3, lever E, and friction-block D, the latter being interposed between the toe of said lever and the driving-face of the wheel, substantially as shown and set forth.

4. The friction device herein described, consisting of the recessed or apertured clamps C, lever E, pivoted to said clamp, and friction-block D, the latter being pivoted at d^2 within said recess, the whole combined, arranged, and adapted to engage with the driving-wheel of a windlass or machine, substantially as shown and set forth.



296,162. FOLDING BED. ALBERT F. GUE, Denver, Colo. Filed June 6, 1883. (No model.)

Claim.—1. The pivoted bed-frame and inclosing-case therefor, combined with the folding wash-stand composed of the slide-piece *r*, portion *s*, hinged thereto, and the shelf *s'*, hinged to said portion *s*, the whole constructed to be slid into the top of the case when not in use and to hang at the side of the case when in use, substantially as shown and described.

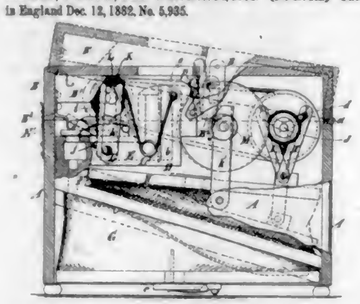
2. The pivoted bed, the folding wash-stand, and inclosing-case therefor, combined with the towel-rack consisting of the pivoted arms *u*, provided with a shoulder or catch, 7, to engage the corner of the case, whereby it may be held in position for use, substantially as described.

296,163. FELT ROOFING. LEVI HAAS and DENNIS HOWARTH, Chester, Pa. Filed Jan. 7, 1884. (No model.)

Claim.—1. A roofing consisting of the tarred-paper strips A, having perforated longitudinal edges cemented to the sheathing, the first sheet being laid flat upon the sheathing, and the second lapped over the perforations thereof, the third being in like manner lapped over the perforations of the second, and so continuously *seriatim*, and a surface or finishing coat, substantially as shown, and for the purpose described.

2. In a roofing, the tarred and perforated strips A, cemented to the sheathing and coated with a mixture of broken pebbles and gravel, for the purpose described.

296,164. SECONDARY BATTERY. ALFRED HAID, Rahway, assignor to Haid's Electrical Storage Company, Newark, N. J. Filed Dec. 29, 1883. (No model.)



Claim.—1. An electrode for secondary batteries, composed of an assemblage of strands consisting of threads or cords of fibrous material, coated or covered with lead or its equivalent, as set forth.

2. The method herein described of manufacturing the electrodes for secondary batteries, which consists in coating twine or cord with an oxidizable conductor, cutting the same into the required lengths, and binding them together, substantially as set forth.

296,164.

296,165. MECHANICAL MUSICAL INSTRUMENT. ANDREW H. HAMMOND, Worcester, Mass. Filed Nov. 14, 1882. (No model.) Patented in England Dec. 12, 1882, No. 5,935.

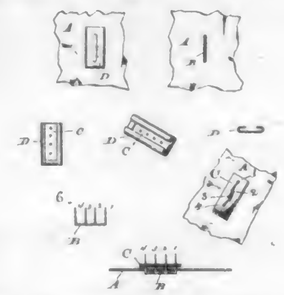
Claim.—1. In a mechanical musical instrument, the combination of a driving-shaft, a music-sheet, a take-up roller for the music-sheet capable of movement toward and from the driving-shaft, a wheel on the driving-shaft, a wheel on the take-up roller, a movable cover or section of the case, and means whereby, when the said cover or section is closed, one of the said wheels will be forced against the other with a yielding pressure for the purpose of causing the music-sheet to be wound up on the take-up roller when the driving-shaft is rotated, and so that when the cover or section is opened the said wheels will be released from operative engagement, substantially as specified.

2. In a mechanical musical instrument, the combination of a music-sheet, music and take-up rollers for the music-sheet, having movable bearings, a driving-shaft, a wheel on the driving-shaft, a wheel on the take-up roller for deriving motion from the wheel on said driving-shaft, a pulley on the driving-shaft, a pulley connected to the music-roller, a belt passing around these pulleys, and a movable cover or top section, and push-pieces on the same adapted to act upon the movable bearings of said rollers, substantially as and for the purpose described.

3. In a mechanical musical instrument wherein a traveling music-sheet is employed, the combination of a roller, M, on which the music-sheet is wound, the wheel M', the bearing-block *k'*, the driving-shaft J, the wheel J', and a cover or top section provided with the block B^3, and the spring *p*, substantially as specified.

4. In a mechanical musical instrument wherein a traveling music-sheet is employed, the combination of a music-roller on which the music-sheet is rewound after playing, and which is supported in movable bearings, a driving-shaft, a belt for transmitting motion from the driving-shaft to said roller, and a cover or top section provided with means whereby, on being adjusted into its place, it will effect the movement of the bearings of said roller to slacken the belt, and on being removed will cause the tightening of the belt, substantially as specified.

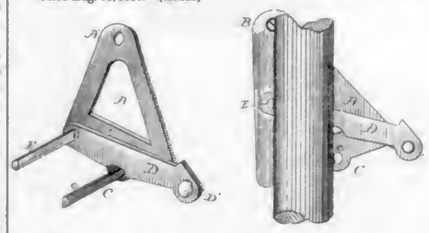
5. In a mechanical musical instrument wherein a traveling music-sheet is employed, the combination of a roller on which the music-sheet is rewound after playing, a driving-shaft, a belt for transmitting motion from the driving-shaft to the said roller, the movable bearings L', in which the said roller is supported, the springs L^2, and the blocks B' on a cover or top section, substantially as specified.



6. In a mechanical musical instrument wherein a traveling music-sheet is employed, the combination of a roller, M, on which the music-sheet is wound, the wheel M', the bearing-block *k'*, the driving-shaft J, the wheel J', the wind-chest E, the valve E', and a cover or top section provided with the block H^2, the push-piece B^3, and the spring *p*, substantially as specified.

7. In a mechanical musical instrument, the combination of a valve, E', a spring for opening the same, and a cover or top section provided with a push-piece for closing the valve, substantially as specified.

8. In a mechanical musical instrument, the combination of an equalizer the upper board of which is fixed in the case of the instrument, bellows mounted on the top of said fixed board, a wind-chest communicating with the equalizer, supported at one end on said fixed board and extending over said bellows, and a reed-board extending upward from the inner end of the wind-chest, substantially as specified.



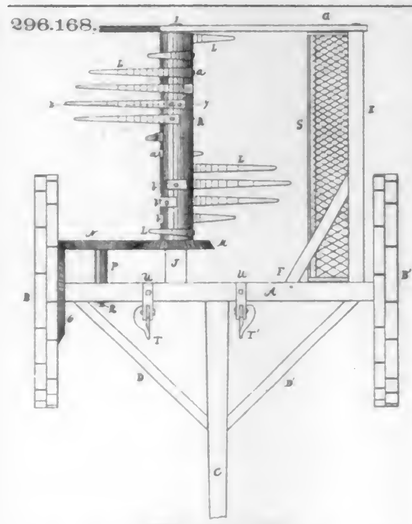
9. In a mechanical musical instrument, the combination of an equalizer the upper board of which is fixed in the case of the instrument, bellows mounted on the top of said fixed board, a wind-chest communicating with the equalizer, supported at one end by said fixed board and extending over said bellows, a reed-board extending upward from the inner end of said wind-chest, a music-roller supported above the wind-chest, at one side of the reed-board, a take-up roller arranged beyond the reed-board and wind-chest over the bellows, and a driving-shaft arranged beyond the wind-chest and reed-board over the bellows, substantially as specified.

296,166. METALLIC FASTENING. HENRY HARRIS, Suisun, Cal. Filed Dec. 26, 1883. (No model.)

Claim.—In a metallic fastener, the combination of a perforated plate, a staple having several sharp points adapted to be passed through said plate, and a cap for concealing the turned-over points of said staple, substantially as shown and described.

296,167. TOOL-HOLDER. COLUMBUS D. HAWLEY, Bridgeport, Conn. Filed Aug. 10, 1883. (Model.)

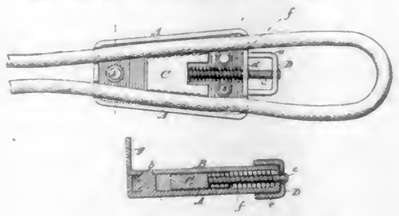
Claim.—1. A vibrating tool-holder consisting of a loosely-pivoted plate having a pin, as shown, and a lever pivoted to said plate, and having a pin at its opposite end, between which and the pin upon the plate the article to be held is tightly gripped.



2. A plate adapted at its upper edge to be pivoted to the wall, and having a pin midway of the length of its lower edge, in combination with a lever pivoted to one of its outer edges, and a pin at the opposite end of said lever, whereby an article placed between said pins is firmly gripped and held.

3. Plate A and pin C, having edge *c*, in combination with lever D, pivoted to said plate and resting upon pin C, said lever being provided with a pin, E, as described, and for the purpose set forth.

296,168. POTATO-DIGGING MACHINE. ASA L. HIGLEY, Troy, N. Y., assignor of one-half to John Mathews, same place. Filed Apr. 30, 1883. (No model.)

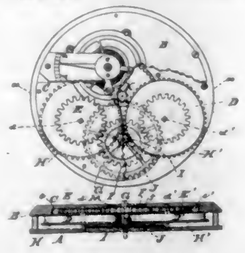


Claim.—In a potato-digging machine, the combination of the following organized parts, to wit: the axle A, with the transporting-wheels, gearing O N M, the revolving digger K, arranged in the line of draft, the adjustable folding screen arranged in a plane parallel with the revolving digger, a pivoted lever for adjusting the revolving digger, and the plows T T', attached to axle A, to loosen the earth upon both sides of the row of potatoes to be dug, the combination being and having the mode of operation substantially as hereinbefore set forth.

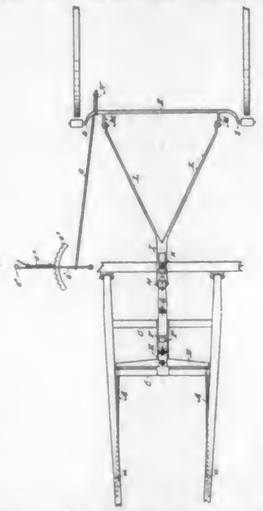
296,168.

Claim.—In a watch, the combination of front plate, A, rear plate, B, shield or cap C, formed with recesses *a d' f*, two mainsprings' drums, D D', having spur-wheels H H' in the same plane, intermediate pinion, I, with which the drum spur-wheels engage, spur-wheel J on the intermediate pinion-shaft, hour-hand pinion engaged by the spur-wheel J, mainsprings' shafts *d d'*, journaled in the cap, spur-wheels E E' on the springs' shafts, occupying the recesses *a d'*, winding-arbor G, extending through the rear plate and cap, spur-wheel F on the arbor, occupying the recess *f* and meshing with the springs' spur-wheels E E', a ratchet-wheel, M, on the arbor, and a spring ratchet-pawl to engage the ratchet, as set forth.

296,169. MAIL-BAG FASTENER. SAMUEL C. HILL and SAMUEL D. WEBB, Washington, D.C. Filed Feb. 6, 1884. (No model.)



Claim.—1. The shell A, having the interior of its sides tapered in one direction from end to end, with a correspondingly-tapered wedge, C, arranged therein, and provided with a rod or pin, *c*, extending from the large end of said wedge through the shell, in combination with a spring, *f*, arranged around the rod or pin, the whole adapted to operate substantially as and for the purpose set forth.

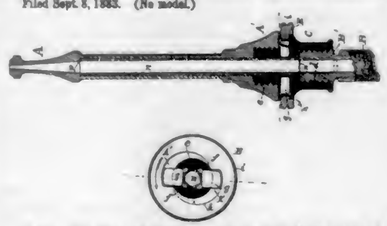


2. The combination, in a bag-tie, of the shell formed of the two parts A and B, the former having formed therewith the pins *b* and the perforated portion *d*, and the latter provided with the right-angular portion *g*, the spring-block, and the pin, substantially as described.

3. The combination, in a bag-tie, of the shell made in two parts, as described, the spring-block, and the pin secured to said block, and provided with the swivel D, having the arms *e*, substantially as described.

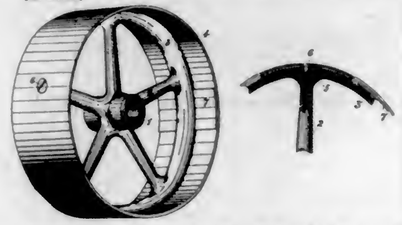
296,170. WATCH-WINDING MECHANISM. ORREN E. HINKLEY, Milford Centre, Ohio, assignor, by direct and mesne assignments, of two-thirds to Albert B. Roots, same place, and Walter Allen, Washington, D.C. Filed Jan. 2, 1883. (No model.)

296,171. WAGON-BRAKE. JAMES HOCKING and CLEMENT R. JONES, Denton, Nebr. Filed Dec. 31, 1883. (No model.)



Claim.—1. The combination, with the rock-shaft R, having downwardly-projecting arms S, bearing brake-shoes, and downwardly-projecting arm M, of the branched brake-rod I L, slotted and guided by a vertical bolt, and means, substantially as described, for forcing the same backward, as set forth.

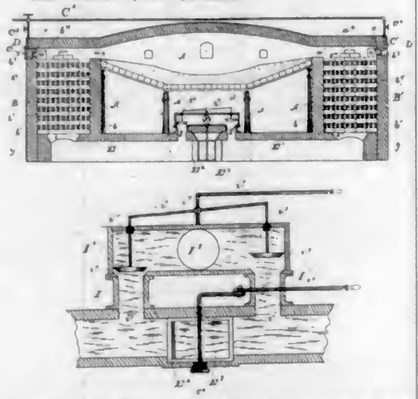
2. The combination, with the shafts of a vehicle, of the rods A, having loops *a*, and guided beneath the shafts, the single-trees B B, guide-irons F F, bifurcated bar G, and a brake-bar connecting with the brakes, and adapted to apply the same when the rods A A are forced back, as set forth.



3. The combination of rock-shaft R, having brake-shoe arms S and arm M, the brake-rod I L, the bifurcated bar G, connected to brake-rod by a universal joint, H, the single-trees B D, and the shaft-rods A A, as and for the purpose described.

296,172. CUT-OFF NOZZLE. CHARLES T. HOLLOWAY, Baltimore, Md. Filed Sept. 8, 1883. (No model.)

Claim.—A liquid-discharging nozzle having a flexible tube-lining extending through it, a laterally-projecting flat flange, A, with a circular rim, A', a neck, *e*, above the flange, provided with two holes, *f*, a block, *g*, to slide in and out each hole, and a loose collar, E, provided with a recess on the side, having a circular wall, A^2, and with its center entirely cut out, forming two internal eccentric rims, *k*, which bear on the outside of the said blocks, as shown and described.



296,173. BELT-PULLEY. ALEXANDER T. IRWIN, Pittsburg, Pa., assignor to Jones & Laughlins, (Limited,) same place. Filed Feb. 25, 1884. (No model.)

Claim.—1. In a belt-pulley, the hub 1, spokes 2, having enlarged ends, and the fellies 3, said parts being cast in one piece, in combination with the wrought-iron rim 4, suitably secured to the spokes and fellies, substantially as set forth.

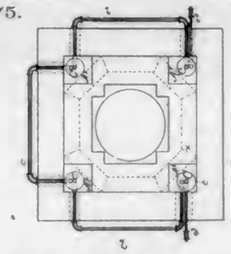
2. In a belt-pulley, the hub 1, spokes 2, having enlarged ends, and the fellies 3, in combination with the wrought-iron rim 4, secured to the said spokes and fellies by screws, substantially as set forth.

296,174. REGENERATOR-FURNACE. GOMER JONES, Washington, D.C., assignor to the Standard Vapor Fuel Iron and Steel Company of New York. Filed Nov. 9, 1883. (No model.)

Claim.—1. The combination of a furnace having openings or throats at each end, air-regenerators having their top layer of bricks near the said throats or openings, bricks resting upon said top layer to form transverse passages in front of the throats or openings of said furnace, and a gas-supplier in the front wall of the regenerators at a point opposite the bricks.

2. The combination of a furnace having openings or throats at each end, air-regenerators having the top layer of bricks near the said throats or openings, and provided with a series of rows of brick resting upon the top layer to form passages leading to the furnace, and a gas-supplier in the front walls of the regenerators, and having jets which register with the passages formed by said brick, substantially as described.

3. The combination of a furnace open at each end, regenerators of the same size from top to bottom at each end of the furnace, gas-suppliers in the front wall of the regenerators, and truncated wedge-shape flues having their base joined to the regenerators, substantially as described.



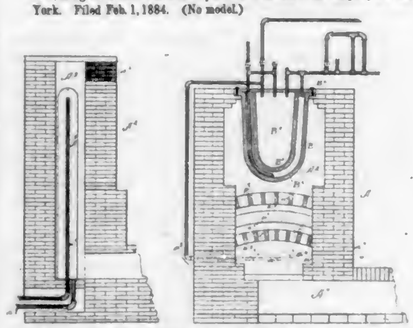
4. In a furnace, the combination of the regenerators, flues E and E', having a valve-box leading to the chimney, and provided with a valve for alternately shutting each flue, and an air-box connected with each of the flues at a point between the inlets to the valve-box and the regenerators, substantially as described.

296,175. SUPERHEATER. GOMER JONES, Washington, D.C., assignor to the Standard Vapor Fuel Iron and Steel Company of New York. Filed Jan. 4, 1884. (No model.)

Claim.—1. The combination of a combustion-chamber having a port in its upper part, a superheater located in said combustion-chamber, a downflue connected with said combustion-chamber by said port, and a superheater located in said downflue, substantially as described.

2. The combination of the downflues of a furnace and superheaters

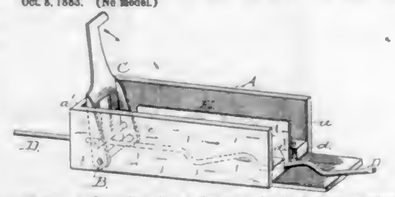
296,175.



in said downflues, and connected together substantially as described.

3. The combination of the downflues of a furnace and superheaters in said flues, consisting of drums connected with each other, and having inlet-pipes terminating near the top of the drums and outlet-pipes near the bottom of the drums, substantially as described.

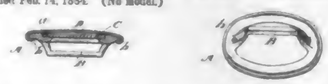
4. In a furnace, a series of downflues having superheating-drums located therein, said drums connected together by pipes, the exit-pipe of one drum being the inlet-pipe of the next drum, substantially as described.



296,176. SUPERHEATING-FURNACE. GOMER JONES, Washington, D.C., assignor to the Standard Vapor Fuel Iron and Steel Company of New York. Filed Feb. 1, 1884. (No model.)

Claim.—1. The combination of a gas-and-air-mixing chamber and a combustion-chamber, said mixing-chamber having a series of arches each formed of rows of brick, with spaces between each row, and the rows in the upper arch being directly over the spaces between the rows in the lower arch, substantially as described.

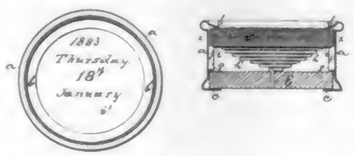
2. The combination of a gas-and-air-mixing chamber and a combustion-chamber, said mixing-chamber having a series of arches formed of rows of bricks, one arch being separated from the other by retaining-bricks, and the rows of one arch being directly over the retaining-bricks of the lower arch, and the retaining-bricks of the upper arch arranged in a staggered manner relatively to the retaining-bricks of the arch below, substantially as described.



296,177. WIRE-CRIMPER. MATTHEW M. JONES, Kokomo, Ind. Filed Oct. 8, 1883. (No model.)

Claim.—1. In a wire-crimper, the box A, having its front end closed and perforated for the free passage of the wire, and provided with the transverse bar B, in combination with the hinged or pivoted lever-handle C, bifurcated at its lower end and provided with the transverse cross-bar *c*, all constructed to operate substantially as and for the purpose set forth.

2. The box A, provided with the transverse bar B, in combination with the bifurcated lever-handle C, provided with the cross-bar *c*, and the crimp-guards *d d*, substantially as and for the purpose set forth.

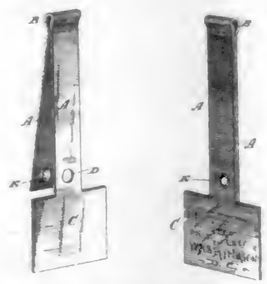


296,178. HARNESS-ROSETTE. RICHARD W. JONES, Syracuse, N. Y. Filed Feb. 14, 1884. (No model.)

Claim.—1. A harness-rosette consisting of the annular base-piece, having a peripheral groove on its under side, and provided with an attaching-loop and an ornamental cap or face piece, with a circumferential flange upset in the groove in the base-piece, substantially as described.

2. In a harness-rosette, the combination of the base-piece A, having an annular recess on its upper surface, a peripheral groove on its under side, and an attaching-loop cast integral therewith, with the disk C and the cap or face D, the circumferential flange on the latter being upset in the groove on the under side of the base, as set forth.

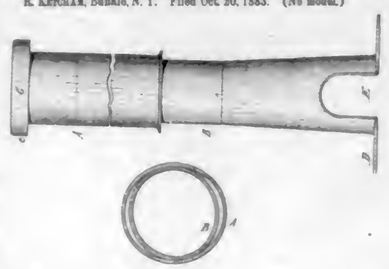
296,179. COMBINED CALENDAR AND PAPER-WEIGHT. LOUIS KELLER, New York, N. Y. Filed Feb. 9, 1883. (No model.)



Claim.—1. As a new article of manufacture, a combined calendar and advertising device, consisting of the case *a*, having continuous or unbroken sides or walls, an open top surrounded by an inwardly-projecting and continuous flange, *b*, a pressure-plate, *i'*, adapted to move within the case, and an interior spring, *h*, secured centrally to the bottom, all arranged substantially as and for the purpose set forth.

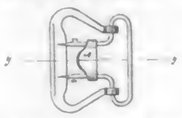
2. As a new article of manufacture, a combined calendar, paper-weight, and advertising device, consisting of a case, *a*, having an annular flange, *b*, on its upper edge, adapted to hold the edges of contained pieces of paper *i'*, a pressure-plate, *i*, adapted to move within the case, an interior spring, *h*, secured centrally to the bottom, and a weighted bottom, E, substantially as and for the purposes set forth.

3. The combination, in a calendar, of the case *a*, the spring *h*, attached at one end to the removable bottom E, and supporting the plate *i* at the other end, the plate *i*, the independent advertising-ring *k*, and the pieces of paper *i'*, separate and independent from each other and piled on each other in numerical sequence, substantially as and for the purposes set forth.



4. The combination, in a calendar, of the case *a*, the spring *h*, the plate *i*, the pieces of paper *i'*, having calendar designations, and arranged on top of each other in proper sequence, and provided with notches in their edges, and the posts *j*, adapted to fit into the notches in the pieces of paper, substantially as and for the purposes set forth.

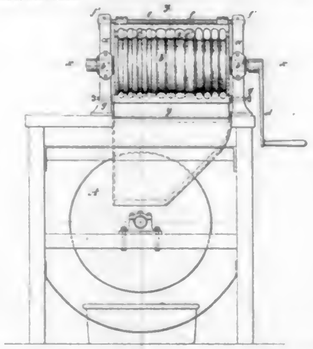
296,180. METALLIC TAG. MARXELL KERSTEN, Garfield, Iowa. Filed Dec. 22, 1883. (No model.)



Claim.—As an article of manufacture, a metallic tag consisting of a strip of sheet metal doubled upon itself, and having at the free end of one of its legs an eyelet punched in the metal, and at the free end of its other leg a plate integral with it, adapted to be marked with the address, &c., and an eyelet-hole adapted to fit the eyelet, whereby the two legs or parts of the tag-strip may be clinched together, substantially as shown and set forth.

296,181. STOP-COCK BOX FOR WATER OR GAS PIPES. ALONZO R. KETCHAM, Buffalo, N. Y. Filed Oct. 20, 1883. (No model.)

Claim.—An extensible box or casing composed of two telescopic parts constructed with elliptical contiguous surfaces, substantially as set forth.



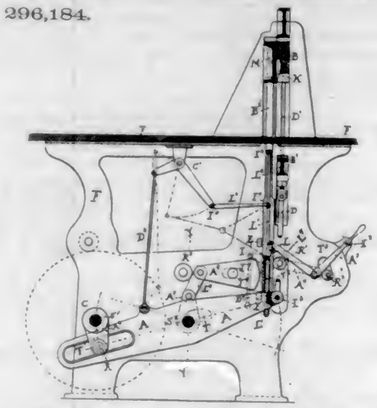
296,182. BUCKLE. WILLIAM A. KEYS and JARED LOCKWOOD, New York, N. Y. Filed Nov. 2, 1883. (No model.)

Claim.—1. A buckle for use in textile fabrics, having a pivoted tongue provided with points *a* and the lifting-piece A, projecting above the plane of the tongue and arranged between the points and pivot of the tongue, substantially as shown and described.

2. The combination, with the prongs of a buckle, of the attached lifting-piece A, substantially as shown and described.

296,183. MACHINE FOR SHAPING PLASTIC MATERIALS. WILHELM KILIAN, Berlin, assignor to Gebr Stollwerck, Cologne-on-the-Rhine, Germany. Filed Feb. 13, 1884. (No model.) Patented in Germany Apr. 9, 1880, No. 12,165.

Claim.—In a machine for shaping plastic material, the combination, with the rotating cylinder *b*, having the grooves *c*, of the segment *e*, arranged as described, and having the grooves *c'*, corresponding with the grooves *c*, and forming therewith tubular passages when the said grooves are brought together, substantially as and for the purpose set forth.

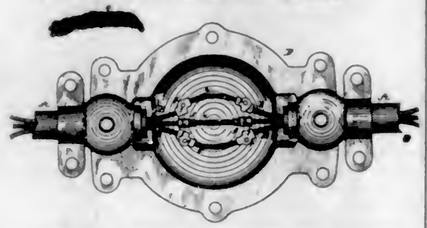


296,184. PAPER-CUTTING MACHINE. HERMAN T. C. KRAUS, Brooklyn, N. Y., assignor to George E. Sanborn, Chicago, Ill. Filed Feb. 23, 1883. (No model.)

Claim.—1. In a paper-cutting machine, the clamp supported by the clamp-bar B^3, and the links L' and L^3, resting upon the pins I, in combination with the link L and arm A^3, for the purpose of controlling the preliminary adjustment of the clamp, substantially as shown and described.

2. The arm A, connecting-rod D^3, crank-lever C', arm L^3, toggle-links L' and L^2, and the clamp-bar B^3, in combination, for the purpose of controlling the adjustment of the clamp.

3. In a paper-cutting machine, the arm A and shaft S^3, in combination with the arm A^3, link L^4, roller R^3, and the toothed segment-arm A^4.



296,184.

4. The combination of the arm A, connecting-rod D^3, arm A^4, rollers R' and R^3, the latter working in the inclined slot T^3, and clamp-bar B^3, as set forth.

5. In a paper-cutting machine, arm A, arm A^3, link L^4, toothed segment-arm A^4, pin I', and toothed clamp-bar B^3, in combination, as and for the purpose set forth.

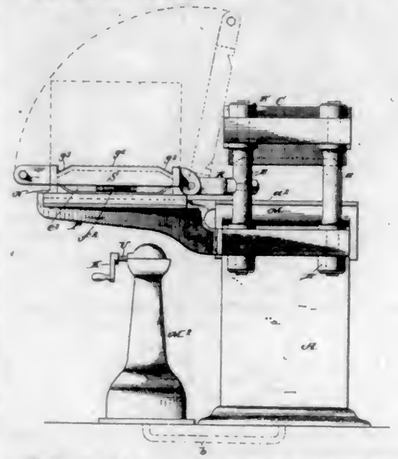
296,185. ELECTRICAL CONDUCTOR AND CONNECTING DEVICE THEREFOR. JOHN KRUESI, Brooklyn, assignor to the Electric Tube Company, New York, N. Y. Filed Oct. 20, 1883. (No model.)

Claim.—1. The combination of two or more electrical conductors, an inclosing-tube, a single insulating-support wound spirally upon each conductor, and an insulating material of the character described filling the tube, substantially as set forth.

2. The combination, with two or more electrical conductors and an inclosing-tube, of an insulating-support wound spirally around each conductor, and an insulating-support wound spirally around all the conductors, and sustaining them centrally in the tube, substantially as set forth.

3. The combination, with two or more electrical conductors and an inclosing-tube, of a spiral insulating-support around each conductor, a spiral insulating-support around all the conductors, and an insulating material of the character described filling the tube, substantially as set forth.

4. The combination, with two or more insulated electrical conductors and an inclosing-tube, of a spiral insulating-support around each conductor, a spiral insulating-support around all the conductors, and an insulating material of the character described filling the tube, substantially as set forth.



5. The combination, with two parts of an electrical conductor, of a device for permanently connecting them, consisting of a bent flexible conductor having end pieces brazed or soldered thereto, the ends of the joined conductor being attached to such end pieces, substantially as set forth.

6. The combination, with two parts of an electrical conductor, of a device for permanently connecting them, consisting of a bent flexible conductor formed of a number of wires massed together, and having solid end pieces soldered or brazed thereto, to which the ends of the joined conductor are connected, substantially as set forth.

7. The combination of a junction-box filled with fusible insulation, conductors entering the same, and connecting-pieces of less conductivity than the conductors, substantially as set forth.

8. The combination of a junction-box filled with fusible insulation conductors entering the same, and flexible connecting-pieces of less conductivity than the conductors, substantially as set forth.

296,186. APPARATUS FOR PRESSING OIL-CAKES. WM. KRUTZSCH, Dayton, Ohio, assignor to the Buckeye Iron and Brass Works, same place. Filed Dec. 3, 1883. (No model.)

Claim.—1. In an apparatus for pressing oil-cake, a press box or plate capable of sliding upon the ram-block and brackets attached to the frame, substantially as described.

2. In an apparatus for pressing oil-cake, the combination, with a press box or plate capable of sliding upon the ram-block and upon brackets forming a support continuous therewith, of end platforms for engaging with said box or plate, and having their upper surfaces formed to approximate the shape of the upper half of the pressed cake, substantially as described.

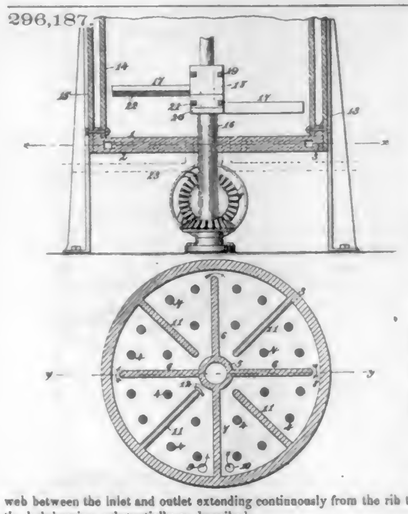
3. The combination, with the press box or plate capable of sliding from the ram-block upon brackets outside the press, of end platforms for engaging the ends of said box or plate, and having their upper surfaces approximating the form of the pressed cake, and a receptacle adapted to traverse said platforms and press box or plate, to deposit the meal upon the latter and shape the upper portion of the mass for the press, substantially as described.

4. The method herein described of pressing oil-cake, said method consisting in laying a cloth upon a press box or plate, depositing the meal thereon, forming the mass into a shape approximating that imparted by the press, folding the two ends of said cloth over thereupon, and submitting the whole to the action of the press, substantially as described.

5. The combination of the ram-block having a flange at each end, of the press-plate constructed of such shape as to form the lower half of the cake and having ends which overhang the ram-block, with grooves formed therein to receive the flanges, substantially as described.

6. The combination, with the press constructed as described, of the end platforms hinged to brackets upon each end of the press, and connected by a rod attached to lugs projecting from the outer ends of said platforms, substantially as specified.

7. The combination, with the press having supporting-brackets P P and sliding press-plate N, of the end platforms, S S, formed as set forth and hinged to the studs R R, and the receptacle traversing said end platforms and supplying the meal to and shaping it upon the press-plate, substantially as described.



8. The end platform, S, having a plain top surface with sides beveled at an angle, g^2 g^2, approximating the form of the upper half of the pressed cake, substantially as described.

296,187. APPARATUS FOR EXTRACTING OIL FROM OLEAGINOUS SUBSTANCES. WM. KRUTZSCH, Dayton, Ohio, assignor to the Buckeye Iron and Brass Works, same place. Filed Dec. 18, 1883. (No model.)

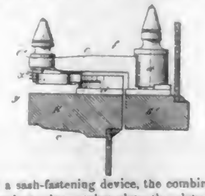
Claim.—1. In an apparatus for heating or cooking oleaginous substances for the extraction of oil, the kettle-heating bottom consisting of the upper and lower walls, and the radiating webs formed integral with the walls and creating steam-passages adjacent to the center of the bottom and its outer edge, the said bottom having a steam inlet and outlet arranged on opposite sides, respectively, of a web which extends from the hub-bearing to its outer edge, substantially as described.

2. In an apparatus for heating or cooking oleaginous substances for the extraction of oil, the kettle-heating bottom composed of a hollow casting comprising the upper and lower separated wheels creating the steam-space, the outer connecting-rib, the hub-bearing, the radiating webs terminating adjacent to the hub-bearing and the outer rib, and the

296,187.

web between the inlet and outlet extending continuously from the rib to the hub-bearing, substantially as described.

3. In an apparatus for heating or cooking oleaginous substances for the extraction of oil, the kettle-heating bottom consisting of the hollow casting forming the steam-chamber, and provided with a surrounding vertical flange to which the kettle-cylinder and exterior cylinder are secured to create the intervening air-space of a width equal to that of the flange, substantially as described.



4. In an apparatus for heating or cooking oleaginous substances for the extraction of oil, the kettle-heating bottom composed of a casting comprising the separated walls, the hub-bearing, the outer connecting-rib, the radiating webs joining the walls and arranged to create steam-passages, and the flange rising from the outer edge of the upper wall to which the flange is secured, the inner and outer cylinders, substantially as described.

5. In an apparatus for heating or cooking oleaginous substances for the extraction of oil, the combination, with the heads secured to the shaft and having flanges, of the agitating-arms having one end secured to said flanges, substantially as described.

6. In an apparatus for heating or cooking oleaginous substances for the extraction of oil, the combination, with the vertical shaft, of the heads grooved to receive the shaft and having inclined flanges, and the agitating-arms secured to the flanges to stand oblique to the axis of the shaft, substantially as described.

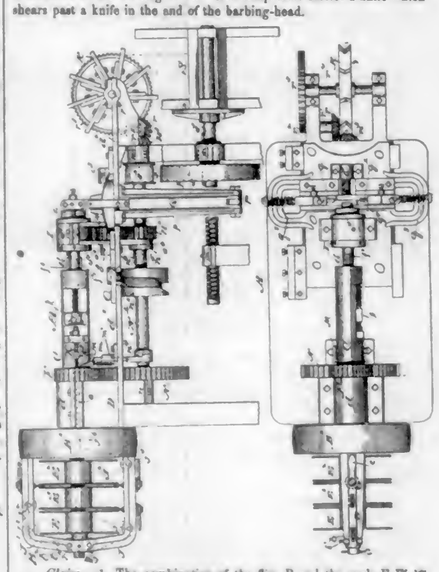
7. In an apparatus for heating or cooking oleaginous substances for the extraction of oil, the combination, with the shaft, of the grooved heads clamped to the shaft by screw-bolts, and provided with inclined flanges and the agitating-arms having one end bolted to the flanges, substantially as described.

296,188. FASTENER FOR THE MEETING-RAILS OF SASHES. EDWARD O. LADD, Everett, Mass. Filed Apr. 21, 1883. (Model.)

Claim.—1. In a sash-fastening device, the combination of an edge cam-bearing plate and an edge ratchet-plate, the plates or edge surfaces being independent of each other but coincident in curvature, and adapted to operate in connection with the fastening mechanism, substantially as and for the purposes set forth.

2. The sash-fastening device consisting of the plate *b*, provided with the arm *c*, pivoted thereto, the said arm adapted to be actuated by the spring x^3, inclosed in the spring-case *a*, in combination with the plate *e*, provided with a circular-edge cam-plate, *g*, and the circular-edge ratchet-plate *f*, formed coincident with each other, and adapted to operate in combination with a projecting shoulder cam and pawl arranged on the outer end of the arm *c*, all substantially as specified and set forth.

3. In a sash-fastening device, the combination of a projecting revolving shoulder cam and pawl, each adapted to co-operate with independent edge cam and edge ratchet plates, said plates being formed coincident with each other upon the plate *d*, substantially as and for the purposes set forth.



296,189. DEVICE FOR TESTING CHEESE-CURD. EDWARD V. LARHAM, Union Grove, Ill. Filed Dec. 6, 1882. (No model.)

Claim.—As an improved article of manufacture for testing curd in cheese-making, the herein-described cylindrical iron chimney, adapted to be fitted upon a lamp-burner or gas-jet, substantially as specified.

296,190. BARBED-WIRE MACHINE. GODFREY H. LAHAR, St. Louis, Mo. Filed Mar. 2, 1883. (No model.)

Brief.—The barbing-head, the barb-compressors, and the mechanism for operating the compressors are all mounted on a reciprocating slide. The barbing-head is rotated continuously by the flier, being carried by a barrel which is splined to the stock of the flier. The barrel rotates with the stock and reciprocates in it. A reciprocating barb-feed is mounted on the rotating stock. One compressor carries a knife which shears past a knife in the end of the barbing-head.

Claim.—1. The combination of the flier B and the reels E E' E², said reels being arranged centrally in the flier, and said flier and reels being perforated centrally to admit the strand-wires.

2. The combination of the flier B, the stock C, and the tubes b' b^2, and core b^4, substantially as described.

3. The combination of the flier B, the stock C, the tubes b' b^2, the core b^4, and the reels E E' E², substantially as described.

4. The combination of the flier B, the reel E', and the tension device E², substantially as described.

5. The combination of the flier B, the stock C, the tubes b' b^2, the core b^4, the barrel G, and the core-bar H, substantially as described.

6. The combination of the flier B, the grooved core b^4, and the catch b^5, as and for the purpose described.

7. The combination of the flier B, the reels E E', pulleys j j' j^2 j^3 j^4, and the grooved core b^4, as and for the purpose described.

8. The combination of the rotating stock C, the tube K, the dogs k' k', the parts k^2 k^3, and the inclined plane M, and spring k^4, substantially as described.

9. The combination of the stock C, the tube K, the dogs k' k', the parts k^2 k^3, and the inclined plane M, said inclined plane having a reciprocating movement, as and for the purpose described.

10. The combination of the inclined plane M, the arm *m*, the guide m', the shaft N', and the cam n^4, as and for the purpose described.

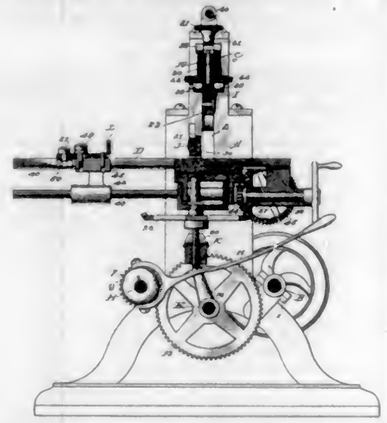
11. The combination of the stock C, the tube K, the inclined plane M, the arm *m*, the guide m', the shaft N', the cam n^4, and the spring k^4 substantially as described.

12. The head I, perforated at *i*, and provided with the removable tube L, said tube being an extension of said perforation, but entirely beyond it, substantially as and for the purpose described.

13. The combination of the head I and the pivoted dog l^4, as and for the purpose described.

14. The combination of the reciprocating slide O, the hanger o^4, the pinions n^2 o', and the shafts N' o^3, substantially as described.

15. The combination of the reciprocating slide O, the head I, the barrel G, the core H, and the compressors q q', the compressor q' having the knife q^4, the knife l^2 on the head I, and the two compressors acting to compress the barb closely upon the strand-wires, substantially as described.



16. The combination of the head I, having a knife, l^2, the barrel G, core H, the swinging arms Q Q and the compressors q q', the compressor q' having the knife q^4, and the two compressors acting to compress the barb upon the strand-wires, substantially as described.

17. The combination of a pair of reciprocating compressors, q q', the knife on one of these compressors, the head I, and the knife on the end of same, substantially as described.

18. The combination of the shaft o^3, the cams o^2 o', the straps q^2 q^3, and the hinged arms Q Q, as and for the purpose described.

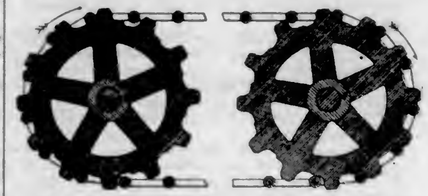
19. The combination of the shaft o^3, the cams o^2 o', the straps q^2 q^3, the arms Q Q, and the springs q^5 q^5, substantially as described.

296,191. PAPER-CUTTER AND DIE-PRESS. JOHN H. LAWLOR, Baltimore, Md. Filed Jan. 15, 1883. (No model.)

Claim.—1. In a paper-cutting machine, the combination of a cross-head adapted to slide vertically in the frame without lateral movement, and a removable cutter connected to said cross-head, and adapted to reciprocate laterally by the vertical movement of the cross-head, substantially as described.

2. In a paper-cutting or die press, a vertically-reciprocating and slotted cross-head, in combination with interchangeable cutters and dies.

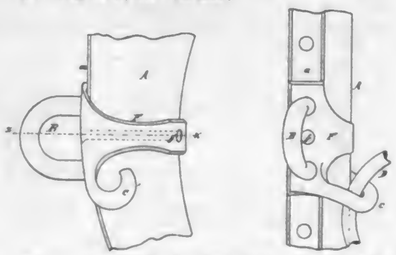
3. The combination, with the sliding cross-head and its connecting-rods, having the described opening, of the removable cutter-head and cutter.



4. The slotted cross-head, in combination with the open connecting-rods, the cutter-head and cutter, and the screws 20.

5. The combination of the sliding cross-head having the slot 19, the cutter-head, having the inclined slot, the pin 26, the screws 20, and the roller-trucks.

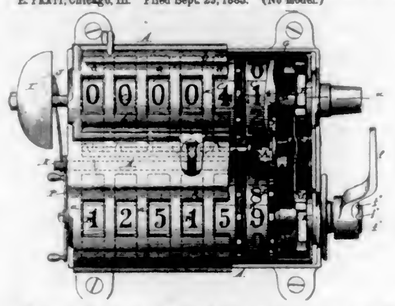
6. Combined with the pivoted sliding follower, the removable guide-block 50, substantially as described.



7. In combination with the frame-work of the machine, substantially as described, the main driving-shaft provided with fast and loose pulleys and fly-wheel, the pinion fixed upon said shaft, the central shaft connected by wrist-pins to the connecting-rods of the cross-head, the loose-gear wheel 4 and pinion 5 on said central shaft, the rear shaft and its fixed-gear wheel 6, meshing into the loose gear, and the clutch mechanism and loose pinion on the rear shaft, and a fixed-gear wheel, 13, on the central shaft.

296,192. SPROCKET-WHEEL. BENJAMIN A. LEGG, Columbus, Ohio, assignor to Joseph A. Jeffrey, same place. Filed Feb. 14, 1884. (No model.)

Claim.—The herein-described sprocket-wheel, having the working-faces of its teeth curved, and provided upon opposite sides with curved seats adapted to receive the anti-friction rollers of the driving-chain, the seat upon one side being nearer to the center of the wheel than the seat upon the opposite side of the tooth, substantially as set forth.



296,193. HAME ATTACHMENT. ODDEN P. LETCHWORTH, Buffalo, N. Y. Filed Oct. 30, 1883. (No model.)

Claim.—1. The combination, with a hame, of a hame staple or loop, a frame or clasp extending from the base of the hame staple or loop to the opposite side of the hame, and a bolt or rivet whereby said frame and staple or loop are secured to the hame, substantially as set forth.

2. The combination, with a hame, of a hame staple or loop, a frame or clasp extending from the base of the staple or loop to the opposite side of the hame, a hook adapted to receive the breast-strap ring, and cast on said clasp or frame, and a bolt or rivet whereby said clasp and staple or loop are secured to the hame, substantially as set forth.

296,194. REGISTER AND ALARM. JOHN G. LETTELIER and EDWIN E. PRATT, Chicago, Ill. Filed Sept. 29, 1883. (No model.)

Claim.—1. In a registering mechanism, the combination, with intermediate connecting and operating devices, substantially as described, of a series of wheels to register increasing numbers, and a series of wheels to indicate decreasing numbers, said series being adjustable independently of each other.

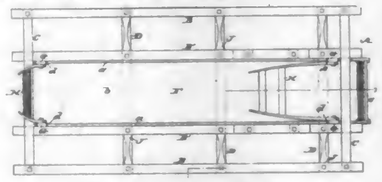
2. In combination with the alarm and the devices, substantially as shown, for operating the same, the series of notched indicator-wheels C, the bar O, provided with studs to enter said notches, and intermediate mechanism whereby said bar is caused to hold the alarm out of action, substantially as described.

3. In combination with a series of register-wheels and an alarm mechanism, a bar for holding said alarm mechanism out of action, extending across and acted upon by the entire series of wheels, substantially

as described, whereby the bar is prevented from releasing the alarm, except when all the registered wheels stand at the zero-point.

4. In combination with the wheels B, the oscillating head E, having the arm *d*, wheels C, and the oscillating head H, provided with the arm *c*.

5. In combination with the indicator-wheels C, the bar O, bar N, and rotary plate M, and the alarm mechanism connected with said plate, substantially as described.



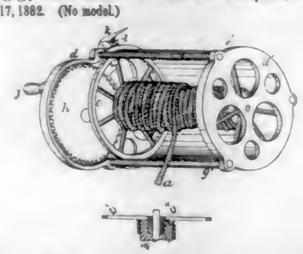
6. In combination with the indicator-wheels C and the bar O, controlled thereby, the rotary plate M, acted upon by the bar O, and bar N, provided with means to throw the operating-pawl G out of action, substantially as described.

7. In a registering mechanism, the oscillating collar E, provided with a pawl by which the registering devices are operated, in combination with the arm *f*, provided with a series of notches and a locking-pin, whereby a rotary adjustment of said arm with respect to the head is permitted.

8. The bell, its striker, the rock-shaft and spring to operate said striker, the arm upon said rock-shaft, and the wheel to actuate the same, combined with the wheels C, bar O, rotary plate M, and intermediate devices connecting said plate with the bar O, substantially as described.

9. In combination with the indicator-wheel C, its operating-pawl *c*, and detent *u*, the rotary plate M, constructed as described, to disengage both the pawl and detent.

296,195. HAY AND GRAIN RACK. WILLIAM H. LOVE, Constantine, Mich. Filed Nov. 30, 1883. (No model.)



Claim.—1. The combination, with the frame of a rack, of metallic braces J, of spreading form, the bends or angles and ends of the limbs thereof being firmly connected with said frame, substantially as and for the purpose set forth.

2. A rack having a body formed of a loose bottom and loose side pieces, the same being fitted centrally in the frame of the rack, substantially as and for the purpose set forth.

3. The rack-frame having longitudinally-extending pieces M on opposite sides of the reach, the same being secured to the parallel transverse bars D' L, substantially as and for the purpose set forth.

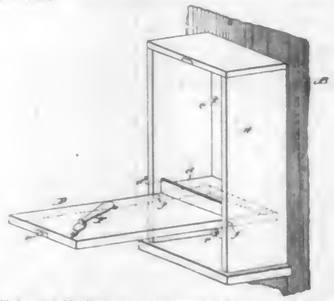
4. The guards H, pivoted to blocks G, which are connected with the pieces or bars B' of the frame, in combination with the body F, having removable side pieces which are formed with shoulders *d*, which engage with said block, substantially as and for the purpose set forth.

296,196. LINE-REEL. WM. N. LOCKWOOD, Campville, Conn. Filed Apr. 17, 1882. (No model.)

Claim.—1. In a line-reel, the combination, with the shaft *b*, of the plain flange *c*, secured to one end thereof, and the flange *c'*, secured to the other end, and provided with a lug, c^2, projecting inwardly therefrom adjacent to the shaft *b*, and to which is attached one end of the line, substantially as and for the purpose hereinbefore set forth.

2. In combination, the inclosing-case *d d' f*, the gear-wheel *h*, provided with the crank-handle *j*, the line-reel *b c c'*, provided with the pinion, and the bell-crank spring-catch *k*, having its outer end lying along the inclosing-case, substantially as and for the purpose set forth.

296,197. LIQUID FOR AND PROCESS OF GENERATING A COMPOUND VAPOR AS A MOTOR POWER. WILLIAM L. LOWREY, Boston, Mass. Filed Nov. 12, 1883. (No specimens.)



Claim.—1. A compound liquid to be used in engine-boilers to generate a vapor for a motor power, consisting of alcohol, either absolute, methylic, the alcohol of commerce, or of any other kind or name, either jointly or separately, their mixtures or compounds, and water in the following proportions, viz: for small boilers—*i. e.*, boilers of from two (2) to twenty (20) horse-power—equal parts of water and alcohol or alcohols, their mixtures or compounds, and for large boilers—*i. e.*, boilers of twenty (20) horse-power and upward—six (6) parts water and four (4) parts alcohol or alcohols, their mixtures or compounds, and the modifications and variations of said proportions, substantially as described.

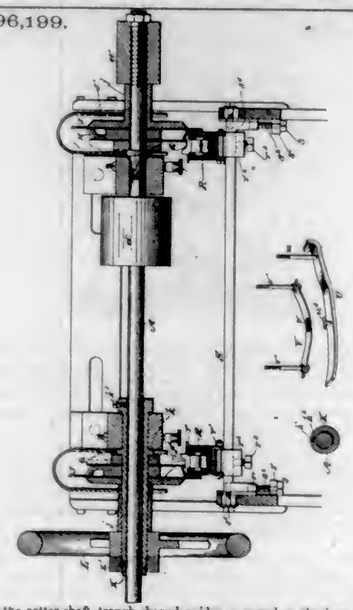
2. The process of generating a compound vapor as a motor power, which consists in mixing absolute and methylic alcohols, their compounds or mixtures, or either of said alcohols or their mixtures or compounds, jointly or separately, with water in equal proportions for small boilers, and for large boilers six (6) parts water to four (4) parts absolute or methylic alcohols, their mixtures or compounds, and modifications and variations of such proportions, and subjecting the same to heat in engine-boilers the same as water is heated to generate steam, substantially as described.

3. A compound vapor generated by heat in boilers from water and alcohol, either absolute, methylic, the alcohol of commerce, or of any other kind or name, either jointly or separately, their mixtures or compounds, mixed in the following proportions: in small boilers—*i. e.*, boilers of from two (2) to twenty (20) horse-power—equal parts of water and alcohol or alcohols, their mixtures or compounds; in large boilers—*i. e.*, boilers of twenty (20) horse-power and upward—six (6) parts water and four (4) parts alcohol or alcohols, their mixtures or compounds, and the modifications and variations of said proportions, substantially as set forth and described.

4. The improved method or process of operating steam or vapor engines, which consists in applying thereto the compound vapor herein described and claimed, substantially as set forth.

296,198. BLACKING-CASE. GEORGE T. MARTIN, Somerville, assignor to the Boston Fancy Cabinet Company, Boston, Mass. Filed May 15, 1883. (No model.)

Claim.—A blacking-case composed of the box A and strong shelf *d* therein, and the door D, having the foot-rest F thereon, the said door being pivoted immediately below the front edge of the shelf, so that the entire surface of its lower end rests horizontally against the under side of the said shelf to thereby afford a strong and extended support for the projecting end of said door when in use, substantially as shown and described.



296,199. MACHINE FOR CROZING STAVES. SAMUEL F. MAXWELL, Clifton, W. Va. Filed May 17, 1883. (No model.)

Brief.—The crozing-cutters are fixed upon a shaft transversely arranged, one of them being longitudinally adjustable thereon. The staves are fed by lag-chains which run in trough-shaped guides. Said guides are supported upon cross-bars having hooks, which pass under the bars, and set-screws for securing them in place. Thus the guides and lag-chains are laterally adjustable independently of the cutters.

Claim.—1. In a machine for crozing and chamfering barrel-staves, the combination of a revolving shaft having rigidly-attached cutters at one end and longitudinally-movable cutters at the other end, with traveling carriers for moving the staves past the cutters, mechanism for adjusting the movable cutters along the shaft, and devices for adjusting one of the carriers toward and from the other carrier independently of the adjustment of the longitudinally-movable cutters, substantially as described.

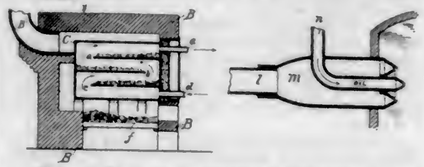
2. In a machine for crozing and chamfering staves, the combination of a revolving shaft having rigidly-attached cutters at one end and longitudinally-movable cutters at the other end, horizontal bars supported

296,199.

below the cutter-shaft, trough-shaped guides arranged on the bars, carriers traveling in the guides to move the staves past the cutters, mechanism for adjusting the movable cutters along the shaft, and devices for adjusting one of the guides and its carrier along the bar independently of the longitudinal adjustment of the movable cutters, substantially as described.

3. In a machine for crozing and chamfering staves, the combination of a revolving shaft having cutters rigidly attached thereto at one end, a sliding sleeve arranged on the other end of the shaft, and carrying attached cutters, mechanism for adjusting the sleeve along the shaft, horizontal bars arranged beneath the shaft, trough-shaped guides supported on the bars, carriers traveling in the guides, and devices for adjusting one trough and its carrier along the bar independently of the longitudinal adjustment of the same on the revolving shaft, substantially as described.

4. In a machine for crozing and chamfering staves, the combination of a revolving shaft having at one end rigidly-attached cutters and at the opposite end longitudinally-movable cutters, with trough-shaped guides, carriers traveling in the guides, and independent mechanism for adjusting the movable cutters and one of the guides and its carrier independently of the adjustment of each other, whereby the guide can be first adjusted and the movable cutters subsequently adjusted to coincide with the adjustment of the trough and its carrier, substantially as described.



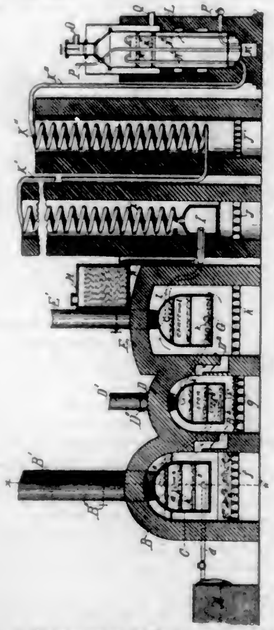
5. In a machine for crozing and chamfering staves, the combination of the revolving shaft having rigidly-attached cutters at one end and longitudinally-movable cutters at the other end, with mechanism for adjusting the movable cutters along the shaft, the horizontal bars beneath the shaft, the trough-shaped guides having hooks on their under sides which engage the bars, the carriers traveling in the guides, and devices for clamping the hooks to the bars and permitting the guides and carriers to be adjusted independently of the longitudinal adjustment of the movable cutters on the shaft, substantially as described.

6. The combination, with the revolving shaft having croze-cutters at each end, and those at one end capable of longitudinal adjustment, of stave-carriers, carrier-guides, and means such substantially as described for adjusting both guides vertically and one guide toward or from the other guide to correspond to the lateral adjustment of the cutters at one end of the shaft, substantially as described.

7. The combination of the revolving shaft having crozing-cutters at each end, those at one end being capable of longitudinal adjustment, the carriers, the carrier-guides having hooks on their under sides, the transverse bars with which said hooks engage, and set-screws clamping the hooks on the bars and permitting the guides to be adjusted thereon independently of the longitudinal adjustment of the cutters on the shaft, substantially as described.

8. In combination with the carriers and guides, the presser-feet U, each having a threaded arm, *u*, and locking-guide arm u^2, and the spring V, having slot *v*, threaded arms *v'*, and adjusting-nuts, substantially as described.

296,200. PROCESS OF MANUFACTURING HYDROCARBON GAS. WILLIAM FITZ CHARLES MASON MCCARTY, St. Petersburg, Russia, assignor of one-half to Henry Levis, Philadelphia, Pa. Filed Dec. 21, 1883. (No model.)



Claim.—1. The process of manufacturing hydrocarbon gas, which consists in passing superheated steam through or in contact with heated sulphate of lime and through or in contact with heated finely-divided metallic iron or copper, then mixing the gas so obtained with a liquid hydrocarbon, and converting the mixture into a fixed gas by heat, as specified.

2. The process of manufacturing hydrocarbon gas, which consists in passing superheated steam through or in contact with heated sulphate of lime, through or in contact with heated finely-divided metallic iron or copper, and through or in contact with a mass of charcoal, then mixing the gas so obtained with a liquid hydrocarbon, and converting the mixture into a fixed gas by heat, as specified.

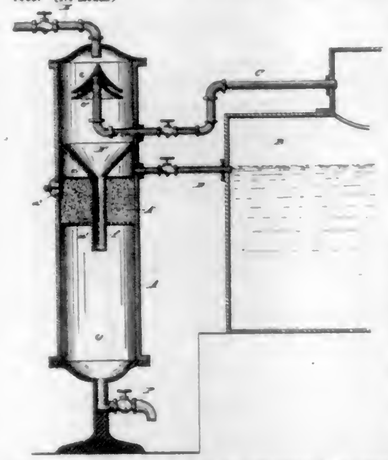
3. The process of manufacturing hydrocarbon gas, which consists in passing superheated steam through or in contact with heated sulphate of lime, through or in contact with heated finely-divided metallic iron or copper, and through or in contact with a mass of charcoal, then mixing the gas so obtained with a liquid hydrocarbon and converting the mixture into a fixed gas by heat, and then purifying said gas by passing the same through a washer, as specified.

296,201. APPARATUS FOR THE MANUFACTURE OF HYDROCARBON GAS. WILLIAM FITZ CHARLES MASON MCCARTY, St. Petersburg, Russia, assignor of one-half to Henry Levis, Philadelphia, Pa. Filed Dec. 21, 1883. (No model.)

Claim.—1. In an apparatus for the manufacture of hydrocarbon gas, in combination, three or more furnaces, the combustion-chamber of each being provided with a closed muffle containing, respectively, lime, iron, (or copper in a finely-divided state,) and charcoal, a mixing-chamber provided with a hydrocarbon-injector, and a heating or fixing coil or chamber, the arrangement being such that superheated steam introduced to the first-named muffle may pass over or through the heated

lime therein, and thence over or through the heated iron or copper in the second muffle, and thence over or through the charcoal in the third muffle, and thence into the mixing-chamber and become mixed with the hydrocarbon therein, and thence into or through the heating or fixing coil or chamber, as specified.

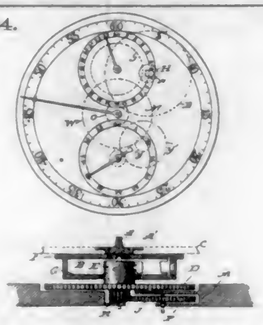
2. In an apparatus for the manufacture of hydrocarbon gas, in combination, a steam boiler or superheater, A, furnaces B, D, and E, provided, respectively, with muffles C, F, and G, said superheater and muffles being connected by pipes *d*, *e*, and *k*, respectively, a mixing-chamber, I, provided with a hydrocarbon-supply tube, *n*, and with a hydrogen-gas-supply tube, *l*, leading from the muffle G, and a fixing chamber or coil, K, as specified.



3. In an apparatus for the manufacture of hydrocarbon gas, in combination, a steam boiler or superheater, A, furnaces B, D, and E, provided, respectively, with muffles C, F, and G, said superheater and muffles being connected by pipes *d*, *e*, and *k*, respectively, a mixing-chamber, I, provided with a hydrocarbon-supply tube, *n*, and with a hydrogen-gas-supply tube, *l*, leading from the muffle G, one or more fixing chambers or coils, K, and a washer, L, as specified

296,202. CHURN. MAC N. MCKINNEY, Jackson, Miss. Filed Feb. 13, 1882. Renewed Feb. 5, 1884. (No model.)

Claim.—The dasher composed of the staff G, cut away or tapered on opposite sides, *g*, at its lower end, cross-head *h*, of even width with the lower end of staff, and parallel solid arms *k k*, of increasing width from the cross-head *h* toward the top, and cut off to form inclines *k' k'*, slanting in opposite directions, the whole made in one piece, as and for the purpose herein shown and described.

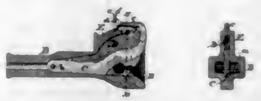


296,208. FEED-WATER PURIFIER. JOHN T. MEAD, Cleveland, Ohio, assignor to himself and John Thomson, same place. Filed Nov. 9, 1883. (No model.)

Claim.—1. In a feed-water purifier, the combination of two conical disks, with a steam-pipe arranged to admit steam between the disks, and a feed-water-supply pipe arranged to discharge the feed-water upon the apex of the upper conical disk, substantially as set forth.

2. The combination, with a cylinder divided into two parts by two perforated diaphragms, between which is packed suitable filtering material, the funnel located above the upper diaphragm, and the pipe connected to the funnel and terminating below the lower diaphragm, of the steam-inlet pipe and the conical disks secured thereto, respectively, above and below the escape-openings, the water-supply pipe terminating directly above the center of the upper conical disk, and a water-discharge pipe situated below the upper edge of the funnel, substantially as set forth.

296,204. WATCH-MOVEMENT. HIRAM B. MEARS, Dubuque, Iowa, assignor of one-half to Asa Herr, same place. Filed Nov. 15, 1883. (No model.)



Claim.—1. In combination, the winding-post, disk A' in a sink or recess in the face of the bridge and attached to the stationary barrel, said barrel being provided with ratchet F beneath the bridge, the driving-wheel D, having an arbor, E, with bearing in the barrel, the spring, and the lower bearing for the wheel D, all these parts being arranged in a watch substantially as described.

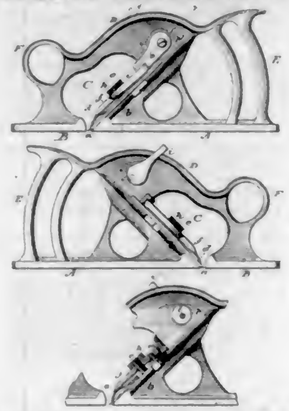
2. In combination, the winding-post, disk A' in a sink or recess in the face of the bridge and attached to the stationary barrel, said barrel being provided with ratchet F beneath the bridge, and with a head, G, the driving-wheel D, having an arbor, E, with bearing in the barrel, the spring, and the lower bearing for the wheel D, all these parts being arranged in a watch substantially as described.

3. In combination, the stationary barrel and ratchet F and winding-arbor, the spring, the wheel D, having its upper bearing in the barrel, the pinion H, and the hour-wheel J, with its bearing in bridge P, its hour-hand and dial, said hour-pinion being arranged to revolve once in twenty-four hours, a minute-hand driven by the central pinion from the main drive-wheel, and the second-hand pinion driven from the central gear, W, through intermediate lantern-wheel and pinion, the pivots of said hands being all in line, all substantially as described.

296,205. CAR-COUPLING. PIERRE E. MIGNAULT, Acton Vale, Quebec, Canada, and PETER DION, Salem, Mass., assignors, by direct and mesne assignments, to the Union Car Coupler Company, Boston, Mass. Filed Oct. 4, 1883. (No model.)

Claim.—1. In a car-coupling, the draw-head B, provided with a suitable recess to receive the coupling-link, and the slot D, inclosed by the projecting portion E, in combination with the coupling-hook C, pivoted within said draw-head, and provided with the nose *g*, and the extension *e*, projecting backward from the front end of said hook above the portion E, all adapted to operate substantially as and for the purposes described.

2. In a car-coupling, the combination of the draw-head B, the coupling-hook C, pivoted therein, and provided with the nose *g*, the short arm A, connected to said hook, and the shaft *i*, provided at each end with a lever, *k*, adapted to operate substantially as and for the purposes described.

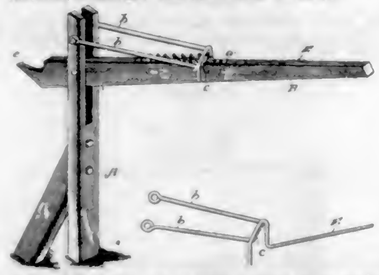


3. In a car-coupling, the combination of the draw-head B, the coupling-hook C, pivoted therein, and provided with the nose *g*, the arm A, connected to said hook, the shaft *i*, provided at each end with a lever, *k*, and the stops *l l*, adapted to operate substantially as and for the purposes described.

4. In a car-coupling, the combination of the draw-head B, the coupling-hook C, pivoted therein, and provided with the nose *g*, the rod *m*, provided with the projection *n*, and the weighted stop *o*, all adapted to operate substantially as and for the purposes described.

296,206. PROCESS OF ENAMELING IRON-WARE. HENRY C. MILLIGAN, South Orange, N. J. Filed Sept. 6, 1883. (No specimens.)

Claim.—The process of enameling iron with a thin enamel, so as to produce a surface of uniform color and free from the usual spots or mottles, which consists in adding to the paste, after it has been prepared in any of the usual and well-known ways, an additional supply of alkali solution sufficient to neutralize any acid which may be present in the paste, and then applying said paste to the chemically-clean surface of the iron and fusing the same in a muffle, substantially as herein set forth.



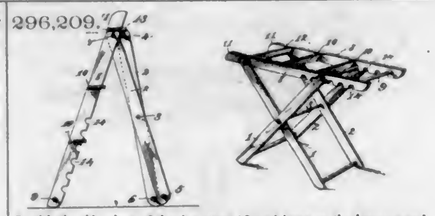
296,207. JOINER'S PLANE. GEORGE D. MOSHER and WILLIAM H. FORD, Birmingham, Conn. Filed Jan. 21, 1884. (No model.)

Claim.—1. A cast-metal plane having the front and rear portions separated by the mouth and throat, whereby said mouth and throat are open from side to side, the front and rear portions connected over the throat, the rear portion constructed with a seat, *b*, for the cutter, said seat provided with a fixed screw-threaded stud, *e*, the cutter *d*, the clamp *f*, and nut *h*, substantially as described.

2. A cast-metal plane having the throat and mouth open from side to side, the rear and front portions of the stock connected centrally over the throat above the cutter, the rear portion constructed with a seat to receive and support the cutter, the adjusting-lever *i*, arranged above the cutter in the connection which unites the rear and front portions, and a link in connection with the cutter and in eccentric connection with the hub of said lever, substantially as described.

296,208. LIFTING-JACK. WILLIAM K. MOTTRAM and JAMES ARCHIBALD MUNDY, Ottawa, Kans. Filed Feb. 15, 1884. (No model.)

Claim.—1. The lifting-jack described, consisting of the standard, having its upper end bifurcated, the lever pivoted therein, and provided on its upper surface with the ratchet-plate, the loop-dog, having its arms secured to the upper arms of the bifurcated standard, and the loop end, provided with means for engaging the ratchet-teeth, and the rearwardly-extending rod secured to the said loop, whereby the same may be made to engage and disengage the teeth of the ratchet, substantially as shown and described.

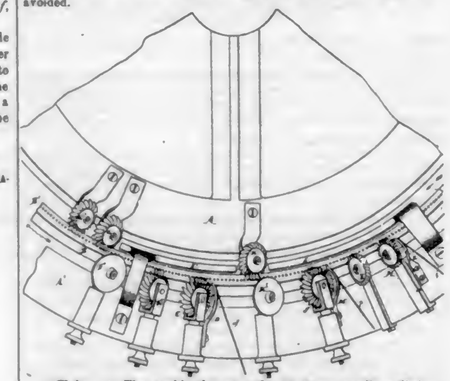


2. In a lifting-jack, the combination, with the loop-dog, of the operating-rod E, constructed substantially as shown and described, and welded to the upper side of the engaging end of the loop, substantially as specified.

296,209. WASH-BENCH AND STEP-LADDER. JAMES S. NELSON, Springfield, Ohio. Filed Aug. 18, 1883. (No model.)

Claim.—1. The combination of the pairs of pivoted legs 1 and 2, provided at their extremities, respectively, with the bars or rounds 4 and 7, with the notched side pieces, 8, having steps 10, and hung on the bar or round 7 to form the extension 11, said extension being constructed substantially as made by applicant, whereby said bar or round 4 may interlock with such extension for holding the parts in position to form a step-ladder, substantially as shown and specified.

2. The combination of the pairs of pivoted supporting-legs 1 and 2, provided at their extremities, respectively, with the bars or rounds 4 and



296,209.

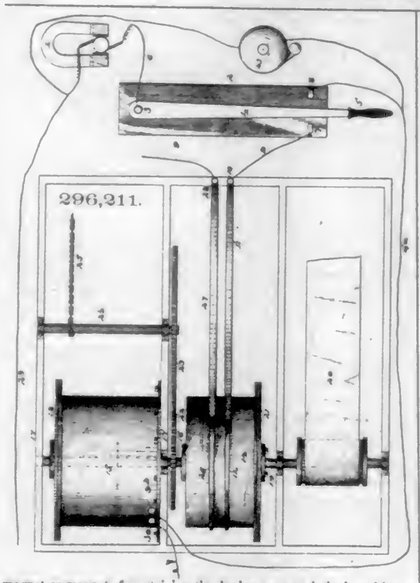
7, with the side pieces, 8, having steps 10, and hung on the bar or round 7 to form the extension 11, which is provided with the step 12, extending beyond the inner edges of the side pieces to provide the offset 13, under which the bar or round 4 of the legs is capable of engaging to support the parts in position for a step-ladder.

296,210. KNITTING-MACHINE. WILLIAM OSBORNE, Philadelphia, Pa., assignor of one-half to John H. Osborne, same place. Filed Oct. 15, 1883. (No model.)

Brief.—An improvement on Kent and Leeson's machine, described in Letters Patent No. 160,685, dated March 9, 1875. Instead of the "blending-wheel" shown and described in said patent, a presser-wheel and landing-wheel of ordinary character, arranged between two push-backs, are employed. By this means the fabric is permitted to rise at the point where the plush-threads are caused to pass up on the beards of the needles, and the difficulty of the blending-wheel previously employed catching irregularities and lumps in the fabric within its reach, by which action the needles are bent and broken and the machine stopped, is avoided.

Claim.—1. The combination of stationary frame, needle-cylinder, and needles, with the plush-looping wheel H, wheel J, presser-wheel K', landing-wheel K, push-backs S S', wheels F G G', and looping-wheel C, located on one side of said landing-wheel K, and wheels H and J on the other side, substantially as and for the purpose specified.

2. The combination of stationary frame, needle-cylinder, and needles, with the plush-looping wheel H, wheels I and J, presser-wheel K', landing-wheel K, push-back S, a push-back, S', looping-wheel C, and devices for raising the knitted web and throwing it off the needles, substantially as and for the purpose specified.



3. The combination of stationary frame, needle-cylinder, and needles, with the plush-looping wheel H, wheels I and J, presser-wheel K', landing-wheel K, wheels C E, presser F, landing-wheel G, knock-over wheel G', push-back S, and a push-back, S', substantially as and for the purpose specified.

4. The combination of a stationary frame, needle-head, and needles, with looping-wheels for inserting, respectively, the plush-thread, the binding-thread, and the fabric face-thread upon said needles, presser-wheel, landing and knock-over wheels, and devices, substantially as set forth, for raising the fabric and the plush-thread, for the purpose of placing said plush-thread upon the beards of the needles and then depressing the said fabric, the said devices being located between the looping-wheels for inserting the binding-thread and fabric face-thread, substantially as and for the purpose specified.

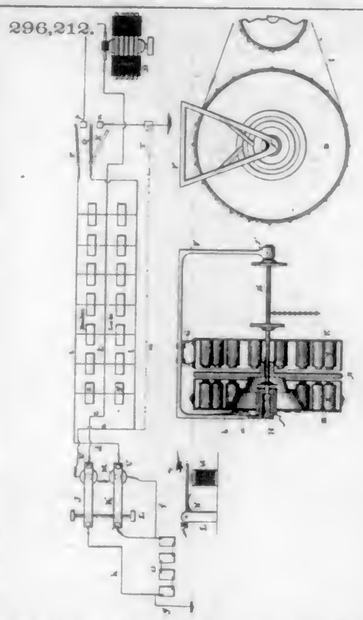
296,211. ELECTRO-MAGNETIC CAR-BRAKE. HARVEY S. PARK, Henderson, Ky. Filed June 14, 1883. (No model.)

Claim.—1. In an electro-magnetic car-brake, the combination, with a circuit including the braking magnet or magnets, of a circuit including

296,211.

magnet or magnets for retaining the brakes to any desired position to which they have been set.

2. In combination with a magnet or magnets mechanically connected with the brake-chain and a clutch-disk arranged to revolve in face thereof, the second magnet or set of magnets fixed to the supporting-frame and adapted to actuate a second armature-disk to arrest the motion of the braking system, substantially as explained.

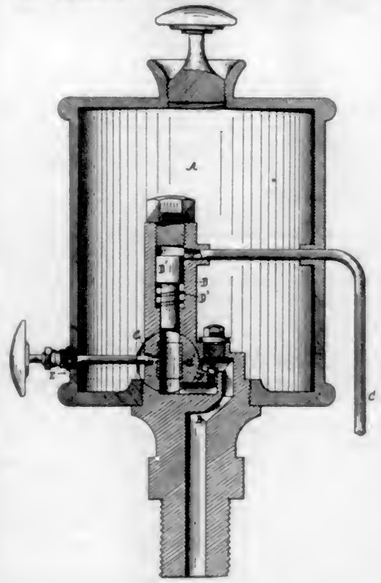


3. In combination with two circuits through the braking and retaining magnets, respectively, a switch-board adapted to be operated at will to throw in either of the said circuits to put on or set the brakes, as described.

4. In an electro-magnetic braking apparatus, the combination of the two coupling members, each having three ways for the current, arranged to automatically complete the circuits, whether separate or joined, substantially as set forth.

5. In combination with the electrical system of a railway-car brake, the coupling member consisting of contact-box 32 and conducting-springs 33 36, adapted to make contact automatically with said box on the uncoupling of the cars, substantially as set forth.

6. The combination of the first coupling member, having contact-box 32 and springs 33 36, with the second member having insulating-wedge 38, conducting-plates 39 40, and spring 41, suitable insulating material, 34, upon the box 32 or spring 41, and a system of electrical conductors, arranged substantially in the manner and for the purposes set forth.



296,212.

of the brakes, outgoing and return conductors, and an additional conductor of relatively high resistance for operating a make and break in the main circuit, substantially as set forth.

6. The combination, with the frame or sleepers of a car, of hangers F, boxes f', and an electro-magnetic clutch apparatus supported thereby, substantially as set forth.

296,213. LUBRICATOR. CHARLES H. PARSHALL, Detroit, Mich., assignor to the Michigan Lubricator Company, same place. Filed Oct. 17, 1883. Renewed Feb. 21, 1884. (No model.)

296,212. ELECTRO-MAGNETIC CAR-BRAKE. HARVEY S. PARK, Henderson, Ky. Filed Nov. 22, 1883. (No model.)

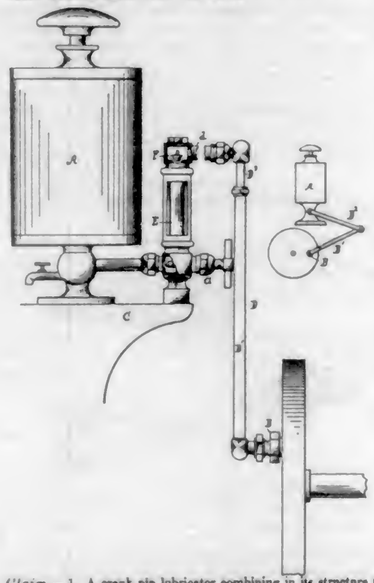
Claim.—1. The combination of a system of electric brakes on a train, a dynamo-electric generator having an operative connection with the brake-magnets, and a supplementary secondary battery, which has also an operative connection with the brake-magnets.

2. The combination of a system of electric brakes on a train, a dynamo-electric generator having an operative connection with the brake-magnets, and a supplementary secondary battery, which has also an operative connection with the brake-magnets, and an electro-magnetic device controlling the battery-circuit.

3. The combination of a system of electric brakes on a train, a secondary battery operating the same, and an electro-magnetic device controlling the battery-circuit, and having its own circuit extending the length of the train.

4. An electro-magnetic severance braking system consisting of a secondary battery having connection in two circuits of relatively high and low resistance, the high-resistance circuit containing means, when traversed by a current of electricity, for breaking the circuit of low resistance, and braking-magnets in such low-resistance circuit, having means for winding up the brake-chain.

5. In an electro-magnetic braking-system, the combination, of a generator placed upon one end of the train, a secondary battery upon the other end, electro-magnets on the cars for effecting the application

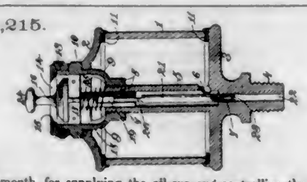


Claim.—1. A lubricator for steam-cylinders, consisting of a stem by which the lubricator may be connected with a steam-chest, and through which the oil is fed, a plunger-cylinder and plunger located within the reservoir, an orifice beneath the plunger for the inflow of oil, and a steam pipe or conduit leading from the plunger-cylinder above the plunger to a steam-port, substantially as described.

2. In a lubricator, the combination of an oil-reservoir, A, a plunger-cylinder, D, rising upward from the bottom of the reservoir, a plunger, D', arranged therein, a pipe, C, for connecting the upper portion of the plunger-cylinder with a source of steam for actuating the plunger, an orifice in the cylinder below the plunger which connects the same with the reservoir, and the regulating-valve E, controlling said orifice and extending outside the reservoir, substantially as described.

3. The combination, with the reservoir and interior plunger-cylinder, of a glass disk or plate located in the outer wall of the reservoir, and a similar plate located in the wall of the plunger-cylinder, substantially as described.

4. The combination, with the reservoir, the inner plunger-cylinder, its plunger, and the steam-pipe C, of a valve, F, adapted to close with pressure up through the stem, and with or without a regulating-valve, E, substantially as described.



296,214. CRANK-PIN OILER. CHARLES H. PARSHALL, Detroit, Mich., assignor to the Michigan Lubricator Company, same place. Filed Oct. 17, 1882. Renewed Feb. 21, 1884. (No model.)

Claim.—1. A crank-pin lubricator combining in its structure the following elements, to wit: a stationary oil-reservoir, a transparent chamber located outside of the reservoir at the side of the same, and connected therewith at one end, and flexible metallic tubes connected with the other end of the transparent chamber by a joint, the said chamber being interposed between the reservoir and the upper portion of the tubes, substantially as and for the purpose described.

2. The combination, substantially as hereinbefore described, of a stationary oil-reservoir, a transparent chamber located outside of but adjacent to the side of the reservoir, and connected at one end with the latter, a neck or tube attached to and communicating with the other end of the transparent chamber, and flexible metallic tubes connected with the said neck or tube by a joint, the transparent chamber being located between the reservoir and the tubes, substantially as and for the purpose described.

296,215. LUBRICATOR. CHARLES E. PEASE, Dayton, Ohio, assignor to the Buckeye Iron and Brass Works, same place. Filed Jan. 7, 1884. (No model.)

Claim.—1. The combination, with an oil-cup having a feed-regulating device, of a sliding and rotating valve to the mouth of the cup, for supplying the cup with oil and adjusting the feed-regulating device substantially as described.

2. The combination, with an oil-cup having an oil-receiving mouth, of a feed-regulating device and a sliding and rotating valve to the receiving-mouth, for supplying the oil-cup and controlling the feed-regulating device, substantially as described.

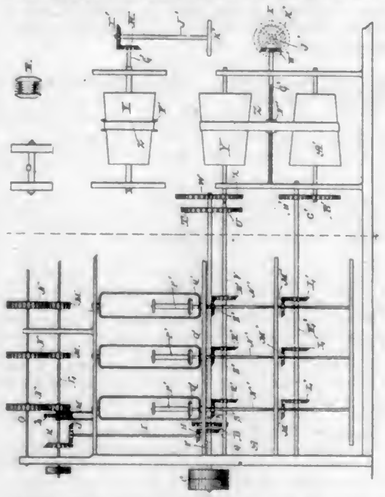
3. The combination, with an oil-cup having a feed-regulating device and an oil-receiving mouth, of a sliding and rotating valve to the receiving-mouth, having a loose connection with the feed-regulator, whereby the valve can be slid to open the receiving-mouth without moving the regulator, and rotated to adjust the regulator, substantially as described.

4. The combination, with an oil-cup having a feed-regulating device, of a vertically-movable and rotating valve having a slotted stem, substantially as described.

5. The combination, with an oil-cup having a feed-regulating device, of a vertically-movable and rotating valve having a slotted stem and radial guide wings or flanges, substantially as described.

6. The combination, with an oil-cup having a feed-regulator, and a ring provided with an oil-receiving orifice and a surrounding valve-seat, of the vertically-movable and rotating valve for engaging the feed-regulator, and having means by which it can be depressed and rotated, substantially as described.

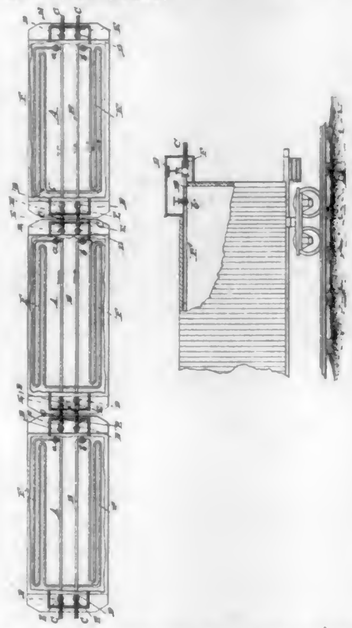
296,216. BUTTON. IRVING G. PLATT, Waterbury, Conn. Filed Mar. 10, 1883. (No model.)



Claim.—1. A button constructed with an eyelet loosely secured within the hub of the button, in combination with a rivet within the eyelet, as and for the purpose described.

2. The combination, with a button-head constructed with a countersunk perforated hub, of an eyelet loosely secured therein, and a hollow rivet upset in the eyelet, as and for the purpose described.

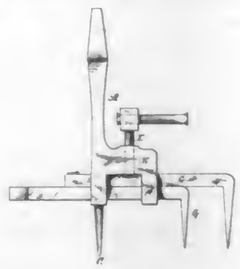
3. The button-head constructed with a recessed hub, combined with an eyelet upset within said hub, and having a flange formed on its outer end, and a rivet with its end upset over the upset end of the eyelet and within the recessed hub, as and for the purpose described.



296,217. SPEEDER FOR THE MANUFACTURE OF ROVINGS, COARSE YARNS, &c. JOSEPH F. RANDALL, Warren, Ohio, assignor of one-half to S. D. Randall, same place. Filed Oct. 23, 1880. (No model.)

Claim.—The combination of the top rolls, porcupine or other gills, fliers, driving-shaft, the spindle-shaft, the two cones Y A', a connecting-belt, and mechanism whereby said belt may be shifted, one of the cones

being operated by the driving-shaft, and the other cone serving to operate the spindle-shaft, whereby the speed of the spindles can be decreased as the bobbins become filled with yarn, substantially as described.

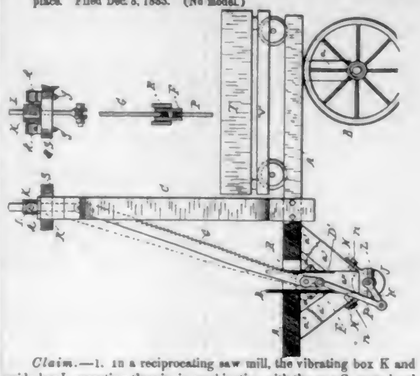


296,218. REFRIGERATOR-CAR. THOS. L. RANKIN, New York, N. Y. Filed Dec. 15, 1883. (No model.)

Claim.—1. The combination, with a railroad car or cars, of refrigerating apparatus comprising the pipes A B, extending longitudinally through said car or cars, flexible connecting-tubes C, valves *a b*, and a pipe, F, connecting the said valves *a b*, as set forth.

2. In a refrigerator-car, the combination of a supply-pipe, A, having valve *a*, a return-pipe, B, having valve *b*, a pipe, F, connecting the valves *a* and *b*, flexible pipe-connections C, and valves D E, as and for the purpose set forth.

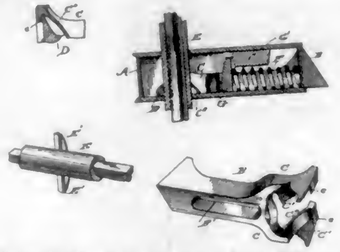
296,219. WASHER-CUTTER. JOSEPH RATH, Columbus, Ohio. Filed Feb. 12, 1884. (No model.)



Claim.—1. A washer-cutter having two separate bearings for each of the cutters, substantially as shown.

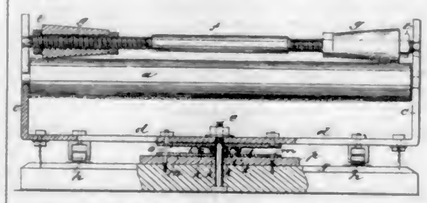
2. A washer-cutter having two separate bearings for each of the cutters, and a screw which is applied to the cutters midway between the bearings, substantially as set forth.

3. The combination of the shank provided with the arm or extension upon one side, with the cutters, and a screw for clamping the cutters in position, both the shank and the arm being perforated for the cutters to pass through laterally, substantially as described.



296,220. PORTABLE SAW-MILL. WILLIAM GRIFFINGTON RODGERS, Owlet Green, Tex., assignor of one-half to Franklin P. Lybrand, same place. Filed Dec. 8, 1883. (No model.)

Claim.—1. In a reciprocating saw mill, the vibrating box K and guide-bar I, operating therein, in combination with the saw G, cross-head E, having pendent links F, for connecting with driving-shaft through pitman P and crank H, and the cross-head arbor formed of the plates D D′, all constructed and arranged to operate substantially as specified.

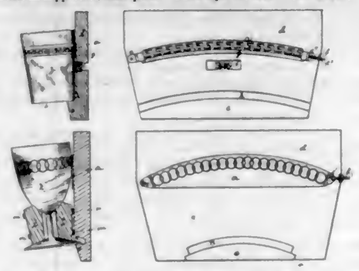


2. The mounted frame A, provided with upright beam C and projection S, perpendicular beams *a″*, brace-beams *a′*, and embracing-plates N, in combination with the vibrating box K, guide-bar I, saw G, cross-head E, having pendent links F, and the cross-head arbor D D′, pitman P, and driving-shaft M, substantially as specified, for the purpose set forth.

296,221. DOOR-LATCH. JOHN ROHDE, Millinburg, Pa. Filed Jan. 10, 1884. (Model.)

Claim.—In a door-latch of substantially the described construction, the combination of the latch-bolt B, having a longitudinal slot, B′, and rearwardly-extending arms C, the lower sides of which are provided with triangular or V-shaped recesses C′, and are cut away at C, spindle E, having wings E′, anti-friction block D, constructed as described, and spiral spring F, bearing with its inner end against a suitable lug on the outer case, A, all constructed and arranged to operate substantially in the manner and for the purpose shown and described.

296,222. AUTOMATIC FELT-GUIDE FOR PAPER-MACHINES. BENJAMIN ALBERT SCHUMBER, Montoursville, Pa., assignor to himself, William Starr, and Kirk & Starr, same place. Filed Dec. 27, 1883. (No model.)



Claim.—1. The guide-roll *a* and cone-guides *g*, in combination with a paper-machine felt, *b*, and mounted on a supporting-bar, *d*, having a center pivot, *e*, and carrying-rolls *h* on opposite ends of the bar for supporting said ends, substantially as described.

2. The guide-roll *a* and cone-guide *g*, in combination with a paper-machine felt, *b*, and mounted on a supporting-bar, *d*, having a central pivot, *e*, carrying-rolls *h* on opposite ends of the bar, and stop-chains *j*, whereby the ends of the bar will be supported and the play of the bar limited, substantially as described.

3. The combination, with the roll of a paper-machine carrying a felt, and said roll being mounted in a swiveled frame, of a rod having screw-threaded ends and mounted in said frame above the said roll, and carrying cones adapted to bear upon the felt passing over the roll, and nuts on the rod at each end of the cones for securing said cones in place, substantially as specified.

4. The combination of the frame supporting the guide-roll and cone-guides, and having the rollers *h h* on its inner side at each end, and the centrally-perforated flanged plate *o l*, with the base or frame *p q*, provided with the centrally-apertured and flanged plate *m k*, the flanges of the plate *m* fitting within those of the plate *o*, and a connecting-pivot, *e*, substantially as set forth.

296,223. APPARATUS FOR DECORATING CHINA AND GLASS WARE. HERMANN SCHULZE-BERGE, Pittsburg, Pa., assignor to himself and Jesse H. Lippincott, same place. Filed Apr. 19, 1883. (No model.)

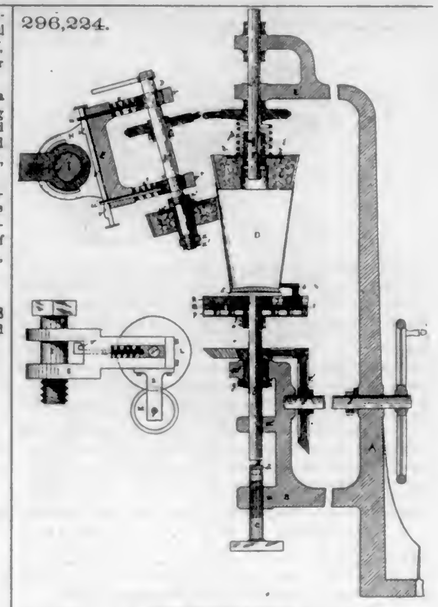
Claim.—1. The device for printing on tapering articles of china or glass by rolling contact of the article with the printing-surface, consisting of a plane-surfaced bed having a projecting ledge, *c*, an elastic printing-plate, *a*, and means, substantially as described, for attaching the printing-plate to the bed and stretching it relatively thereto, substantially as and for the purposes described.

2. The device for printing on tapering articles of china or glass by rolling contact of the article with the printing-surface, consisting of a plane-surfaced bed, *d*, having a projecting curved guide, *c*, and an elastic printing-plate, *a*, substantially as and for the purposes described.

3. The device for printing on tapering articles of china and glass, consisting of bed *d*, provided with a recess, *n*, printing-plate *a*, and curved guide *c*, substantially as and for the purposes described.

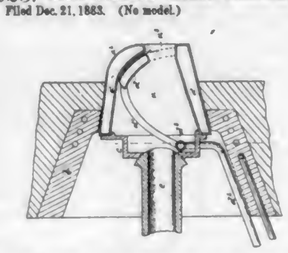
4. In an apparatus for printing on china and glass ware, the combination of such articles with filling-pieces of suitable shape to furnish a bearing-surface of conical form, to enable the article to be rolled over in contact with a printing-surface, substantially as and for the purposes described.

296,224. MACHINERY FOR DECORATING GLASSWARE. HERMANN SCHULZE-BERGE, Pittsburg, Pa., assignor to himself and Jesse H. Lippincott, same place. Filed Apr. 19, 1883. (No model.)



Claim.—1. In machines for printing on glassware and similar articles, the combination of a lathe for holding and revolving the article to be printed on, with a revoluble shaft and printing-roller adjustable at various angles to the axis of rotation of the lathe, substantially as and for the purposes described.

2. The apparatus for printing on revolving articles of glass or china ware, consisting of a frame capable of adjustment on a pivot at any required angle, in combination with a spindle carrying a printing-roller, such spindle being held by yielding bearings, so that the printing-roll shall be capable of conforming to the irregularities of the surfaces of articles upon which it prints.



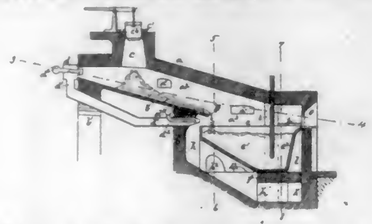
3. In machines for printing on glass and similar articles, the combination of a lathe for centering and holding the article at both ends and revolving it to be printed on, with a tapering printing-roller mounted on a revoluble shaft, so as to be in printing contact with the surface of the article held between the centers of the lathe, substantially as and for the purposes described.

4. In a machine for printing on glassware and similar objects, having a revoluble printing-roller and a lathe for holding the article to be printed on, the combination, with such roller and lathe, of radially-arranged holding and centering jaws caused to act toward a common center by the pressure of a common spring, substantially as and for the purposes described.

296,224.

296,225. BLAST-FURNACE. HERMANN SCHULZE-BERGE, Rochester, Pa. Filed Dec. 21, 1883. (No model.)

Claim.—1. A blast-furnace for smelting ores, provided with tuyeres having stoppers for regulating the size of the nozzle-openings, substantially as and for the purpose described.



2. A water-cooled tuyere having a water-cooled sliding stopper for regulating the size of the discharge-opening, substantially as and for the purposes described.

296,226. METHOD OF APPLYING FUSIBLE METALLIC COLORS TO CHINA AND GLASS WARE. HERMANN SCHULZE-BERGE, Rochester, assignor to himself and Jesse H. Lippincott, Pittsburg, Pa. Filed Jan. 11, 1884. (No specimens.)

Claim.—1. The herein-described method of applying coloring-matter to the surface of glass or china ware for purposes of decoration, by first tracing or printing the design or pattern with a semi-fluid sticky substance—such as varnish or boiled linseed oil—and then dusting a single ground color of fusible enamel in a dry and finely-powdered condition over the surface, and then, after the first or ground color has been absorbed, applying the other color or colors in the like pulverized condition to such parts of the surface as may be desired, and rubbing them in, and, lastly, burning or fusing the colors in the usual way, substantially as described.

2. The herein-described method of applying two or more colors to the surface of glass or china ware, by first tracing or printing the desired design or pattern with a sticky semi-fluid substance—such as varnish or boiled linseed-oil—and then applying the several fusible enamel colors in a finely-powdered condition to the printed surface and rubbing them, so as to blend the outer edge of one color into the adjoining color, and, lastly, burning or fusing the colors in in the usual way, substantially as described.

296,227. GLASS-MELTING FURNACE. HERMANN SCHULZE-BERGE, Rochester, Pa. Filed Jan. 16, 1884. (No model.)

Claim.—1. A glass-melting furnace having a fusing floor or chamber for fusing the batch, a projecting edge or precipice disconnected from the side walls, over which the melted batch falls, a vertical free space through which the melted batch falls freely, and in which it is exposed to the action of the heated gases during its fall, a pot or receptacle arranged on a lower level directly under the precipice, so as to receive the freely-falling glass for farther treatment, to clear it and complete the melting operation, and a working-chamber separated from the clearing-chamber by a dependent trap, the lower end of which is immersed in the glass, substantially as and for the purpose described.

2. A glass-melting furnace having a fusing chamber or floor, with a discharging end or precipice disconnected from the side walls, projecting over a vertical space in the furnace, so that the molten batch flowing over the same from the fusing-floor shall have a free fall through the heated gases of the furnace into a pot or receptacle arranged in the furnace at a lower level, substantially as and for the purpose described.

3. A glass-melting furnace provided with a fusing-floor, a pot or receptacle arranged below the fusing-floor, a projecting precipice from which the molten glass falls through the heated air of the furnace into the pot, and means for projecting a supplemental flame on the glass as it falls through the space, substantially as and for the purpose described.

4. The combination, in a glass-melting furnace, of a fusing-floor having a precipice or discharging end cooled by water or other suitable medium, with a pot or receptacle arranged under the precipice to receive the glass falling therefrom for further treatment, substantially as and for the purposes described.

5. A glass-melting furnace having a fusing floor or chamber provided with a discharging edge or precipice projecting into a vertical space in the furnace, so that the molten glass may have a free fall therefrom, a pot or receptacle arranged below it, so as to receive the falling glass, and a bridge, break, or arch arranged across the chamber below the precipice and above the pot, so as to intercept, retard, or break the fall of the glass, substantially as and for the purpose described.

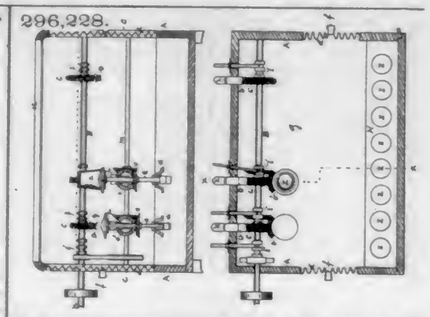
6. The combination, in a glass-melting furnace, of a fusing-floor having a precipice, and a pot or receptacle arranged under the precipice, with a reversely-inclined bridge or arch, and tuyeres arranged to blow against the downward flow of glass on the bridge, substantially as and for the purposes described.

7. The combination, in a glass-melting furnace, of a fusing-floor having a precipice, with a trap or dam-plate arranged over it, at or near its edge, to prevent the unfused ingredients from being carried over the precipice with the molten glass, substantially as and for the purposes described.

8. A glass-melting furnace having a feed-hole arranged over the fusing-floor, provided with channels or pipes for the passage of a cooling medium, substantially as and for the purposes described.

9. The combination of a glass fusing floor or chamber with a glass pot or furnace lined with graphite for receiving the molten glass from the fusing-floor, substantially as and for the purposes described.

10. The method of melting glass, consisting of fusing the ingredients in a suitable chamber or floor, whence it falls to a second chamber, pot, or receptacle for further treatment, and in its descent is subjected to the action of a supplementary blast of heated gas or flame projected against or through it, substantially as and for the purposes described.



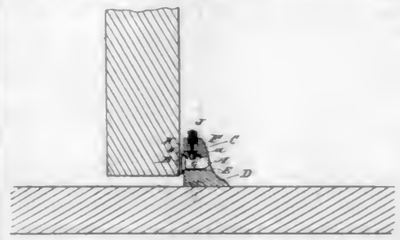
296,228. APPARATUS FOR APPLYING POWDERED SUBSTANCES TO SURFACES OF GLASS. HERMANN SCHULZE-BERGE, Rochester, assignor to himself and Jesse H. Lippincott, Pittsburg, Pa. Filed Jan. 17, 1884. (No model.)

Claim.—1. The method hereinbefore described of applying pulverized substances to the surface of glassware, china, &c., by revolving the article in front of a stream of a pulverized substance projected against it, substantially as and for the purpose described.

2. The apparatus hereinbefore described for applying pulverized substances to the surface of glass, chinaware, &c., consisting of the combination of a revolving bristle brush, a hopper, and a revolving shaft or holder placed in front of the revolving brush, substantially as and for the purpose described.

3. The combination of the revolving brush and hopper or receptacle

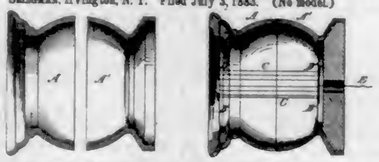
296,228.



for pulverized substances, a revolving holder placed in front of the revolving brush, a shelf placed over the holder with an opening to allow of the passage of the revolving holder, and devices for raising and lowering the shelf in relation to the revolving holder, substantially as and for the purposes described.

4. The close chamber A, in combination with a series of revolving brushes, and a receptacle or receptacles for pulverized substances, within or upon which the brushes revolve, and a series of revolving holders for articles to which the pulverized substance is to be applied, substantially as and for the purpose described.

5. A close chamber, A, having openings covered with elastic fulled covering, and a hand-aperture closed with a removable stopper for the purpose of conducting operations requiring a practical exclusion of access to the atmosphere outside of the chamber, substantially as described.



6. The combination, in a machine for applying powdered substances to the surfaces of glass and other articles, of a hopper or receptacle, with a revolving brush arranged at or near the end of the hopper, so that its bristles may catch the dry pulverulent substance as it is fed down by the hopper and project it in a shower from the nose or edge of the hopper, substantially as and for the purposes described.

296,229. DOOR-CHECK. FRANK MUNFORD SEARS, East Saginaw, Mich. Filed Jan. 12, 1884. (No model.)

Claim.—In a door-check, the block C, provided with the transverse aperture E and the vertical aperture F, combined with the pin or bolt G, held in the aperture E, the spring K, resting on the bolt or pin G, and the screw J, screwed in the upper part of the aperture F, substantially as herein shown and described.

296,230. MECHANICAL TELEPHONE. HENRY SELIGMAN and EMMA SELIGMAN, Irvington, N. Y. Filed July 3, 1883. (No model.)

Claim.—1. The combination, in a mechanical telephone, of two diaphragms, a line-wire attached to one of said diaphragms, and filamentary connections between them, as set forth.

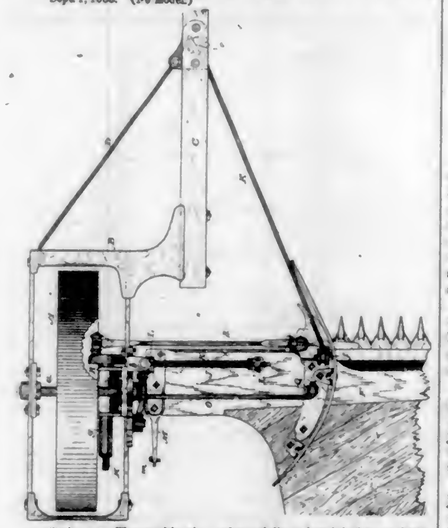
2. The combination, in a mechanical telephone, of an inclosing shell or case, two diaphragms on opposite sides of said shell or casing, filamentary connections between said diaphragms, and a line-wire connected with one of the said diaphragms, for the purpose described.

3. A mechanical telephone formed of a globe-like chamber or case having two diaphragms on opposite sides thereof, one of the diaphragms

being connected to the line-wire, and the two diaphragms being connected to each other by one or more threads, as set forth.

4. A mechanical telephone consisting of two hollow hemispheres, connected, as described, each hemisphere being provided with a diaphragm, a thread or threads connecting the two diaphragms, and a line-wire attached to one of the diaphragms, as and for the purpose set forth.

5. The combination, in a mechanical telephone, of two diaphragms, a line-wire connected with one of the diaphragms, two rings connected respectively, to the two diaphragms, and a thread or threads connecting the two rings, substantially as and for the purposes set forth.



6. The combination, in a mechanical telephone, of two diaphragms, a line-wire connected with one of the diaphragms, two rings connected, as described, to the two diaphragms, and a single continuous thread passing back and forth over the rings, as and for the purpose set forth.

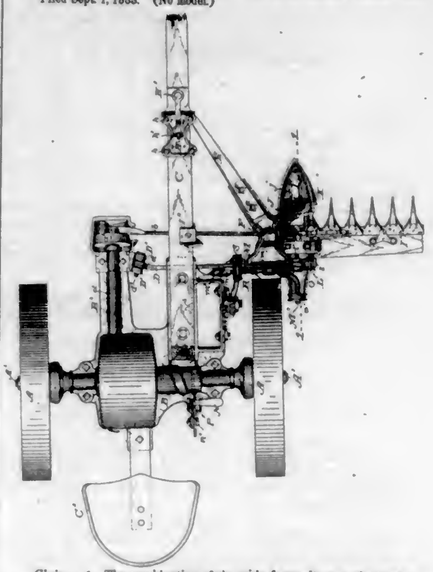
7. The combination, in a mechanical telephone, of an inclosing case or shell, two diaphragms on opposite sides of the same, rings supported in the center of the diaphragms, filamentary connections between the rings, and a line-wire connected to one of the diaphragms, as set forth.

8. The combination, in a mechanical telephone, of two diaphragms, one or both being non-metallic, filamentary connections between the same, and a line-wire connected to one of the diaphragms, as set forth.

9. The combination, in a mechanical telephone, of two diaphragms, one or both being non-metallic, a ring in the center of each diaphragm, filamentary connections between the rings, and a line-wire connected to one of the diaphragms, as set forth.

296,231. HARVESTER. JAMES R. SEVERANCE, Fremont, Ohio. Filed Sept. 1, 1883. (No model.)

Claim.—1. The combination, substantially as hereinbefore set forth, of the main frame, the adjustable finger-beam, and means by which the beam has vertically and horizontally sliding connection at its heel with the frame, for the purpose described.



2. The combination, substantially as hereinbefore set forth, of the main frame, the stiff tongue, the finger-beam having the vertically and horizontally sliding connection with the frame, and the brace-rod having pivotal connection with the tongue and beam, for the purpose described.

3. The combination, substantially as hereinbefore set forth, of the main frame, the finger-beam having the vertically and horizontally sliding connection with the frame, and the controlling-rod having jointed connection with the frame and beam, for the purpose described.

4. The combination of the main frame provided with the bearings, the finger-beam, the supporting-bracket sliding in the frame-bearings, and with which the beam has sliding connection, and the controlling-rod having jointed connection with the frame and beam, substantially as and for the purpose hereinbefore set forth.

5. The combination, substantially as hereinbefore set forth, of the main frame, the tongue, the supporting-bracket sliding in the frame-bearings, the finger-beam having sliding connection with the bracket, the crank-wheel and pitman for actuating the cutters, the controlling-rod having jointed connection with the beam and frame, and parallel, or nearly so, to the pitman when its crank is on the dead-center, the brace-rod having pivotal connection with the tongue and beam, and means for raising and lowering the beam.

296,232. MOWING-MACHINE. JAMES R. SEVERANCE, Fremont, Ohio. Filed Sept. 1, 1883. (No model.)

Claim.—1. The combination of the main frame, its arm, the tongue, the cutting apparatus, the drag-bar having jointed connection at its outer end with the cutting apparatus, the hanger-bracket secured to the tongue, and to which the inner end of the drag-bar is jointed, the coupling-arm having jointed connection at its outer end with the cutting apparatus, and the joint connecting the inner end of the coupling-arm with the main-frame arm, and by which the coupling-arm is caused to vibrate about an axis in line with that about which the drag-bar vibrates, substantially as and for the purpose hereinbefore set forth.

2. The combination, substantially as hereinbefore set forth, of the main frame, the tongue, the coupling-frame, the shoe, the double joint by which the shoe has connection at the rear with the coupling-frame, and the joint by which the shoe has vertically-adjustable connection at front with the coupling-frame, for the purpose described.

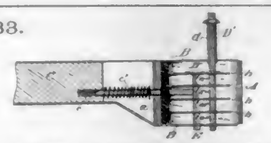
3. The combination, substantially as hereinbefore set forth, of the main frame, the tongue, the coupling-frame, the shoe, the double joint by which the shoe has connection at rear with the coupling-frame, the joint by which the shoe has vertically-adjustable connection at front with the coupling-frame, and the rock-shaft engaging the heel of the shoe, for the purpose described.

4. The combination of the coupling-frame, the shoe, the double joint by which the shoe has connection at rear with the coupling-frame, and the vertically-sliding bearing and pivot by which the coupling-frame is connected with the guide-yoke of the shoe at front, substantially as and for the purpose hereinbefore set forth.

5. The shoe provided with a front guide-yoke and the rear pivot-bearings, substantially as and for the purpose hereinbefore set forth.

6. The shoe having the heel projection, provided with the slot, substantially as and for the purpose hereinbefore set forth.

7. The combination, substantially as hereinbefore set forth, of the main frame, the tongue, the coupling-frame jointed to the main frame and tongue, the shoe having doubly-jointed connection at rear with the coupling-frame, and vertically-adjustable jointed connection at front therewith, the lifting-lever having connection with the coupling-frame, the rock-shaft acting upon the heel of the shoe, and the lever connected with the rock-shaft, for the purpose described.



8. The combination of the hinged shoe, having the slotted heel-projection, the coupling-arm, and the rock-shaft mounted in bearings on the coupling-arm, and provided with the cranked end passing through the slot in the shoe-heel, substantially as and for the purpose hereinbefore set forth.

296,233. CAR-COUPLING. NATHANIEL B. SHELDON, Rochester, N. Y. Filed Oct. 20, 1883. (No model.)

Claim.—1. A draw-head having the side pieces, A, provided with grooves a a', in combination with the end piece, a', fitted in the groove a, and spring-plates b, as and for the purpose set forth.

2. A series of spring-plates, b, having slots for the passage of the

296,233.

coupling-pin, and rigidly secured to the end plates, *a'*, and having their edges bearing in grooves which pass transversely through vertical ribs in the draw-head, as set forth.

3. The bar E, having a series of transverse grooves, *e'*, in combination with the spring-bolt, perforated plate *a'*, and spring-plates, as and for the purpose set forth.

4. The combination of a series of slotted spring-plates with the bar E, having a sliding piece at its upper end, and a series of transverse grooves, *a'*, arranged centrally between said plates, spring-bolt *c'*, coupling-pin, and means for raising the latter, as and for the purpose set forth.

296,234. GEM-SETTING. JOHN H. SHOEMAKER, Newark, N. J., assignor to Shoemaker & Co., same place. Filed Dec. 6, 1883. (No model.)

Claim.—A piece of jewelry having an ornamental re-enforcing plate secured on the outer or exposed face of the body-plate, said re-enforcing plate being centrally recessed and holding the stone, all substantially as set forth.

296,235. BLOTTER. ALFRED N. SELL, Philadelphia, Pa. Filed Apr. 14, 1883. (No model.)

Claim.—1. The combination of the curved elastic plate A, carrying the blotting-surface, with a handle, B, having a longitudinally-yielding connection with said plate, whereby on pressing the handle downward the plate A is at liberty to flatten out, as set forth.

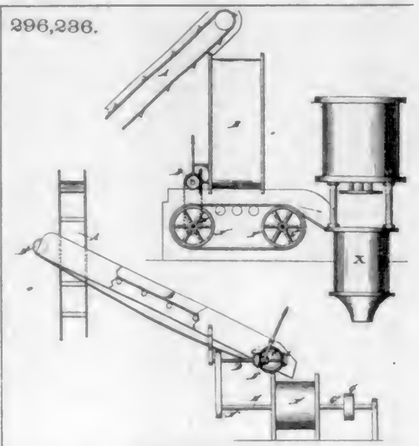
2. The combination of an elastic plate, A, carrying the blotting-surface, and provided at one or each end with a slot or groove, with a handle, B, having a T-head adapted to said slot or groove, substantially as described.

3. The combination of a handle and plate, A, with a blotting-surface, and spring-clamps at each end of the plate A, as specified.

4. The combination of a plate, A, having a hooked end, *a*, with a plate, E, having a hook, *b*, and bearing *d*, substantially as set forth.

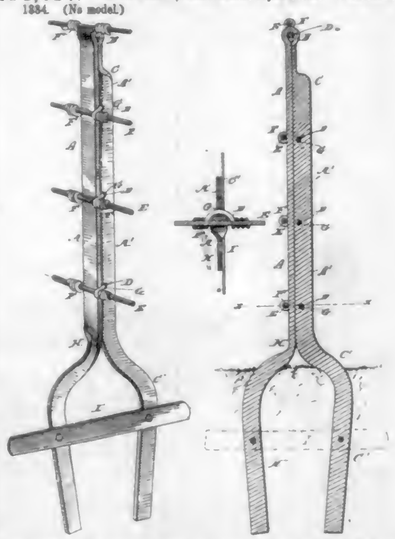
5. The combination of a sheet-metal plate, A, having a hooked end, *a*, with the plate E, having a hook, *b*, and adapted to be applied to the hooked end of the plate A laterally, substantially as described.

296,236. FEEDER FOR TILE AND SEWER-PIPE MACHINES. JOHN S. SMITH, Jackson, Mich. Filed Jan. 23, 1884. (No model.)



Claim.—1. In combination with the pressure-cylinder of a tile or sewer-pipe machine, a rapidly-rotating endless belt arranged in such relation to the cylinder of the press that when the apron descends around its pulley the clay carried on the face of the apron shall be hurled by its centrifugal force into the open mouth of the cylinder, substantially as set forth.

2. In combination with the cylinder of a tile-machine, the endless apron F, feeding-apron B, and reversible drum carrying the upper section of the latter alternately toward and from the former apron, substantially as set forth.

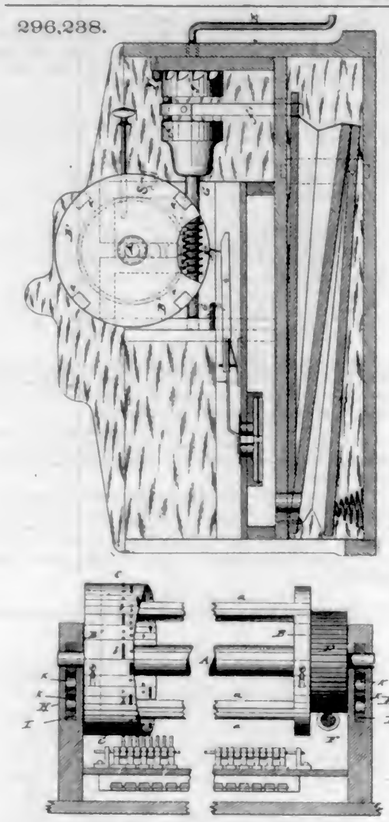


3. In combination, the cylinder or chamber to be fed, the rapidly-rotating apron F, and the apron B, supplying clay to the apron F, and mechanism imparting an intermittent motion to the apron B, substantially as set forth.

4. The combination of the endless apron B, the bevel-wheel C upon the shaft of its driving-drum, bevel-pinions C' C', and double clutch D', for reversing the movement of the apron or stopping the same, substantially as set forth.

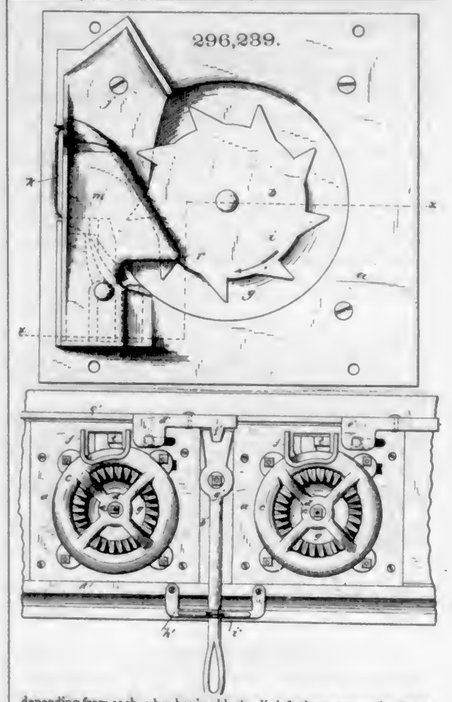
296,236.

296,237. FENCE-POST. TRUE J. SMITH, Topeka, Kans. Filed Jan. 10, 1884. (No model.)



Claim.—The metallic fence-post herein shown and described, consisting of the parts A and A', doubled upon and at right angles to each other, and bent or twisted to form the flat loop B at the top of the post, and the diverging legs C' and H, curved so as to lie in the same plane with one another, and connected by a cross-brace, I, in combination with the twisted binding-wires D F and the fence-wires E, as shown and specified.

296,238. MECHANICAL MUSICAL INSTRUMENT. OTTO SPARTHE, Gera, Germany. Filed June 9, 1883. (No model.)



Claim.—1. In a mechanical musical instrument, a detachable sheet-metal cylinder having raised portions of greater or smaller size, made integral with the body of the sheet, in combination with wooden heads, to which the cylinder is detachably applied, stiffening-strips *a*, shaft of the cylinder-heads, a gear-wheel, a crank-rod, a worm-wheel, and a ratchet-wheel and pawl, substantially as described.

2. In mechanical musical instruments, the combination of a shaft, A, cylinder C, attached to heads B B' of said shaft, supporting-standards H H, having vertical recesses *h*, transverse slides I, having vertical slots *i*, with horizontal recesses *k*, so that cylinders of different diameters can be supported without shifting in any direction, substantially as specified.

296,238.

296,239.

296,239. FERTILIZER-DISTRIBUTER. JACOB W. SPANGLER, York, Pa. Filed May 6, 1882. (No model.)

Claim.—1. In a fertilizer-distributer, a force-feed wheel having a discous base, and a superposed toothed disk in a parallel plane with an intervening wall, whereby material to be distributed may be fed.

2. In a fertilizer-distributer, a force-feed wheel having a discous base, a superposed toothed disk in a parallel plane, and an intervening wall, whereby material to be distributed may be fed, combined with a bed-plate having a discharge-throat, and a stationary scraper to throw the load of the wheel into the discharge-throat.

3. In a fertilizer-distributer, a force-feed wheel having a discous base, and a superposed toothed disk in a parallel plane with an intervening wall, whereby material to be distributed may be fed, combined with a discharge-throat, a cap therefor, and a stationary scraper projecting between the two disks and hugging the intervening wall to discharge the load of the wheel.

4. In a fertilizer-distributer, a force-feed wheel having a discous base, and a superposed toothed disk in a parallel plane with an intervening wall, whereby material to be distributed may be fed, combined with a discharge-throat, a stationary scraper, a clearer, and a sliding gate under said clearer to regulate the quantity of the discharge.

5. A feed-wheel composed of a discous base suitably supported, combined with a toothed disk overlying but elevated above the same, substantially as shown and described.

6. The combination, substantially as shown and described, of a rotating toothed feed-wheel, a stationary scraper, *l*, a stationary clearer, *r*, a bed-plate having a discharge throat or opening, and a sliding gate to regulate the size of the opening and the quantity of material fed.

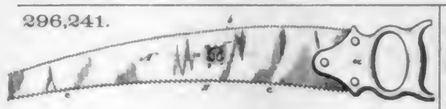
7. The combination, with the bed-plate having a discharge-orifice and a cap thereover, of the sliding gate *t*, arranged in guides in the bed-plate, to regulate the size of opening in said orifice to control the quantity fed, substantially as described.

8. The combination, with the feeders, of their sliding gates, a lug, *u*, depending from each, a bar having blocks *d' e'*, for loose connection therewith to operate them, and a lever to move said bar, substantially as shown and described.

9. As an improvement in the art of sowing or distributing fertilizing material, the combination, as herein described, of a horizontal rotary feed-wheel arranged within a hopper and its content of fertilizer, and working over a covered discharge-throat, and provided with a clearer, a sliding or adjustable gate to regulate the size of opening in said discharge-throat, and means for varying the rapidity of rotation of said feed-wheel in proportion to the increase or decrease of the area of feed-opening in accordance with the quantity to be distributed, whereby injurious agitation of the mass of fertilizer is diminished, if not wholly prevented, strain upon the gearing is reduced, the draft is lightened, and the fertilizer distributed regularly, substantially as set forth.

296,240. CARRIAGE-TOP-PROP BLOCK. JAMES STANLEY, Newark, N. J., assignor to Lillian Lemassena. Filed May 9, 1883. (No model.)

Claim.—1. A prop-block cylindrical in shape, with a longitudinal projecting ridge, *d*, thereon, formed of pieces of leather pressed and pasted into shape, and having a rubber core-piece, *c*, arranged in the projection thereof, substantially as and for the purposes set forth and shown.



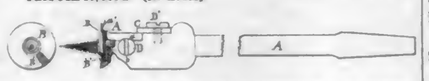
2. In combination with the top-prop *a*, having the raised portion *d*, the tacks *n*, arranged and operating substantially as set forth and shown.

3. In combination, the leather top-prop *a*, having the raised portion *d*, a series of tacks, *n*, secured in said leather, and covered by a coating of patent-leather or hard-rubber finish.

296,241. PRUNING-SAW. WM. K. STANSBURY, Middletown, N. Y. Filed Feb. 9, 1884. (No model.)

Claim.—1. A pruning-saw provided with a convex line of teeth constructed to cut when the saw is thrust, and with a concave line of teeth constructed to cut when the saw is drawn, substantially as set forth.

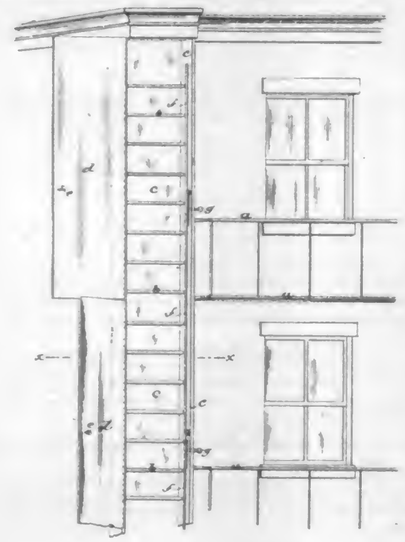
296,241.



2. A pruning-saw provided with a convex line of teeth and with a concave line of teeth, the convex and concave lines having a uniform curve, substantially as set forth.

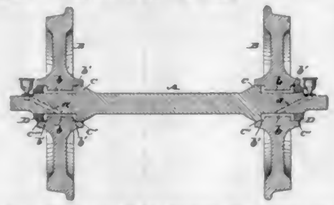
3. As a new article of manufacture, a saw provided with a convex line of teeth constructed to cut when the saw is thrust, and with a concave line of teeth constructed to cut when the saw is drawn, the convex and concave lines having the same curve, substantially as set forth.

4. A pruning-saw having a curved row of teeth on one edge and a curved row of teeth on its opposite edge, substantially as set forth.



296,242. EXTENSION-BIT. WILLIAM STEERS, Brattleborough, Vt. Filed Jan. 19, 1884. (No model.)

Claim.—A center-bit stock having a continuation of the feeding-threads of the gimlet-point around the cylindrical part of the cutter, a tangent-screw secured by a neck and pin, a clamping device, and a dovetailed groove, in combination with an extension-blade having on its back a dovetailed ridge, and screw-threads to match the threads of the tangent-screw, substantially as and for the purpose described.

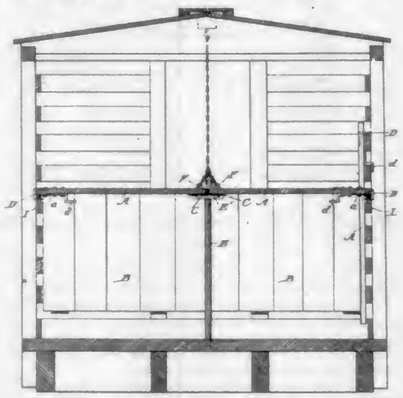


296,243. FIRE-ESCAPE. ROBT. STEVENSON, Muskegon, Mich. Filed Jan. 29, 1884. (No model.)

Brief.—An improvement on Letters Patent No. 257,867, dated May 16, 1882. A sliding bar having handles which project through the case and latches for engaging catches upon the door is provided.

Claim.—In a fire-escape, the incased ladder, with its case provided with catches, in combination with the sliding bar provided with latches engaging with said catches, and with handles projecting through slots in said case, substantially as and for the purpose set forth.

296,244. CAR WHEEL AND AXLE. SAMUEL J. STEVENSON, Philadelphia, Pa. Filed Nov. 15, 1883. (No model.)



Claim.—1. An axle having lubricant-ducts, in combination with wheels fitted independently on said axle and formed with pockets which extend transversely on the inner faces of the hubs from end to end thereof, substantially as and for the purpose set forth.

2. In a car-axle lubricator, a wheel having pockets which extend radially on the ends of the hub thereof, and collars connected with the axle fitted in recesses in the ends of the hub, substantially as and for the purpose set forth.

3. An axle having a lubricant-duct, a loosely-fitted wheel, and collars connected with the axle fitted in recesses in the ends of the hub, said wheel having pockets which extend transversely on the inner face of the hub, and pockets which extend radially on the ends of the hub and join said transversely-extending pockets, substantially as and for the purpose set forth.

296,245. STOCK-CAR. LUTHER R. STILES, Chicago, Ill. Filed Jan. 24, 1884. (No model.)

Claim.—1. The main portion of the second deck described, composed of four equal and like sections, A, detachable and portable, adapted to be supported in position by the side walls of the car on their outer sides, and on their inner sides by posts or chains, or both, substantially as described.

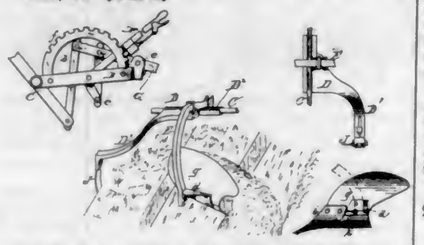
2. The detachable sections A, provided each with a series of rectangular hooks, *d*, adapting it to be suspended upon the side bars of the car and out of the way when not in use, substantially as described.

3. The detachable sections A, each provided with a series of bars, D, as a means of attachment to the walls of the car when in use, and of holding the walls thereof against spreading, substantially as described.

4. The described end sections, composed of sub-sections B and B', hinged together, and the whole hinged to the side walls by means of the hinge composed of the tube G, fastened to the sub-section B, and the rod *g*, having its bearings in the side walls of the car, substantially as and for the purpose described.

5. The supporting-post E, provided with a suitable platform or cap, E', on its top, and containing a suitable number and arrangement of pins, *e*, adapted, when socketed upon the first floor, to support adjacent edges and corners of sections A and B B', and hold them against yielding in any direction, and adding strength to the car itself, substantially as described.

6. The described hinges for the end sections, composed of the tube G and the rod *g*, resting on the side bars of the car, adapted to hold the posts sufficiently distant from the end wall, substantially as and for the purpose described.



7. The described end sections, composed of sub-sections B and B', hinged together, and also hinged to the side walls of the car in such a manner as to leave space for sub-section B' to fold upon sub-section B, and both together to fold against the end wall out of the way, substantially as shown and described.

8. The four equal and like sections A, having each a projection, *b*, sufficiently long to extend out to the outer face of the side walls of the car, and wide enough to fill one-half the doorway, as shown in Figs. 9 and 10, substantially as described.

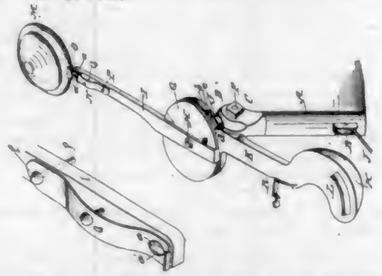
9. The plate C, bent into the form of an angle-iron fastened to the inner edges of all the sections and acting as a girder, and serving to render few supports necessary, substantially as described.

10. The sections A, provided with staples or eyebolts F upon their inner corners or edges, in combination with chains suspended from the roof, and provided with hooks at their lower ends, as and for the purpose described.

296,246. PLOW. GARLAND R. ST. JOHN, Cedar Rapids, Iowa. Filed Oct. 23, 1883. (No model.)

Claim.—1. In a plow, the arch B and tongue-iron G, pivoted at *e*, in combination with lever F, bail C, and connections *b* and *c*, or their equivalents, substantially in the manner and for the purposes set forth.

2. In a wheel-plow, the clamp-iron D, provided with an arm, D', and a groove, D^2, and adapted to the two uses of securing the plow-beam to the bail and furnishing a support for a coltsr, substantially as described.



3. The combination, with a plow, E, and bail C, of a clamp-iron, D, having a laterally-extended arm, with a colter-blade, which is rigidly but adjustably secured to the outer end of said arm, and adapted to operate substantially as described.

4. The combination, with a wheel-plow, of a clamp-iron, D, provided with an arm, D', and a groove, of a colter rigidly secured to said arm D', and means for securing the clamp-iron to the plow-beam, substantially as described.

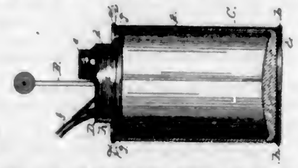
5. The combination of the plow E, the clamp-iron and its extension D', pivotally secured to said bail and to the plow-beam, and a colter rigidly secured to the said extension and inclining downward and forward, substantially as described.

6. In a plow without a landside, the combination, with mold-board and share, of a strengthening-plate, *i*, secured under and along the front edge of the share and projecting upward under the mold-board, and adapted to form a seat and be bolted to said mold-board.

296,247. BALL-TRAP. CHARLES F. STOCK, Peoria, Ill. Filed Dec. 24, 1883. (No model.)

Claim.—1. A throwing-arm for target-throwing traps, consisting of the arm and a curved spring-clamp on the outer end of said arm, the said spring-clamp being secured at one end to the arm, and provided at or near its center with an adjusting-screw, and at its forward under side with a holding spur or tooth, substantially as set forth.

2. A throwing-arm for target-throwing traps, consisting of the arm and a curved spring-clamp on the outer end of said arm, the said spring-clamp being secured at one end to the arm, and provided at or near its curved central part with an adjusting-screw, and at its forward under side with a depression, a portion of the depression being cut away to form a holding-support, substantially as set forth.

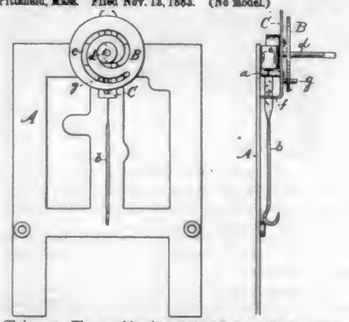


3. The body portion for holding the target, pivoted to a suitable standard or base, and provided with a weight at its free end, on the upper face of which is secured a curved lip for the target to rest against, in combination with a throwing-arm constructed to engage said target and remove it from said weighted portion and lip.

4. The combination of the body portion E, hinged to a suitable standard, and provided near its outer end with a holding-spring, R, with the pivoted throwing-arm I, provided with the spring-clamp N near its outer upper end, and with a pin or lug on its under side to engage the holding-spring R, and mechanism for releasing and throwing said throwing-arm, substantially as set forth.

5. The combination of the body portion E, hinged to a standard, A, and having its outer end weighted at K, a lip, L, above said weight, and a holding-spring, R, with the throwing-arm I, pivoted to the body E, and provided with the spring-clamp N, secured at one end to the arm by a bolt, P, which passes through the arm to engage the holding-spring R, and said spring-clamp provided with an adjusting-screw near its center, and constructed to hold the target between its outer end and the throwing-arm, and mechanism for releasing and throwing said throwing-arm, substantially as set forth.

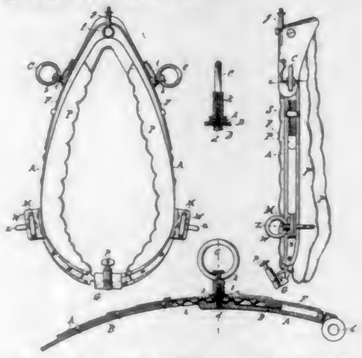
6. The combination of the body portion E, hinged to a suitable standard, and provided with flange *b*, cut away at *c* to form a shoulder, *d*, with the throwing-arm I and pulley G, pivoted to the flanged end of the body portion by bolt H, and a cord, J, secured to said pulley and passing through said cut-away portion of the flange, whereby a stop for the cord and throwing-arm is provided.



296,248. INCASED OIL-CAN. CHARLES H. TALLMAN, Bellaire, Ohio. Filed June 1, 1883. (No model.)

Claim.—1. A cylindrical glass vessel, C, having a top recessed between the shoulder *i* and the bottom of a neck, *d*, the top of said shoulder and the bottom of the neck being on about the same horizontal plane, substantially as described.

2. In an incased oil-can, a cylindrical vessel having a top recessed between the shoulder *i* and the bottom of a neck, *d*, and an incasing-jacket, A, rising vertically above such shoulder and the bottom of such neck, substantially as and for the purpose described.



296,249. PENDULUM-REGULATOR FOR CLOCKS. SOLON M. TERRY, Pittsfield, Mass. Filed Nov. 12, 1883. (No model.)

Claim.—1. The combination of the slit arm, the movement-plate A, the bridge *c*, mounted on said plate, the slide C, the cam B, and cam-shaft *d*, disconnected from the clock-train, said slide and shaft both mounted upon the said bridge, and the shaft having its front end provided with means for rotating it by hand, substantially as described, and for the purpose specified.

2. The combination of plate A, the pendulum *b*, mounted on a fixed stud, *a*, attached to said plate, the bridge *c*, the slide C, having the slit arm *f*, the cam B, and the cam-shaft *d* for operating said slide and split arm, substantially as described, and for the purpose specified.

296,250. HORSE-COLLAR. CARL ROBERT TESCH and CARL CHRIST. FRANK, Leipsic, Saxony, Germany. Filed July 1, 1882. (No model.) Patented in GERMANY Aug. 17, 1880, No. 13,367, and Feb. 1, 1881, No. 15,962; in AUSTRIA Apr. 10, 1881, No. 6,753, and Oct. 19, 1881, No. 23,760; in FRANCE Apr. 19, 1881, No. 141,230; in BELGIUM Sept. 12, 1881, No. 55,713, and in ITALY May 26, 1882, No. 14,231.

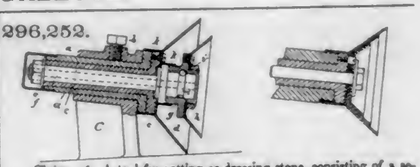
Claim.—1. In combination with the frame A and plate B, the plates D, provided with lugs *h*, at one end and suitable teeth or projections at the other end engaging with corresponding teeth, *b*, made in the frame A or plates B, the bolt *d*, and the rein-ring hub *k*, arranged to operate in the manner and for the purpose substantially as described.

2. In combination with the plates B, the bar E, provided with teeth *s*, and the bar E', with hub G, bolt *l*, rod *m*, spring *q*, and head or knob *p*, arranged to operate in the manner and for the purpose substantially as specified.

3. In combination with the frame A and plate B, the frame M, provided with three or more holes, *u*, the hook-bolt Z, and the draft-ring W, substantially as and for the purpose set forth.

4. In combination with the frame A of a horse-collar, recessed and strengthened by plates B, the plates D, with outside guiding-plates, F, bolt *d*, hubs *k* for rein-rings, plates E and E', bolt *l*, frame M, hook-bolt Z, and draft-rings W, the whole being constructed and arranged to operate substantially in the manner and for the purpose herein described.

296,251. APPARATUS FOR TREATING ORES AND FOR OTHER PURPOSES. THEODORE ROGELIM TIBBY, Nyack, N. Y. Filed Dec. 13, 1883. (No model.)

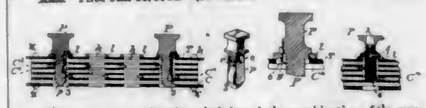


Claim.—1. A jacketed cylinder mounted on radial and longitudinal trunnions with movable bearings, to permit the optional use of either pair of trunnions for the rotation of the cylinder in either direction, substantially as and for the purposes set forth.

2. A cylinder mounted on trunnions supported by sliding bearings which may be withdrawn to permit the rotation of the cylinder, substantially as described.

3. The combination of the cylinder 3, having radial trunnions 4 and axial trunnions 5, the supporting-frame 1, and the retractible bearings 6 and 8, substantially as and for the purposes set forth.

296,252. CUTTER FOR DRESSING STONE. FRANK TESCH, London, England. Filed Nov. 6, 1883. (No model.) Patented in England Jan. 20, 1883, No. 341.



296,252.

Claim.—1. A tool for cutting or dressing stone, consisting of a series of cone-shaped metallic cutters of different diameters, arranged one within or partially within, but not in contact with, the other, and mounted on a common axis, as set forth, whereby each cutter is adapted to act on the stone at a different depth from the others.

2. A tool for cutting or dressing stone, consisting of a series of cone-shaped metallic cutters of different diameters, arranged one within or partially within, but not in contact with, the other, mounted on a common axis, and adapted to be independently rotated in substantially the manner set forth.

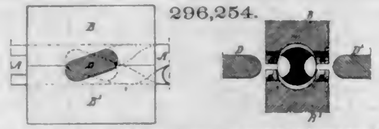
296,253. ELECTRIC SWITCH-BOARD. THEODORE N. VAIL, Boston, Mass. Filed Jan. 30, 1884. (No model.)

Claim.—1. In an electric switch-board, the combination of the non-conducting separating-plates, perforated as described, the conducting crossing strips or wires overlapping the edge of the holes through the non-conducting plates, all of the said strips on the same horizontal plane being united electrically, and the line-plates resting upon the uppermost non-conducting plate, as set forth.

2. A switch-board consisting of a series of non-conducting insulating-plates perforated for the reception of plugs, a series of conducting strips or wires interleaved between each two non-conducting plates, and disposed so as to overlap an arc of the holes through the said non-conducting plates, all the strips of each layer being electrically united, a series of line-plates surmounting the whole, and a series of plug-connectors, each adapted to make contact with the line-plates, and arranged in pairs with respect to the conducting-strips, so that each pair of plugs is adapted to present a contact-point and to make contact with its own connecting-strip and with no other, substantially as described.

3. The combination of the interleaved non-conducting perforated plates and conducting connecting-strips, the latter crossing the former and overlapping the edge of the holes perforating the same, with the hereinbefore-described plug-connectors, consisting of a handle and shank, a conducting portion adapted to make contact and interlock with the line-plate, and a spring projection or cam adapted to make contact with the connecting-strip and interlock with the overlapping part thereof, whereby the plug may be inserted and slightly turned to simultaneously make the required contact and to lock itself in position, as specified.

4. The combination, in a switch-board of the character hereinbefore described, of the line-plates provided with line and ground connections, the conducting connecting-strips, the several strips of each layer being united, the interleaved non-conducting plates adapted to insulate the several layers of connecting-strips from one another and from the line-plates, plug-connectors for connecting any wire-plate with any connecting-strip, and means, as indicated, whereby signals may be sent and conversation maintained over the main line, either through the line-plates direct or through the connecting-strip and plug-connector, as and for the purposes described.



5. In a switch-board of the character hereinbefore described, the combination of the line-plates and connection strips or wires insulated in layers by interleaved non-conducting plates, the line-plates and non-conducting plates being perforated with plug-holes, and the connection-strips arranged to cross the edge of the said plug-holes, and provided with extension-wires (one for each layer) leading to studs at the surface of the board, with a signaling bar and keys, the said keys being all connected with the bar and extending over the said studs, together with an electrical generator and a telephone set, and a switch for connecting the signaling-bar with either telephones or generator, as described, whereby upon the pressure of the keys signals may be sent to line or conversation maintained through the connecting-strips, as specified.

296,254. MANUFACTURE OF DRILLS. CLAUS VAN HAAGEN, Philadelphia, Pa. Filed Aug. 6, 1883. (No model.)

Claim.—1. The mode herein described of forging drills, said mode consisting in feeding the drill-rod longitudinally and subjecting the same to the action of a reciprocating hammer or hammers while it is confined, so as to prevent lateral spreading, as set forth.

2. The mode described of forging drills, said mode consisting in simultaneously turning and longitudinally feeding the drill-rod and subjecting the same to the action of a reciprocating hammer or hammers while it is confined, so as to prevent lateral spreading, as set forth.

296,254.

3. The combination, with the clock-hand-adjusting levers E, of the crank-shaft G, connected with such levers, means, substantially as shown, for operating said shaft, and the controlling-lever I, the whole adapted to operate substantially as described, for the purpose set forth.

3. The combination, with the clock-hand-adjusting levers E, of the crank-shaft G, connected with such levers, means for operating said shaft, the lever I, for controlling it, the armature K, and the electro-magnet L, the whole adapted to operate substantially as described, for the purpose set forth.

4. The combination, with the clock-hand-adjusting levers E, of the crank-shaft G, connected with such levers, means, substantially as described, for operating said shaft, the lever I, and the revolving indicator geared with the crank-shaft, the whole adapted to operate substantially as described, for the purpose set forth.

5. The combination, with the clock-hand-adjusting levers E, of the crank-shaft G, connected with such levers, means for operating said shaft, the lever I, the indicating-disk M, geared with the crank-shaft, and the clock-dial having the display-opening *o*, the whole adapted to operate substantially as described, for the purpose set forth.

6. The combination, with the clock-hand-adjusting levers E, of the shaft G, connected with such levers and provided with the key *s*, the lever I, having at one end the anchor H, to engage with such key, and a means, substantially as described, for imparting a revolving motion to said shaft.

7. The combination, with the clock-hand-adjusting levers E, of the crank-shaft G, connected with such levers and provided with the key *s*, the lever I, having at one end the anchor H, to engage with such key, the drum or windlass H' on the crank-shaft, and the weight G', attached to the cord of the windlass, the whole adapted to operate substantially as described, for the purpose set forth.

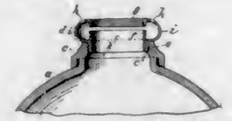
8. The combination, with a synchronizing mechanism comprising the levers E, shaft G, connected therewith, and the lever I, of the supplemental arm R on such lever, having the spur *i*, and the revolving disk N, having the peripheral notch *j*, the whole adapted to operate substantially as described, for the purpose set forth.

9. The combination, with a synchronizing mechanism comprising the levers E, shaft G, connected therewith, and the lever I, of the armature on such lever, the electro-magnet, the revolving metallic disk N, having a peripheral insulator, P, and notch *j*, the contact-springs *m*, forming the terminals of the wires in the shunt-circuit, and the supplemental arm R on the lever, having the spur *i*, the whole adapted to operate substantially as described, for the purpose set forth.

ing the same to the action of a reciprocating hammer or hammers while it is confined, so as to prevent lateral spreading, as set forth.

3. The combination of a pair of clamping-dies, mechanism for feeding a drill-rod longitudinally through the same, a hammer arranged at an angle to the longitudinal axis of the drill-rod, and mechanism for reciprocating the hammer, as set forth.

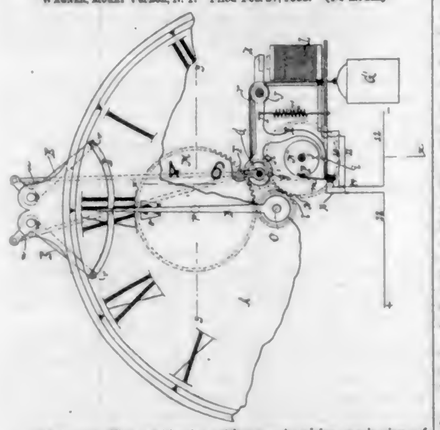
4. The combination of the clamping-dies B B', the hammers D D', and a drill-rod-holding chuck, with mechanism, substantially as described, for operating the dies, reciprocating the hammers, and spirally feeding the chuck, as set forth.



5. The combination of the hammer or hammers, the clamping-dies B B', having recesses *d* for the reception thereof, and mechanism, substantially as described, for reciprocating said hammer or hammers, opening and closing the dies, and feeding a drill-rod longitudinally through the same, as set forth.

6. The combination of the upper clamping-die, B, and its wedge-block *n*, partly inclined and partly straight, the hammer-slide *a'* and its wedge-block *m*, adapted to the block *n*, and a spring, *i*, adapted to elevate the die B and maintain the wedge-blocks in contact with each other, as set forth.

7. The combination of the hammer-slide, the hammer adjustable therein, and having a threaded stem, nut adapted to said stem, a longitudinal shaft, *g*, and mechanism, substantially as described, whereby said shaft *g* is geared to the nut, as set forth.



8. The combination of the carriage K, threaded chuck-stem, nut *q*, shaft P, and mechanism for rotating said shaft and nut, as set forth.

296,255. LAMP-COLLAR. AMBROSE D. VEST, San José, Cal. Filed Sept. 7, 1883. (No model.)

Claim.—In an oil-lamp, the combination, with the collar c, of the attachment *d*, having the outer wall of the oil-chamber perforated near its upper end, the inner wall, *f*, slotted near its upper end for the escape of gas from the lamp, and perforated at *k* for the return of oil to the lamp, the inner wall internally threaded at its upper end to receive the burner, and provided at its lower end with a threaded flange to engage the threads of the collar, substantially as specified.

296,256. CLOCK-SYNCHRONIZING APPARATUS. GUSTAVUS G. WAGNER, Mount Vernon, N. Y. Filed Feb. 27, 1883. (No model.)

Claim.—1. The combination, with a synchronizing mechanism, of the indicator connected with such mechanism, substantially as described, to be set automatically in each operation thereof, for the purpose set forth.

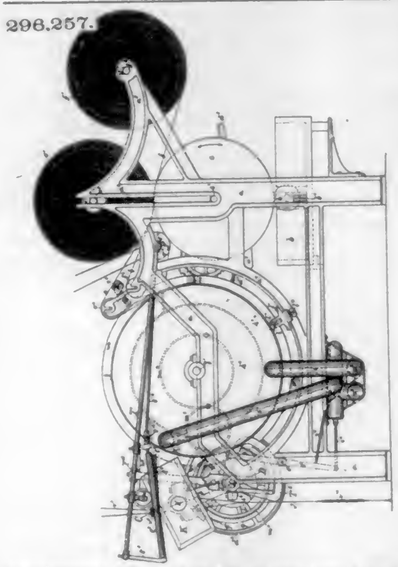
2. The combination, with the clock-hand-adjusting levers E, of the crank-shaft G, connected with such levers, means, substantially as described, for operating said shaft, and the controlling-lever I, the whole adapted to operate substantially as described, for the purpose set forth.

296,257. PAPER-BOX-COVERING MACHINE. LON WESTON, Brockton, Mass. Filed Aug. 20, 1883. (No model.)

Brief.—The covering-strips have paste applied to their lower surfaces, are overlapped, united, and then forwarded to the box-form by a rotating pneumatic cylinder, the end of the covering material, when it reaches the form, being blown from the cylinder to the box by the reversal of the exhaust mechanism. When the proper amount of material has been fed to the box, a cutter operating against the cylinder severs the strips. The box-form is mounted on a hollow shaft connected with pneumatic mechanism that holds the box on the form by the exhaustion of air while being covered, and automatically expels it from the form when the box is finished by compressing the air. The covering is pressed on the box, laid over the bottom, and brushed across and within the open end of the box by rolls and rotating brushes.

Claim.—1. In a paper-box-covering machine, the reel *d'*, loosely supported on top of paste-roller *c*, for the purpose of transferring the paste from said roller to the paper strip or strips, as described.

2. In a paper-box-covering machine, the reels *d' f'* and paste-distributer *c*, combined with guide-rolls *d⁴ f⁴*, for dividing the strips *e f*, and oblique paste-spreading roll *c³*, as and for the purpose set forth and described.



3. In a paper-box-covering machine, the intermittently-rotating perforated conveyor *g*, in combination with the internal stationary cylinder, *h*, its pneumatic chambers h^1 h^2, and mechanism, substantially as described, for exhausting the air from chamber h^1 and intermittently exhausting and compressing the air in chamber h^2, as and for the purpose set forth.

4. In a paper-box-covering machine, the combination, with the perforated cylinder *g*, of the laterally-movable bar *l'* and cutter *l'*, and means, substantially as described, for operating the bar and cutter and automatically cutting off the strips on the cylinder at the proper times, as and for the purposes set forth.

5. The box-former *k*, chambered or recessed at its end, secured to the hollow box-former shaft *k''*, and automatic pneumatic mechanism, substantially as described, for intermittently exhausting and compressing the air in said shaft and its former, for the purpose set forth.

6. The combination, with the revolving box-former *k*, of the shaft *l*, the parallel rods T T', hinged at their rear ends to said shaft, the cross-braces T'', T³, and T⁴, connecting the parallel rods, and constituting a hinged frame having its fulcrum on said shaft, and the revolving smoothing-roller *u'*, having annular flange u^3, and mounted in bearings *u*, lat-

296,257.

erally adjustable on the cross-brace T^2 of the hinged frame, substantially as described.

7. The combination, with the revolving box-former *k*, of the shaft *i*, the parallel rods T T', hinged at their rear ends to said rods, the cross-braces T'', T^3, and T^4, connecting the parallel rods, the bearings i^2 and i^3, laterally adjustable, respectively, on the cross-braces T'' and T^4, and the roller i^4, mounted in said bearings, and provided with the spiral brush i^5, substantially as and for the purpose described.

8. In combination with the box-former and its hollow shaft, the templet *v*, grooved shoe *v'*, having the inward-projecting arm forming a bearing-piece, rotary brush v'', resting on said bearing-piece, and guiding mechanism, substantially as described, for retaining the said shoe onto its templet for the purpose of automatically laying and pasting the inner edge of the paper on the inside of the paper box, as described.

9. The combination of frame T T', the smoothing-roller *u'*, roller i^4, spiral wing i^5, the cam T^5, the driving-shaft *d*, and the forked arm T^6, having pin and roll T^7, and hinged in its upper end to the swinging frame T T', substantially as described.

10. In a paper-box-covering machine, the intermittently-rotating perforated conveyer *g*, in combination with a paper-cutting-off mechanism, substantially as described, concentrically adjustable in relation to said conveyer *g*, as and for the purpose set forth.

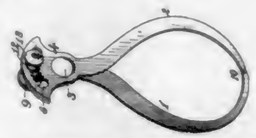
11. In a paper-box-covering machine, the rotating conveyer *g*, in combination with the box-former and its shaft, and means, substantially as described, for adjusting said box-former shaft to and from the conveyer *g*, as and for the purpose set forth.

296,258. RUBBER-SURFACED FABRIC AND COMPOSITION THEREFOR. NELSON S. WHITE, Canton, MASS. Filed Dec. 3, 1883. (Specimens.)

Claim.—1. A close-textured fabric surface-coated with a composition consisting of dissolved india-rubber and gutta-percha and a filling of zinc-white, sulphur, or sulphide and coloring pigments of the character and in the proportion described, all substantially as set forth, and for the purpose described.

2. A close-textured fabric surface-coated with a gutta-percha composition containing gum-dammar, all substantially as and for the purpose described.

3. The aniline pigment consisting of aniline, china-clay, and precipitated silicate of soda, in the proportions named, all substantially as and for the purpose described.



4. In the manufacture of rubber or gutta-percha surfaced fabric, the zinc mordant described, obtained by coloring by attrition while dry, zinc oxide with suitable pigments, all substantially as and for the purposes described.

5. In the manufacture of india-rubber or gutta-percha fabrics, the use of zinc oxide in substantially the proportions named, to gradually cure the composition with which the fabric is coated, all substantially as and for the purposes described.

6. In a rubber or gutta-percha surfaced fabric, a close-textured cloth coated with an elastic and flexible solution, which, in turn, is covered by a surfacing of a less elastic composition, all substantially as and for the purposes described.

7. The combination, in an india-rubber and gutta-percha surfaced fabric, of a close-textured cloth, a coating of colored rubber or other similar elastic and flexible composition, and a surfacing coat of colored gutta-percha composition applied to the surface of the rubber composition, all substantially as and for the purposes described.

296,259. CALIPERS. WILLIAM A. WHITE, Athol, MASS., assignor of one-half to Daniel Appleton Newton, same place. Filed Feb. 4, 1884. (No model.)

Claim.—1. A measuring-instrument composed of two limbs connected by a pivot, and having shanks projecting beyond the pivot and in contact with each other, and provided with a rack-and-pinion mechanism for adjusting the limbs, said pinion having its axis arranged parallel to the axis of the pivot connecting the limbs, and at right angles to the limbs themselves, substantially as described.

2. A measuring-instrument composed of two limbs connected by a pivot, and having shanks projecting beyond the pivot and in contact with each other, combined with rack-and-pinion mechanism on said shanks for adjusting the limbs, and means whereby the shanks may be clamped upon each other for holding the limbs in their adjusted position, substantially as described.

3. A measuring-instrument consisting of two limbs connected by a pivot, and having shanks projecting beyond the pivot and in contact with each other, a rack-and-pinion mechanism on the shanks for adjusting the limbs, said pinion having its axis parallel to the axis of the pivot connecting the limbs, and at right angles to the limbs themselves, and means for clamping the said shanks into frictional contact for holding the limbs in their adjusted position, substantially as described.

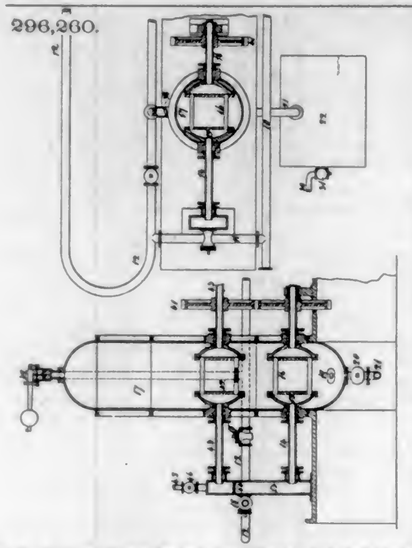
4. A measuring-instrument consisting of two limbs connected by a pivot, and having shanks projecting beyond the pivot and in direct contact with each other, a rack-and-pinion mechanism on the shanks for adjusting the limbs, and pinion having its axis parallel to the axis of the pivot connecting the limbs, and a screw nut and pin for clamping the shanks together to hold the limbs in their adjusted position, substantially as described.

5. A measuring-instrument consisting of two limbs connected by a pivot, and having shanks projecting beyond the pivot and in direct contact, a rack-and-pinion mechanism for adjusting the limbs, and a screw nut and pin for clamping the shanks together to hold the limbs in their adjusted position, said pinion and screw nut and pin having their axes arranged parallel to the axis of the pivot connecting the limbs, substantially as described.

6. A measuring-instrument consisting of two limbs connected by a pivot, with shanks beyond the pivots provided with slots having teeth at their edges, a pinion arranged in said slots and engaging the teeth, and a finger-piece for rolling the pinion to adjust the limbs, substantially as described.

7. A measuring-instrument consisting of two pivoted limbs, with shanks beyond the limbs provided with slots having teeth at their edges, a pinion in said slots and engaging the teeth, a finger-piece for rolling the pinion to adjust the limbs, and means for holding the limbs in position after their adjustment, substantially as described.

296,260. APPARATUS FOR THE MANUFACTURE OF BICARBONATE OF SODA. CHARLES WIGG, Liverpool, County of Lancaster, England. Filed Sept. 18, 1883. (No model.) Patented in England July 3, 1882, No. 3,125.



Claim.—1. In a plant or apparatus for the manufacture of bicarbonate of soda, the combination, with the absorber, of a carbonic-acid-generating chamber, connected therewith by suitable pipes, and provided with a vertically-adjustable cage for the material from which the gas is generated, substantially as and for the purposes specified.

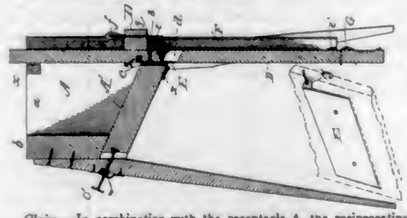
2. In a plant or apparatus for the manufacture of bicarbonate of soda, the combination, with the absorbers, of a brine-purifying chamber connected therewith by a brine-delivery and a gas-inlet pipe, said purifying-chamber having a perforated plate or diaphragm arranged over the gas-inlet pipe, substantially as and for the purposes specified.

3. The combination, with an absorber for the manufacture of bicarbonate of soda, of a transversely-arranged hollow perforated rotating agitator and gas-distributer, substantially as and for the purposes specified.

4. In a plant or apparatus for the manufacture of bicarbonate of soda, the combination of absorbers 17 with hollow beaters 42, adapted

296,260.

for the circulation of water, for the purpose and substantially in the manner set forth.



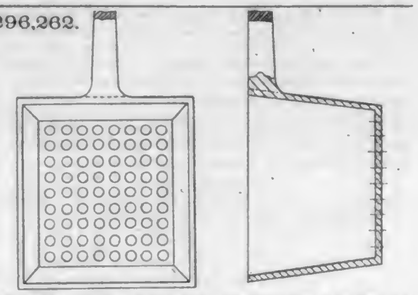
5. The combination of absorbers 17 with hollow distributers 16 and beaters 42, for the purposes set forth.

6. In a plant or apparatus for the manufacture of bicarbonate of soda, the filter-chambers 22, inlet-way 21, filter-bed 23, door 25, outlet-ways 27 and 28, pipe 29, and cock 31.

7. In a plant or apparatus for the manufacture of bicarbonate of soda, the combination of a series of absorbers, each provided with rotating perforated gas-distributers and rotating cooling-beaters, said absorbers connected by circulating-pipes, a brine-purifying tank provided with a perforated diaphragm and connected with the absorbers by a brine-delivery pipe and a gas-inlet pipe, a carbonic-acid-gas generator provided with a vertically-adjustable cage and connected with the absorbers by suitable gas-delivery pipes, and a series of filters, each connected with its respective absorber, and with an exhaust-pump for maintaining a partial vacuum in the filters, substantially as and for the purposes specified.

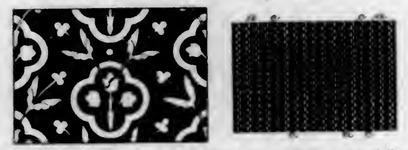
8. In a plant for the manufacture of bicarbonate of soda, the combination of an absorber having hollow perforated rotating gas-distributers, a brine-purifier having a perforated diaphragm, the absorber and purifier being connected by a brine-pipe and a gas-pipe, and a carbonic-acid generator of the character herein described, said generator being connected with the rotating perforated beaters and distributers of the absorber, substantially as and for the purposes specified.

296,261. VEGETABLE-CUTTER. CHARLES L. WILLIAMS, South Whitley, Ind. Filed Oct. 18, 1883. (No model.)



Claim.—In combination with the receptacle A, the reciprocating slide provided with transverse handles and a spout removably attached to said slide in front of the cutting means, substantially as set forth.

296,262. MANUFACTURE OF SPONGY LEAD. FRANK TAMELIN WILLIAMS and JOHN CHARLES HOWELL, Llanelly, County of Carmarthen, England. Filed Nov. 12, 1883. (No model.) Patented in England May 23, 1883, No. 2,573; in France Nov. 6, 1883, No. 158,403, and in Belgium Nov. 7, 1883, No. 63,133.



Claim.—The method of making porous blocks or plates of lead or

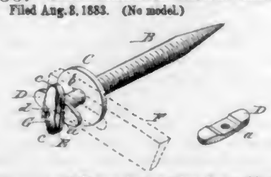
296,262.

alloy of lead, consisting in inserting a perforated mold of the size and pattern of the block or plate required into a bath of the crystallized and molten metal, then removing said mold from the bath and allowing the liquid metal to drain through the perforations, leaving in the mold a plate or block of crystalline porous or spongy metal, substantially as and for the purposes described.

296,263. WATERPROOFED TEXTILE FABRIC. ISAAC F. WILLIAMS, Bristol, R. I. Filed June 24, 1882. (Specimens.)

Claim.—1. The waterproofed knit or woven fabric, substantially as hereinbefore described, the same having raised ribs or figures free from waterproofing matter, and its rear surface and the recessed background for said raised ribs or figures charged or coated with said waterproofing matter, as set forth.

2. The waterproofed knit or woven fabric, substantially as hereinbefore described, the same having raised ribs or figures on its front surface, and charged or coated with vulcanizable waterproofing material at the rear surface of said fabric and at the recessed portions only of the front surface, as set forth.

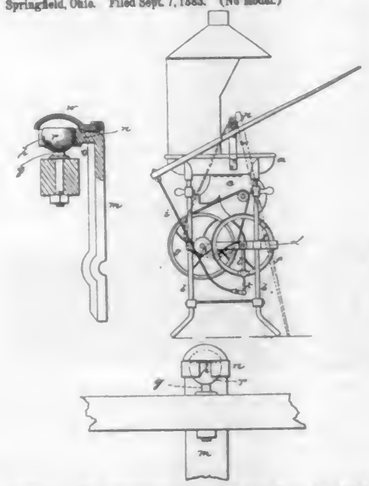


296,264. RUBBER BOOT. ISAAC F. WILLIAMS, Bristol, R. I. Filed Apr. 7, 1883. (No model.)

Claim.—1. The combination, with a rubber boot, of a molded rubber heel having a forwardly-projecting lip for affording a reliable union of said heel with the main sole of the boot, substantially as described.

2. The molded rubber boot heel provided with the integral forwardly-projecting lip, substantially as described, whereby an extended area of adhesive contact with the sole of a rubber boot is afforded, and also whereby the front portion of the heel can be durably united to said sole, as set forth.

296,265. WHIFFLETREE-HOOK. JAMES B. WILLIAMS, Glastonbury, Conn. Filed Aug. 8, 1883. (No model.)



Claim.—1. A whiffletree-hook having, in combination outside of its trace-bearing, a stationary and a movable recessed button and a flat spring to keep the buttons in contact, one of said buttons having a flange or lug at each end or around its edge, for the purpose of keeping in position and protecting the spring, substantially as shown and described.

2. In a whiffletree-hook, a flat spring rotating on its center, in combination with a recessed or flanged button, substantially as shown and described.

3. The combination, with the whiffletree A, provided with a spindle, B, having a partly-elliptical trace-bearing, *b*, and a recessed button, D, fixed to the spindle at the outer end of said bearing, of the movable recessed button E, having lugs or bearings *c c*, the spring G, arranged on the spindle at the outer side of the trace-bearing, and the cap C, having wings *g g* and provided with an end opening corresponding with the form of the trace-bearing, substantially as described.

296,266. DETACHABLE LEVER FOR FORGES. JAS. P. WINCHELL, Springfield, Ohio. Filed Sept. 7, 1883. (No model.)

Claim.—1. The combination, with a portable forge, of a lever and detachable connections forming the fulcrum thereof, whereby the lever is made capable of universal motion, and is immediately detachable from its bearing, substantially as specified.

2. A forge having a lever connected thereto by a ball-and-socket fulcrum in which the ball portion is detachable from the socket, substantially as specified.

3. The combination, with a forge, of a lever having an open socket-seat, and a ball-and-stem portion attached to the lever and removable from the socket-seat, substantially as specified.

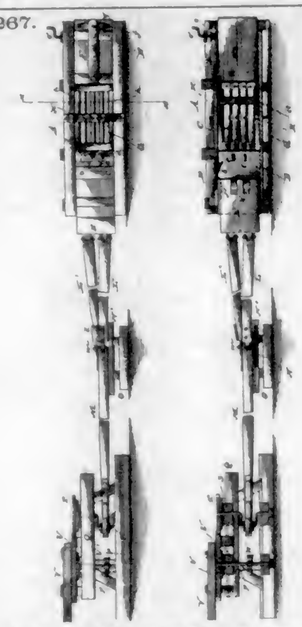
4. In a forge, a lever connected at its weight end to the mechanism to be driven, and provided with a ball-and-socket fulcrum, in which the ball-and-stem portion is removable from the socket-seat, substantially as specified.

5. In a forge, a lever provided with a separable fulcrum, whereby the lever may be given an elliptical motion, substantially as specified.

6. In a forge, the combination of the bracket *m*, having the horizontal arm *n*, with the open socket-seat *o p*, with a lever having a ball-and-stem portion adapted to fit the socket-seat.

7. In a forge, the combination of the bracket *m*, having arm *n*, and open socket-seat *o p*, with the hinged cap adapted to cover the ball portion of the ball-and-socket fulcrum in the socket-seat, substantially as specified.

296,267. HAY-PRESS. THOMAS D. AYLSWORTH, Oswego, Kans. Filed Aug. 30, 1883. (No model.)



Claim.—1. The combination, in a horizontal baling-press, of the spring-actuated beveled stops *c*, passed freely through the press-frame, with the spring-holding boxes outside of this frame, and a follower having bevels K, and a spring, *b*, on door D, substantially as described.

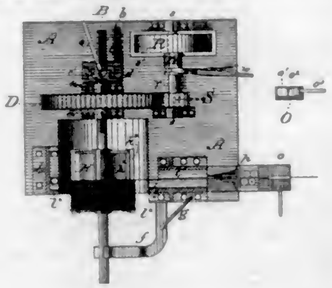
2. The combination, in a baling-press, of removable side frames having separated ribbed bars with the adjustable bolts J and the arched braces H, bolted to the press-frame, substantially as described.

3. The combination of the plunger, the plunger-rod pivoted to it below its center, the brace-rod pivoted to it above its center and connected to the plunger-rod by its sheath, the pitman-rod pivoted to the plunger-rod, and the slide working in the guides of a jack, all constructed and adapted to operate substantially in the manner and for the purposes described.

4. The combination of the plunger, the plunger-rods, the slide guided as described, in ways on a jack-frame, the bell-crank, the pinion thereof, the master-wheel engaging with said pinion, the sweep secured to the

296,267.

master-wheel, the spring W on the shaft of this wheel, and the vertical arresting-rods *p p* for said spring, all constructed and adapted to operate substantially in the manner and for the purposes described.



296,268. MACHINE-BRACE. SAMUEL BEAL, Elyria, Ohio, assignor of one-half to W. Lamartine Fay, same place. Filed Dec. 15, 1882. Renewed Nov. 8, 1883. (No model.)

Claim.—1. The combination of the braces A A, heads B B, and screw E E, the whole to be constructed and operated in the manner and for the purpose substantially as described.

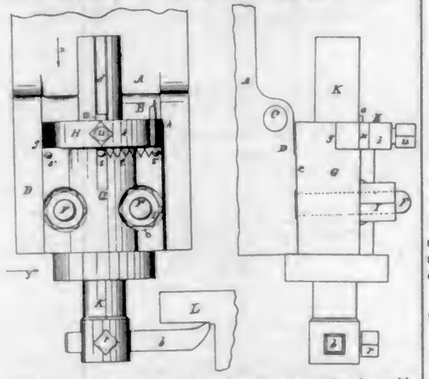
2. The combination of the braces A A, heads B B, ways C C, bearings D D, screw E E, and ratchet F, the whole to be constructed and operated in the manner and for the purpose substantially as described.

296,269. MACHINE FOR BENDING WIRE. CHARLES F. BEAMAN, Chicago, Ill., assignor to the Wellsville Plate and Sheet Iron Company, Wellsville, Ohio. Filed Feb. 9, 1884. (No model.)

Claim.—1. In a machine for bending wire, a rotating former, in combination with a drop-hammer, said parts being so constructed and arranged that the wire is made to conform to the shape of the former by a series of blows, substantially as set forth.

2. In a machine for bending wire, a rotating and longitudinally-movable former, in combination with a drop-hammer, substantially as described.

3. In a machine for bending wire, the former H and the shaft B, threaded and grooved at one end, in combination with the gear-wheel D, splined to said shaft, divided nut C, and means for opening and closing the divided nut, substantially as set forth.



4. In a machine for bending wire, the former H, detachably secured to the shaft B, in combination with the swinging bearing-arm *f*, substantially as set forth.

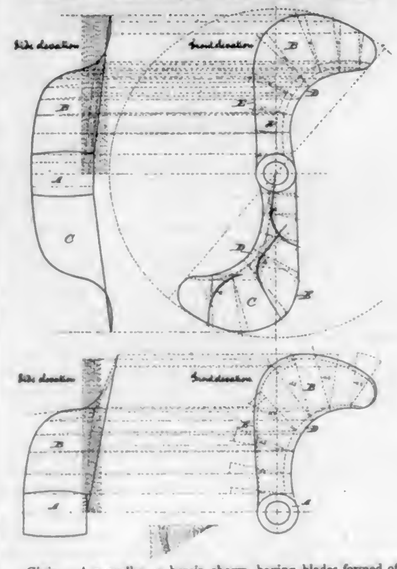
5. In a machine for bending wire, the former H, secured to the rotating and longitudinally-movable shaft B, in combination with the tension device *o* and the straightening device *p*, substantially as set forth.

6. In a machine for bending wire, the rotating and longitudinally-movable former H, in combination with the drop-hammer L, having the wings *m*, the guide-standards *l l*, having the flanges *l*², and the arms *n*, substantially as set forth.

7. In a machine for bending wire, the drop-hammer L, having side wings, *m*, in combination with the standards *l l*, so arranged as to allow a slight horizontal movement to the hammer during its vertical reciprocation, the arms *n*, pivotally connected to the hammer and the standard *l*, and the former, substantially as set forth.

296,270. ATTACHMENT FOR METAL-PLANERS. EDWIN R. BETANY, Rochester, N. Y., assignor to the Rochester Machine Tool Works, (Limited,) same place. Filed Aug. 27, 1883. (No model.)

Claim.—1. An attachment for an iron-planer, consisting, in combination with the swinging slide A, of a block, G, rigidly secured to the swinging slide, provided with a stock, K, for holding the cutter, said stock being fitted in a circular bearing within the block, for the purpose of permitting it to turn within the latter to bring the point of the tool in position to take a cut, or be turned to relieve the point of the tool from the work during the reverse motion of the planer, substantially as described.



2. An attachment for an iron-planer, consisting, in combination with the swinging slide, of a block, G, rigidly secured to the swinging slide, provided with a stock, K, for holding the cutter, fitted to a circular bearing within the block, for the purpose of permitting it to be turned within the latter at each forward and backward motion of the planer, to bring the point of the tool, respectively, in position to take a cut or relieve it from the work, said stock K being longitudinally adjustable within the block, substantially as described.

3. The attachment for iron-planers, consisting of a block, G, rigidly secured to the swinging slide A, stock K, for holding the cutter *b*, fitted to a circular bearing within the block G, for the purpose set forth, collar H, secured to the stock K, and stop *h*, to limit the distance the stock may be turned within the block, substantially as set forth.

4. In combination with the swinging slide A of an iron-planer, a block, G, rigidly attached thereto, provided with a tool-stock, K, for holding the cutting-tool, said stock fitted to circular bearings within the block, for the purpose of permitting it to be turned therein to bring the point of the tool either to or away from the work, with automatic means to turn said stock in position to bring the point of the tool to the work, substantially as specified.

5. In combination with the swinging slide A of an iron-planer, a block, G, rigidly attached thereto, provided with a tool-stock, K, for holding the cutting-tool, said tool-stock being fitted to a circular bearing within the block, for the purpose of permitting it to be turned therein to bring the point of the cutting-tool either to or away from the work, said tool-stock being held by the block in an inclined position, for the purpose of allowing the point of the tool to deviate from a horizontal plane when the stock K is turned in its bearings, as stated, for the purpose set forth.

296,271. SCREW-PROPELLER. ADOLF GRAF VON BOGNACORSI DI PISTOJA, Vienna, Austria-Hungary. Filed Oct. 31, 1882. (Model.)

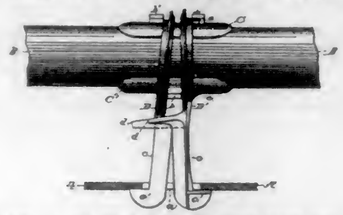
Claim.—A propeller, as herein shown, having blades formed of a series of cross-sections of parabolic shape from the hub to the periphery, and the blades gradually bent to be at right angles to the center of axis of the hub, substantially as specified.

296,272. CRANK. JESSE H. BURKE, Los Angeles, Cal. Filed Dec. 6, 1883. (No model.)

Claim.—1. In a crank, the combination of a suitable casing and the arm held to the casing, substantially in the manner described, whereby when not in use it may be stored entirely within the casing, substantially as and for the purposes specified.

2. The combination, as set forth, of a suitable casing, the arm having one end movable out of said casing, and provided with a handle, and means whereby said arm is held from detachment from said casing, substantially as set forth.

3. In a crank, the combination of the casing, the arm, the handle held to one end of the arm in position to be turned down against the same, and a spring whereby the arm and handle, when incased, are forced apart and bind the walls of the casing, as set forth.



4. In a crank, the combination of the casing, the arm having one end movable out of, and its other end provided with means whereby it is held in, the casing, and formed with a head approximating in diameter that of the casing, and the handle pivoted to the outer end of the arm, and provided in the rear of said pivot with a cap or head fitted to the casing, substantially as and for the purposes specified.

5. In a crank, the casing provided at or near one end with a transverse rod, combined with the arm having a hook formed on one end, adapted to engage said transverse rod in the operation of the device, substantially as set forth.

6. The crank, substantially as hereinbefore described, consisting, in connection with a suitable casing, of the arm, the handle pivoted at one end of said arm, means whereby the arm and casing are held from detachment, said arm and handle being constructed and arranged substan-

tially as described, whereby when not in use they may be stored within the casing, substantially as set forth.

296,273. DEVICE FOR HANDLING SPOOLED BARB-WIRE. WM. T. BURROWS, East Dubuque, Ill. Filed Sept. 6, 1883. (No model.)

Claim.—1. In a device for handling spooled barbed wire, hooks loosely suspended from a single bar, and appliances attached to said bar, whereby the said hooks are opened and closed by the action of said bar, substantially as described.

2. In a device of the character described, a pair of hooks cast upon rings loosely encircling a handle-bar provided with means which open and close said hooks by the action of said bar, substantially as described.

3. In a device of the character described, the combination, with a handle-bar, of a pair of hooks cast upon rings loosely encircling said bar, and which rings are provided with means whereby said hooks are prevented from separating in any direction other than that in which they open and close by the action of said bar, substantially as described.

4. In a device of the character described, the combination, with a handle-bar and a pair of hooks cast upon rings loosely encircling said bar, of means provided upon the said bar, and rings to engage with each other and prevent the bar from turning beyond the opening and closing limit of the hooks, substantially as described.

5. In a device of the character described, the combination, with the handle-bar and a pair of hooks cast upon rings loosely encircling said bar, of means provided upon the said bar and rings to prevent the handle-bar from turning in either direction while carrying the spool, substantially as described.

6. In a device of the character described, the combination, with a handle-bar, of a pair of rings loosely encircling the same, and provided each with a depending arm and a hook upon the end of said arm, substantially as and for the purpose set forth.

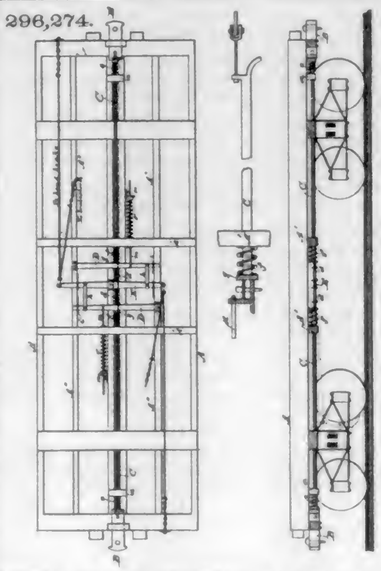
7. In a device of the character described, the combination, with a handle-bar, of a pair of rings loosely encircling said bar, and provided each with a depending arm, a hook upon the end of said arm, and two ears cast upon one of said arms and embracing the other arm, substantially as and for the purpose set forth.

8. In a device of the character described, the combination, with a pair of rings provided each with a depending arm and hook, of a handle-bar passing loosely through said rings, and provided with studs or projections, two of which embrace said rings and one separates the same, substantially as described and shown.

9. In a device of the character described, the combination, with a handle-bar and a pair of rings encircling said bar, and provided each with a depending arm and hook, of a stud or elevation located upon said bar, and adapted to engage with a notch cut in the inner circumference of one of said rings, substantially as and for the purpose set forth.

10. In a device of the character described, the combination, with a handle-bar provided with three studs or projections, arranged as described, of a pair of rings loosely encircling said bar, and provided each with a depending arm and hook, and two lugs cast upon one of said rings, and adapted to engage with one of the handle-bar studs, substantially as and for the purpose set forth.

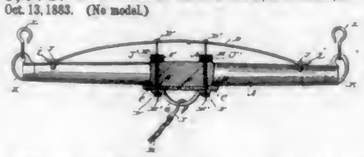
296,274. CAR-BRAKE. JOSEPH P. CHOTNER, Pittsburg, Pa. Filed Aug. 24, 1883. (No model.)



Claim.—1. In railway-car brakes, the combination of the draw-bars C, provided with springs *e* and *f*, with a central lever, E, connected by links A to the levers D, having attached to them the rods *d d*, arranged substantially as specified.

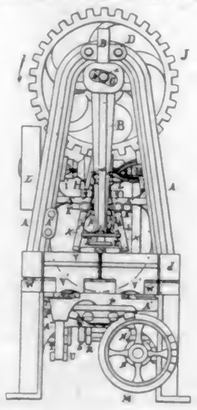
2. The combination of the draw-bars C, provided with springs *e* and *f*, with a central lever, E, connected by links A to the levers D, having attached to them the rods *d d* and spring-rods *m*, arranged as shown, and for the purpose set forth.

3. The combination of the draw-bar C, provided with springs *e* and *f*, a central lever, E, connected by links A to the levers D, having attached to them the rods *d d* and spring-rods *m*, with the rods and chains *p* and *p'*, for operating the brakes by steam or hand power, substantially as shown and herein specified.



4. The brake herein described, consisting of the bumpers B, draw-bars E, with springs *e* and *f*, the central lever, E, side levers, D, links

296,274.



k, rods *d a*, spring-rods *m*, rods and chains *p p*, springs *o*, angle-pieces *n*, and suitable frame, all constructed and arranged substantially as described and shown.

296,275. WHIFFLETREE. HARDING CLARK, East Canton, Pa. Filed Oct. 13, 1883. (No model.)

Claim.—The whiffletree herein described, consisting of the body A, having the loops J, the spring D, having the hooks *l* secured in said loops, the openings A' in the body, the packing J', the bolts D', passing through said packing and openings, and the draft-bar G, with its attachments for operating said spring, as shown and described.

296,276. BRICK-MACHINE. FRANCIS M. COMSTOCK, Keokuk, Iowa, assignor to Felix T. Hughes, Wells M. Irwin, Charles S. Whitney, and Frederick M. Stafford, all of same place. Filed Jan. 3, 1884. (No model.)

Claim.—1. The method herein described of pressing brick, the same consisting in raising the mold with the clay therein upward and in contact with the main compression-plunger, by which a partial compacting of the clay in the upper portion of the mold is effected, then permitting the mold to be slid down over the clay a short distance by the compression-plunger, and finally subjecting the clay within the mold to the upward pressure of the follower or mold bottom and the downward pressure of the plunger, as set forth.

2. The method herein described of making brick, the same consisting in continuously moving or changing the position of the clay within vertically-movable molds by the devices, substantially such as described, during the pressing or forming process, whereby the particles of clay are more evenly arranged to form a solid and compact brick and the brick rendered more easily ejected from the mold, as set forth.

3. In a brick-machine, a rotary mold-table provided with movable molds adapted to be held in position from lateral displacement by pins, in combination with devices, substantially such as described, for raising and holding said mold from the mold-table during a portion of the time the brick is being compressed.

4. In a brick-machine, a series of molds movably mounted on a mold-table, said molds being provided with movable bottoms and adapted to be raised with the charge of clay therein, and to be depressed or carried down by the compression-plunger, as set forth.

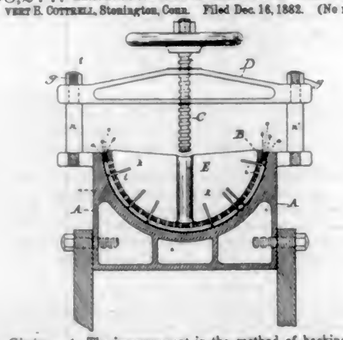
5. In a brick-machine, a series of vertically-moving molds mounted on a mold-table, said molds being adapted to be carried down on the mold-table and held there during the final pressure of the brick and during the withdrawal of the plunger, as set forth.

6. In a brick-machine of the character described, the arms K, pivoted to the sides of the machine and adapted to be operated by suitable devices on the plunger-bar, in combination with the movable molds, as set forth, whereby the molds are held down while the compression-plunger is being withdrawn or separated from the newly-formed brick.

7. The arms K, pivoted to the cross-bar A'', and provided with the spring arms or extensions L and wedge-shaped cams *p'*, in combination with the plunger-bar B and wedge-shaped cams *p*, as and for the purpose set forth.

8. In a brick-machine, the plunger bar or bars provided with a plunger-head adapted to fit within the mold-cavity and a supplemental head or flange adapted to impinge upon the top of the mold and force the said mold down, as set forth.

9. In a brick-machine, the plunger-bar B, provided with the plunger-head E and supplemental head or flange B'', in combination with the vertically-movable mold provided with a movable bottom, and the mold-table W, provided with the pins W'', as set forth.

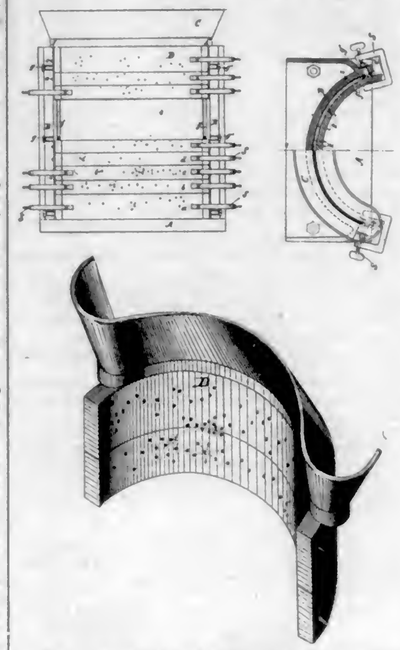


10. In a brick-machine, a vertically-movable mold provided with a vertically-movable mold-bottom, and devices, substantially such as described, for moving the mold and mold-bottom upward, in combination with the plunger-heads E and B'', as set forth.

11. The plunger-bars B, mounted in guides, as described, and provided with a diagonal slot, G, in combination with the shaft E and crank-arms *a*, whereby the plungers are quickly raised and a period of rest given the plungers before the downward movement is given the plungers, as set forth.

12. In a brick-machine, a mold-table provided with projections adapted to fit within cavities formed in the sides of the mold, in combination with the mold V and follower X, as set forth.

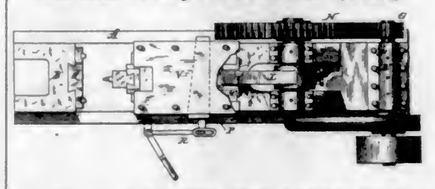
13. The mold-table W, provided with a central shaft, on the power end of which is secured a pin or crown wheel, in combination with the wheel M, having the mutilated gear, as described, whereby the molds are turned one-third of a revolution, as set forth.



296,277. ELECTROTYPE AND STEREOTYPE CASTING PAN. CALVERT B. COTTRELL, Stonington, Conn. Filed Dec. 16, 1882. (No model.)

Claim.—1. The improvement in the method of backing curved electrotype-plates which consists in perfecting the form of the shell and holding the same in position by pins inserted through perforations in the lid during the introduction of the molten metal, substantially as described.

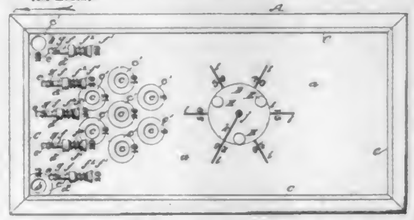
2. The combination, with the pan A, of the perforated lid B and the pins *k k*, substantially as described.



296,278. ELECTROTYPE AND STEREOTYPE CASTING-MOLD. CALVERT B. COTTRELL, Stonington, Conn. Filed Mar. 15, 1883. (No model.)

Claim.—1. A mold for casting electrotype or stereotype plates, in which the cover is made up or composed of sections which are provided with perforations adapted to receive pins, substantially as described, and for the purpose specified.

2. The herein-described improvement in the art of casting electrotype or stereotype plates, which consists in perfecting the curve of the shell or matrix, section by section, and holding such perfected portions in position until after the introduction of the molten metal, substantially as described.



296,279. STRAIGHTENING, BENDING, AND PUNCHING MACHINE. JAMES CROSSROVE, Pittsburg, Pa. Filed Oct. 31, 1883. (No model.)

Claim.—1. In a straightening, bending, or punching machine, the combination, with the moving head M, of the supplementary head N, sliding therein, an interposed wedge, P, between said heads, and adapted to move transversely thereof and give them positive adjustment to and from one another, and a pivoted lever, R, connected to said wedge, substantially as described, whereby the necessary adjustments may be readily made between the strokes.

2. The combination of head M, having top groove, *o*, and head N, having top groove, *o*, the adjacent faces of one or both heads being inclined, the solid wedge-block P, having the angularly-set overhanging tenons *q*, fitting said grooves *o*, and a pivoted lever, R, substantially as described.

296,280. GAME-TABLE. FRANK R. DE FOY, Dannemora, N. Y., assignor to himself and C. H. Stackpole, same place. Filed Nov. 14, 1883. (No model.)

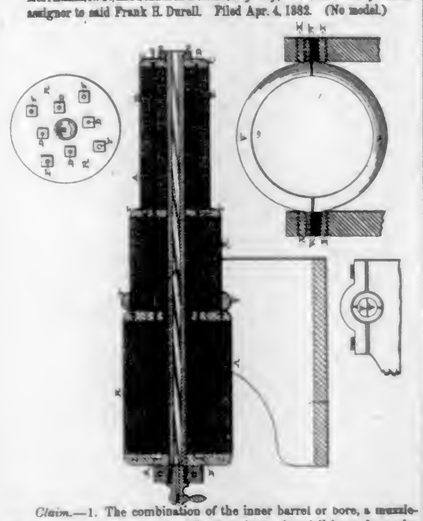
Claim.—1. The game-table herein shown and described, formed with the central revolving wheel, D, cluster of pockets *c*, spring-buffers *f*, and corner pockets, *b*, the spring-buffers being attached to gong-levers *g*, and the wheel D, provided with pegs E, and index-line *k*, and surrounded by the radial numbered lines *l*, substantially as set forth.

2. In a game-table, the revolving wheel D, having the guard-pegs E, substantially as and for the purposes described.

3. In a game-table, the cluster of pockets *c*, arranged beyond the wheel D that has pegs E, substantially as set forth.

4. In a game-table, the spring-buffers *f*, arranged on the surface of the table beyond the revolving wheel E, substantially as set forth.

5. In a game-table, the combination, with the spring-buffers *f*, of the levers *g*, and gongs *h*, arranged substantially as described.



6. In a game-table, the series of spring-buffers *f*, arranged beyond the cluster of pockets *c*, substantially as set forth.

7. In a game-table, the series of spring-buffers arranged beyond the cluster of pockets *c* and beyond the wheel D that has the guard-pegs E, substantially as set forth.

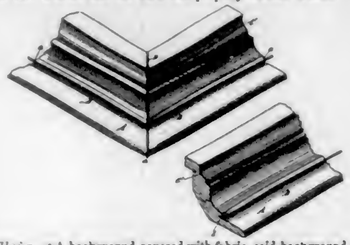
8. In a game-table, the wheel D, provided with pegs E, and index-mark *k*, in combination with the radial marks *l*, substantially as set forth

9. In a game-table, the pockets *c*, made of hard rubber, with flange c', set in a countersunk recess, c^2, for forming the pocket and at the same time holding the baize *a* around the recess at opening c^2, substantially as shown and described.

296,281. BREECH-LOADING ORDNANCE. HENRY DURELL, West Morrisania, N. Y., and FRANK H. DURELL, Bay City, Mich.; said Henry Durell assignor to said Frank H. Durell. Filed Apr. 4, 1882. (No model.)

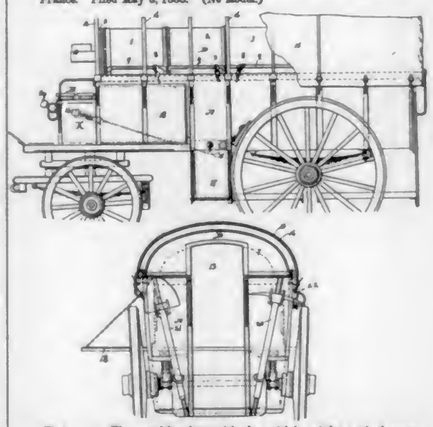
Claim.—1. The combination of the inner barrel or bore, a muzzle-plate secured to the front end of the barrel, a series of disks, and a series of draw-bolts with a metallic plate placed at the beginning of the re-enforcement, and a second series of disks and draw-bolts, the second set of draw-bolts being passed from the metallic plate through the rear series of disks, a breech-plate, and a nut which is passed over the rear end of the barrel, substantially as set forth.

2. A trunnion composed of two pieces of iron, which are bent so as to conform to the shape of the gun, and which have their ends turned outward, so as to receive a screw collar or sleeve, substantially as described.



296,282. HAT-BINDING RING. RUDOLF EICKEMEYER, Yonkers, N. Y. Filed Feb. 4, 1884. (No model.)

Claim.—The adjustable hat-binding ring composed of a strip of flexible non-elastic material overlapped at its ends, and provided with a thumb-piece and a clamp, substantially as described, whereby hats of various sizes may be circumferentially confined upon a hat-block and prevented from undue expansion during the curling and rounding of brims, or other similar operations.

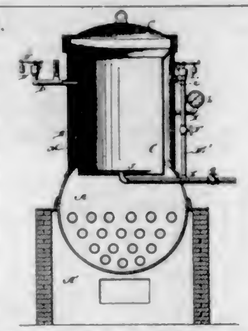


296,283. APPLICATION OF FABRICS TO A BACKGROUND. ALFRED FRESCHL, Detroit, Mich. Filed Feb. 18, 1884. (No model.)

Brief.—The edges of the fabric are secured in saw-kerfs, and a cord or fillet then inserted into the kerfs and properly secured therein.

Claim.—A background covered with fabric, said background provided with one or more kerfs or grooves, the edges of the fabric pressed into said grooves, and in combination therewith a cord or fillet secured in said groove over said edges, substantially as described.

296,284. PORTABLE BAKE-OVEN. EUGENE PAUL GHEERTS, Paris, France. Filed May 8, 1883. (No model.)



Claim.—1. The combination, with the vehicle, of the arched oven-sections adapted to rest on the sides of the said vehicle, and removably secured thereto, whereby room is obtained in the vehicle beneath the oven for carrying men, bread-making utensils, and other articles, substantially as described.

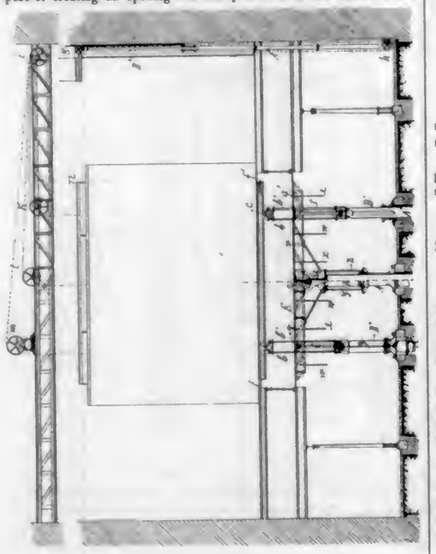
2. The traveling bread-factory comprising, in combination with the vehicle constructed substantially as described, and carrying the bread-making utensils, and being provided, further, with seats for men, the arched oven-sections adapted to rest on the sides of the said vehicle, and removably secured thereto, room being left beneath the same for the said utensils and for the men to be carried, substantially as described.

296,285. PROCESS APPARATUS. NATHAN G. GURNEY, Baltimore, Md., assignor of one-half to Francis Clark, same place. Filed Mar. 6, 1883. (No model.)

Claim.—1. In a processing apparatus, a jacketed kettle having a connection with a steam-generator and surrounded by a steam-space having open connection with said steam-generator, and means for automatically relieving pressure within said kettle when a predetermined point of pressure has been reached, as set forth.

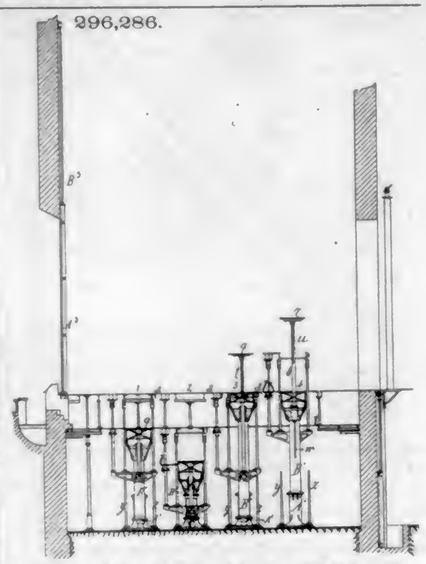
296,285.

2. In a process apparatus, the combination, with a steam-boiler, of a vertical cylinder having its lower open end in direct communication with the steam-space of the boiler, and secured to the boiler-casing by a steam-tight joint, a can receiving and supporting vessel secured within the cylinder by flanges, to form a seat for the removable cover, and a steam-supply pipe for delivering steam into the vessel, upon the cans therein, substantially as described.



3. In a processing apparatus, and in combination with the boiler A, jacketed kettle and cover, as described, a steam-pipe, E, connecting with the interior of the vessel or kettle, and having a branch, E', connecting with the steam-space exterior to the said kettle, and with proper valves, as and for the purposes set forth.

296,286. HYDRAULIC THEATER APPLIANCE. ROBERT GWINNER, JOHANN KAUDSKY, CARL DENGG, and FRANZ ROTH, Vienna, Austria-Hungary. Filed Jan. 9, 1883. (No model.) Patented in Germany June 6, 1882; in England June 19, 1882, No. 2,889; in France June 24, 1882, No. 149,754, and in Austria-Hungary Aug. 11, 1882, No. 18,384 and No. 31,163.



Claim.—1. In stage apparatus, the combination of a hydraulic cylinder, A', located below the stage-floor, and the plungers B', with parts of the stage, for the purpose of raising or lowering the said parts, the same being supported upon and by said plungers.

2. In stage apparatus, the combination of hydraulic cylinders A' with the sections of the stage-platform, the trap E, the hanging scenes, and the fire-curtain, substantially as and for the purpose described.

3. The two longitudinal flaps *f f'* in the stage-platform, for the purpose of creating an opening sufficiently wide to enable a scene to be

296,286.

raised by hydraulic means from beneath the stage-platform, in combination with suitable hydraulic appliances for effecting the elevation of the scene, for the purpose set forth.

4. In hydraulic theater appliances, the combination, with the hydraulic cylinders A', of the plungers B', for moving the stage-platform, and the pistons *i*, for moving the traps, substantially as described.

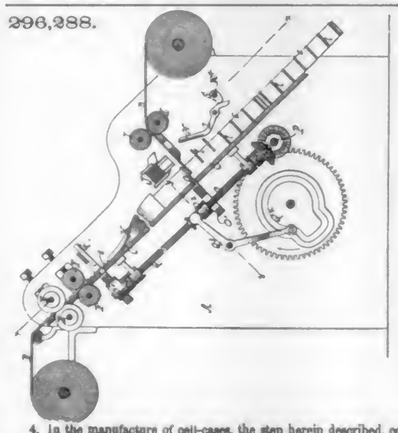
5. In stage apparatus, the combination of the hydraulic cylinder A with the piston B' and the pulleys *g*, *h*, *i*, *k*, *l*, and *m*, for moving the hanging scenes, substantially as described.

6. In stage apparatus, the combination of a hydraulic cylinder, A^3, in the middle of a fire-curtain, a hollow plunger, B^3, branch escape-pipes, and a fire-curtain, substantially as and for the purpose set forth.

296,287. TABLE-CASTER OR OTHER ARTICLE OF TABLE-SERVICE. GURDON W. HULL and CHARLES B. YALE, Wallingford, Conn., assignors to Simpson, Hall, Miller & Co., same place. Filed Feb. 18, 1884. (No model.)

Claim.—1. Metal articles of table and like service, provided with means, substantially such as described, for removably and interchangeably attaching initials, monograms, &c., substantially as specified.

2. Metal articles of table and like service, constructed with the grooved parallel bars *a b* and fitted to receive letters, monograms, &c., substantially as specified.



296,288. MANUFACTURE OF CELL-CASES. GUSTAV L. JAEGER, New York, N. Y., and ADOLF FABER DU FAUR, Newark, N. J., assignors to said Jaeger. Filed June 26, 1883. (No model.)

Claim.—1. In the manufacture of cell-cases from continuous longitudinal strips and from cross-strips, the step herein described, consisting in presenting such continuous longitudinal strips with an intermittent motion and interlocking therewith the cross-strips while said longitudinal strips are stationary.

2. In the manufacture of cell-cases from continuous longitudinal strips and from cross-strips, the step herein described, consisting in presenting such longitudinal strips with an intermittent motion, and between the periods of such motion, and while said longitudinal strips are stationary, both interlocking therewith the cross-strips and forming therein cross cuts or slots to receive the cross-strips.

3. The within-described method of making cell-cases, which consists in presenting a series of longitudinal strips with an intermittent motion varying in extent, interlocking therewith successive cross-strips, and severing the longitudinal strips between the periods of such motion previous to each variation therein.

296,288.

4. In the manufacture of cell-cases, the step herein described, consisting in feeding to and partially interlocking in its place the leading end of a continuous web before cutting it.

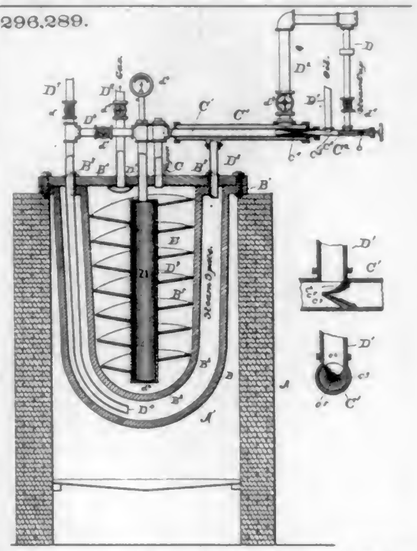
5. The within-described method of making cell-cases, which consists in presenting a series of continuous longitudinal strips, interlocking therewith the leading end of a continuous web, severing the latter at the proper point to form a cross-strip, bottoming the cross-strip, and severing the longitudinal strips into the proper length for a case.

6. In a machine for making cell-cases from a series of continuous longitudinal strips and cross-strips, a mechanism, substantially as described, for presenting the longitudinal strips with an intermittent motion of varying extent at regular intervals, in combination with a mechanism, substantially as described, for interlocking the cross-strips with the longitudinal stripe at similar intervals, substantially as and for the purpose described.

7. In a machine for making cell-cases from a series of continuous longitudinal stripe and cross-strips, the combination of intermittingly-operating mechanism for forming and presenting the longitudinal strips, and similar mechanism for forming and interlocking the cross-strips while said longitudinal strips are stationary, substantially as and for the purpose described.

8. In a machine for making cell-cases from a series of continuous longitudinal stripe and cross-strips, the combination of intermittingly-operating mechanism, substantially as described, for presenting the longitudinal strips, similar mechanism for interlocking the cross-strips with the longitudinal strips, guides for turning the longitudinal strips from a flat to an upright position, and reciprocating cutters, arranged at a point intermediate of the strip-interlocking mechanism and the guides, to act on the longitudinal strips, substantially as and for the purpose described.

9. In a machine for making cell-cases from a series of continuous longitudinal stripe and cross-strips, the combination of rotary cutters for producing the longitudinal strips, intermittingly-operating feed-rollers for advancing the longitudinal strips, guides for turning the longitudinal stripe from a flat to an upright position, and a reciprocating die, arranged at a point intermediate of the feed-rollers and guides, to act on the longitudinal strips, substantially as and for the purpose described.

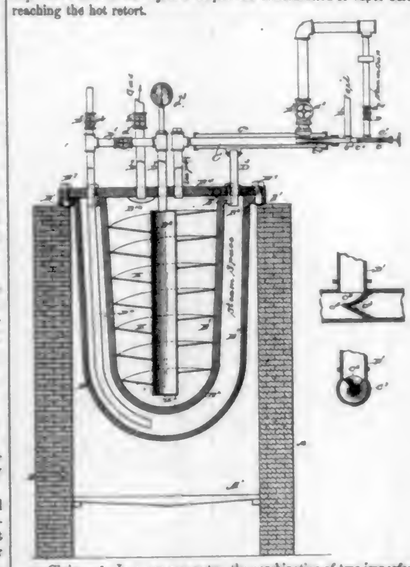


10. In a machine for making cell-cases from a series of continuous longitudinal stripe and cross-strips, the combination of intermittingly-operating mechanism, substantially as described, for presenting the longitudinal stripe, similar mechanism for interlocking the cross-stripe with the longitudinal strips, and a bottoming mechanism, substantially as described, arranged at a point in rear of such interlocking mechanism, to act on the cross-stripe between the periods at which the strip-presenting mechanism operates, substantially as and for the purpose described.

296,289. PROCESS OF GENERATING GAS. GOMER JONES, Washington, D. C., assignor to the Standard Vapor Fuel Iron and Steel Company of New York. Filed Jan. 11, 1884. (No model.)

Claim.—1. In the art of generating gas from petroleum, the method herein described, consisting, first, in feeding the oil in a small stream before a blast of superheated steam; second, applying heat at the moment of vaporization to prevent condensation; and, third, projecting said vapor against a current of superheated steam coming from the opposite direction and under less pressure than the vapor, substantially as described.

2. In the art of generating gas from petroleum, the method herein described, consisting, first, in feeding the oil in a small stream before a blast of superheated steam; second, applying heat at the moment of vaporization to prevent condensation; and, third, projecting and whirling



296,289.

said vapor against a whirling current of superheated steam coming from the opposite direction and under less pressure than the vapor, substantially as described.

296,290. GAS-GENERATOR. GOMER JONES, Washington, D. C., assignor to the Standard Vapor Fuel Iron and Steel Company of New York. Filed Jan. 29, 1883. Renewed Jan. 11, 1884. (No model.)

Brief.—Oil is vaporized by steam, and oil-vapor is mixed with steam in a hot retort. The oil-vapor pipe leading from the spraying injector is provided with a steam-jacket to prevent condensation of vapor before reaching the hot retort.

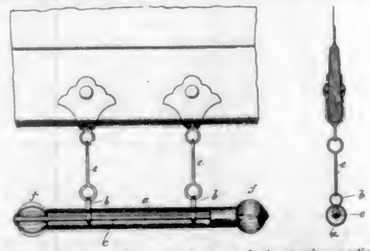
Claim.—1. In a gas-generator, the combination of two imperforate jackets, one within the other, forming a steam-space, having inlet and outlet pipes which enter through the cover for said jackets, said cover having supply and exhaust pipes opening into the mixing-chamber formed by said cover and the inner jacket, substantially as described, and for the purpose set forth.

2. In a gas-generator, the combination of imperforate jackets B′ B², cover B⁴, pipes C, D², D⁴, D⁷, and D⁸, passing through said cover, and a pipe, D⁴, connecting pipes D⁴ and D⁸, substantially as described.

3. In a gas-generator, the combination of a mixing-chamber having a vapor-supply pipe and a vapor-exhaust pipe, a drum suspended within said mixing-chamber and connected with a steam-supply pipe, and having an opening connecting its interior with the mixing-chamber and a spiral interposed between the walls of the jacket and drum and between the opening in said drum and vapor-exhaust pipe, substantially as described.

4. In a gas-generator, the combination of two imperforate jackets, one within the other, and forming a chamber, and an exhaust-pipe extending down through said chamber below the bottom of the inner jacket for the purpose set forth.

5. In a gas-generator, the combination of two imperforate jackets one within the other, a cover for said jackets, a steam-supply pipe passing through said cover into the space between the jackets, an exhaust-pipe extending through the cover and between the jackets, a pipe connected to said exhaust-pipe and passing through the cover to near the bottom of the mixing-chamber, and an exit-pipe extending through the cover from said mixing-chamber, for the purpose set forth.



6. In a gas-generator, the combination of two imperforate jackets one within the other, a cover for said jackets, a steam-supply pipe passing through said cover, an exhaust-pipe extending through the cover and between the jackets, a pipe-connection through said exhaust-pipe and extending through the cover to near the bottom of the mixing-chamber, a vapor-supply pipe passing through the cover into the mixing-chamber, and an exit-pipe extending through said cover from said mixing-chamber, substantially as described.

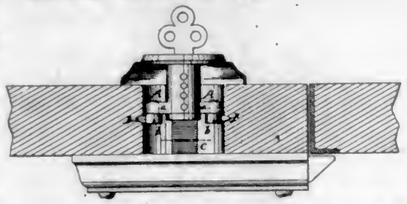
7. In a gas-generator, a steam-supply pipe provided with a needle-valve and a diaphragm having a perforation and a fan-shaped groove which terminates at the perforation, in combination with an oil-supply pipe arranged, substantially as described, to drop the oil in said groove, for the purpose set forth.

8. In a generator, the combination of a mixing-chamber having a steam-inlet pipe, a vapor-inlet pipe, and an exhaust-pipe, a vapor-generator outside of the mixing-chamber, and consisting of a steam-supply pipe, an oil-supply pipe opening into the steam-supply pipe, a vapor-pipe connected to the vapor-inlet pipe of the mixing-chamber and to the steam-supply pipe, and in which the vapor is formed by the commingling of the steam and oil, and means, substantially as described, for heating the vapor in said vapor-pipe at the moment of vaporization, for the purpose set forth.

9. In a gas-generator, the combination of a mixing-chamber, a steam-supply pipe having a needle-valve, an oil-supply pipe, in connection with the needle-valve, a vapor-pipe in which the oil and steam are commingled, and which leads to the mixing-chamber, and a steam-jacket surrounding the vapor-pipe, and having an outlet which leads to said mixing-chamber, substantially as described, and for the purpose set forth.

296,291. WINDOW-SHADE BAR. HERBERT L. JUDD, Brooklyn, N. Y. Filed Feb. 15, 1884. (No model.)

Claim.—1. The combination, with the shade-bar having mortises in it, of eyes, loops, or links passing through such mortises, and a rod or wire within the shade-bar for securing the parts together, substantially as set forth.



2. The combination, with the shade-bar, of ornamental ends, and a rod passing through the shade-bar and holding the parts together, substantially as set forth.

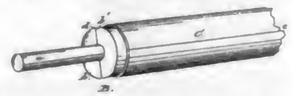
3. The combination, with the shade-bar, of eyes or loops passing into mortises in the bar, a rod or wire within the bar for holding the same, and end pieces to the bar, also secured by the rod or wire, substantially as specified.

4. The combination, in a shade-bar, of a tube, end pieces to the tube, a wire or rod extending from one end piece to the other, and suspending devices passing through mortises and connected with the wire or rod, substantially as set forth.

5. The combination, with the tubular shade-bar, of ornamental end pieces, and a rod or wire passing through the end pieces and the shade-bar and secured at the ends by riveting or solder, substantially as set forth.

296,292. MEANS FOR ATTACHING LOCKS. JOHN KUSTER, Jr., Stamford, Conn. Filed Feb. 19, 1883. (Model.)

Claim.—The lock-case provided at or near its inner end with the external lateral projections, a, having screw-threaded holes therein, combined with the screws A, positively engaging the screw-threaded holes in said lugs, and having slotted heads b, and the sharpened wings or lugs B, made directly on said head to enter the wood of the door to hold the lock in place, as shown and described.



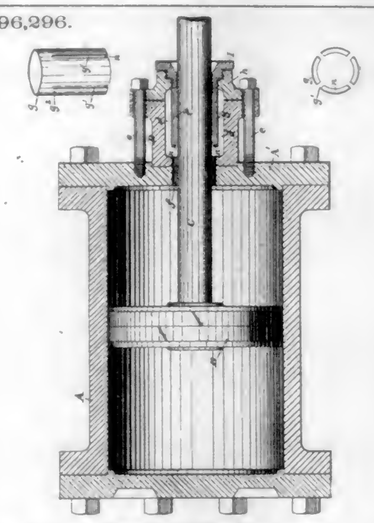
296,293. BUTTER-DISH. JOSEPH D. LUCAS, Toronto, Ontario, Canada. Filed Feb. 18, 1884. (No model.) Patented in Canada Mar. 6, 1884, No. 16,803.

Claim.—1. In combination with a dish of any suitable design, a divided ring, B, designed to fit the edge of the dish, and provided with claws b, arranged to grasp the edge of the dish when the ends of the divided ring are clamped together, as specified.

2. A divided ring, B, having the knife-holder E, handle C, and claws b, attached to it, in combination with lugs c, formed on the ends of the ring and clamped together, substantially as and for the purpose specified.

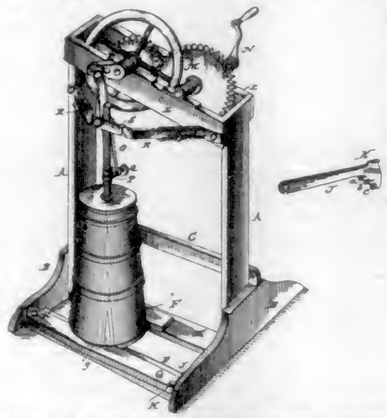
296,294. INSULATED CONDUCTOR. THEODORE MINER, Brooklyn, N. Y. Filed May 17, 1882. (No model.)

Claim.—1. In an insulated electric conductor, the combination of a metallic conductor or conductors, grooved sections of wood inclosing the same, and a longitudinally-folded strip of sheet metal around the wooden sections, forming a protection thereto, substantially as set forth.



2. An insulated conductor, consisting of one or more conductors, a wooden insulation thereabout formed of grooved sections, inclosing the wires, and an exterior metallic protection inclosing and protecting the wooden insulation, substantially as set forth.

296,295. PISTON-ROD PACKING. THEODORE A. MYERS, Wheeling, W. Va. Filed Nov. 30, 1883. (No model.)

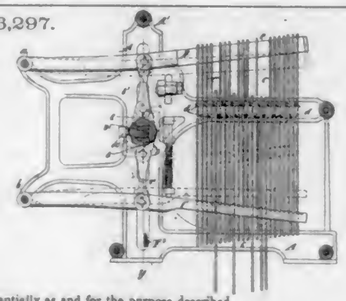


Claim.—1. The herein-described improvement in packing for piston-rods and stems of valves, consisting of a chamber having an annular space, d, and a hole through which passes the rod, and which allows the steam to enter the annular space, and a packing-tube, g, within the chamber, having divisions made by longitudinal slits g′, and one end of the tube being secured to the cap of the chamber, whereby steam entering the annular space around the packing-tube causes it to contract and the exhaust of the steam allows it to expand, as set forth.

2. A packing-tube for piston-rods and stems of valves, having divisions made by longitudinal slits g′ and inward projections n on the expansible ends of the several divisions, as set forth.

296,296.

296,296. CHURN. SAMUEL C. PYLE, Centreville, Iowa. Filed Dec. 5, 1883. (No model.)



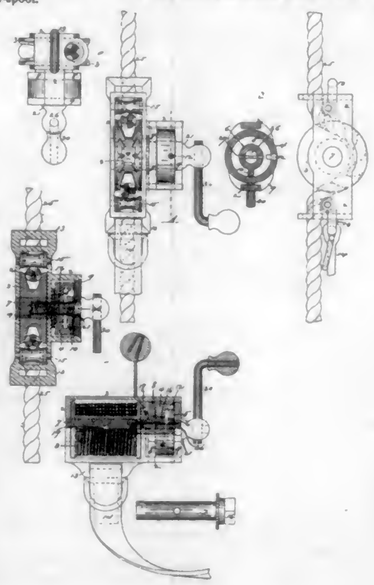
Claim.—The combination of the frame having the motor mechanism and fixed recessed cleat F, the adjustable guide-box composed of the extensible arms E and latch-piece S, the hinged recessed cleat or lock-bar G, and the latch J K, having steps or offsets *a b c*, adapted to engage the free end of the lock-bar, substantially as and for the purpose shown and set forth.

296,297. SHEDDING MECHANISM FOR LOOMS. VERNON ROYLE and JOHN ROYLE Jr., Paterson, N.J. Filed Dec. 6, 1882. (No model.)

Claim.—1. The combination, with the lifting-bar or knife, the lower bar or grid, lifting-wires and needles connected with said wires, a pattern-cylinder, and means for operating the same, of a rock-shaft extending between said bars, mechanism connected directly with said rock-shaft, for imparting an oscillating motion thereto, and toggle-like connections between opposite sides of the rock-shaft and said bars, through which both bars are operated by the rock-shaft, substantially as and for the purpose described.

2. The combination, with the upper bar or knife, the lower bar or grid, the lifting-wires, the needles connected with the lifting-wires, a pattern-cylinder, and means for operating it, of a hollow rock-shaft and connections for operating said bars, bearings for holding the rock-shaft against longitudinal movement, an inner shaft of square or analogous transverse section, fitted to and capable of adjustment lengthwise through said hollow rock-shaft, and mechanism for oscillating said inner shaft, substantially as and for the purpose described.

296,297.

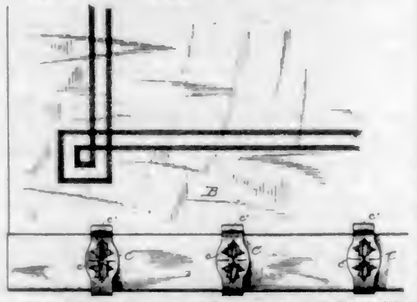


3. The combination, with the bars B C, the lifting-wires *c*, and needles *d*, the pattern-cylinder, and means for operating it, of the hollow rock-shaft D, provided with the arms *e*, the links *e'*, the sliding inner shaft, D', and mechanism for oscillating it, the pivoted bearing *f*, the sleeve *f*³, the yoke E, the support E', wherein said yoke is vertically adjustable, and the set-screw *f*³, all substantially as described.

4. The combination, with the bars B C and means for operating them, the lifting-wires *c*, and the horizontally-arranged needles *d*, of the cylinder F, provided with two sets of holes, a vibrating frame carrying said cylinder, means for operating said frame, and devices whereby said frame, and with it the cylinder, may be shifted in a direction lengthwise of the cylinder and retained in position after shifting, substantially as and for the purpose described.

5. The combination, with the bars B C, means for operating them, the lifting-wires *c*, and the needles *d*, of the cylinder F, provided with two sets of holes, a vibrating frame carrying said cylinder, mechanism for operating said frame, the bracket or bearing G', provided with the reverse inclines *i i'*, and the pivoted latch H, provided with arms *j j'*, substantially as and for the purpose described.

296,298. FIRE-ESCAPE. EDWIN F. SHERMAN, Springfield, Mass. Filed Aug. 22, 1883. (No model.)

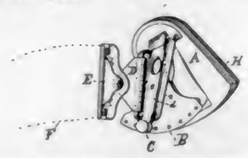


Brief.—A fire-escape in which the turning of the rope-spool turns it onto the screw, binding the friction plates and disk tightly together, preventing the disk, which is rigid upon the rope-spool shaft, and the rope-spool from rotating. By turning the crank secured to the screw the screw is turned out of the spool just enough to loosen the plates and disk and permit the rotation of the spool. A lug formed on the collar secured to the screw comes in contact with a projection within the groove in the friction-disk, preventing the screw from turning too far out of the rope-spool.

Claim.—1. The combination, with a frame, of a shaft having a spool secured thereto or made thereon, adapted to receive a rope or cord and to revolve in bearings in said frame, a recessed disk secured to said shaft or spool to revolve therewith, a screw adapted to be turned in a threaded hole in said shaft or spool, and provided with a projecting lug to impinge against a projection or pin in said disk, and a movable plate secured in said frame, and adapted to be forced against said disk by said screw to stop the rotation of the spool and disk when the spool is turned onto said screw, and to release the disk and spool and permit their rotation when the screw is turned out of the spool, substantially as described.

2. The combination, with a frame, of a shaft having a spool secured thereto or made thereon, adapted to receive a rope or cord and to revolve in bearings in said frame, a recessed disk secured to said shaft or spool to revolve therewith, a screw adapted to be turned in a threaded hole in said shaft or spool, and provided with a projecting lug to impinge against a projection or pin in said disk, and two plates, one movable and secured in said frame, and adapted with a movement to clamp said disk between them when the spool is turned onto said screw, and to release the disk and spool and permit their rotation when the screw is turned out of the spool, substantially as described.

296,299. CURTAIN-FIXTURE. GEORGE E. SWAN, Beaver Dam, Wis. Filed Jan. 23, 1884. (No model.)



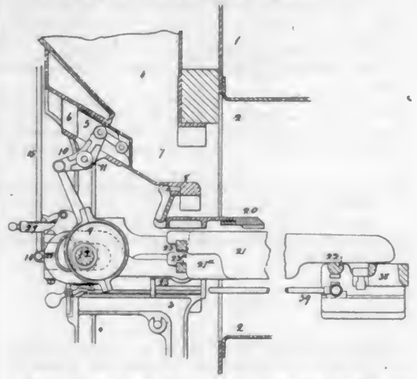
Claim.—1. As an improvement in securing curtains to their weight-sticks, the combination, with the weight-stick and the curtain fabric having its end folded around the same and unsecured thereto, of a series of spring-clasps binding this folded end securely to the stick, said clasps being adapted to be removed when it is desired to disconnect the curtain from the stick, substantially as set forth.

2. The combination of the weight-stick, the curtain fabric folded around the same, with its edge within the fold, as set forth, and unsecured to the stick, and the approximately U-shaped securing-clasps formed with convex spring side portions, and having the outwardly-curved top ends, whereby the fabric is bound to the stick, substantially as set forth.

3. The combination of the weight-stick, the curtain fabric having its end folded around the stick to retain the same, and unsecured to the stick, and approximately U-shaped securing-clasps binding the folded end permanently to the stick and against any movement or disengagement, the stick and curtain being disconnected when the clasps are removed, substantially as and for the purpose set forth.

4. As an improved article of manufacture, the herein-described clasp for weight-sticks, bent up into approximately U shape, with convexed spring side portions, and having its ends curved outwardly, whereby the clasp may be pressed onto the stick or disengaged therefrom without engaging or injuring the curtain fabric, substantially as set forth.

296,300. HERNIAL TRUSS. WILLIAM L. TUCKER, Syracuse, N. Y. Filed Oct. 29, 1883. (Model.)



Claim.—1. In a hernial truss, a swiveled hook connecting the belt to the pad, constructed substantially as above described.

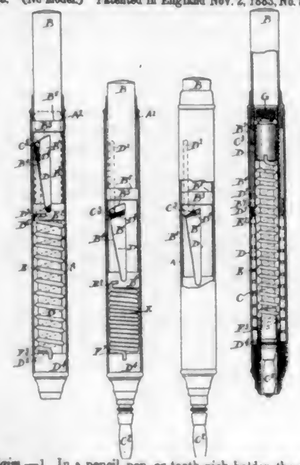
2. In a hernial truss, a face-plate constructed with converging slots, substantially as and for the purposes specified.

3. The combination of the swiveled hook D and face-plate C, provided with converging slots, and together creating a hinge between the belt and pad, constructed and operating together, substantially as described, for the purposes specified.

296,301. APPARATUS FOR FEEDING FUEL TO AND IN FURNACES. THOMAS VEARS the elder, JOHN VEARS the elder, THOMAS VEARS the younger, and JOHN VEARS the younger, Liverpool, County of Lancaster, England. Filed Nov. 21, 1883. (Model.)

Claim.—1. In a grate, the combination of a series of fire-bars with a rotating shaft provided with cams for imparting a conjoint forward motion and a serial return motion to said bars, retaining-pawls 36, and releasing-cam 37, substantially as and for the purposes specified.

2. The combination of fire-bars 21ª, carrier 23ª, pulleys 24ª, guides 25, straps 26ª, forks 27ª, shaft 12, cams 35, abutments 34, pawls 36, and releasing-cams 37.



3. The combination of fire-bars 21 21ª with grooved carrier 22 and carriers 23 23ª, supported on guides 25 by pulleys 24 24ª.

4. The combination of a steam-jet pipe, 39, bearing-bar 22, and fire-bars moved conjointly and in series by means of a shaft, 12, and cams.

5. The combination of a steam-jet pipe, 39, with fire-bars moved conjointly and in series, a bearing-bar, 22, and a perforated bridge, 38.

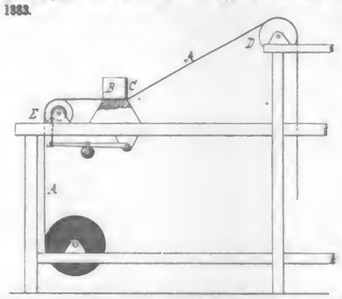
6. The combination of fire-bars moved conjointly and in series, when provided with retaining-pawls 36 and releasing-cams 37, with hopper-feed apparatus, as illustrated and described.

296,302. PENCIL, PEN, OR TOOTH-PICK CASE. ALFRED HAVILAH WOODWARD, Birmingham, County of Warwick, England. Filed Dec. 12, 1883. (No model.) Patented in England Nov. 2, 1883, No. 5,224.

Claim.—1. In a pencil, pen, or tooth-pick holder, the combination, with an exterior casing and a movable cap, of a movable mount adapted to be projected from the holder, and means, as set forth, whereby said mount is automatically locked in such projected position by depressing said cap, and to be released from such locked position by revolving the cap, substantially as described.

2. In a pencil, pen, or tooth-pick holder, the combination of an exterior casing and a movable cap, with a movable mount capable of independent movement with relation to said cap, by means substantially as set forth, and adapted to be projected from the casing and automatically locked in such projected position by depressing said cap, and a coiled spring, which will retract said mount when the cap is revolved, substantially as described.

3. In a pencil, pen, or tooth-pick holder, the combination of exterior casing, a slotted interior casing, and a slotted movable cap, with a movable mount having a pin which projects through the slots in the cap and the interior casing, and, when the mount is projected, engages with a lateral slot opening into said slot in the interior casing, substantially as described.



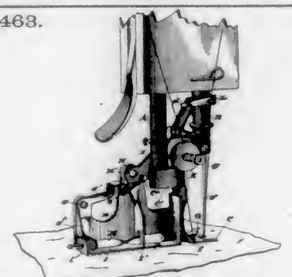
4. In a pencil, pen, or tooth-pick holder, the combination of exterior casing, A, and movable cap B, having a triangular slot, B^2, and spring E, with the interior casing or tube, D, having bayonet-slot D^2 D^3, and mount C, having pin C^2 and spring F, substantially as described.

296,303. POLISHING-LIQUID. EUGEN LUDWIG, Hoboken, N. J. Filed June 9, 1883. (No specimens.)

Claim.—A polishing-liquid composed of Vienna lime, oil of turpentine, linseed-oil, and gasoline, prepared substantially in the manner and for the purpose set forth.

REISSUES.

10,462. MANUFACTURE OF OIL-CLOTH. ALEXANDER F. BUCHANAN, Montrose, N. Y. Filed Mar. 3, 1884. Original No. 276,765, dated May 1, 1883.



Claim.—1. The within-described process for decorating oil-cloth, which consists in exposing a traveling web of cloth to the action of a series of daubing devices containing colors of different shades, thus coating the web in parallel lines or sections with such colors, then drying the colors and graining the entire coated surface of the web, by a suitable color, in imitation of wood, then drying the graining-color, and, finally, varnishing the coated and grained surface.

2. The open-bottom daubing-troughs arranged side by side, and each expanded horizontally toward the rear edge, where the troughs meet, in combination with the spreading-blade common to the series of troughs, and suitable rollers for guiding and impelling a web of cloth under said troughs and blade.

3. As a new or improved article of manufacture, the oil-cloth herein described, having its surface decorated in imitation of stripe of wood of different shades.

10,468. EMBROIDERING ATTACHMENT FOR SEWING-MACHINES. GEORGE W. BAKER, Cleveland, Ohio, assignor to the White Sewing Machine Company, same place. Filed Nov. 26, 1883. Original No. 274,548, dated Mar. 27, 1883.

10,468.

Claim.—1. In a sewing-machine embroidering attachment, the combination, with a shaft provided with a looper having an eye for the passage of the embroidery-thread, of means actuated by the needle-bar and adapted to engage the looper-shaft and reciprocate the same and move the looper away from the needle, and also rotate the looper through a half-circle, and then move the looper toward the needle and rotate it back to its original position, substantially as set forth.

2. In a sewing-machine embroidering attachment, a rotary reciprocating spiral shaft arranged horizontally and operated by the needle-bar, and carrying a looper provided with arms adapted to engage the embroidering-thread, one of said arms being provided with an eye, substantially as set forth.

3. In a sewing-machine embroidering attachment, a horizontal spiral shaft provided with a looper having arms adapted to loop the embroidering-thread, said shaft being operated from the needle-bar by bell-cranks to allow the needle of the machine to pass through the loop of said thread, substantially as set forth.

4. In a sewing-machine embroidering attachment, the combination, with a looping device, of a spiral shaft and bifurcated bell-cranks engaging the shaft, substantially as set forth.

5. In a sewing-machine embroidering device, the combination, with a spiral shaft and a bell-crank adapted to impart a reciprocating motion to said shaft, of a second bell-crank adapted to engage with the first and also with the shaft, whereby the said shaft is moved forward in a horizontal direction, substantially as and for the purpose set forth.

10,464. CURTAIN-PIN. JOHN DAY, Brooklyn, N. Y. Filed Feb. 13, 1884. Original No. 275,160, dated Apr. 3, 1883.

Claim.—1. The improved curtain-pin comprehending the ornamental head *a*, the metal back plate, *c*, the clamping-rim, *b*, the screw-stem *f*, riveted at one end to the metal back plate, and the hollow ornamental shank surrounding the screw-stem, substantially as set forth.

2. The curtain-pin having an ornamental head, a metallic back, and a screw-stem fastened to such metallic back, a wooden shank, A, with an ornamental exterior surface, and a central hole through which passes the screw-stem, substantially as and for the purposes set forth.

3. The curtain-pin having an ornamental head and a metallic back, a screw-stem attached to the metallic back, a tubular shank passed over the screw-stem, and a feather or projection to prevent the tubular shank being rotated upon the screw-stem, substantially as specified.

PHOTO-LITH. NORRIS PETERS WASHINGTON D.C.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE UPTON.

Decided March 21, 1884.

1. PARAGRAPH 1 OF RULE 93 AND THE BEGINNING OF RULE 94 CONSTRUED—CONFLICT IN CLAIMS DEFINED.

The spirit of the rule of interference is not that claims must conflict in terms in order to constitute an interference, but that the subject-matter claimed must conflict.

It is not essential that the claims should be so alike that the claim in any one case will apply just to the matter or device of the other or others.

If the claim of one party will include that of another, there is an interference in fact.

It should be settled in the Patent Office who is entitled to the broad claim, and this should appear as the result of an interference proceeding.

2. SUBSEQUENT PATENTS WITH BROADER CLAIMS.

Neither the spirit of the law nor public policy sanctions the granting of patents with specific claims while applications with generic claims are still pending, the objection being that, whether the application with the generic claim belongs to the same party who has a specific claim under the genus, or is an application of a different party, a patent covering by a generic claim, if a subsequent patent, improperly extends the monopoly.

APPEAL from the Primary Examiner.

LIGHTNING-CONDUCTORS.

Application filed June 25, 1883.

Messrs. Dyer & Seely for the applicant.

BUTTERWORTH, *Commissioner:*

The Examiner says:

This appeal is taken from the action of the Primary Examiner refusing a patent to the applicant, in view of Patent No. 282,449 to T. H. Dodge, July 31, 1883, and involves a question of practice as to the right of the Examiner to cite as a reference a patent granted on an application pending at the same time with the application under consideration.

The facts are as follows:

The application at issue was filed June 25, 1883. That of the patentee, Dodge, was filed December 15, 1879, and a patent accordingly issued as above July 31, 1883. No question is here raised as to the pertinency of the reference from lack of identity of subject-matter. In fact, it is acknowledged to be generically the same in both. Dodge, the patentee, made one very limited claim to the construction shown and described. The applicant makes broad claims to the genus, and denies the right of the Examiner to cite said patent, holding that under the rules either an interference should be declared or both patents allowed to issue, and cites Rule 74 as sustaining his views. No interference exists nor has at any time existed.

The Examiner is in error as to there being no interference. An interference does and did exist. The spirit of the interference rule is not that claims must conflict in terms in order to constitute an interference, but that the subject-matter claimed must conflict. It is not necessary that the claims should be so alike that the claim in either case will apply just to the matter or device of the other. If the claim of one party will include that of the other, there is an interference in fact. The Dodge case having got to issue, the Examiner was right in citing the patent to the applicant. It should be settled in the Patent Office who is entitled to the broad claim, and this should appear as the result of an interference proceeding.

Neither the spirit of the law nor public policy sanctions the granting of patents with specific claims while applications with generic claims which include the specific claim allowed, are still pending, the objection being that whether the application with the generic claim pending belongs to the same party who has a specific claim under the genus, or is an application of a different party, a patent covering by a generic claim, if a subsequent patent, improperly extends the monopoly.

The applicant in the present case will either stand rejected on the patent of Dodge or make the affidavit required by the Examiner and request an interference.

The Examiner will be guided in other cases by the construction of the rule herein announced.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court—District of California.

THE GIANT POWDER COMPANY *v.* THE SAFETY NITRO POWDER COMPANY *et al.*

Decided February 18, 1884.

1. If a patent is inoperative so far as not to cover all that the party is entitled to claim, it is inoperative within the meaning of the provisions of the statute relating to reissues.
2. The question whether there is a fraud in the surrender and application for a reissue is for the officers of the Patent Office alone to decide, and their determination is conclusive in a collateral proceeding. The court can only examine and pass upon what appears upon the face of the patent, and see whether there is anything to indicate its invalidity or render it void upon its face. All questions of fact behind the patent are to be examined, heard, and conclusively determined by the Commissioner of Patents.
3. Where an original patent is valid, but the reissue based thereon is invalid, there is no good reason why a second reissue embracing the valid claim alone of the original patent would not be valid.
4. The object of a plea, where there is some certain single issue requiring but little evidence that will dispose of the whole case, if sustained, is to try that issue without putting the parties to the expense of the trial of the case at large, and pleas are limited to a single defense or issue, unless by permission of the court the defendants are allowed to plead double. *Held* that the plea in this case does not conform to this rule, and besides comes too late.
5. Reissued Letters Patent No. 10,267, issued January 9, 1883, upon the application of Alfred Nobel, to the Giant Powder Company as assignee, for an improvement in explosive compounds, examined and sustained.

Mr. George Harding and *Mr. Hall McAllister* for the complainant.

Mr. M. A. Wheaton for the defendants.

SAWYER, *C. J.:*

In the case of *The Giant Powder Company* v. *The Safety Nitro Powder Company*, a motion for leave to file an amended plea setting up several distinct defenses has been argued in connection with the argument as to the sufficiency of the plea already filed. The Giant Powder Company was the owner of the original patent, No. 78,317. This patent was surrendered and reissued as Patent No. 5,619. Afterward for the purpose of correcting a clerical error, Patent No. 5,619 was surrendered and reissued as Patent No. 5,799. A suit upon this last patent was decided by Mr. Justice Field in this court, in which it was held that the reissue was broader in its scope than the original invention as described in the patent, the original patent, No. 78,317, being for a combination of nitro-glycerine with some non-explosive absorbent material, while the reissue embraced explosive as well as inexplosive absorbents; and Mr. Justice Field held that in that particular the reissue was broader than the original patented invention, and for that reason void. (*Giant Powder Co.* v. *Cal. Vigorit P. Co.*, 6 Sawyer, 509.) This being so, Patent No. 5,799 was surrendered and reissued again in Patent No. 10,267; and in Patent No. 10,267 both the specifications and the claim are identical with those of the original patent, No. 78,317, which had before been surrendered and reissued in the patents before mentioned. These facts are set up in the plea, and it is claimed that Patent No. 10,267 is void, it being identical with the original surrendered patent, No. 78,317. That patent was surrendered as being inoperative, and as a reissue can only be had where the patent is inoperative it is claimed that the original patent must have been held to be wholly inoperative. I think counsel are mistaken in that proposition. A patent may be inoperative, in my judgment, when it is inoperative in part. I do not think it must be absolutely inoperative in its entirety. If it is inoperative so far as not to cover all that the party is entitled to claim, and what he is entitled to claim appears in the specifications, it being inoperative to that extent, I think it would be inoperative within the meaning of the provisions of the statute, and entitle the party to a reissue. It does not necessarily follow that Patent No. 78,317 was wholly inoperative or void or useless. I am not aware that it has ever been held to be utterly invalid in all its parts. The question of fraud in procuring the reissue, in my opinion, does not arise on this plea, because the question as to whether a mistake has been innocently made in not covering by the patent all that the party was entitled to cover. The question whether there is a fraud in the surrender and application for a reissue is for the officers of the Patent Office alone to decide, and their determination is conclusive in a collateral proceeding. This court can only examine and pass upon what appears upon the face of the patent, and see whether there is anything to indicate its invalidity or render it void upon its face. All questions of fact behind the patent are to be examined, heard, and conclusively determined by the Commissioner of Patents.

This principle has been affirmed over and over again by the Supreme Court. I do not think the fact that the patent was reissued in the indentical terms of the original patent, No. 78,317, renders it void. The specifications of the patent last surrendered were amended by omitting the objectionable parts. Patents are constantly reissued for portions of the specifications and claims in the identical language of the original patent. Each claim in its nature substantially and in effect covers a distinct and separate invention, and is an independent patent in substance and effect. It might be the subject of an independent patent, and if in any reissue, so far as the patents are identical, those claims are valid in the reissued patent having another or additional valid claim, or a modified claim, or some other change in the specifications. I do not perceive why they would not be valid in a patent limited to them alone. If they can all stand together, I do not see why a reissued patent covering the identical claims by themselves may not stand and be valid.

Patents may be reissued in divisions. It is not necessary that all claims in the reissue should be included in one patent. They are often issued in divisions, and I suppose a patent might be reissued in divisions in the identical language as to some of the claims, the changes being included in another and separate division or patent—that is to say, all claims or inventions which are fully covered and operative may be reissued by themselves in one division in the identical language of the original surrendered patent, and all other claims, or the amendments to the specifications, and covering the invention shown by the amended specifications, in another division or patent. I do not see why a part of the original claims may not be reissued in one division in identically the same language as in the original patent, and the rest in another. If this can be done without affecting the validity of the reissue, and a party finds that he has made a mistake and surrendered a valid patent and obtained a void reissue, I do not perceive why he may not fall back upon his old patent and have it reissued or newly-amended specifications embodying that portion which is valid. If parts which are identical are valid in connection with other parts in a reissue, I do not perceive why they should not be valid in a reissue containing no additional matter. Now, in this particular class of cases it is quite extensively claimed by the bar, I think, that the Supreme and some of the circuit courts have made something of a departure in some of their late decisions upon reissues, including the reissue in question. Mr. Justice Field held Patent No. 5,799 to be void, while several of the circuit judges at the East held it to be valid.

Where courts make a mistake, it may very properly be conceded that a party may very well make an honest mistake himself. On the argument of the plea, my attention has been called for the first time to the case of *Gage* v. *Herring*, (107 U. S., 646,) in which, I think, the principle involved in the plea is distinctly determined.

The court says:

> The invalidity of the new claim in the reissue does not indeed impair the validity of the original claim, which is repeated and separately stated in the reissued patent. Under the provisions of the patent act, whenever through inadvertence, accident, or mistake, and without any willful default or intent to defraud or mislead the public, a patentee in his specification has claimed more than that of which he was the original and first inventor or discoverer, his patent is valid for all that part which is truly and justly his own, provided the same is a material and substantial part of the thing patented and definitely distinguishable from the parts claimed without right; and the patentee, upon seasonably recording in the Patent Office a disclaimer in writing of the parts which he did not invent or to which he has no valid claim, may maintain a suit upon that part which he is entitled to hold, although in a suit brought before the disclaimer he cannot recover costs. (Rev. Stats., secs. 4917, 4922; *O'Reilly* v. *Morse*, 15 How., 62, 120, 121; *Vance* v. *Campbell*, above cited.) A reissued patent is within the letter and the spirit of these provisions.

If a reissued patent is within the letter and spirit of these provisions, as stated, and "the invalidity of the new claim in the reissue does not indeed impair the validity of the original claim, which is repeated and separately stated in the reissued patent," it is not apparent to my comprehension why a second reissue embracing the valid claim alone of the original patent would not be valid. I cannot, therefore, say that the Patent No. 10,267 is void by reason of anything asserted in the plea upon the grounds set forth. The plea must, therefore, be overruled.

With reference to the filing of the proposed so-called amended plea, I think it is not within the reasonable discretion of the court to allow it to be filed at this late day. In view of the circumstances of this case, as they appeared before this court in the various stages of the proceedings, I think it would be an abuse of its discretion to allow the plea to be filed, if it were otherwise a proper plea. In fact, the proposed amended plea sets up all the defenses that can be made to a patent, and it would involve the trial of the whole case with the exception of the single question of infringement.

The object of a plea, where there is some certain, single issue requiring but little evidence that will dispose of the whole case if sustained, is to try that issue without putting the parties to the expense of the trial of the case at large, and pleas are limited to a single defense or issue, unless by permission of the court the defendants are allowed to plead double. If the court allows this so-called amended plea to be filed, it would allow parties to try all the issues in the case with the exception of the one issue as to infringement, and it would be necessary to try the whole case on the merits by piecemeal. Besides, it comes too late. After this plea was originally filed it was stipulated that it stand for an answer, so far as it was available as a defense. An answer and replications were filed, and the parties commenced taking testimony.

In the course of taking the testimony the attorney for the defendant ascertained the importance of having the case decided on his plea, provided it was good, and thought he was at a disadvantage in his then position. He therefore moved upon the affidavits to be relieved from the stipulation, taking the plea for an answer. He claimed, among other things, to have misunderstood the practice of the court. After argument the court, thinking there might be something in the plea, as this exact point had never been decided so far as it was aware, and, if good, it would save the expense of a trial, relieved the party from the stipulations and allowed the plea to be set down for argument. I did not think the exact question had ever been presented before, and when the argument was made upon the stipulation I had not seen the case of *Gage* v. *Herring*, *supra*, which I think decides the principle. I thought there was perhaps something in the plea. At all events I thought it was worthy of being carefully considered, for, if the plea is good, and the patent absolutely void upon its face, I saw no occasion for putting the parties to a great expense of going to a trial of all the issues in the case. I therefore set aside the stipulation and allowed the defendant to withdraw its answer in the case and set the plea down for a hearing. It was set down for a hearing and continued from time to time, until finally it came up for argument, counsel from Philadelphia coming on to argue the case on the validity of the plea. When the plea was called for argument, it was found that there had been a change of attorneys, and an application was made by the substituted attorney at the moment for leave to file the proposed so-called amended plea, which presents all the issues in the case with the exception of the one issue of infringement. I think, under the circumstances, it would be improper, and it would be an abuse of discretion, to allow this so-called amended plea to be filed at this late day.

Leave to file the proposed amended plea is therefore denied.

U. S. Circuit Court—Western District of Pennsylvania.

LLOYD *v.* MILLER *et al.*

Decided February 12, 1884.

LLOYD—PUDDLING-FURNACES.

Letters Patent No. 135,650, granted February 11, 1873, to E. Lloyd, for an improvement in puddling-furnaces, construed and sustained, but held not to be infringed by the defendants.

Mr. D. F. Patterson and *Mr. E. C. Cotton* for the complainant.

Messrs. Bakewell & Kerr for the defendants.

ACHESON, *J.:*

The plaintiff's Letters Patent No. 135,650, dated February 11, 1873, are for an improvement in furnaces for boiling, heating, and puddling iron. The objects to be attained thereby, as stated in the specification, are the prevention of the rapid burning out of the hearth-plate and the base of the chimney or stack and the facilitating of the combustion of the inflammable gases in the furnace by supplying air thereto, thereby utilizing fuel and preventing largely the escape of smoke.

The furnace described in the specification and accompanying drawing, aside from the plaintiff's improvement, is a puddling-furnace of the well-known kind, having the ordinary exit-flue leading into the high chimney or stack.

The invention is thus described: "Beneath the hearth-plate *c* and a plate, *c*," (which is merely the continuation of the hearth-plate under the neck,) "is an air-conduit, G, which extends from the ash-pit opening E to the back wall of the stack C, and communicates with this stack at its base by means of an opening, *g*. This will allow" (the specification proceeds to declare) "a current of air induced by the draft of the stack C to enter the stack at its junction with the flue *h*."

The resulting advantages thereby secured (as is affirmed) are the following: First, the current of air so entering the stack will "violently turn back the flames rushing through the flue *h*," retard the escape of inflammable gases, and, mixing therewith, promote their combustion in the furnace; second, the air in its passage through the conduit G will absorb heat from the hearth-plate and plate *c*, and, keeping down their temperature, preserve them; third, "and as the air impinges on the walls of the chimney at its base, these walls will be protected from the intense heat to which they are subjected in other puddling-furnaces."

The claim is in these words:

> The air-conduit G, arranged beneath the hearth and communicating with the chimney or stack at the base thereof, for the purposes and in the manner substantially as described.

It was not a new thing to let air circulate underneath the hearth of a puddling-furnace to cool and preserve it; and it is shown that for many years prior to the plaintiff's invention such furnaces were constructed with a passage-way or conduit for air beneath the hearth and extending from the ash-pit opening to the back-wall of the stack, with an aperture through that wall outwardly into the external air, so that this conduit was supplied with air from both ends, the fresh air coming in at the stack-end passing underneath the base of the stack on its way to the ash-pit. Nor was it new to promote combustion in the furnace by a supply of heated air drawn from underneath the puddling-hearth. I incline, however, to think that the plaintiff's method of construction, whereby communication is secured between the air-conduit G and the base of the stack by means of an opening into the stack, is new, at least in puddling-furnaces; and, assuming that the defense of anticipation has not been made out successfully, I address myself to the inquiry whether the defendants infringe the plaintiff's patent.

The distinguishing feature of the plaintiff's invention is the opening *g* into the stack at its base, whereby a current of air induced by the draft of the stack is permitted "to enter the stack." Great prominence is given to that opening in the specification and accompanying drawing, and, although not expressly mentioned in the claim, it is necessarily implied. It is, indeed, indispensable, for without the opening *g* there would be no communication whatever between the air-conduit G and the chimney or stack. Every advantage specified or contemplated is altogether due to that opening, which, in my judgment, is of the essence of the invention.

The alleged infringing furnaces were constructed by William Swindell, under three patents, for improvements in metallurgic furnaces, granted to him in the years 1875 and 1878. In the defendants' furnaces the gas from the producer, where the fuel is consumed, is admitted to the bed through a number of ports arranged below an equal number of hot-air ports. A series of air-flues pass under the bed, but not in contact with the bottom, and over the crown or arch of the furnace to the end where the gas enters, and the gas and air there meeting pass together into the combustion-chamber, which contains the iron to be worked. The ingoing air is heated, and becomes more and more heated as it passes over the arch toward the discharge-ports by reason of the flues through which it courses being in contact with alternate flues which conduct the waste-heat from the combustion-chamber. Combustion begins when the gas from the producer meets the hot air, and, uniting, they enter the bed. The waste and heated products of combustion pass out of the opposite end of the bed into flues which extend over the crown or arch of the furnace and lead to the stack. No part of the air enters the waste-flues without first passing through the combustion-chamber, and it reaches the stack altogether through the waste-flues.

It cannot be pretended, and, indeed, it is not urged, that the method of construction found in the defendant's furnaces secures the first two above-enumerated advantages which appertain to the plaintiff's invention. Swindell's air-conduits have no tendency to cool the hearth-plate or bottom of the furnace, and he does not conduct into the stack a current of air to retard the escape of inflammable gases or promote their consumption in the furnace. There is, indeed, no connection or direct communication between his air-flues and the stack, the air, as we have seen, reaching the stack through the waste-flues after it has fully served its purpose in the combustion-chamber. It is however earnestly contended that Swindell, by a mere structural or formal change, has secured, and that the defendants enjoy, the third advantage due to the plaintiff's invention—viz., protection to "the walls of the chimney at its base" from the intense heat to which they are subjected in other puddling-furnaces.

The plaintiff's theory is that the arched waste-flues of the defendants' furnace are part of the chimney or stack, which, he insists, begins at the point where these flues leave the combustion-chamber, and, as at that point the air passing in through the air-flues absorbs heat from and tends to preserve the walls of the waste flues, he maintains that there is an infringement of his patent.

I have great difficulty in accepting the hypothesis that the arched waste-flues are part of the chimney or stack within the meaning of the plaintiff's patent. It is plain to me that when his specification speaks of the chimney it means the high stack, the two words being used as equivalents. Now, I do not see that the defendants' arched waste-flues are any more a part of the chimney or stack than is the flue *h* in the plaintiff's furnace. The function of each is to convey the waste heat, smoke, &c., from the combustion-chamber to the stack; but if the arched waste-flues be considered as part of the chimney or stack, the fact remains that there is no communication between the air-flues and waste-flues by means of an opening. In truth, there is no communication whatever between them. They alternate and are built side by side up, over, and around the arch of the furnace; but they are completely separated from each other by brick walls four and one-half inches thick.

It is also an assumption of the plaintiff that the defendants' arched air-flues are "compartments of the chimney;" but surely they come not within his own counsel's definition of a chimney—viz., "the flue which leads from the combustion-chamber to conduct waste heat and smoke away." They perform no such service. Their function is to supply the working-chamber with hot air to promote a vivid combustion. Incidentally the ingoing air does absorb heat from the common division-walls between the two sets of flues, and thus tends to the preservation of these walls; but this is not effected by any means disclosed by the plaintiff's patent, nor by any method analogous thereto or suggested thereby.

In no possible view of the case can the plaintiff's pretentions be sustained without holding that the opening *g* into the chimney or stack for the admission thereto of a current of air is non-essential, and that external contact with the walls of the chimney or stack at its base is "communication" within the meaning of his specification. But such constructive expansion of the specification is, it seems to me, utterly inadmissible. Moreover, a claim so comprehensive could scarcely stand, in view of the prior state of the art.

Let a decree be drawn dismissing the bill, with costs.

Attorneys.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., March 28, 1884.

SIR: I am directed by the Secretary to inform you that he has ordered that Charles Koerner, of Alton, Illinois, be not recognized from and after this date as attorney in the prosecution of any claim or other matter before the Department of the Interior or any bureau thereof.

I am, sir, very respectfully, your obedient servant,
AMOS HADLEY,
Acting Chief Clerk.
The Commissioner of Patents.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., March 29, 1884.

SIR: I am directed by the Secretary to inform you that he has ordered that Samuel J. R. Wilson, of Fairfield, Wayne county, Illinois, be not recognized from and after this date as attorney in the prosecution of any claim or other matter before the Department of the Interior or any bureau thereof.

I am, sir, very respectfully, your obedient servant,
AMOS HADLEY,
Acting Chief Clerk.
The Commissioner of Patents.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., March 29, 1884.

SIR: I am directed by the Secretary to inform you that he has ordered that David McWilliams, of Monticello, Piatt county, Illinois, be not recognized from and after this date as attorney in the prosecution of any claim or other matter before the Department of the Interior or any bureau thereof.

I am, sir, very respectfully, your obedient servant,
AMOS HADLEY,
Acting Chief Clerk.
The Commissioner of Patents.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., March 29, 1884.

SIR: I am directed by the Secretary to inform you that he has ordered that Frederick E. Abbott, of Worcester, Massachusetts, be not recognized from and after this date as attorney in the prosecution of any claim or other matter before the Department of the Interior or any bureau thereof.

I am, sir, very respectfully, your obedient servant,
AMOS HADLEY,
Acting Chief Clerk.
The Commissioner of Patents.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., March 29, 1884.

SIR: I am directed by the Secretary to inform you that he has ordered that Henry Eatherton, of Monticello, Piatt county, Illinois, be not recognized from and after this date as attorney in the prosecution of any claim or other matter before the Department of the Interior or any bureau thereof.

I am, sir, very respectfully, your obedient servant,
AMOS HADLEY,
Acting Chief Clerk.
The Commissioner of Patents.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., April 1, 1884.

SIR: I am directed by the Secretary to inform you that he has ordered that G. H. Chandler, of Karns City, Butler county, Pennsylvania, be not recognized from and after this date as attorney in the prosecution of any claim or other matter before the Department of the Interior or any bureau thereof.

I am, sir, very respectfully, your obedient servant,
AMOS HADLEY,
Acting Chief Clerk.
The Commissioner of Patents.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., April 3, 1884.

SIR: I am directed by the Secretary to inform you that he has ordered that Albert T. Summers, of Decatur, Illinois, be not recognized from and after this date as attorney in the prosecution of any claim or other matter before the Department of the Interior or any bureau thereof.

I am, sir, very respectfully, your obedient servant,
AMOS HADLEY,
Acting Chief Clerk.
The Commissioner of Patents.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., April 1, 1884.

SIR: I am directed by the Secretary to inform you that he has ordered that J. G. Bigelow, of Washington, D. C., be not recognized from and after this date as attorney in the prosecution of any claim or other matter before the Department of the Interior or any bureau thereof.

I am, sir, very respectfully, your obedient servant,
AMOS HADLEY,
Acting Chief Clerk.
The Commissioner of Patents.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., April 3, 1884.

SIR: I am directed by the Secretary to inform you that he has ordered that William H. Woodward, of Carbondale, Jackson county, Illinois, be not recognized from and after this date as attorney in the prosecution of any claim or other matter before the Department of the Interior or any bureau thereof.

I am, sir, very respectfully, your obedient servant,
AMOS HADLEY,
Acting Chief Clerk.
The Commissioner of Patents.

DESIGNS.

14,944.—ORNAMENTATION OF AN UMBRELLA OR PARASOL.—*William A. Drowen*, Philadelphia, Pa. Application filed January 2, 1884. Term of patent 7 years.

14,945.—COOKING-STOVE.—*William M. Gartshore*, London, Ontario, Canada. Application filed March 3, 1884. Term of patent 7 years.

14,946 and 14,947.—FORK.—*Hubert C. Hart*, Unionville, Conn. Applications filed February 7, 1884. Term of patents 7 years.

14,948.—EARTHENWARE DISH.—*Edwin Haviland*, Plainfield, N. J. Application filed December 4, 1883. Term of patent 3½ years.

14,949.—FONT OF PRINTING-TYPE.—*Charles E. Heyer*, Chicago, Ill., assignor to *Arthur M.* and *Alson E. Barnhart*. Application filed February 15, 1884. Term of patent 14 years.

14,950.—FONT OF PRINTING-TYPE.—*William W. Jackson*, Philadelphia, Pa., assignor to *MacKellar, Smiths & Jordan*, same place. Application filed February 28, 1884. Term of patent 14 years.

14,951.—CARPET.—*Winthrop L. Jacobs*, East Orange, N. J., assignor to *The Hartford Carpet Company*, Hartford, Conn. Application filed July 23, 1883. Term of patent 3½ years.

14,952.—GIMP.—*Isaac H. Lester*, New York, N. Y. Application filed January 25, 1884. Term of patent 3½ years.

14,953.—TOY MONEY-BOX.—*William S. Reed*, Leominster, Mass. Application filed December 10, 1883. Term of patent 3½ years.

14,954.—CHENILLE.—*Christian A. Schmidt*, Hoboken, N. J. Application filed January 17, 1884. Term of patent 14 years.

14,955.—CLOCK-FRAME.—*Joseph Schweizer*, New York, N. Y., assignor to *The Ansonia Clock Company*, Ansonia, Conn. Application filed January 7, 1884. Term of patent 3½ years.

14,956.—OIL-STOVE.—*George W. Scott*, Lansingburg, assignor to *Scott, Quimby & Co.*, Troy, N. Y. Application filed December 17, 1883. Term of patent 7 years.

TRADE-MARKS.

11,070.—WOVEN FABRICS, CARPETS, RUGS, OIL-CLOTHS, AND MATTINGS.—*Martin I. Cooley*, North Plainfield, N. J. Application filed January 21, 1884.

"The words 'GLOBE MANUFACTURING CO.'"

11,071.—CANNED SOUPS, MEATS, AND FISH.—*Germania Packing Co.*, New York, N. Y. Application filed February 7, 1884.

"The representation of the statue of Germania."

11,072.—CERTAIN PICKLES, TABLE-SAUCES, AND CONDIMENTS.—*Globe Pickle Company*, St. Louis, Mo., and Chicago, Ill. Application filed December 14, 1883.

"The representation of a globe crossed by parallel and meridian lines upon a circular background, upon which are the words 'ST. LOUIS & CHICAGO' and the words 'GLOBE PICKLE COMPANY.'"

11,073.—PERFUMERY.—*Hatfield Brothers*, Philadelphia, Pa. Application filed February 20, 1884.

"The word 'PANSY.'"

11,074.—ROLLER-SKATES.—*Micajah C. Henley*, Richmond, Ind. Application filed February 18, 1884.

"The representation of a sun or disk with lines radiating from the periphery thereof, said lines and sun forming a background, a side view of the roller-skate in the foreground, the words 'HENLEY' and 'SKATE' being above and below said figure, respectively, and the words 'RICHMOND ROLLER SKATE' above the foregoing words and figures."

11,075.—RYE AND OTHER WHISKY.—*Whits, Hentz & Co.*, Philadelphia, Pa. Application filed February 27, 1884.

"The monogram of the letters 'W. H. & Co.'"

11,076.—CIGARETTES.—*Kinney Tobacco Company*, New York, N. Y. Application filed December 21, 1883.

"The figure of a woman, a Turkish fez, a radiance of light, the words 'LA FAVORITA,' and the fac-simile signature 'KINNEY BROS.'"

11,077.—SMOKING-TOBACCO.—*B. Leidersdorf & Co.*, Milwaukee, Wis. Application filed February 13, 1884.

"The word-symbol 'MINERS AND PUDDLERS,' arranged in one or more lines, and irrespective of the question whether the word 'AND' is printed in full or represented by the commonly-used character '&.'"

11,078.—PLUG-TOBACCO.—*Lawrence Lottier*, Richmond, Va. Application filed December 26, 1883.

"The word-symbol 'POLICE.'"

11,079.—SAFETY-MATCHES.—*Trummer & Co.*, London, England. Application filed March 3, 1884.

"The representation of a leaping horse inclosed within an oval line."

11,080.—MATCHES.—*Trummer & Co.*, London, England. Application filed March 3, 1884.

"The arbitrary symbol of a reindeer."

11,081.—MATCHES.—*Trummer & Co.*, London, England. Application filed March 3, 1884.

"The word 'GIRAFFE' or the arbitrary symbol giraffe, either one alone or both together."

11,082.—REED-ORGANS.—*Whitney Organ Company*, Detroit, Mich. Application filed February 26, 1884.

"The word 'CENTURY.'"

11,083.—HOLLANDS.—*H. B. Wiggin's Sons*, New York, N. Y. Application filed February 25, 1884.

"The word 'ROCKSONIA.'"

11,084.—SMOKING AND CHEWING TOBACCO.—*G. W. Gail & Ax*, Baltimore, Md. Application filed February 29, 1884.

"The word-symbol 'FORGET-ME-NOT' and the pictorial representation of a bunch of forget-me-nots."

11,085.—TWIST AND PLUG TOBACCO.—*Inge & Mahone*, Petersburg, Va. Application filed March 12, 1884.

"The word-symbol 'SWEET HOME.'"

LABELS.

4,039.—Title: "ANGOSTURA AROMATIC BITTERS."—*C. W. Abbott & Co.*, Baltimore, Md. Application filed March 3, 1884.

4,040.—Title: "DR. ALLING'S TRIUMPH INHALER AND INHALANT."—*C. P. Alling*, Buffalo, N. Y. Application filed March 15, 1884.

4,041.—Title: "DR. EMPET'S OIL" (FOR A MEDICAL COMPOUND.)—*Liston B. Bassett*, Norwich, N. Y. Application filed March 12, 1884.

4,042.—Title: "SWEET LULLABY BOUQUET."—*Philip L. Fisher*, New York, N. Y. Application filed March 12, 1884.

4,043.—Title: "MRS. FLEMING'S HOT SPRINGS BEAUTIFIER" (FOR THE COMPLEXION.)—*Sarah Alice Fleming*, Hot Springs, Ark. Application filed March 13, 1884.

4,044.—Title: "DREW'S MANILLA PLAIN PAPER BAGS."—*F. L. Hooper & Co.*, Baltimore, Md. Application filed March 12, 1884.

4,045.—Title: "SUCCESS," (FOR FLOUR.)—*John B. A. Kern*, Milwaukee, Wis. Application filed March 13, 1884.

4,046.—Title: "SPEAR HEAD" (FOR CIGARS.)—*Mensing & Stecher*, Rochester, N. Y. Application filed March 13, 1884.

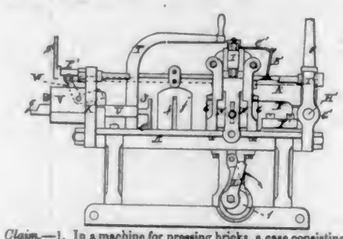
4,047.—Title: "TWENTY-FOUR O'CLOCK" (FOR CIGARS.)—*Mensing & Stecher*, Rochester, N. Y. Application filed March 14, 1884.

4,048.—Title: "OMINICO," (FOR A MEDICAL AND TOILET PREPARATION.)—*Stanley W. Neuer*, New York, N. Y. Application filed March 13, 1884.

4,049.—Title: "IRON TONIC & BLOOD PURIFIER."—*C. C. F. Schroeder & Co.*, Berrett, Md. Application filed March 14, 1884.

4,050.—Title: "ROCHESTER'S EXCELSIOR," (FOR CIGARS.)—*Hiram Wood*, Rochester, N. Y. Application filed March 13, 1884.

PATENTS



GRANTED APR. 8, 1884.

296,304. HAY-KNIFE. LEVI O. ALLEN, Gardiner, Me. Filed Dec. 31, 1883. (No model.)

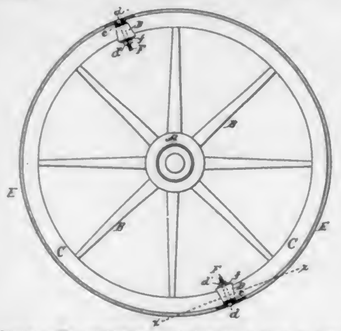
Claim.—The combination, with a blade provided with perforations or openings at its end, of a handle having perforations at its end to register with the perforations of said blade, and a slot to receive the end of same, a U-shaped bolt for securing the blade to the said handle, said bolt being screw-threaded at one end to receive a thumb-screw, and at its other end to receive an interiorly screw-threaded handle, as set forth.

296,305. BRICK-MACHINE. JOHN BAILEY, Salem, Ohio. Filed Feb. 20, 1884. (No model.)

Claim.—1. In a machine for pressing bricks, a case consisting of the adjustable ends G and H and adjustable top, in combination with the sliding carriage consisting of a bed-plate having thereon a fixed plate, 4, and an adjustable plate, 3, arranged to operate on one side of said case conjointly with a movable compressing side, E', on the opposite side, substantially as herein described, and for the purpose specified.

2. In combination with the movable ends of the case herein described, the blocks M M, provided with inclined ribs adapted to fit and move in corresponding grooves in the sides or wings of the ends G and H of the case, substantially as described, and for the purpose specified.

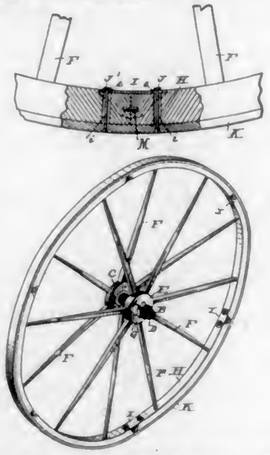
3. In combination with the cross head or beam I and screw-bolts connecting said beam to the top of the case and to the blocks M, the eccentrics 1 and 2, constructed and arranged to operate substantially as described, and for the purpose set forth.



4. The combination of the eccentrics G' and compressing side E', jointed thereto for operating said side co-operative with the case and brick-carriage, substantially as and for the purpose specified.

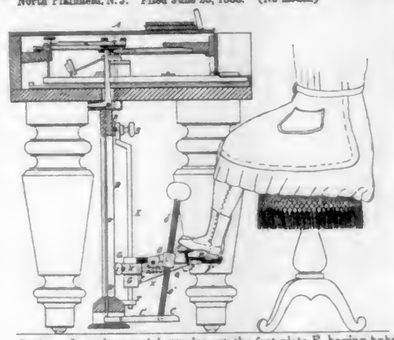
5. In combination with the brick-carriage and bar U, provided with a shouldered end, a pawl, connecting-rods Y Y, and link suspending the end A' of said bars, substantially as described, and for the purpose set forth.

6. In a machine for pressing bricks, the combination of the carriage, the movable plate 3, and handle for operating said plate and carriage, in the manner substantially as described, and for the purpose specified.



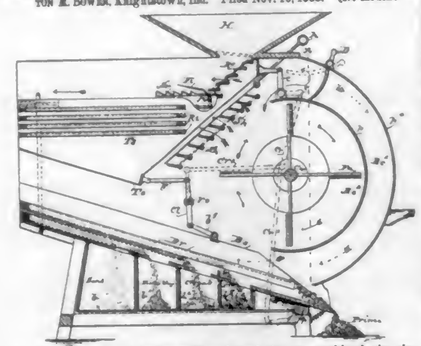
7. Arranged in relation to the brick-carriage herein described, the push-plate *j*, operated by the links R' R' and *n n*, arms *m m*, standard-shaft P', and lever constructed and co-operating for the purpose set forth, and substantially as described.

296,306. TIRE-TIGHTENER. HENRY C. BATES, Miles, assignor of one-half to Zachariah De Groat, Preston, Iowa. Filed Jan. 10, 1884. (No model.)



Claim.—The combination, with the tapered block D, having its sides *a a* depressed to fit the felly ends *b b*, of the elastic packing *c*, inserted in the space between the ends of the fellies and between the end of the block and the tire, substantially as and for the purposes described.

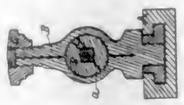
296,307. VEHICLE-WHEEL. JOHN EDWARD BELL, Nashville, Tenn., assignor to James W. Cole and Robert L. Armistead, both of same place. Filed Aug. 20, 1883. (No model.)



Claim.—In a vehicle-wheel, the rim H, formed with passages *i*, and provided at one end with a dowel-pin, M, entering a recess in the other end, a joint-plate, I, formed with slots *e*, and the bolts J, connecting with the tire, and passing through the passages *i* and slots *e*, and held in position, as set forth.

296,308. PEDAL ATTACHMENT FOR PIANOS. JOHN M. BETTMAN, North Plainfield, N. J. Filed June 25, 1883. (No model.)

Claim.—In a piano-pedal attachment, the foot-plate F, having hubs G, pedal O, and bolt K, in combination with the collar H on rod E, having cavities *h h'* and the rod O', for connecting the pedal O with the pedals of the piano, as set forth.

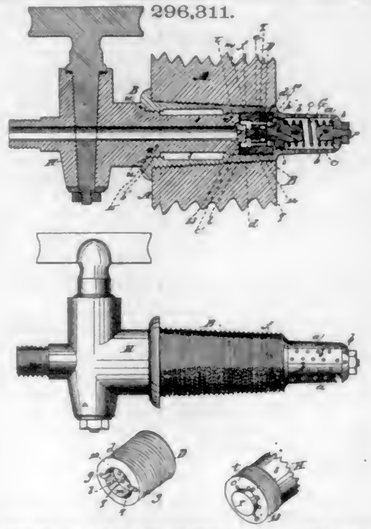


296,309. COMBINED FANNING-MILL AND SEED-CLEANER. NEWTON M. BOWEN, Knightstown, Ind. Filed Nov. 10, 1883. (No model.)

Claim.—1. In a fanning-mill and seed-cleaner combined, the air-chamber Ac', formed by the partition *p* and the wall *p'*, and provided with damper D, in combination with drum Ac², shutters *sh*, fan Fs, top shoe, Ts, and bottom shoe Bs, substantially in the manner and for the purpose set forth.

2. In a fanning-mill and seed-cleaner, the combination of the top shoe, Ts, riddles Rs, slotted riddle-shoe Rs, whippers Fi, feed-fingers Sr, and mechanism for operating the same, substantially in the manner and for the purpose set forth.

296,310. ADJUSTABLE TOOL-HOLDER. FRANCIS BROOKS BOWMAN, Waltham, Mass. Filed Sept. 3, 1883. (No model.)



Claim.—The herein-described tool-holder, composed of the ball and the socketed post encompassing the ball, which is pierced axially to receive the tool, the post being split partially or entirely to permit of insertion of the ball, and clamped about such ball by nuts suitably applied, substantially as explained.

296,311. DEVICE FOR TAPPING BEER. JEREMIAH H. BRENNAN, Boston, Mass. Filed Nov. 3, 1883. (No model.)

Claim.—1. In a barrel-tapping device, the externally-threaded bushing B, having at its inner end the perforated chamber *c*, and provided with an internal thread, *e*, and shoulder 10, in combination with the removable screw-plug D, adapted to be inserted into and taken out from the front end of the bushing, and having the valve-seat *h* and a web,

296,311.

12, provided with a series of perforations, *q*, arranged around the central aperture, *l*, in front of the valve-seat, the valve *i*, with its stud *n*, the spiral spring G, and the stud *p*, projecting inward from the rear end of the chamber *c*, and the faucet H, adapted to be brought into contact with and press back the stem of the valve *i* as it is screwed into the bushing, the whole constructed and arranged to co-operate substantially in the manner and for the purpose set forth.

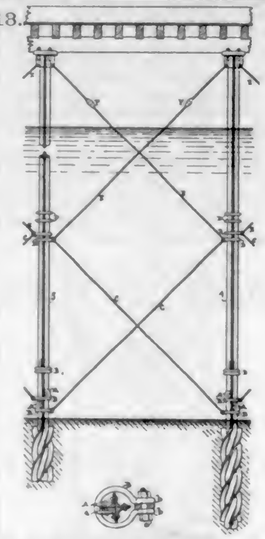
2. In a barrel-tapping device, the combination, with the bushing B, removable screw-plug D, having a recess, *m*, in its front side, and a series of perforations, *q*, the valve *i*, with its stem *k*, projecting into said recess *m*, and the spring G, of the faucet H, provided with an external thread, *t*, and having its inner end closed and provided with a protuberance, *r*, surrounded by a strainer formed of a series of perforations, *c'*, all constructed and arranged to operate substantially in the manner and for the purpose described.

3. In a barrel-tapping device, the combination, with the bushing B, provided with an internal thread, *e*, and a second internal thread, *b'*, at its mouth, of larger diameter, the removable screw-plug D, valve *i*, and spring G, of the faucet H, having its stem *s* provided at its rear end with a thread, *t*, and at the opposite end with a shoulder, *u*, and a second thread, *a'*, of larger diameter, with a smooth or non-threaded portion between them, all constructed and arranged to operate substantially in the manner and for the purpose set forth.

296,312. FINGER-RING. JOSEPH BULOVA, New York, N. Y. Filed Jan. 30, 1884. (No model.)

Claim.—The combination of ring A, having perforated head *b* and stone *c*, with the ornament *d*, having screw-pins *e e*, and with the perforated nuts *f*, fitting over pins *e*, substantially as specified.

296,313. BRACING THE PILES OF PIERS. AARON B. BURTON, New York, N. Y., assignor, by mesne assignments, to the Driven Screw Post and Pile Company, same place. Filed Aug. 4, 1883. (No model.)



Brief.—Loose rings at the lower ends of the bracing engage brackets on the piles, and free rings midway connect the bracing with the piles.

Claim.—1. The combination, with a pile, of an anchor-ring and attached bracing, substantially as specified.

2. The combination, with a pile, of a bracket, anchor-ring, and bracing, substantially as specified.

3. The combination, with two piles, of a bracket, anchor-ring, free ring, and bracing, substantially as specified.

296,313.

4. The combination, with two or more piles, of two or more brackets, two or more anchor-rings, two or more free rings, and bracing, substantially as specified.

296,314. FOOT-COVERING. WILLIAM CARTER, Highlandville, Mass. Filed Mar. 15, 1883. (No model.)

Claim.—1. As an improved article of manufacture, a foot-covering composed of a knitted fabric seamed substantially as shown and described, fulled, shaped to a last, and toeseled, and provided with an elastic anklet or top, as set forth.

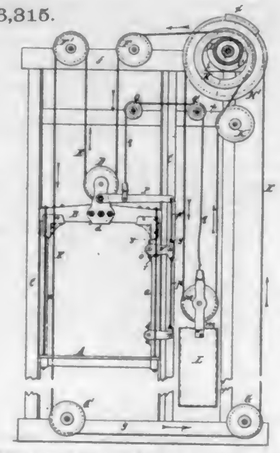
2. The herein-described blank for a shoe-upper, it having selvage-edges to be joined in the formation of the seam at the top of the foot, and also for the attachment to it of the anklet or top, substantially as described.

296,315. ELEVATOR. HENRY CHANDLER, Buffalo, N. Y. Filed July 17, 1883. (No model.)

Claim.—1. The combination, with the elevator platform or cage, of an endless hoisting-rope, a counterbalancing-weight provided with a pulley, differential pulleys, and guide-pulleys around which the hoisting-rope runs, substantially as set forth.

2. In a hoisting-machine, the combination, with differential pulleys, of an eccentric support upon which the pulleys can adjust themselves, substantially as set forth.

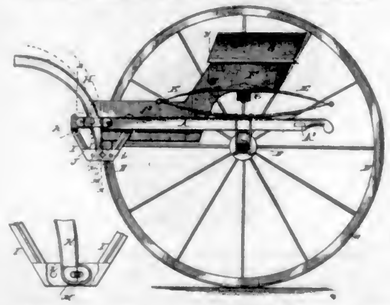
3. In a hoisting-machine, the combination, with differential pulleys mounted on an eccentric support, of an endless hoisting-rope and a counterbalancing-weight, substantially as set forth.



4. The combination, with the differential pulleys H H', having a central opening, *i*, of a supporting-roller, I, made smaller in diameter than the opening *i*, substantially as set forth.

5. The combination, with the elevator platform or cage provided with a pulley, D, of an endless hoisting-rope, E, guide-pulleys F F' and G G', arranged, respectively, above and below said platform, differential pulleys H H', and a counterbalancing-weight, L, provided with a pulley, M, substantially as set forth.

6. The combination, with an elevator platform or cage, of a safety-catch attached thereto, an endless hoisting-rope, a counterbalancing-weight having a pulley around which the endless hoisting-rope passes, and a rope or chain, whereby the counterbalancing-weight is connected with the safety-catch, substantially as and for the purpose set forth.



7. The combination, with an elevator platform or cage, of friction-rollers *n*, mounted on levers N, pivoted to the cage or platform, an end-

296,315.

less hoisting-rope, and a counterbalancing-weight suspended by the same, and connected by a slack rope with the lever N, substantially as set forth.

296,316. TWO-WHEELED VEHICLE. LEVI STARR CLARK, ORRIN G. FRANKS, and GEORGE T. HAUGHMAN, Doylestown, assignors to themselves, and John H. Warren, Lodi, Ohio. Filed Nov. 30, 1883. (No model.)

Claim.—1. As an improvement in two-wheeled vehicles, the combination, with the frame, of the thills having their ends connected to the side bars of the frame at their front ends by a longitudinally-sliding bearing, and pivoted directly to the frame above and over this sliding bearing, substantially as set forth.

2. As an improvement in two-wheeled vehicles, the combination, with the frame of the vehicle, of brackets disposed on the same horizontal plane as the front ends of the side bars of the frame and depending therefrom, and the thills having their ends provided with a longitudinally-sliding bearing in the horizontal brackets, and also pivoted to the frame above and over the said brackets, substantially as set forth.

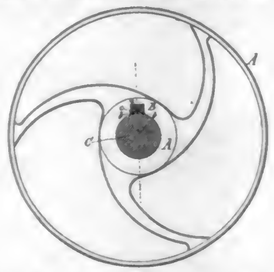
3. The combination, in a two-wheeled vehicle, with the brackets, of the thills pivoted to the frame of the vehicle, and having an elongated eye at their lower ends, and cross-pins engaging the eyes and the brackets, substantially as set forth.

4. The combination, with the frame of the vehicle having horizontal brackets depending therefrom and provided with elastic or spring devices, of the thills pivoted to the frame over the brackets, and having their ends retained between the said spring and acting in both directions against the same, substantially as set forth.

5. The combination of the frame, the thills pivoted thereto and having the thill-irons provided with the enlarged eye at their ends, the cross-pin passing through this eye, and cushions disposed in said eye at each side the said pin, substantially as set forth.

6. The combination of the frame, the brackets depending therefrom and comprising the side plates provided with perforations, the thills pivoted to the frame above the brackets and provided with an enlarged end eye inclosed between the plates of the brackets, the cross-pin passing through the perforations and the eye, and the cushions inclosed with the eye, substantially as set forth.

7. The combination, with the frame having depending brackets embodying side plates provided with a series of perforations, of the thills pivoted to the frame, and having the eye at their lower ends received within the said brackets, and a cross-pin, substantially as set forth.



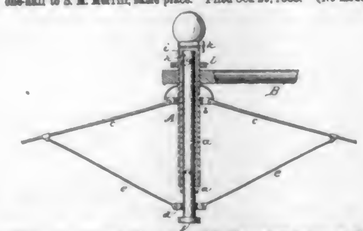
8. The combination of the main frame supported at its rear portion upon the axle, the springs secured on the frame over the axle, the body supported at its front end on the frame, and thills pivotally connected with the front portion of the frame, and having their lower ends acting against springs or cushions, to equalize the weight on the springs, substantially as set forth.

9. The combination of the main frame supported at its rear portion upon the axle, the main springs secured on the frame over the axle, the body supported at its rear portion upon the springs and pivotally connected at its front portion to the frame, the depending shackles at the front end of the frame, and thills pivoted to the frame and having their ends connected to the shackles, substantially as set forth.

10. The combination, with the frame carrying the springs at its rear end and having the body supported on said springs and pivotally connected therewith, and with the shackles depending at the front end of the frame, of the thills pivoted to the frame and having their ends connected to the shackles, springs or cushions being provided at the sides of this connection to receive the action of the lower ends of the thills, substantially as set forth.

11. The combination, in a two-wheeled vehicle, with the sides of the body and the horizontal links pivoted thereto at one of their ends, of the seat resting upon the top edge of the said sides, and the vertical bars or links depending from the seat and pivoted to the free ends of the horizontal links, whereby the seat may be lifted and shifted by causing the horizontal links to turn over upon their pivots, substantially as set forth.

296,317. MEANS OF KEYING WHEELS, PULLEYS, &c., TO SHAFTING. GODFREY DAWE, Eau Claire, Wis. Filed Feb. 28, 1884. (No model.)



Claim.—1. A key for fastening a pulley, wheel, cam, eccentric, or other analogous part of machinery to shafting, consisting of a tapered bar having parallel sharp ridges or edges separated by a concave surface in relief from the shaft, substantially as and for the purpose described.

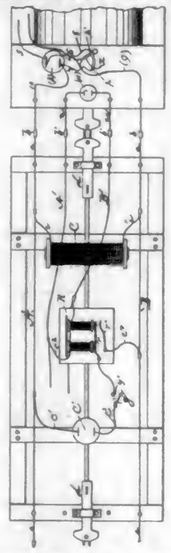
2. The combination, with a hub provided with a tapered key-seat, *a*, of a tapered key provided with parallel sharp ridges or edges separated by a concave surface in relief from the shaft to which the hub is to be keyed, substantially as and for the purpose described.

3. The key having its edges beveled downward and its under surface made with the concave *c*, substantially as and for the purpose described.

296,318. PARASOL. FRANK C. DIEHER, New York, N. Y., assignor of one-half to S. M. Merrill, same place. Filed Oct. 29, 1883. (No model.)

Claim.—1. An umbrella or parasol having a stem composed of two or more telescopic sections arranged to slide into each other, the upper one of which is tubular and projects above the ribs or bows, substantially as described.

2. An umbrella or parasol stem composed of two or more telescopic sections, having a collar or runner rigidly attached to one of the sections, and a spring-catch arranged at the top of the stem for holding the parasol when opened, substantially as described.



3. A parasol-stem composed of two or more telescopic sections having a spring-catch for holding the umbrella open arranged at the top of the stem, whereby the catch may be operated from the outside to collapse the parasol, substantially as described.

4. In a parasol-stem composed of two or more sections, a spring-catch located at the top of the stem comprising the spring *i*, the lug *h*, and the thumb-piece *k*, arranged diametrically opposite the spring, substantially as set forth.

5. The spring-catch consisting of spring *i*, lug *h*, and thumb-piece *k*, arranged at the top of the stem, in combination with one of the telescopic sections having the notch or equivalent, substantially as described.

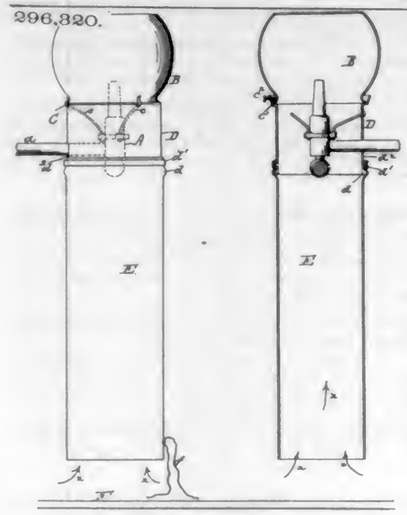
6. The combination of the spring *i* with collar *l*, the latter being mortised to limit the play of spring when the thumb-piece is operated to close the parasol, substantially as described.

296,319. ELECTRO-MAGNETIC-BRAKE SYSTEM. AUGUSTUS L. DOWNING, Cincinnati, Ohio. Filed Nov. 5, 1881. (No model.)

Claim.—1. The combination, with the main source of electricity and the main system of apparatus for the direct application of electro-magnetism to railway-brakes, of an auxiliary source of electricity, and devices for automatically connecting the same with the conductors of the main system when said conductors become disconnected from the main source of electricity, substantially as described.

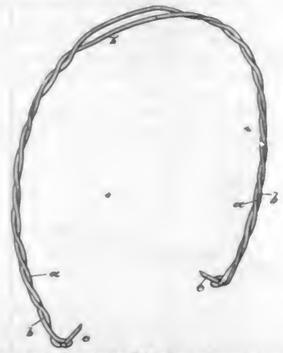
2. The combination, with the main conductors A B, electro-magnetic-brake mechanism C, and a main source of electricity and connections for supplying a current over said main conductors, of the auxiliary conductors A' B', auxiliary generator 11, magnet R, the auxiliary secondary battery C', the electrical connections, and the circuit breaking and closing devices, substantially as and for the purpose set forth.

296,320. GAS-BURNER FOR HEATING AND LIGHTING ROOMS. BENJAMIN F. ENOCK, Philadelphia, Pa. Filed Jan. 12, 1883. (No model.)



Claim.—1. The combination of a gas-burner, a globe or shade therefor, and a tube inclosing said burner below the shade or globe and hanging pendent therefrom and supported thereby, substantially as shown, and for the purpose set forth.

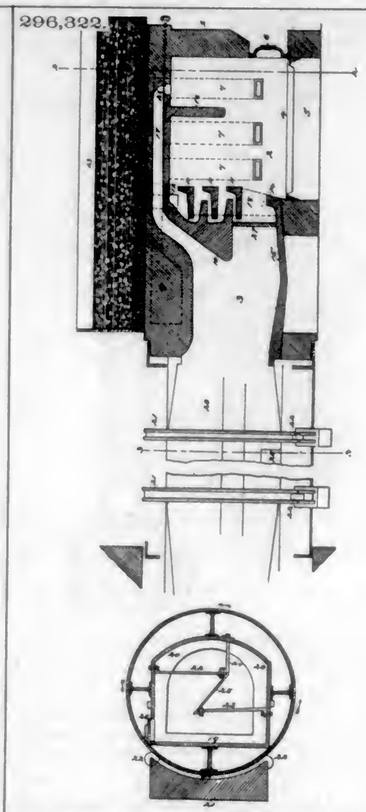
2. In combination with a gas-burner, a globe or shade, a balcony for the globe inclosing the burner, and a flexible tube supported thereby and depending therefrom to near the floor of the apartment wherein such fixtures are located for use, substantially as described.



3. The tube D, having slot d^3, and provided with means for attaching it to a gas-burner, and a beaded or flaring edge, *d*, in combination with pipe or hose E, and means for attaching it to said tube, substantially as shown and described.

4. In a heating attachment for gas-burners, the combination of a tube, D, provided with means for attaching it to a gas-burner, a flexible pipe, E, and means for contracting the lower opening of said pipe, substantially as set forth.

296,320.



296,321. ICE-HOOK. JAMES W. EVERDEN, Rome, N. Y. Filed Mar. 3, 1884. (No model.)

Claim.—As an improved article of manufacture, a pair of ice-hooks consisting of two steel wires twisted together to form the main portions of the hooks, and provided with the hook-points passed through the eyes at the ends of one of the wires which form the ice-hooks, and having the curved handle formed from plain portions of the two wires separated from each other between the twisted portions, substantially as specified.

296,322. INCINERATING-FURNACE. HENRY S. FIRMAN, New York, N. Y., assignor to the Universal Concentrating Company, Camden, N. J. Filed May 3, 1883. (No model.)

Claim.—1. A calcining-furnace formed of contiguous chambers, substantially as hereinbefore described, which consists, first, of a fire-chamber, then an igniting-hearth at the rear end of said fire-chamber, and, finally, a calcining-chamber at the rear of the igniting-hearth, whereby the material is subjected to a furnace-heat gradually diminishing in intensity from the point of admission to the point of delivery, as and for the purposes set forth.

2. A calcining-furnace consisting of a stationary fire-chamber, a stationary igniting-hearth, and a revolving calcining-chamber, all arranged and adapted to graduate the intensity of the furnace-heat from a maximum at the point of admission to a minimum at the point of delivery, substantially as shown, and for the purposes set forth.

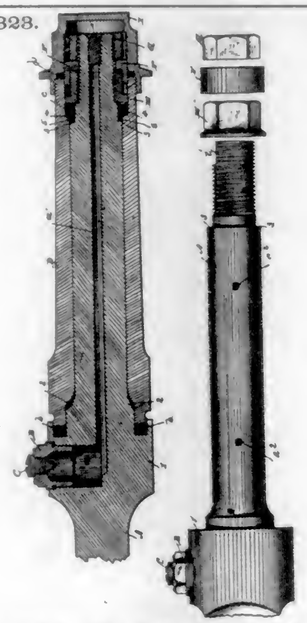
3. A calcining-furnace formed of contiguous chambers, substantially as herein described, which consist of a fire-box and igniting-hearth, located in such position relatively to each other as to cause the products of combustion to be discharged through the material during its descent, and a calcining-chamber located at the rear of the igniting-hearth, as and for the purposes set forth.

4. A calcining-furnace having a suitable supply-tank connected with a series of evaporating-trays located in the fire-chamber, and adapted to effect a partial evaporation of the material during its descent to the incineration-hearth, as set forth.

5. The combination of fire-chamber having at back suitable heating-trays, igniting-hearth to the rear of the fire-chamber, and a flue for leading pure or nearly pure air in a heated state onto the igniting-hearth, substantially as set forth.

6. The combination of fire-chamber having the pendent curtain near its front, the igniting-hearth to the rear of the fire-chamber, and the flue leading from the front of the fire-chamber and discharging pure or nearly pure air onto the material on the igniting-hearth, substantially as set forth.

7. The combination of fire-chamber having the pendent curtain near its front or center, the igniting-hearth to the rear of the fire-chamber, and a flue leading from the front of the fire-chamber and discharging pure or nearly pure air onto the material on the igniting-hearth, substantially as set forth.



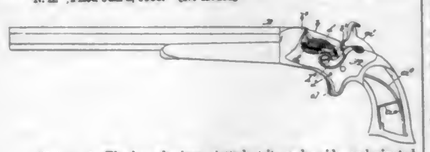
8. The combination, in the calcining-furnace, of two or more open hearths on the sides thereof, and having a screen or sifter stretching between the same, as specified.

296,323. SELF-OILING AXLE FOR VEHICLES. LEWIS H. FISHER, Walpole, Mass. Filed Aug. 3, 1883. (No model.)

Claim.—1. In combination with the axle having a valveless oil-chamber in its collar, and an axial and lateral oil-feeding passage, substantially as shown and described, the inner adjustable nut, E, and the washer *c*, applied relatively to the axle and the box D, substantially as and for the purposes described.

2. In combination with the axle A, and with the adjustable nut E and washer *c*, the D-shaped cap F, adapted, as described, to fit upon the polygonal end of the inner nut, E, and also at its outer end to fit the D-shaped end of the axle, the combination being substantially as and for the purposes set forth.

296,323.



3. In combination with an axle, the inner nut, E, cap F, made as described, the nut G, and the exterior cap, I, applied to the box D, the whole constituting a complete locking arrangement to prevent the nuts coming off.

4. In combination with the axle having an oil-chamber in its collar, and the axial and outlet passages therefrom, box D and washer *b*, adjustable inner nut, E, and washer *c*, the cap F, made as described, the outermost nut, G, and the cap-nut I, applied to the box B, all substantially as and for the purposes set forth.

296,324. FIRE AND WATER PROOF PAINT. MARION O. FISHER, Allen's Hill, N. Y. Filed Jan. 9, 1884. (No specimens.)

Claim.—The fire and water proof paint compound herein described, consisting of coal-tar, yellow ocher, mineral paint, sulphur, alum, and talc, compounded in the manner and proportions substantially as herein set forth.

296,325. BREECH-LOADING FIRE-ARM. JAMES E. GAGE, Concord, N. H. Filed Jan. 2, 1883. (No model.)

Claim.—1. The breech-piece, slotted at its under side, and pivoted at its rear end and reduced in thickness where the screw or pivot passes through it, and the firing-pin, combined with the hammer shaped to extend forward over the pivot of the breech-piece, and with the finger to swing the breech-piece, substantially as described.

2. The pivoted breech-piece, slotted at its lower side, and provided with a firing-pin, the frame, a tumbler provided with two faces, the finger to enter the slot of the breech-piece, and a thumb-piece or lever to turn the tumbler, combined with a spring to hold the tumbler in its different positions, substantially as described.

3. The pivoted breech-piece, provided with a firing-pin, the frame, and the sliding extractor, combined with the tumbler and its attached finger to operate the breech-piece and extractor, substantially as described.

4. The extractor, slotted as shown, and provided with a shoulder, 16, and the frame to guide the said extractor, the tumbler having an irregular face, and the finger and thumb-piece or lever, combined with a spring co-operating with the said tumbler to cause the finger to rebound, as described, and leave the extractor free to be moved forward by the cartridge, as set forth.

5. The breech-piece, pivoted at its rear end and provided with a diagonal slot in its base, combined with a vertically-vibrating finger engaging said slot, and means to move said finger to throw or swing the breech-piece, substantially as described.

6. The frame, combined with the pivoted hammer, and the breech-piece having its pivot at right angles to that of the hammer and in the plane of the same, and a spring bearing against the lower edge of the hammer in the rear of its pivot, whereby a rebound is secured for the hammer after firing, substantially as described.

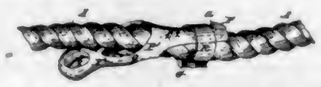
296,326. DEPURATED COMPOSITE SUGAR, &c. JOSEPH GANDOLFO, New York, N. Y. Filed Mar. 13, 1883. (No specimens.)

Claim.—1. As a new article of manufacture, the depurated composite sugar above described, compounded of cane-sugar and grape-sugar which has been liberated of its deliquescent salt and then reduced by shaving, substantially as specified.

2. The process of manufacturing composite sugar, substantially as before set forth, consisting of the shaving of grape-sugar, the sifting it, the drying it, and the mixing it with cane-sugar.

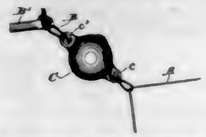
3. The process of manufacturing composite sugar, substantially as before set forth, consisting of the shaving of grape-sugar, the sifting it, the drying it, the artificially cooling it, and the mixing it with cane-sugar.

296,327. STENCIL-PLATE. ROMEO E. GUERRI, New York, N. Y. Filed July 10, 1883. (Model.)



Claim.—A stencil-plate having upon its upper face, and on each side of spaces *b*, the raised brush-guides *c c*, placed at some distance from the edges of said spaces, whereby each letter may be stenciled separately, and the spaces between the letters regulated, as described.

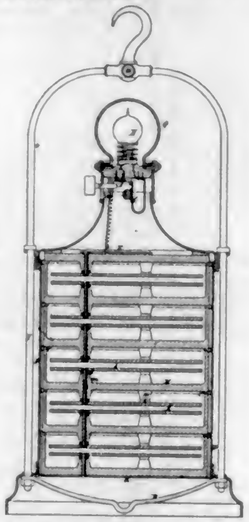
296,328. ROPE-HALTER BUCKLE. JOHN GIBBONS, West Troy, N. Y. assignor to the Union Hardware Manufacturing Company, same place. Filed Jan. 21, 1884. (No model.)



Claim.—In a halter-rope buckle or fastener, the combination of a body part made with a rounded-out interior surface and convex exterior surface, a spur projected out from said interior surface, a beveled extension projected from the end of said body, as shown, and constructed with an elongated opening adapted for the threaded passage of the rope, a feather projected from the body part on its exterior rounded surface, and a ring made with a connecting-eye projected therefrom and a groove on its inner face, and said ring constructed to be passed on over said feather, body part, and included rope to connect said parts, as and for the purposes herein set forth.

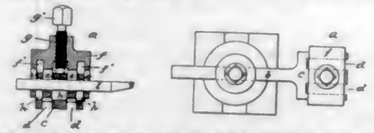
296,329. ROPE-HALTER BUCKLE. JOHN GIBBONS, West Troy, N. Y., assignor to the Union Hardware Manufacturing Company, same place. Filed Jan. 21, 1884. (No model.)

Claim.—In a halter-rope buckle, the combination of a plate having an interior concave and an exterior convex surface, a spur on the concave interior of the plate, an elongated extension of said plate that is beveled obtusely from the rounded-out part thereof on its projection therefrom, an eye on the end of said extension, an elongated opening in said extension adapted for the passage of the halter-rope, a feather made with an abrupt termination and constructed on the exterior of the rounded-out part, and a ring made with a groove for the passage of said ring over said feather, plate, and included rope, in the manner and for the purposes herein set forth.



296,330. INSULATOR FOR LINE-WIRES OF MECHANICAL TELEPHONES. JAMES F. GILLILAND, Indianapolis, Ind., assignor to John R. Bennett and August R. Meyer, both of same place. Filed June 26, 1883. (No model.)

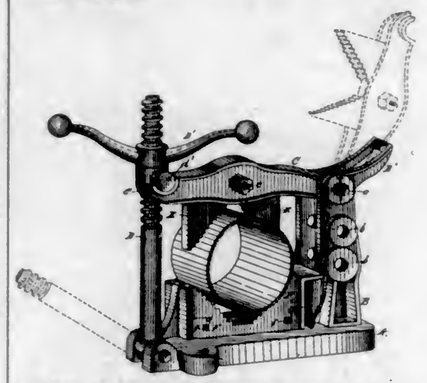
Claim.—1. The combination, with a mechanical-telephone line-wire and the structures by which it is supported, of a hanger composed of wire or cord running from said line-wire to said structure, and an insulator secured to said wire in close contact therewith, substantially as set forth.



2. The combination of the wire A, the structures by which the same is supported, and the hangers by which said wire is connected to said structures, said hangers being composed of wires B and insulators C, having eyes *c' c'*, through which said wires pass, substantially as shown and specified.

293,331. PORTABLE ELECTRIC BATTERY AND LAMP. CHARLES GODFREY GUNTEL, Leicester Square, County of Middlesex, England. Filed Mar. 7, 1883. (No model.) Patented in England June 12, 1882, No. 2,756, and in France Dec. 8, 1882, No. 152,526.

Claim.—A portable secondary electric battery consisting of a suspending-frame and a number of dishes piled one on the other within a case or frame, with their junctions made tight against leakage of liquid, each dish having tubular projecting bosses, through which pass rivets or their equivalents, electrically connecting an electrode-plate above the dish with a plate below, substantially as herein described.

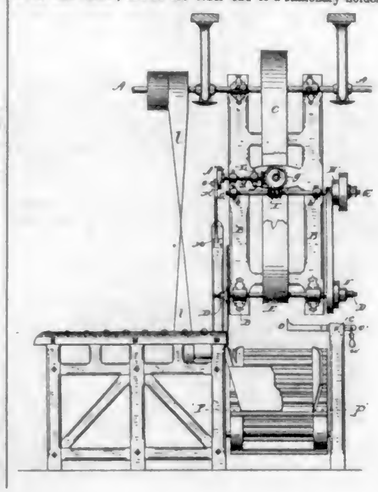


296,332. TOOL-HOLDER. ERNEST L. HARTMANN, Hartford, Conn. Filed Aug. 11, 1883. (No model.)

Claim.—1. In combination, the shank *b*, having the body part *c*, with mortises *d* and tool-socket *a*, body part *f*, having corresponding intermeshing parts, and clamp-screw *g'* or its equivalent, all substantially as described.

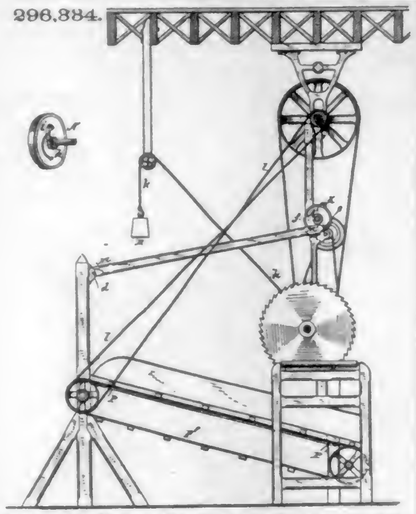
2. The combination, in a tool-holder, of the body part having a shank and a forked extremity with a V-shaped tool-socket, the body part with projections bearing a tool-socket and fitting between the forks of the main body part and the clamp device, whereby a tool is held in a line at right angles with the axis of the shank, all substantially as described.

296,333. PIPE-VISE. ALBERT H. JARECKI, Erie, Pa. Filed Apr. 12, 1883. (No model.)



Claim.—In a pipe-vise, the combination, substantially as shown, of the base A with upright B, having the horn B', and pivot-pin holes *b b b* and the jaw-faces G G, the pivoted jaw C with claw *c'*, and the pivoted screw D with movable block *d'* and armed nut D'.

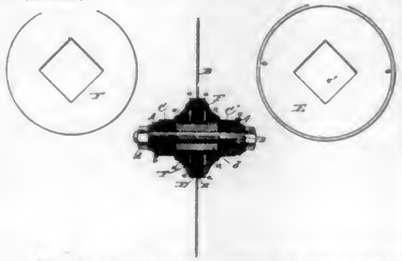
296,334. CIRCULAR SAWING MACHINE. JOEL H. JONES, Lynchburg, Va. Filed Nov. 26, 1883. (No model.)



Claim.—1. The combination of a feed-operating shaft, G G', mounted on the swinging saw-frame, worm I on the said shaft, worm-wheel K, geared into the worm, disk-crank A', having its shaft geared to the shaft of the worm-wheel, and pitman M M', pivoted at one end of the disk-crank, and at the other end to a stationary holder, for the purpose of imparting a vibratory feed movement to saw-frame, as set forth.

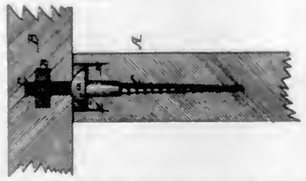
2. The combination of the saw-arbor D D' on a vibrating saw-frame, feed-operating shaft G G', mounted on the saw-frame, differential pulleys F H, respectively, on the saw-arbor and feed-shaft, and their connecting-belt, worm I on the said shaft, worm-wheel K, geared into the worm, disk-crank A', having its shaft geared to the shaft of the worm-wheel, and pitman M M', pivoted at one end to the disk-crank, and at the other end to a stationary holder, substantially as and for the purpose herein specified.

3. The combination of a swinging saw-frame, a disk-crank, A', adapted to turn on a revolving shaft on the saw-frame, and to be coupled to the shaft by a ratchet and pawl, a pitman, M M', pivoted at one end to the disk-crank, and at the other end to a stationary holder, and a



296,334.

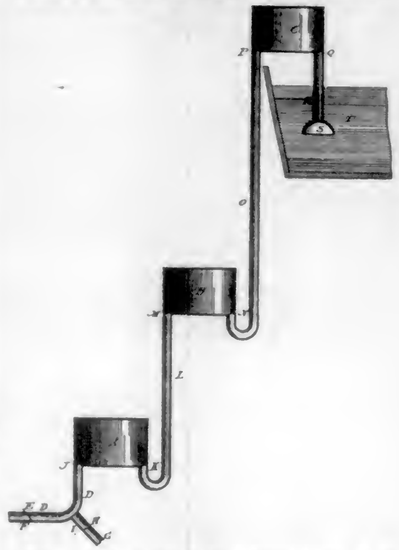
counter-weight, R, connected by a cord or chain with the saw-frame, and adapted to swing the same backward, whereby the forward feed vibration of the saw-frame is made positive and gradual, and its return vibration is made free and instantaneous, substantially as herein specified.



4. In combination with a saw mounted on a suspended swinging saw-frame, as specified, a tilting gage, O, located opposite to the saw and the material being sawed, and a counter-weight, *w*, on the gage, substantially as and for the purpose herein specified.

296,335. COLTER. ROBT. KLOSS, Shabonier, Ill. Filed May 8, 1883. (No model.)

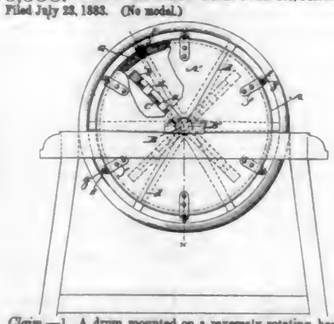
Claim.—In a plow-colter, the combination of the blade B, provided with flanges *a a*, the plate E, provided with peripheral flange *e* and central opening, *d'*, the washer F, the disks C C', provided on their outer sides with projections *c c*, the hub *b*, bolt D, having its center plane and ends screw-threaded, the lock-nut *d*, and yoke A, substantially as described and shown.



296,336. CHAIR-LEG FASTENER. SIGMUND KOHN, Vienna, Austria-Hungary, assignor to the firm of Jacob & Josef Kohn, same place. Filed Oct. 29, 1883. (No model.)

Claim.—1. The combination of the screw C, having shoulder *a*, with the hollow cap E and nut D, substantially as herein shown and described.

2. The combination of the wooden chair-leg A, which is recessed at its upper end, with the hollow cap E, screw C, having shoulder *a*, and with the nut D and seat B, substantially as herein shown and described.



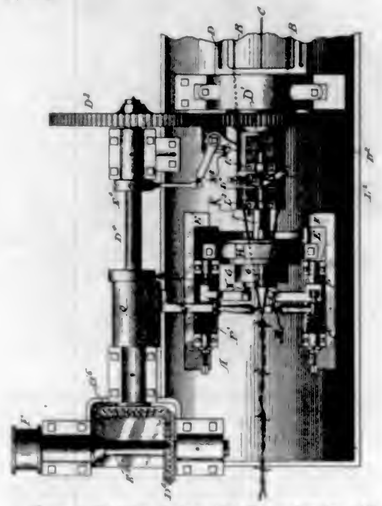
296,337. APPARATUS FOR THE PURIFICATION OF WATER. ALBERT R. LEEDS, Hoboken, N. J. Filed Sept. 17, 1883. (No model.)

Claim.—1. In an apparatus for the purification of water, the supply-pipe D, having the valve E, and the supply-pipe G, having valve H, and adapted to be connected to a suitable air-pump, combined with the chamber A, reservoir T, and outlet-pipe between said chamber and reservoir, substantially as and for the purpose described.

2. In an apparatus for the purification of water, a series of pressure-chambers, as A B, connected by the pipes, as L O, in combination with the water-supply pipe D and the air-supply pipe G, substantially as described.

296,338. MIXING-MACHINE. DAVID H. LEVETT, Philadelphia, Pa. Filed July 23, 1883. (No model.)

Claim.—1. A drum mounted on a reversely-rotating beater-shaft, in combination with a bevel-wheel rigidly connected with the head of said drum, and freely encircling said shaft, a bevel-wheel rigidly connected with said shaft, and an intermediate idler, the two bevel-wheels thus being on the same shaft, substantially as and for the purpose set forth.



2. A drum mounted on a reversely-rotating beater-shaft, and having one head divided, in combination with ears connected with said head, bolts secured to the drum, and nuts fitted on said bolts, substantially as and for the purpose set forth.

3. A drum mounted on a reversely-rotating beater-shaft, and having at one end a divided head with the fastening bolts, eyes, and nuts, in combination with two bevel-wheels and an idler, both bevel-wheels being on the beater-shaft, one fixed thereto, and the other loose thereon, and fixed to the head of the drum, substantially as and for the purpose set forth.

4. A mixing-machine having a drum mounted on a reversely-rotating beater-shaft, and beaters formed with cross-bars and end heads, the cross-bars alternating in adjacent beaters, substantially as and for the purpose set forth.

296,339. BARBED-WIRE MACHINE. ADELBERT MATTESON, Chicago, Ill. Filed Jan. 7, 1884. (No model.)

Brief.—Improvement on Letters Patent No. 273,765, dated March 13, 1883.

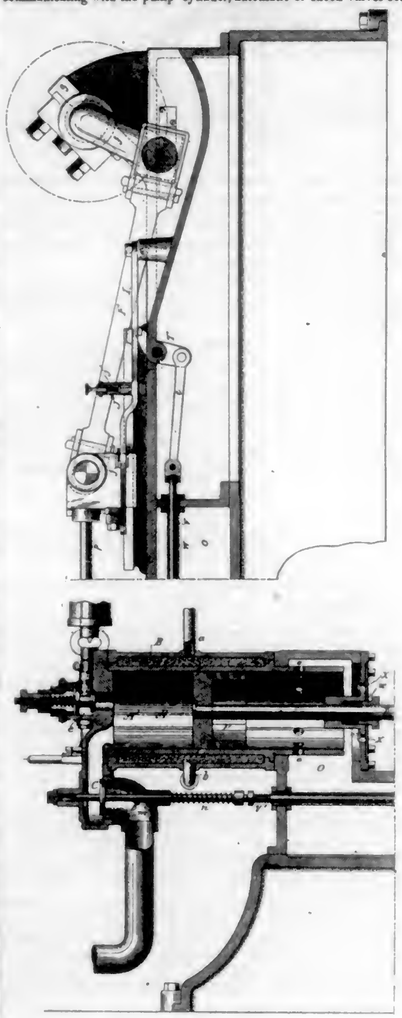
Claim.—1. In a wire-barb machine, the combination, with a rotary twister having passages through it for the barb and cable wires, and carrying a cutter, and means for bending the free end of the barb-wire, of a combined cutter and bender, substantially as described, and means for operating it to sever the barb-wire just before the completion of the barb, and then to bend one end of the unfinished barb and complete the latter, substantially in the manner set forth.

2. In a wire-barb machine, the combination, with the rotary twister, and means for bending the free end of the barb-wire, of a pivoted lever provided with a cutter operating in front of the twister to sever the barb-wire, and a cam timed to act upon the lever, and turn the same so as to raise the cutter, and cause it during its rising movement to sever the barb-wire, and then bend one end of the latter to complete the barb, substantially as described.

3. In a wire-barb machine in which the barbs are formed from a single wire, the revolving twister provided with passages for the cable-wires, a single tube for guiding the barb-wire, and a cutter, in combination with a pair of levers pivotally mounted on a carriage carrying the revolving twister, the bender M, carried by one lever, and the combined cutter and bender N, carried by the remaining one of said levers, substantially as described.

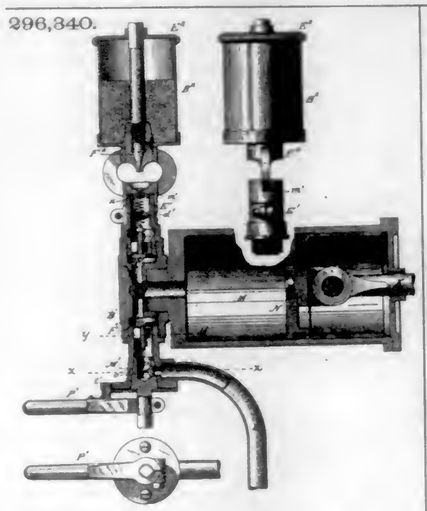
4. The combination, in a barb-wire machine, of the rotary twister carrying a knife, and provided with means for guiding the cable-wires, and a single barb-wire, with the levers pivoted on a carriage carrying the rotary twister, the bender M, adjustably secured on one lever, and the combined cutter and bender adjustably secured on the other lever in position to rise and meet the cutter on the rotary twister at one side of the barb, substantially as described.

296,340. GAS-ENGINE. HIRAM S. MAXIM, Brooklyn, N. Y. Filed Oct. 31, 1883. (No model.)



Claim.—1. In an air or gas engine containing a valve for permitting the escape or exhaust from the cylinder of the products of combustion and a moving part for operating or controlling the said valve, the combination, with such moving part, of a locking device constructed or arranged to maintain the exhaust-valve open beyond the normal limit of time, whereby too great compression in the cylinder is avoided, as and for the purpose specified.

2. In a gas-engine, the combination of a working-cylinder, piston, piston-rod, and cross-head, an exhaust-valve for permitting the escape of the products of combustion from the cylinder, a lever in the path of movement of the cross-head, and intermediate connections for opening the exhaust-valve, and a locking device for maintaining the exhaust-valve open beyond the normal limit of time when the engine is starting up, the said device being actuated or controlled by the moving cross-head, as and for the purpose specified.



3. In a gas-engine, the combination of a working-cylinder, piston, piston-rod, and cross-head, an exhaust-valve for permitting the escape of the products of combustion from the cylinder, a lever for operating the exhaust-valve, and a spring-actuated lever for locking or holding the same open beyond the normal limit of time when the engine is starting up, the valve controlling and locking levers being both in the path of movement of the cross-head, but arranged to be encountered by the same at different portions of the stroke, all as set forth.

4. In a gas-engine, the combination, with the exhaust-valve, a lever for operating or controlling the same, and a lever for locking or maintaining the valve open beyond the normal limit of time, constructed and arranged for operation in substantially the manner described, of a retaining-pin or locking device for engaging with and preventing from action the locking-lever, as and for the purpose set forth.

5. The combination, with the working-cylinder of a gas-engine, of a pump forcing explosive charges into the same, air and gas passages communicating with the pump-cylinder, automatic or check valves con-

296,340.

tained therein, and an adjustable or index valve for controlling the supply of gas, as and for the purpose specified.

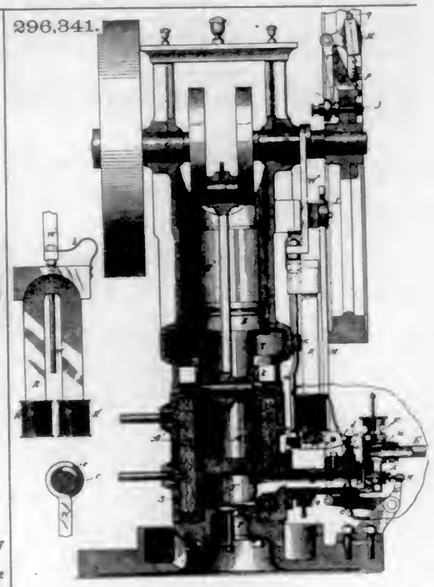
6. In a gas-engine of the kind described, the combination, with the piston and cross-head, of the lever T and devices connected therewith for operating the exhaust-valve, the pivoted locking-lever I, and the spring or spring-actuated pin i, all substantially as described.

7. The combination, with the piston and cross-head in an air and gas engine, of the lever T and devices connected therewith for operating the exhaust-valve, the pivoted locking-lever I, spring i, and retaining-pin J, as described.

8. In a gas-engine, the combination, with the pump for forcing explosive charges into the working-cylinder, of the pipe B', for admitting air and gas into the pump-cylinder, and an oil-cup for dropping oil into the pipe B' through the air-port, as and for the purpose set forth.

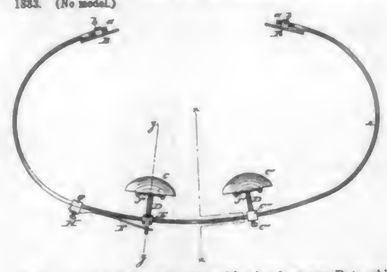
9 In a gas-engine, the combination, with the pump for forcing explosive charges into the working-cylinder, of a vertical pipe, B', having a valve or port for the admission of gas below, and a valve for the admission of air above, the perforated cover, an oil-cup secured above the same, and means for regulating the amount of oil supplied from the cup, as described.

296,341. ELECTRICAL IGNITING DEVICE FOR GAS-ENGINES. HIRAM S. MAXIM, Brooklyn, N. Y. Filed Jan. 12, 1884. (No model.) Patented in France Oct. 6, 1883.



Claim.—1. The combination, with a gas-engine, of a magnet and movable armature-coils upon the magnet, a circuit carried through the chamber or space for containing the explosive charge, and mechanism connected with a moving part of the engine and operated thereby for causing a sudden movement of the armature and breaking the circuit within the explosion-chamber, all substantially as set forth.

2. The combination, with a gas-engine, of separable contact-pins arranged within the chamber or space for containing the charge, a magnet with coils in circuit with said pins, a movable armature connected with one of the pins, and mechanism connected with a moving part of the engine and operated thereby for effecting the retraction of the armature from the magnet and the separation of the pins within the explosion-chamber, all substantially as set forth.



3. The combination, with a gas-engine, of separable contact-pins arranged within the chamber or space for containing the charge, a magnet with coils in circuit with said pins, a movable armature connected with one of the pins, and a rod operated by a cam on the shaft of the engine for effecting the withdrawal of the armature from the magnet and the separation of the pins within the explosion-chamber, all substantially as set forth.

4. The combination, with a gas-engine, of separable contact-pins arranged within the chamber or space for containing the charge, a magnet with coils in circuit with said pins, a movable armature connected with one of the pins, and a spring-actuated rod operated by a cam on the shaft of the engine for effecting the withdrawal of the armature from the magnet and the separation of the pins within the explosion-chamber, all substantially as set forth.

296,341.

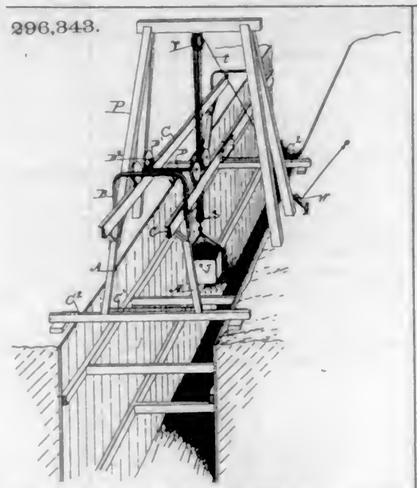
296,342. TRUSS. JOHN B. MAYER, Philadelphia, Pa. Filed Oct. 17, 1883. (No model.)

Claim.—1. A pad, in combination with a band, an arm, D, to which said pad is attached, a jointed elbow-lever mounted on said band and having said arm attached to it, a torsional spring operating on said elbow-lever and a clamping device for attaching said spring to said band.

2. A pad, in combination with a band, a journaled elbow-lever, a torsional spring, and a slide and screw, said slide being arranged and adapted to regulate the tension of said spring, substantially as set forth.

3. A pad, in combination with a detachable arm, D, screw D', elbow-lever E, torsional spring F, and the band, substantially as and for the purpose set forth.

4. A pair of serrated interlocking plates, J J', in combination with a truss-pad which is attached to one of said plates, a supporting-arm to which the other plate is attached, screws for connecting said plates together, an elbow-lever to which said arm is attached, and a spring attached to said arm and bearing on said elbow-lever, the latter being pivoted on said band, substantially as set forth.



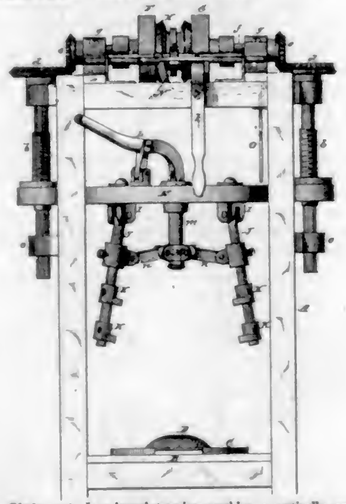
296,343. APPARATUS FOR HOISTING AND CONVEYING GROUND, MINERALS, &c. PATRICK H. MCCARLEY, Des Moines, Iowa. Filed Feb. 1, 1884. (No model.)

Claim.—1. An elevated railway-track composed of posts A, a yoke, B, and rails C, substantially as shown and described, for the purposes specified.

2. A carriage composed of a single axle, D, having T ends D', stub-axles D^2, and four wheels, substantially as shown and described, for the purposes specified.

3. A bucket having an open top and rigid arched handle and hinged bottom sections, A, connected with a revolving shaft, J, by means of chains, and a shaft-locking device to retain the hinged bottom sections

296,343.

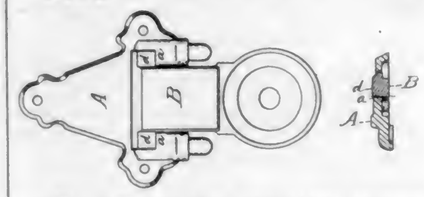


closed, substantially as and for the purposes stated.

4. An improved elevator or hoisting box or bucket composed of a vessel having an open top, two hinged bottom sections, h, chains i i k, shaft J, perforated disk m, lever n, carrying a pin, n', and a suitable handle by which it can be suspended from a rope or chain, for the purposes set forth.

5. A hoisting and conveying apparatus composed of the following elements, arranged and combined as set forth, to wit: an elevated railway-track, A B C, a carriage, D D' D^2, a bucket having an open top and hinged bottom, a derrick or elevator frame, and pulleys and rope, substantially as shown and described, to operate in the manner set forth.

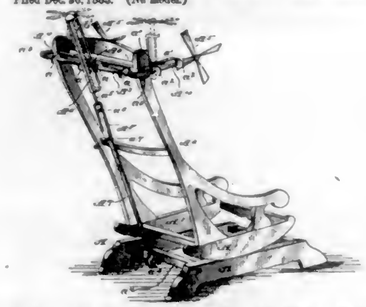
296,344. BARREL-TRUSSING MACHINE. THOMAS W. MCGREGOR, Rushford, Minn. Filed Sept. 25, 1883. (Model.)



Claim.—1. In a barrel-trussing machine, a vertically-operating trussing-head provided with the usual pivoted driving-arms and dogs, in combination with a vertically-sliding rod extending centrally through the head, and connected at its lower end to the driving-arms by spider and pivoted links, and at its upper end to a hand-lever pivoted to the trussing-head, and adapted to operate to automatically throw the arms outward by the weight of the rod and spider, and brought against the barrel by the pivoted lever, substantially as and for the purpose set forth.

2. In an upright barrel-trussing machine, a suitable trussing-head, in combination with an adjustable depending lever extending over the trussing-head, and connected to the mechanism for reversing the motion of the counter-shaft or stopping it by a pivoted arm and a bell-crank lever, substantially as and for the purpose specified.

3. In an upright barrel-trussing machine, the combination, with a flanged ring detachably connected to the base of the machine, of a centering-cone, said ring having a central opening equal to the greatest diameter of the cone within which it rests, and a horizontal flange to form a space between the flange and cone, substantially as and for the purpose set forth.



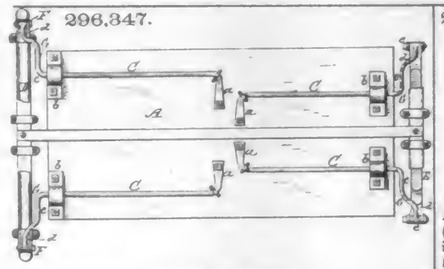
296,345. TRUNK-LOCK. FRANK W. MIX, New Britain, Conn., assignor to the Corbin Cabinet Lock Company, same place. Filed Jan. 11, 1884. (No model.)

Claim.—1. The improved hasp, consisting of the base-plate having the opening with bearing-shoulders *a a* at each end, and the hasp B, having the lateral projections *d* for engaging said bearing-shoulders, said hasp being also connected with the base-plate by means of a suitable pintle, substantially as described, and for the purpose specified.

2. The improved hasp, consisting of the base-plate having the opening and connecting-bar *f*, with bearing-shoulders *a a* at each end thereof, and the hasp B, having the lateral projections *d* for engaging said bearing-shoulders, said hasp being also connected with the base-plate by means of a suitable pintle, and extended therefrom in front of the bar *f* toward the keeper, substantially as described, and for the purpose specified.

296,346. FAN ATTACHMENT. ARTHUR H. MOORE, Chicago, Ill. Filed Dec. 26, 1883. (No model.)

Claim.—1. In combination with fans A^3, the shafts A^5 and A^4, rack and pinion A^6 A^7, hinged shaft A^7, and flexible coupling a^3, or its equivalent, substantially as and for the purpose set forth.

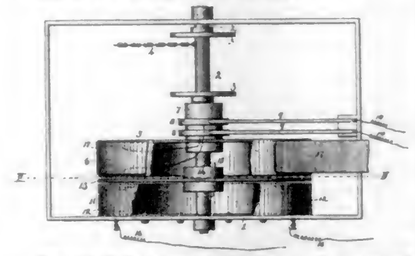


2. The combination of fans A^3, shafts A^5 and A^4, rack and pinion A^6 and A^7, flexible coupling a^3, or its equivalent, tubular hinged shaft A^7, and the connecting-sleeve A^8, substantially as and for the purpose specified.

3. In combination with fans A^3, the shafts A^5 and A^4, flexible coupling a^3, rack and pinion A^6 A^7, hinged shaft A^7, and the hinged arms a', substantially as and for the purpose described.

296,347. VEHICLE-SPRING. RICHARD MULHOLLAND, Dunkirk, N. Y. Filed May 31, 1883. (No model.)

Claim.—In a vehicle-spring, the combination, with the body and end leaf-springs or bars, of the torsion-springs having their outer arms bent at right angles (or nearly so) to their length, which arms are provided with an additional bend nearer their ends so in a line with the length of the torsion-springs, or substantially so, and with a short bend in the direction of the length of the leaf-spring or bar, so that the ends of the arms are connected under the center of the leaf-springs, thereby allowing the body of the vehicle to move downward and upward, and pass the plane of the leaf-springs or bars, substantially as and for the purposes described.

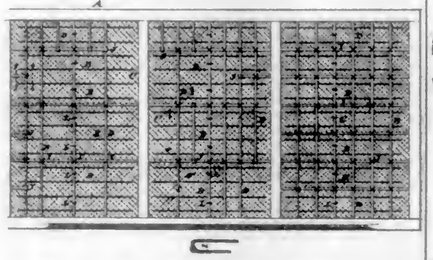


296,347.

296,348. PROCESS OF HAND-PAINTING PORTRAITS, FIGURES, AND LANDSCAPES. OTHO H. ORTON, Madison, Wis. Filed Dec. 3, 1883. (No specimens.)

Claim.—The process of hand-painting in oil-colors in landscape, portrait, animal, and figure painting, which consists in preparing flock-paper with any desired color; secondly, applying to the colored side thereof, by means of a brush, the pigments or oil-colors, as and for the purpose set forth.

296,349. ELECTRO-MAGNETIC CAR-BRAKE. HARVEY S. PARK, Henderson, Ky. Filed Sept. 1, 1883. (No model.)



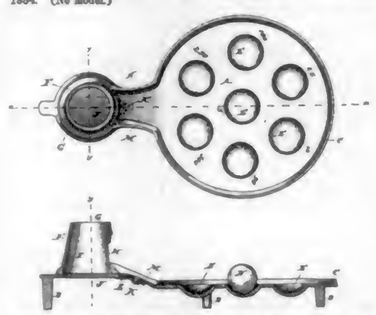
Claim.—1. In an electro-magnetic car-brake, in combination with a braking and a locking circuit and two separate sets of electro-magnets in said circuits, the armature-disk upon the braking-shaft, placed between the faces of such electro-magnets, and adapted to be operated thereby to effect the application or locking of the brakes, substantially as set forth.

2. The combination, with the shaft 2, of the continuously-revolving series of electro-magnets 6 loose on said shaft, having hubs 7, with conducting-rings and brushes and a clutch-disk placed opposite the faces of such electro-magnets for the purpose of applying the brakes.

3. The combination, with a revolving series of magnets and a fixed series of magnets whose poles are opposite each other, of an armature-disk fixed to its shaft between said magnets by a spline and groove, and adapted to be attracted by either, as and for the purposes set forth.

296,350. TYPE-CASE. WILLIAM PIHL, St. Louis, Mo. Filed Sept. 23, 1883. (No model.)

Claim.—1. A type-case having slots formed in its bottom, and wire-gauze covering the bottom, for the purpose set forth.



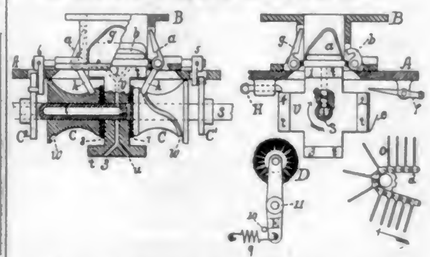
2. In a type-case, the combination, with the division-strips, of the four-prong fastening, two of the prongs extending down through the bottom of the case, and the other two being quite short, substantially as set forth.

296,351. TOY. MICHAEL RAUGHTIGAN, Norwich, Conn., assignor to Edwin Oldfield, Edwin A. Tracy, and Emma J. Raughtigan, all of same place. Filed Sept. 15, 1883. (No model.)

Claim.—The within-described toy, consisting of the plugged tube A, having hole *c*, the supporting-frame C, bent substantially as shown, (fitting tightly on tube A,) and the wind-wheel B, hung in suitable bearings in frame C, all in combination, the position of C and B relative to the perforated tube being such that, as a current of air is forced through said tube, it engages the wings of wheel B, causing it to revolve, for the purpose specified.

296,352. GAME. ALFRED C. REX, Philadelphia, Pa. Filed Jan. 26, 1884. (No model.)

Claim.—1. The horizontal plate A, having depressions E, in combination with tube F, located at the periphery of said plate, and having aperture H facing said plate, substantially as and for the purpose specified.



2. The plate A, having depressions E, in combination with tube F, having aperture H facing said plate, and neck M, connecting said tube with said plate, substantially as and for the purpose specified.

3. The plate A, having depressions E, in combination with tube having closed bottom, and aperture H, facing said plate, and inclined neck M, connecting said tube with said plate, substantially as and for the purpose specified.

4. The combination of plate A, having depressions E, tube F, having apertures I H, and plate J, substantially as and for the purpose specified.

5. The combination of plate A, having depressions E, tube F, having apertures I H, neck M, and plate J, substantially as and for the purpose specified.

296,353. ENVELOPE-FOLDING MECHANISM. FRANCIS H. REHARDS, Cleveland, Ohio. Filed Mar. 29, 1883. (No model.)

Claim.—1. In an envelope-folding mechanism, in combination, the folding-box B and a series of plates, *t*, adapted to have envelopes folded thereon, arranged substantially as described, to each successively form the bottom of box B.

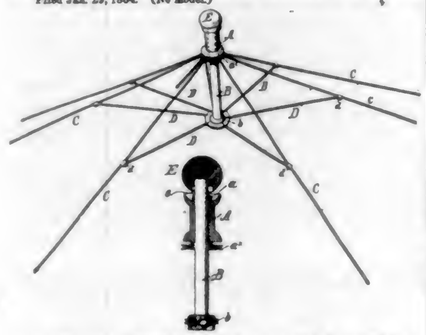
2. In an envelope-folding mechanism, the box B, having folding-wings *a a b g*, and a series of plates, *t*, adapted to have envelopes folded thereon and arranged to be revolved about an axis, all in combination and arranged to operate substantially as described.

3. In an envelope-folding mechanism, in combination, the plate *t*, arranged for envelopes to be folded thereon, folding-wing *a*, having an arm adapted to move in a groove in cam C, and cam C, arranged to rotate upon an axis at right angles to the axis of wing *a*, all arranged to operate substantially as shown and described.

4. In an envelope-folding mechanism, in combination, the box B, with its folding-wings, cams C C′ C², and shaft S, and series of plates *t*, supported by and arranged to revolve about said shaft.

5. In an envelope-machine, in combination, a folding mechanism having a series of plates, *t*, adapted to each successively have envelopes folded thereon, and endless apron *d*, to receive the folded envelopes therefrom.

6. In an envelope-machine, in combination, a series of plates, *t*, adapted to have envelopes folded thereon, endless apron *d*, and mechanism, substantially as described, adapted to transfer folded envelopes from said plates to said apron.



7. In an envelope-folding mechanism, in combination, a series of plates, *t*, mechanism adapted to move said plates successively into position for envelopes to be folded thereon by the same folding devices, and mechanism, substantially such as described, to arrest the motion of said plates *t* at the proper time and place for envelopes to be folded thereon.

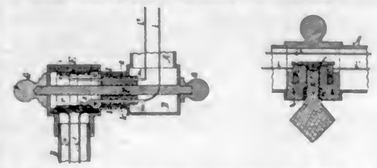
8. In an envelope-machine, in combination, a series of plates, *t*, adapted to have envelopes folded thereon, supported upon a rotating shaft, S, and a wiping roll or mechanism, D, adapted to operate upon the surface of said plates, substantially for the purpose described.

9. In an envelope-folding mechanism, in combination, a folding-wing, *b* or *g*, provided with arm 5 or 6, adapted to be operated directly by cam C′ or C², upon shaft S, parallel to the axis of said folding-wing, and cam C′ or C², all constructed and arranged substantially as described.

10. In an envelope-folding mechanism, plates *t*, adapted to have envelopes folded thereon, and having air-passages therein, substantially as described, in combination with hollow shaft S, supporting said plates, and having passage *i*, arranged to operate substantially as described.

296,354. PARASOL-FRAME. HENRY M. RICHARDSON, Boston, Mass. Filed Jan. 29, 1884. (No model.)

Claim.—1. The combination, to form a parasol-frame which can be opened or closed from the outside, of a thimble or hollow sleeve, to which the upper ends of the main ribs are connected, a sliding stem adapted to slide through the thimble, to the lower portion of which stem are connected the inner ends of the supplemental ribs, and supplemental ribs attached to the stem and to the main ribs, substantially as set forth.



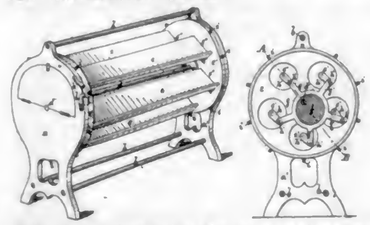
2. The combination, to form a parasol-frame which can be opened or closed from the outside, of a thimble or hollow sleeve, to which the upper ends of the main ribs are connected, a sliding stem adapted to slide through the thimble, to the lower portion of which stem are connected the inner ends of the supplemental ribs, supplemental ribs attached to the stem and to the main ribs, and means for fixedly connecting the stem with the thimble, substantially as set forth.

3. As a means for connecting the stem with the thimble and for securing additional tension to the expanded frame in a parasol-frame of the class herein recited, the combination of the threaded boss upon the thimble and the threaded socket connected with the stem, substantially as set forth.

4. The combination of the thimble, the rotatable stem, the main ribs, the supplemental ribs, the boss upon the thimble, and the socket within the head of the stem, substantially as set forth.

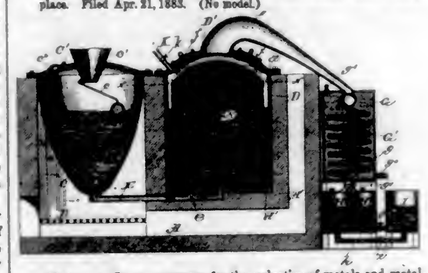
5. In a parasol-frame, the combination of a thimble, main ribs pivoted at their upper extremities to said thimble and connected intermediately of their length to the respective outer extremities of auxiliary ribs, a stem adapted to slide within said thimble, and auxiliary ribs at their respective inner extremities, pivoted to a collar carried by the stem, and within which said stem swivels, substantially as and for the purposes set forth.

296,355. SWINGING BRACKET FOR ELECTRIC LAMPS. JOHN RITCHIE, Brookline, Mass. Filed Dec. 26, 1883. (No model.)



Claim.—1. The combination of the rotary key of insulating material, provided with the switch fulcrumed to it, and also with the depressing-spring, with the concentric or surrounding insulating-block, its metallic studs, and curved rails, all being adapted in manner and for use with electric-circuit wires, substantially as set forth.

2. The lower joint-section, D, provided with the insulator *m* in its neck, and the spring circuit-wires *n o*, extending through and above such insulator, in combination with the upper joint-section, E, and its tubular insulator *u*, and metallic rings *r s*, arranged in and adapted to it, all being substantially and to operate as represented.

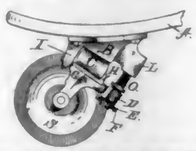


3. The combination of the joint-sections D and E, having the insulators *m u*, electric wires *n o*, and metallic rings *r s*, arranged as set forth, with the circuit-wires *i i′ i²*, and the part A, provided with the rotary key *a*, switch *f*, spring *c*, insulating-block *b* and its metallic studs *h*, and curved rails *g*, all being adapted and to operate substantially as represented.

296,356. REVOLVING BOOK-REST. SIMON ROSEN, Cambridgeport, Mass. Filed June 11, 1883. (No model.)

Claim.—In a revolving book or other rest, the stationary supports *a a′*, the revolving heads *c c′*, journaled on said supports, and the shelves *e e e*, journaled on said heads and provided with cranks A A A, combined with the stationary eccentric *f* and the movable ring *g*, having arms *g′ g′*, hinged in their outer ends, respectively, to cranks A A A, as and for the purpose set forth.

296,357. PROCESS OF AND APPARATUS FOR REDUCING METALS BY ELECTROLYSIS. AUGUSTUS J. ROGERS, Milwaukee, Wis., assignor of two-thirds to Henry Mann and Julius Koebig, both of same place. Filed Apr. 21, 1883. (No model.)

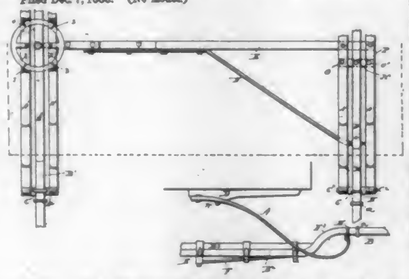


Claim.—1. In an apparatus for the reduction of metals and metalloids by electrolysis of their salts or ores in a melted condition, the combination of a melting-pot located over a suitable fire-bed, and an independent decomposing-tank provided with electrodes, and a close-fitting cover having gas-tight passages leading therefrom, and a condensing apparatus and receptacles, together with suitable connecting-pipes and cocks, all arranged and adapted to operate substantially as set forth.

2. The process of separating sodium or potassium from sodium chloride or potassium chloride, substantially as described, consisting in heating the salt to the point of fusion in a suitable vessel, conveying the liquid thus obtained to a separate independent decomposing-tank pro-

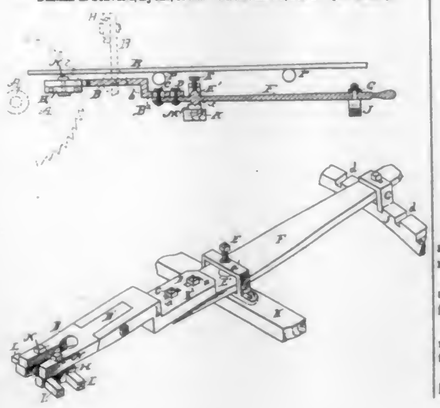
vided with electrodes, and passing an electric current through the liquid to separate the chlorine therefrom, and then conducting the gaseous chlorine and vaporized sodium or potassium into separate receptacles, that for the latter containing coal-oil, and the passage which conducts the vaporized sodium or potassium into the said receptacle being supplied with hydrogen or other suitable gas, to prevent contact of oxygen with its contents at the commencement of the process of separation, substantially as set forth.

296,358. ROLLER-SKATE. JACOB V. ROWLETT, Richmond, Ind. Filed Mar. 10, 1884. (No model.)



Claim.—1. The adjustable post O, in combination with the bracket B, eye-pivot D, and pin F, substantially as set forth.

2. The adjustable post O, in combination with bracket B, eye-pivot D, pin F, and washer E, with lug K, holding the pin in position, substantially as set forth.



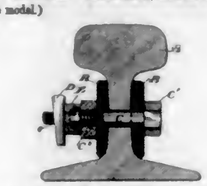
3. In a roller-skate, the combination of the foot-piece A, the bracket B, having post I, and adjustable post O, and flanges M M, with hanger G, having flange H, the elastic spring C, pivot N, eye-pivot D, washer E, having lug K, and pin F, all constructed substantially as and for the purpose set forth.

296,359. VEHICLE-SPRING. CYRUS W. SALADEE, Torrington, Conn. Filed Dec. 7, 1883. (No model.)

Claim.—In combination with the axle of a road-wagon, the self-compensating duplex spring A A, the latter being curved downwardly from or near its center to the requisite point, then bent upwardly to a direct connection with the trunnions B B, substantially as specified.

296,360. SAW-SHIFTING MECHANISM FOR GANG-EDGERS. DANIEL L. STEVENS, Lyons, Iowa. Filed Jan. 15, 1884. (No model.)

Claim.—1. The combination of the bifurcated head B, plate B^2, lever F, and the guide-pin blocks H, pivoted centrally to the bifurcated head, substantially as and for the purposes described.



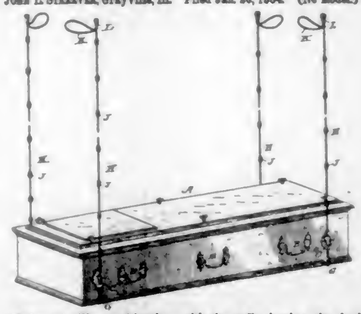
2. The combination of the plate B^2, lever F, pivoted blocks H guide-pins L, and the bifurcated head B, connected to the plate B^2 by a joint adapted to enable the entire head to be raised away from the saw, substantially as and for the purposes set forth.

3. The combination of the hinged bifurcated head B, the pivoted blocks H, having the guide-pins L, the lever F, and the plate B^2, jointed to the bifurcated head and to the lever, and provided with the offset *b*, substantially as and for the purposes described.

4. The combination, with the lever-plate F, having the transverse slot O, of the bifurcated jointed head B, pivoted blocks H, guide-pins L, and the plate B^2, provided with the longitudinal slots *a a*, substantially as and for the purposes set forth.

5. The combination of the pivoted blocks H, pins L, bifurcated jointed head B, plate B^2, provided with longitudinal slots *a a*, the lever F, provided with the transverse slot O, and pivotal studs E' *c*, the yoke *d'*, provided with the set-screw E, the dog G, and the notched gage-bar J, substantially as and for the purposes described.

296,361. NUT-LOCK. HIRAM STONE, Cleveland, Ohio. Filed Jan. 31, 1884. (No model.)



Claim.—1. In a nut-lock, the combination, with a bolt provided with a head, a threaded portion, and a smooth portion of reduced diameter, having a diagonal slot formed therein, of a tapering key adapted to fit within the diagonal slot in the bolt, and a sleeve located on the bolt between the key and nut, said sleeve being chambered at one end to pass over the threaded portion of the bolt, the opposite end of the sleeve engaging the smooth portion of the bolt, substantially as set forth.

2. In a nut-lock, a bolt provided with a longitudinal slot beyond the threaded part, in combination with the washer E and the key D, and the parts so arranged that the nut may be successively tightened and locked, as may be required from time to time, as the parts wear or stretch, substantially as set forth.

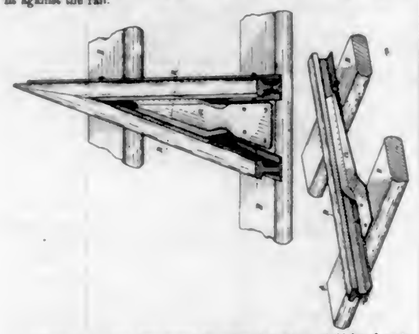
3. In a nut-lock, the bolt C, provided with the nut C^2 and the sleeve E, in combination with the key D, of such width, length, and taper as required to "follow up" the nut and sleeve for some distance, and of such thickness and flexibility that the key may be bent to prevent its "backing out" or becoming loosened, substantially as set forth.

296,362. DEVICE FOR LOWERING OR RAISING COFFINS, &c. JOHN L. STREEVER, Grayville, Ill. Filed Jan. 26, 1884. (No model.)

Claim.—1. The combination, with the coffin having the device C attached thereto, and formed with a dependent hook, of the lowering-rope arranged to be connected to the device, as set forth.

2. As an article of manufacture, the coffins provided with the ornamental devices C, in which the handles are pivoted, for the purpose set forth.

3. As an article of manufacture, the coffins provided with the ornamental devices C, consisting of a body having a hook, ring, or lug formed therewith, and a dependent hook, as set forth.



4. A device for lowering or raising coffins, &c., consisting of a body having a hook, lug, or ring formed therewith and provided with a dependent hook, in combination with a rope having a ring or hook attached thereto, as set forth.

5. A device for raising or lowering coffins, &c., consisting of a raised or bulged body formed with a central U-shaped slot, attaching-flanges, a projecting hook or lug, and a depending hooked rod, as described, in combination with the rope, as set forth.

6. A device for lowering or raising coffins, &c., consisting of a raised or bulged body having attaching-flanges, a central U-shaped slot, a projecting hook or lug, and a depending hooked rod, in combination with the rope having hand-holds at suitable intervals, a ring at one end of the rope, and a loop at the other end, as set forth.

296,363. FOOT-GUARD FOR RAILWAYS. HERVEY SULLINGS, Kalamazoo, Mich. Filed Aug. 23, 1883. (No model.)

Brief.—A foot-guard consisting of a rigid level plate secured at one end to the tie, and having upward and outward extending flanges to fit against the rail.

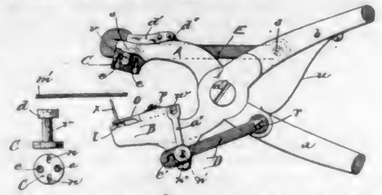
Claim.—1. In a foot-guard for railroad-tracks, a rigid level plate having upward and outward extending flanges fitting up against the under edge of the upper part of the rail, substantially as set forth and described.

2. In a foot-guard for railroad-tracks, a rigid plate with the point turned to fit into the groove and resting on the base of the rail, with opposite end depressed suitable for resting on and spiking to the tie, substantially as specified and described.

3. In a foot-guard for railroad-track, a rigid plate provided with upward and outward extending flanges to fit against the under edge of the upper part of the rail, with the point turned downward and outward, fitting into the groove, and resting on the base of the rail, with opposite end depressed for resting on and spiking to the tie, holding it firmly in position, substantially as set forth and described.

296,364. CHAIN-HOIST. CHAS. A. TEAL, Philadelphia, Pa., assignor to Martha R. P. Teal, same place. Filed Feb. 15, 1884. (No model.)

Claim.—1. The combination, substantially as herein described, with a frame-work, of a shaft carrying a hand chain-wheel and a pinion, and two gear-wheels engaging with said pinion and operating the chain-pulleys.



2. The combination, substantially as herein described, with the frame, of a pinion-shaft carrying the hand chain-wheel, a shaft on each side thereof having gears meshing with said pinion, and chain-pulleys upon said shafts, the arrangement being such that one chain-pulley will move faster than the other.

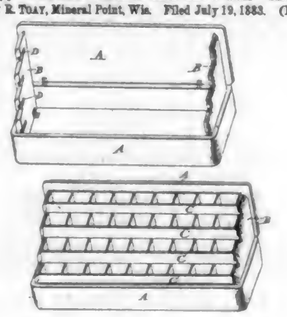
3. A chain-hoist consisting of a frame, A, shaft B, carrying a pinion and hand chain-wheel, shafts F G, carrying gears F' G' and chain-pulleys F^2 G^2, chain H, passing over said pulleys, and a pulley-block, the whole adapted to form a differentially-acting hoisting apparatus, as set forth.

296,365. GALVANIC BATTERY. HENRY TRANK, Windsors Road, High Street, Battersea, County of Surrey, England. Filed Aug. 13, 1883. (No specimens.) Patented in England Feb. 3, 1883, No. 598.

Claim.—As the liquid for charging the carbon-cells of galvanic batteries, chloro-chromic acid, known otherwise as "oxydichloride of chromium," "chloro-chromic anhydride," or as "oxychloride of chromium," "(CrO_2Cl_2) substantially as and for the purposes described herein.

296,366. BUTTON-SETTING INSTRUMENT. JAMES F. THAYER, Providence, R. I. Filed Feb. 15, 1884. (No model.)

Claim.—1. A button-setting instrument composed of two members, one of said members being provided with means for holding a fastener, and the other member provided with a rotary die containing a series of openings and dies adapted to be automatically operated, the whole combined and arranged substantially as described.



2. In a button-setting instrument, the combination, with one member thereof, of a rotary die having on its surface an alternate series of openings and dies arranged to be operated by means of a ratchet-wheel and connections, substantially as described.

3. In a button-setting instrument, the herein-described rotary die C, consisting of the openings *e*, dies *n*, stem *v*, and ratchet-wheel *d*, in combination with the spring *d'* and connection E, attached to the opposite member of instrument back of pivot *a'*, arranged and adapted for use substantially as shown and described.

4. In a button-setting instrument, the herein-described fastener-holding device, consisting of the plate *o* and spring *p*, in combination with the lever *a''* and link D, attached to the opposite member of instrument back of the pivot *a'*, arranged and adapted for use substantially as shown and described.

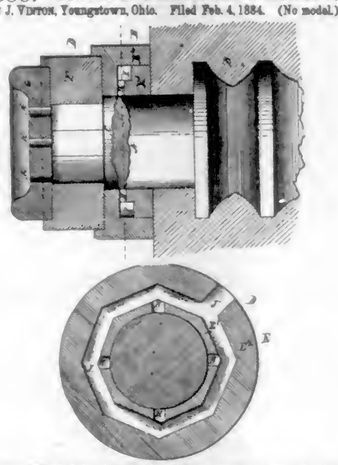
5. The herein-described button-setting instrument, consisting of member A, having rotary die C, spring *d'*, and connection E, and the member B, provided with the seat *t*, forked plate *o*, spring *p*, lever *a''*, and link D, the whole combined and arranged substantially as shown and described.

296,367. COMBINED PACKING AND SHOW BOX. SIMON TOAY and JOHN R. TOAY, Mineral Point, Wis. Filed July 19, 1883. (Model.)

Claim.—1. In a combined packing and show box, A, the raisers B B, fastened at their ends to the bottom of the box, on the inside, and having grooves D D on their inside, adapted to receive the tongues E E of the trays C when opened, as described and shown, for the purpose set forth.

2. In a box, the raisers B B, having grooves D D on the inside and groove *a* on the outside, the raisers attached to the bottom and ends of the box on the inside, and adapted to be folded down to receive the trays C C in the box, or raised to support the tongues E E of the trays, as shown and described, and for the purpose set forth.

296,368. TEDDER-CRANK. FULLER TRUMP, Springfield, Ohio. Filed Nov. 20, 1883. (No model.)



Claim.—1. A crank-shaft consisting of two or more crank-pieces and intermediate coupling-pieces, constructed for connection to form a rigid shaft, and also to be readily separated, substantially as set forth.

2. The combination, in a crank-shaft, of crank-pieces and coupling-pieces, with corresponding recesses and projections upon the crank-arm or coupling-pieces, to permit the continuous connection of the parts without interfering with their ready detachment, substantially as set forth.

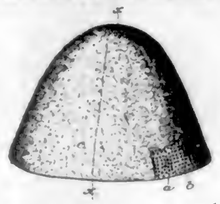
3. The combination of the crank-pieces and coupling-pieces, having corresponding recesses and projections, the coupling-pieces adapted to the bearings, substantially as specified.

4. The coupling-pieces adapted to unite adjacent crank-pieces, and with projections or recesses at opposite ends arranged at different angles, for the purpose set forth.

296,369. MOLD FOR REPAIRING BROKEN ROLLS, SHAFTS, &c. JOHN J. VIDTON, Youngstown, Ohio. Filed Feb. 4, 1884. (No model.)

Claim.—The herein-described mold for repairing broken rolls and shafts, consisting of the lower portion, E, made in two parts, with the central opening for the broken end of the broken roll or shaft, and the radial passages and circumferential channel having the outlet J, the central or wabbler section, F, and the upper or basin section, G, provided with the gates K, leading to the wabbler and neck sections, substantially as specified.

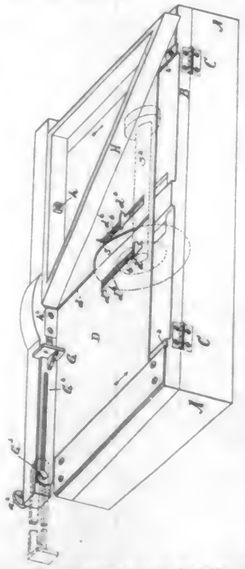
296,370. IMPLEMENT FOR SMOOTHING OR POLISHING METALLIC SURFACES. WILLIAM JAMES WALKER, Franklin, Mass. Filed Jan. 18, 1884. (No model.)



Claim.—1. The combination of the tubular and flanged screw c and the disk *f* with the nut *e*, screwed upon and extended beyond the said screw, all being substantially as represented.

2. The combination of the tubular and flanged screw c and the disk *f* with the nut *e*, screwed on and extended beyond the screw, as set forth, and with the screw *h* and packing *g* arranged in the said nut, and with respect to the said screw *c*, all being substantially as represented.

3. The combination of the screw-threaded tubular shank *c*, having the disk-shaped flange *d*, screw-threaded nut *e*, and disk *f*, as described, with the cock C, extended into the nut *e* and tubular screw *c*, and with the water-proof and elastic vessel *a*, applied to such neck, all being substantially as represented.

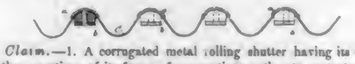


296,371. HEAD-COVERING AND METHOD OF MAKING THE SAME. ARTHUR B. WARING, Boston, Mass. Filed Feb. 13, 1882. (No model.)

Claim.—1. As an improved article of manufacture, a head-covering composed of a perforated felt body having a nap deposited upon and incorporated with it, the holes in the body serving to receive the accumulation of fine fibers through the body at different spots, all substantially as and for the purpose described.

2. That step in the art or method of covering a perforated fibrous or felt body with a nap of fur which consists in depositing the said fur nap upon the body and through the perforations of the said fibrous or felt body while held upon a perforated exhausted former, substantially as described.

296,372. APPARATUS FOR SAWING PRINTERS' BLOCKS. GEO. WILLIAMSON, Cambridge, assignor to J. O. Hayden, Somerville, Mass. Filed July 30, 1883. (No model.)



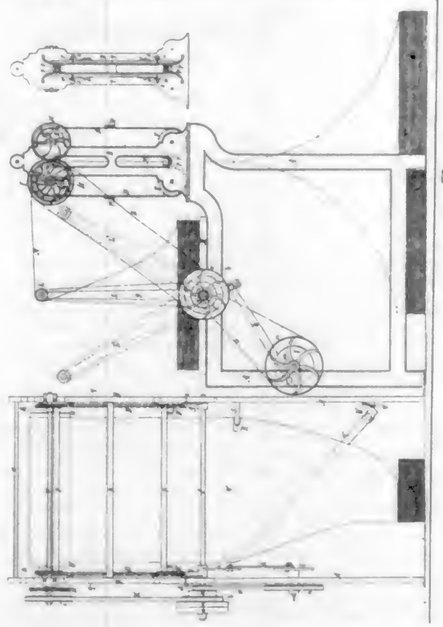
Claim.—1. The bed-plate, saw, and the sliding rule or work support, provided with the rest E and a slit for the saw, combined with an adjustable stop to determine the distance between the edge of the saw and the said rest when a rule is to be but partially cut through, substantially as described.

2. In an apparatus for cutting printers' rules, the top, the saw, the bed-plate, sliding rule or work support provided with rest E, saw-slit *d*, and slot d^4, and the adjustable gage connected therewith, combined with the adjustable stop d^4, substantially as described.

3. In an apparatus for sawing printers' rules, the sliding rule or work support provided with the rest E, combined with the gage G, having a slotted shank and made reversible, substantially as described.

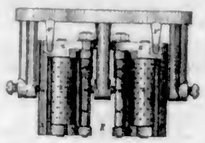
296,373. CORRUGATED METAL ROLLING SHUTTER. JAMES G. WILSON, New York, N. Y., assignor to Francis Forbes, same place. Filed Dec. 22, 1883. (No model.)

Brief.—Corrugated metal rolling shutters have their edges strengthened by metal shields fitted individually to their crowns, and the shutters are prevented from catching, in rolling and unrolling, by pads secured in the concavities of the corrugations.



Claim.—1. A corrugated metal rolling shutter having its edges and those portions of its face or faces contiguous thereto protected and strengthened by means of superposed metal shields fitted to the crowns of individual corrugations and individually attached, substantially as shown and described.

2. A corrugated metal rolling shutter having washers or pads fixed in the concavities of its corrugations, but not projecting beyond the crowns of its convex surfaces, substantially as shown and described.



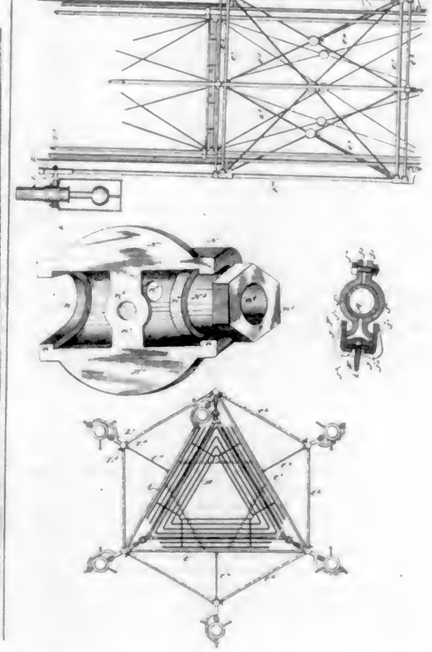
3. The combination, with a corrugated metal rolling shutter, of metal shields and pads, substantially as described.

296,374. CLOTH-FOLDING MACHINE. JOHN EMORY WINDLE, Worcester, Mass. Filed Mar. 5, 1883. (No model.)

Brief.—A pair of roller-temples and a distender are attached to one side of the frame. The two selvages of the cloth are passed through the two temples, the cloth at its middle being forced away from them by the distender in a manner to distend the cloth opposite to where it is held by the temples, which folds the cloth once lengthwise. It is then passed upward between two pairs of endless chains provided with a series of bars, which bars of the two pairs of endless chains come together, so as to grasp and hold between them the cloth folded lengthwise at its middle. It then passes partly about a roller fixed on one of the standards that support the endless chains and their actuating mechanism, thence to and partly around a roller of the vibrator and down onto a platform, where it is crosswise folded and laid regularly by the oscillation of the vibrator.

296,374.

Claim.—1. The cloth-folding machine or combination, substantially as described, consisting of the two sets of endless chains, their bars and yielding jaws, the cloth-roller, the receiving-platform, the vibrator, the distender, and the two temples, all arranged and provided with mechanism for operating the said chains, jaws, vibrator, and distender, essentially as set forth.



2. The carrier-frame S, having the bent stop *v*, in combination with the roller-temples R R, pivoted to such frame, as set forth.

3. A roller-temple provided with a yielding presser, in combination with and pivoted to a carrier-frame, as set forth.

4. A roller-temple, R, consisting of the toothed roller *z*, presser *y*, rod *w*, spring *a'*, and case *x*, as set forth.

296,375. TOWER. JOHN S. ADAMS and FREDERICK U. ADAMS, Elgin, Ill. Filed May 31, 1883. (No model.)

Brief.—A vertically-moving lamp-carriage exterior to the tower is operated by endless ropes passing over pulleys and provided with a counter-weight. The lower pulleys are mounted in a radial frame adjusted by means of a tension-rod. The supports for the lamps extend above the lamp-carriage and project above a rail on the top of the tower. The rails for the carriage are supported from the uprights in adjustable brackets. The latter consists of a chair clutching the rail connected by a clamp adjustable on the upright by a nut and bolt. The lamp-carriage has brackets with wheels traveling on the rails, and with an eye for the hoisting-rope. The tower is triangular and the lamp-carriage hexagonal, having posts located opposite the angles of the tower and joined by horizontal girts parallel with the sides of the tower, and intermediate posts with girts and braces. A clamp for the diagonals consists of a recessed junction-plate with semicircular end openings and flanges, and a nut with a collar and exterior squared head. It also has an apertured cross-bar for the tie-bar. The junction-plates close each other.

Claim.—1. The combination, with a skeleton tower, pulleys for supporting the hoisting-ropes arranged radially to said tower at the top thereof, and an exterior lamp-carriage, of two or more suspending-ropes trained over said pulleys and severally connected at both ends with the carriage, pulleys suspended by the several ropes at the lower end of the tower, means for holding the suspended pulleys upright, and a weight or weights connected with the ropes for counterbalancing the carriage, substantially as described.

2. In combination with the external lamp-carriage, the upper and lower pulleys, and the endless suspension-ropes connected with the carriage, as described, a frame, H^4, to which the several lower pulleys are attached, and a central tension device for tightening the suspension-ropes, substantially as described.

3. In combination with the duplex tower-uprights, Fig. 7, the pulley-frame H^4, having its arms extended between the members A' of said duplex uprights, and the pulleys H^2, connected with said frame, substantially as described.

4. In combination with the radial pulley-frame H^4 in the structure described, the tension-rod h^3, applied centrally to said frame, substantially as described, and for the purpose described.
